- D. Participated in at least two recent formal road safety audits with criteria similar to the Road Safety Reviews and Audits in this Work, where such previous participation was on projects delivered using design build or public private partnership project delivery methods; and,
 - E. Demonstrated professional independence in undertaking Road Safety Reviews and Audits in this Work.
- (d) DB Co's Responsibility:
- (i) DB Co shall undertake Road Safety Audit and Road Design Safety Review as per the requirements of Clause 6.18 of this Part 2 on all temporary and permanent roadway improvements listed below.
 - A. All facilities operated by OC Transpo including, but not limited to, all bus loops and associated accesses, lay-bys, bus stops, PPUDOs, Park and Ride facilities, as specified in Clause 6.9 of this Part 2;
 - B. All Roadway improvements listed under Clause 6.19 of this Part 2 and Clause 6.21 of this Part 2. For Road Safety Audit and Road Design Safety Review requirements for provincial road improvements, including Hwy 417, DB Co shall refer Schedule 15-2, Part 9, Part B, Article 10 – Road Safety Review and Audits.
 - C. All staging detour routes, Lane Shifts, lane closures, and temporary conditions designed and constructed by DB Co as part of the Works per the requirements specified in the Schedule 15-2, Part 7 - Traffic and Transit Management and Construction Access.
 - (ii) DB Co shall assume responsibility for the following items:
 - A. Scheduling, initiating, allowing access to the applicable site and managing the Road Safety Audits and Road Design Safety Reviews process at the appropriate times during the course of the Works;
 - B. Providing all necessary design drawings and supporting documentation for the Road Safety Audit team to conduct the Road Safety Audit and Design Safety Review;
 - C. Ensuring that the Design Safety Review and Road Safety Audit is conducted in accordance with good industry practice;
 - D. Receiving and reviewing the Road Safety Audit team's report with the City of Ottawa representative;
 - E. Responding to the Road Safety Audit team's report, including presenting rectification alternatives to address deficiencies;

- F. Implementing required re-design as a result of the corrective suggestions as described in the sub clause noted above in an expeditious and timely manner;
 - G. Updating changes on the required design drawings; and,
 - H. Providing all draft and final documentation related to the Road Safety Audits and Road Design Safety Reviews to the City of Ottawa's representative.
 - (iii) DB Co shall accept responsibility for and account for all costs associated with Road Safety Audits and Road Design Safety Reviews, including any re-design and increased costs to the Works that result from the Road Safety Audits and Road Design Safety Reviews.
 - (iv) After each Road Safety Audit and Road Design Safety Review, except as otherwise expressly agreed in writing by the City of Ottawa's representative, DB Co shall address all recommendations made by the Road Safety Audit team.
- (e) Road Design Safety Review
- (i) DB Co shall undertake an initial Road Design Safety Review at the outset of the Works and no later than 60 calendar days after Commercial Close of the Works in order to assess DB Co's proposed design elements including both temporary and permanent improvements that may have any bearing on public, maintenance or operational safety from the point of view of any user within the Lands.
 - (ii) In each Road Design Safety Review, DB Co shall review, identify and resolve any safety concerns prior to advancing the design of both temporary and permanent improvements such that the design can be modified in a timely fashion to address the safety concerns within the Works. DB Co shall plan, schedule and execute the review, together with providing a report that addresses any safety concerns and the recommendation or resolution of the initial Road Design Safety Review. The initial Design Safety Review shall precede the design activity and the subsequent design stages shall accommodate any required recommendation or resolution of this initial Road Design Safety Review.
 - (iii) DB Co shall undertake Road Design Safety Reviews on an ongoing basis through the different stages and duration of all designs and all to be Constructed elements, both temporary and permanent improvements that may have any bearing on public, maintenance or operational safety from the point of view of any users within the Lands.
- (f) Road Safety Audit Process
- (i) DB Co shall complete the Road Safety Audit process in accordance with The Canadian Road Safety Audit Guide. References to "review" or "response" from

the owner agency, or other qualifying phrase with similar connotation in the process, shall be construed as the responsibility of DB Co in accordance with the requirements in Clause 6.18 of this Part 2.

- (ii) DB Co's Road Safety Audit team shall prepare a report to document the audit findings and submit the Road Safety Audit reports to the Design Team for the stages identified in the clause that follows. The Road Safety Audit reports shall clearly identify safety hazards that need to be addressed by DB Co along with recommendations for remediation. DB Co shall respond to the identified hazards and recommendations with remediation counter-measures or provide appropriate reasons why the safety issue may not be addressed as recommended in the reports. Under any circumstances, DB Co's response and remediation countermeasures shall address the safety issue to the satisfaction of the Road Safety Audit team.
- (iii) For all temporary conditions and temporary roadway improvements to accommodate staged construction under long duration Works as specified under clause 2.5.4 Long Duration (LD) in the MTO's OTM Book 7, DB Co shall perform Stage 3a and Stage 3b audits for all temporary roadway improvement according to the requirements outlined in Clause 6.18 (f) of this Part 2.
- (iv) DB Co shall perform Stage 3b audits for all Station construction Sites according to the requirements outlined in Clause 6.18(f)(v) of this Part 2.
- (v) DB Co shall submit the Road Safety Audit reports to the City of Ottawa's representative in accordance with the review procedures specified in Schedule 10 – Review Procedure for review at all the stages identified below:

A. Stage 1: Pre-Final Design Road Safety Audit

- i. DB Co shall conduct a Stage 1 Road Safety Audit immediately before submission of the Pre-Final Design Development Submittals in accordance with the requirements of Schedule 10 – Review Procedure of the Project Agreement. DB Co shall undertake a detailed review of the pre-final design development submittals to identify any potential safety-related enhancements that might have an impact on the design and construction of Works. Issues considered shall include, but not be limited to, the following:
 - 1 Design consistency;
 - 2 Site conditions and visibility;
 - 3 Drivers' work load and perceived road information;
 - 4 Vehicular traffic speed management and associated safety risk factors;

- 5 Traffic control devices;
- 6 Human factors;
- 7 Horizontal and vertical alignment;
- 8 Cross section design;
- 9 Interchange/intersection design and configuration;
- 10 Access location;
- 11 Sight distance including, but not limited, to stopping sight distance and turning sight distance, sight distances to traffic control devices, Bullnoses, etc.;
- 12 Operation of public transit;
- 13 Operational and maintenance safety;
- 14 Traffic operations;
- 15 Environmental factors;
- 16 Clearances to roadside objects;
- 17 Safety barriers; and,
- 18 Provision for vulnerable road and all multi-modal road ROW users.

B. Stage 2: Final Design Road Safety Audit

- i. DB Co shall conduct a Stage 2 Road Safety Audit immediately before submission of the final design development submittals in accordance with Schedule 10 – Review Procedure of the Project Agreement. The audit shall undertake a detailed review of the completed final design development submittals to identify any potential safety-related enhancements that might have an impact on the operational safety of the Works. DB Co shall consider in the audit and address issues such as the items included, but not be limited to the following items:

- 1 Signing and Pavement markings;
- 2 All interface with adjacent design disciplines (rail track corridors and LRT facilities; tunnel, civil, facilities

- including stations and landscaping, utilities and bridges, etc.)
- 3 Traffic signal configuration;
 - 4 Intersection details;
 - 5 Municipal services;
 - 6 Drainage and SWM elements;
 - 7 Lighting;
 - 8 Fencing;
 - 9 Clearances to roadside objects;
 - 10 Safety barriers;
 - 11 Surface standards including treatments and structures;
 - 12 Traffic control devices;
 - 13 Streetscape and road furniture;
 - 14 Provision for vulnerable road and all multi-modal road ROW users;
 - 15 Accommodation of design vehicles;
 - 16 Emergency responses requirements;
 - 17 Road maintenance
 - 18 Traffic staging plan; and,
 - 19 Any other Stage 1 Road Safety Audit results affected by the final design.

C. Stage 3a: Temporary Traffic Control On-site Road Safety Audit

- i. DB Co shall conduct Stage 3a Road Safety Audits on the applicable sites within Lands before implementation of temporary traffic and transit control set-ups that meet one or more of the following criteria:
 - 1 Two or more individual temporary work zones in close proximity to each other such that one would influence the traffic and transit operation of the other. The spacing

between the termination area of one work zone and the advance warning area of the next work zone for which one temporary traffic control set-up influences the traffic operations of the next temporary traffic control set-up is 2.0 km or less.

- 2 Temporary staging are required within the existing Roadways and the duration of temporary traffic control set-ups is five calendar days or more. The set-up does not necessarily have to be in place for the entire time but can be one of a number of repeating set-ups that are active at different times.
- 3 The duration of temporary traffic control set-ups is ten calendar days or more on roads other than those identified (2) above. The set-up does not necessarily have to be in place for the entire time but can be one of a number of repeating set-ups that are active at different times.

D. Stage 3b: Construction Road Safety Audit

- i. DB Co shall conduct Stage 3b Road Safety Audits on the applicable sites within Lands during construction of Works. These audits shall examine the field conditions of the Work under construction and assess any circumstances that may have a bearing on public safety from the point of view of any user and public areas that are within the Lands, or are modified and Constructed as a part of the Works. The audits shall meet the following criteria:
 - 1 DB Co shall undertake two of the Stage 3b Road Safety Audits annually within the high construction season, between June and September (i.e. two audits to be performed annually between June and September) and one in the winter season, annually between December and February. DB Co shall preplan for only one of the audits, while DB Co shall perform the other audits unannounced.

E. Stage 4: Post-Construction Road Safety Audit

- i. DB Co shall carry out a Stage 4 Road Safety Audit prior to opening any portions of the Roadway Works for traffic operation. DB Co's audit shall investigate and identify potential safety enhancements that may reduce the frequency and/or the severity of collisions. The Road Safety Auditor shall also check for safety deficiencies that result from using particular combinations of design elements not previously detected or any synergistic effects

of using minimum Design Criteria for multiple design elements that may compromise users' safety.

- ii. DB Co shall plan for and conduct Stage 4 Road Safety Audits prior to and as a condition of the issuance of the substantial completion certificate.
- iii. Pursuant to the requirements of the two clause (i) and (ii) of the intended Stage 4 Road Safety Audit noted-above, the Road Safety Audit team shall fully examine the Works by:
 - 1 Meeting with DB Co to review any issues relating to the Works, in particular design changes that may affect the safety of Roadway Works included in this Article;
 - 2 Checking to ensure that safety issues identified in the Stage 2 Road Safety Audit are addressed and the resulting design changes do not create further safety issues;
 - 3 Reviewing any design changes that occurred during the relevant Works to ensure they do not create safety issues; and,
 - 4 Conducting field reviews of such Works, under both daytime and night time conditions.

(g) City-requested Safety Audit

- (i) The City of Ottawa reserves the right to request site-specific Road Safety Audits at any time in addition to the audits required in all other Road Design Safety Reviews and Road Safety Audits specified in Clause 6.18 of this Part 2. Such request may be for any site conditions, design element, design concern or Constructed element of Works that is of concern to the City of Ottawa. The City's written request will outline the safety concern and the issues required to be investigated and addressed by DB Co.
- (ii) DB Co shall demonstrate that the design and proposed Constructed Works meet a reasonable level of safety for all affected users. DB Co shall provide supporting research or engineering rationale and analyses for the design decisions, and for the support of the proposed design and Constructed Works that are subject to investigation.
- (iii) DB Co shall address the concerns and/or modify the proposed design and Constructed Works accordingly and provide all available technical information to the Road Safety Audit team for consideration.

- (iv) The Road Safety Audit team will render an opinion with the safety issue, and DB Co shall address the safety issue to the satisfaction of the Road Safety Audit team and the City of Ottawa. The disposition and rectification of the safety concern is DB Co's full responsibility and obligation based on full and due consideration of input from the City of Ottawa and the Safety Audit team.
- (h) Road Safety Audit Certificates
 - (i) DB Co shall submit to the City of Ottawa's representative a Road Audit Safety Certificate called in the form attached as Appendix H - Form of Road Safety Audit Certificates to Schedule 15-2 – Design and Construction Requirements in respect of the Stage 1, Stage 2, and Stage 4 Road Safety Audits respectively. Each Road Safety Audit Certificate shall be signed by DB Co's Design Manager, DB Co's construction contractor representative, DB Co's Project Manager representative, and the Road Safety Audit team.
 - (ii) DB Co shall provide the Independent Certifier with the Stage 4 Road Safety Audit Certificate. The Substantial Completion Certificate shall not be issued unless a Stage 4 Road Safety Audit Certificate has been submitted and signed by the DB Co's Design Manager, DB Co's construction contractor representative, DB Co's Project Manager representative, and the Road Safety Audit team.
- (i) Random Audits
 - (i) The City of Ottawa retains the right to perform additional independent audits on any part of design and construction Works at any time.

6.19 Municipal Roads Improvements

- (a) OR174
 - (i) General Requirements
 - A. DB Co shall design and construct all OR174 improvements and new Roadway construction, including all impacted interchanges and associated ramp intersections at cross roads. All associated construction activities with the OR174 shall include the completion and Commissioning of the Works, carried out in strict accordance with Schedule 15-2 – Design and Construction Requirements, and in such a manner as to comply with all applicable Project Agreement requirements.
 - B. DB Co shall design and construct OR174 travel lanes, impacted interchange ramps, and crossing road intersections and permanent improvements to satisfy the requirements of the TAC GDGCR.
 - C. Unless specifically noted otherwise in this Article, DB Co shall design the necessary improvements of OR174 and interchange ramps based on the

OR174 basic Design Criteria parameters noted in Table 1 and Table 3 included in Appendix A of this Part 2.

- (ii) OR174 improvements include the design and construction of all and any modifications necessary on the existing OR174 and associated infrastructures in order to support the construction.
- (iii) OR174 improvements include but are not limited to all permanent improvements, realignment and/ or reconstruction of OR174 travel lanes and shoulders and all necessary earthworks, Pavements, traffic signs, traffic signals, barriers and Pavement marking, and all associated infrastructure modifications on OR174 interchange ramps and cross roads.
 - A. DB Co shall maintain existing lane configuration including number of through travel lanes and speed change lanes as a minimum for all permanent improvements required on OR174 throughout unless specifically noted otherwise in this Article or in Appendix A of this Part 2.
 - B. DB Co shall provide standard Pavement widths for all travel lanes, ramps, and shoulders throughout as per the requirements of Appendix A of this Part 2, unless specifically noted otherwise in this Article.
 - C. DB Co shall repurpose the existing Bus Only Lanes back to outside paved shoulders as Remaining Works. DB Co shall assume responsibility for the design, approvals and construction associated with updating the existing Pavement markings in accordance with OTM requirements. DB Co shall also assume responsibility for removing all bus-only signing. DB Co will be responsible for making any arrangements with the City of Ottawa to ensure the schedule and process for decommissioning the shoulder buses meets OC Transpo service and operational requirements.
 - D. DB Co shall design and construct a TL-5 barrier between the LRT and OR174 median shoulders that meets the applicable structural and safety requirements for the intended use as per the requirements of Article 4 - Structural Design Criteria and Requirements of this Part 2. The design and construction of the TL-5 barrier and median shoulders shall accommodate a future HOV lane in each direction.
 - E. DB Co shall design traffic staging plans in accordance with the requirements of OTM Book 7 and Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access.
 - F. DB Co shall investigate, design and construct all Pavements. DB Co shall design and construct flexible Pavements that meets or exceeds the requirements of Clause 6.11 of this Part 2.

- G. DB Co's design of the section of the OR174 west of the Montreal Road interchange improvements shall maintain the existing horizontal alignment of the WB lanes and provide for a 3.0 m median shoulder.
 - H. DB Co's design of OR174 west of Montreal Road interchange improvements shall realign the EB lanes as required to accommodate the LRT infrastructure and the TL-5 barriers. DB Co's design shall provide for a 3m median shoulder.
 - I. DB Co's design shall include the full depth removal of the existing concrete road base in some sections of the OR174 travel lanes within the area of the Works as specified under Clause 6.11 of this Article 6.
 - J. DB Co shall design and construct a new signalized intersection to the east of the existing OR174 and Trim Road intersection, such that the intersection is beyond the east terminus of the Tail Tracks, including associated Track bumper stop and other Trackwork appurtenances.
 - K. DB Co shall design and construct localized grading adjacent to existing ditches and new drainage facilities including but not limited to catch basins, maintenance holes, oil and grit separators, curb and gutters, storm sewers, and correction of road cross falls to ensure positive drainage along and across OR174 so that OR174 drainage requirements are satisfied according to the criteria specified in the City of Ottawa Sewer Design Guidelines. For overall drainage requirements criteria refer to Article 5 - Drainage and Stormwater Management Design Criteria, of this Part 2.
 - L. DB Co shall design and construct all impacted Roadway elements at tie-in locations and use appropriate transitions to match existing conditions. DB Co shall also design and construct all necessary road realignments, widenings, and relocation of any interchange exit and entrance ramp sections, loops, and ramp junctions that may be impacted as a result of OR174 improvements or in order to support the construction staging of the Works.
- (iv) DB Co shall design and construct all and any modifications, relocation, and reconstruction of the aboveground and underground utilities, lighting, and traffic signal improvements necessary to support the OR174 road improvements and construction of Works. All such utility works shall satisfy the City's utility circulation and permit approval requirements as required under Article 8 - Utility Infrastructure Design Criteria of this Part 2.
 - (v) DB Co shall ensure that any improvement on OR174 will not compromise the vertical clearance under the existing and new Overhead structures over OR174. For minimum clearance criteria acceptable for Overhead structures refer to Article 4 – Structural Design Criteria and Requirements of this Part 2.

- (vi) Requirements for new MUP in OR174 corridor are referenced in Schedule 15-2, Part 6, Article 3 – Connectivity Requirements. At locations along OR174 corridor, where DB Co shall construct a new MUP, or realign existing MUPs, the location and design of the intended MUP shall not compromise OR174 improvements including its grading and drainage requirements noted in this Part 2. DB Co shall also take into consideration the future ultimate OR174 HOV widening grading and drainage requirements in determining the appropriate location and design of the intended MUPs. DB Co shall demonstrate that a feasible and economical design solution can be achieved without requiring the intended MUPs to be reconstructed or drainage and grading requirements compromised when OR174 is widened to accommodate HOV lanes in the future.
- (vii) DB Co shall undertake a detailed field survey and investigate the existing conditions along the entire OR174 corridor within the Project limits. This review shall include but not be limited to the location and type of the existing concrete barriers, guiderails, structures, traffic signs, poles, creek crossings Culverts, bridge Culverts, ditches, steep slopes, areas of deep excavation and steep grades, all underground and above-ground utilities, and all and any other road side safety Hazard items and issues associated with the existing conditions along and across the road corridor. DB Co shall record the results and findings of the existing conditions survey in a comprehensive existing conditions report and submit a copy of the report to the City, in accordance with Schedule 10 – Review Procedure prior to advancing the design.
- (viii) DB Co shall review all roadside hazard conditions on OR174 and provide adequate mitigation in conformity with current MTO standards including the MTO's Roadside Safety Manual. DB Co shall identify the roadside safety hazards, and substandard conditions due to the widening and realignment of OR174 and interchange ramp modifications. The reduction in length of barriers and guide rails required throughout the OR174 corridor shall consider slope flattening as the preferred method of disposing of excess material. DB Co shall evaluate the design along with the Design Criteria, property constraints, and all roadside safety hazard conditions in the early stages of design development and develop maximum roadside safety design. Where current design guidelines cannot be achieved, DB Co shall identify and provide proposed countermeasures. After receiving endorsement from the City, DB Co shall incorporate the proposed improvements into the design. DB Co shall present and provide documentation of the existing conditions and proposed improvements decisions throughout the length of the Works with respect to roadside safety design in the form of roadside safety review reports stamped by a licensed professional engineer with over 15 years freeway safety review experience and seek approval from the City 30 calendar days prior to completing the preliminary design.
- (ix) There is a +/-150m section of OR174 located approximately +/-680m west of the existing OR174 / Trim Road intersection (at the approximate location of Taylor Creek Culvert crossing) on which a Pavement surface distress is observed on the

existing OR174 travel lanes in both the EB and WB directions of traffic. DB Co shall undertake necessary geotechnical investigations and determine the cause of this pavement distress and design and construct appropriate pavement rehabilitation solutions and necessary improvement countermeasures in order to rectify this Pavement surface distress so that the OR174 pavement and road profile will be improved and meet the appropriate pavement performance requirements, service life, and Design Criteria required under both Clause 6.11 and Article 7 - Geotechnical Design Criteria and Requirements of this Part 2.

- (x) DB Co shall design and construct highway shoulder rumble strips on both outside shoulders and median shoulders of OR174 and all necessary transitions and treatments at the location of exit and entrance ramp terminals as per the requirements of the MTO's directive PLNG-B-004 "Highway shoulder rumble strip application and installation policy, issued by policy and planning branch on 2000-10-23" and its associated appendices.
 - (xi) DB Co shall design and construct the OR174 alignment and cross section at the location of Green's Creek Culvert such that the edge of pavement for the ultimate WB outside lane (Lane 3 as defined in Table 3 of Appendix A of this Part 2) will match the existing edge of pavement of the existing WB outside lane. All the necessary roadway widening to accommodate the Green's Creek Culvert replacement shall be constructed to the south of the above noted WB outside lane and contained within the Lands.
 - (xii) DB Co shall design and construct the OR174 / Montreal Road interchange Bridge Structure and associated road cross-section elements and speed change ramps to their ultimate requirements to accommodate the ultimate widening and improvements required for HOV lane improvements and as specified under Appendix A, Table 3, of this Part 2. For added clarity, DB Co shall demonstrate in the preliminary design stage how DB Co's proposed OR174 design can accommodate the future HOV lanes widening and improvements without any modifications or alterations to DB Co's proposed OR174 / Montreal Road interchange Bridge Structure when the HOV lanes are implemented along OR174 corridor. For additional information, DB Co shall refer to requirements of Clause 6.19(c) and Article 4 – Structural Design Criteria and Requirements, of this Part 2.
- (b) Blair Road
- (i) DB Co shall design and construct all improvements and modifications for Blair Road, including the existing intersections, and interchange ramps that are necessary in order to support the construction of Works. Refer to Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access, for the description of necessary site-specific improvements on affected Roadways, intersections and interchange ramps, in order to accommodate the appropriate traffic and transit operations under staged conditions, including conditions for final reinstatement requirements.

(c) Montreal Rd / OR174 Interchange

- (i) DB Co shall design and construct the Montreal Road/ OR174 interchange, including all associated ramp terminals, to meet the Design Criteria requirements and corresponding minimum lane configuration diagrams shown in Appendix A and Appendix B of this Part 2, respectively. Refer to Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access, for the description of necessary site specific improvements on affected Roadways, ramps, and intersections in order to accommodate the appropriate traffic and transit operations under staged conditions.

A. DB Co shall coordinate the design of traffic signals with the City for the interchange, in accordance with Clause 6.14 of this Part 2 as well as undertake a detailed intersection multi-modal operation and level of service analysis.

- i. DB Co shall demonstrate the traffic operations impacts associated with the necessary improvements on the existing signalized intersections and interchange ramps do not cause traffic queues that reach the mainline of OR174 and are acceptable and feasible considering projected traffic volumes, expected transit operations, and pedestrian and cyclist movements.
- ii. DB Co shall develop a Synchro model based on existing conditions that includes the two ramp intersections and the intersection of Montreal Road and Shefford Road at the interchange. DB Co shall use the City supplied existing signal timing, phasing, and volumes for the existing Synchro model.
- iii. DB Co shall perform peak hour field observations and calibrate the Synchro/Sim Traffic model to reflect observed conditions. DB Co shall develop models for all phases of construction and the ultimate condition, using the calibrated existing Synchro model.
- iv. DB Co shall prepare a traffic signal analysis report documenting the existing conditions to compare to the proposed construction phasing and ultimate conditions.
- v. The results of the intersection operations analysis shall include, intersection layout configuration, traffic control types, and auxiliary storage lane requirements as per the requirements of the City of Ottawa TIA guidelines.
- vi. DB Co shall submit to the City of Ottawa the results of above-noted investigations by submitting a traffic analyses report and seek approval from the City of Ottawa at least 20 calendar days prior to initiating the development of geometric design.

- vii. DB Co shall include the existing channelized right turn lane between the WB OR174 off ramp and the WB direction of Montreal Road in the above noted investigations. DB Co shall use the results of the investigations to determine if this channelized right turn lane is necessary to achieve required LOS. If the results of the investigation determine that the existing channelized right turn lane is necessary to achieve required LOS, then DB Co shall include the existing channelized right turn lane in the lane configuration diagrams shown in Appendix A of this Part 2.
- (ii) DB Co shall design and construct Utility Infrastructure and Utility relocations and conflicts in accordance with the requirements of Article 5 – Drainage and Stormwater Management Design Criteria, and Article 8 – Utility Infrastructure Design Criteria, of this Part 2.
- (iii) DB Co shall upgrade the Montreal Road cross-section as per the requirements of the corresponding Design Criteria and lane configuration diagrams specified in Appendices A and B of this Part 2, respectively.
- (iv) DB Co shall design and construct appropriate crossing treatments for pedestrian and cyclists across all Montreal Road/OR174 interchange ramps and Montreal Road intersections.
 - A. The improved Montreal Road cross-section shall accommodate new unidirectional raised cycle tracks within the limits of construction.
 - B. In the WB direction, the raised cycle track shall begin east of the EB on/off ramp intersection, and terminate west of the WB off ramp (connecting back into the existing on road cycling lane).
 - C. In the EB direction, the cycle track shall begin just west of the WB on/off ramp intersection, and terminate just east of the EB intersection, connecting back into the existing on road cycling lane.
 - D. DB Co shall segregate the proposed raised cycle tracks from the outside (curbside) lane on either side of the Roadway by a 0.6m wide hard surface boulevard.
 - E. For additional requirements related to pedestrian and cyclist connectivity treatments and Station facilities used by pedestrians refer to Schedule 15-2, Part 4 – Stations, and Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
- (v) DB Co's design shall accommodate and reconstruct to current standards all accesses from / to the adjacent properties including [REDACTED] that are impacted as the result of Works on Montreal Road.

- (d) Jeanne d’Arc Boulevard/OR174 Interchange
- (i) DB Co shall design and construct the necessary improvements on the above-noted interchange ramps intersecting Jeanne d’Arc Boulevard as follows:
- A. DB Co shall remove the northern portion of the existing free flow N-W ramp, and direct traffic through the existing signalized intersection. DB Co shall design and construct a modification to the existing bus ramp to receive and redirect the N-W ramp traffic back to OR174 speed change lane in the WB direction.
- i. DB Co shall repurpose a portion of the land vacated by the removal of the free-flow portion of the N-W ramp to extend the SB right turn lane northerly towards the existing diverge point of the existing free-flow N-W ramp, including pavement markings and signage, as required, to allow the northern portion of this auxiliary lane to function as a bus lay-by area to accommodate transit vehicles during the afternoon peak period, including relocating the west sidewalk and associated utilities as necessary to maintain connectivity. The total length of the SB auxiliary lane shall be a minimum of 40m in length for transit vehicle lay-by storage, in addition to the length required for the SB right turn lane based on the results of the traffic analysis as noted below. The 40m storage noted above should be provided on the northern portion of the above noted SB right turn auxiliary lane.
- B. DB Co shall remove the southern portion of the Jeanne d’Arc Boulevard NB free flow off-ramp that currently leads the traffic to the existing free flow S-W loop ramp, and direct traffic through the existing signalized intersection. DB Co shall replace the above-noted free flow off-ramp with an urbanized ramp intersection that involves a tighter yet feasible curb turning radii and loop ramp geometry considering the governing geometric Design Criteria.
- C. For additional improvements required to enhance pedestrian and cyclist connectivity on both intersections at Jeanne d’Arc Boulevard interchange location refer to Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
- D. In order to address the above-noted improvements, DB Co shall also undertake a detailed traffic/ transit analysis and demonstrate the traffic impacts associated with the necessary improvements on the existing signalized intersections and interchange ramps are feasible and acceptable considering projected traffic volumes considering a 2031 traffic horizon, expected transit operations, and pedestrian and cyclist movements. DB Co shall submit to the City of Ottawa the results of the above-noted investigations by submitting a traffic analysis report and seek approval

from the City of Ottawa at least 20 days prior to initiating the development of preliminary design.

- (e) Champlain St / OR174 Interchange
 - (i) DB Co shall design and construct all interchange ramp modifications necessary to accommodate the OR174 widening or realignment as required for the Work.
- (f) Tenth Line / OR174 Interchange
 - (i) DB Co shall design and construct all interchange ramp modifications necessary to accommodate the OR174 widening or realignment as required for the Work.
- (g) Trim Road / OR174 Intersection and Trim Park and Ride
 - (i) DB Co shall design and construct a realigned Trim Road that extends from the eastern leg of the roundabout at the existing Trim Road and Taylor Creek Drive/ Dairy Drive, runs along the south and east sides of the proposed Trim Park and Ride facility, intersects at-grade with the OR174 at a new location east of the existing Trim Road / OR174 intersection, and terminates at an intersection with Jeanne d'Arc Boulevard North, north of OR174. For added clarity, all references to Jeanne d'Arc Boulevard North, hereinafter, in this Article 6 and Part 2 Appendices shall include the Roadway sections of Jeanne d'Arc Boulevard North extended from the west of Trim Road towards Inlet Private. All Roadway Works shall be contained within the Lands as defined in Schedule 20 – Lands.
 - (ii) DB Co shall design and construct a new signalized intersection for the proposed realigned Trim Road / OR 174 at-grade crossing, which shall be located at a feasible location beyond the east terminus of the Tail Tracks and east of the Trim Park and Ride to replace the existing signalized intersection for Trim Road and OR174. The design and construction of the proposed signalized intersection shall meet the applicable reference documents and design requirements specified in this Part 2, applicable Design Criteria specified in Appendix A and shall accommodate the requirements of the proposed minimum lane configurations specified in Appendix B.
 - A. DB Co shall design and construct all the necessary Pavement widening and new improvements to accommodate the appropriate merging and diverging transitions for the westbound through lanes on either side of the realigned Trim Road/ OR174 signalized intersection per the requirements of the TAC GDGCR.
 - i. DB Co shall perform additional traffic analysis in order to determine the optimal length for the development and termination of the outer WB through lanes on either side of the realigned Trim Road/ OR174 signalized intersection in order to maximize the

operational performance of both the northbound triple left turn and westbound through movements.

- B. DB Co shall provide pedestrian crosswalks and bi-directional cycling crossride facilities on both the east and south legs of the intersection of realigned Trim Road / OR174;
 - C. DB Co shall design and construct appropriate channelized concrete islands as per the City's standards to accommodate the right turning traffic and pedestrian and cyclists' movements, as a minimum, at the northeast and southeast quadrants of the intersection; and,
 - D. DB Co shall design and construct the necessary improvements of the proposed realigned Trim Road and OR174 intersection so that all the EB right-turning traffic will be prohibited at the signalized intersection and instead shall be accommodated through the proposed OR174 W-S ramp junction at the existing Trim Road located west of the proposed Park and Ride Facility.
 - i. DB Co shall accommodate the EB right turn movements via a new proposed W-S ramp from the OR174 to the existing Trim Road, intersecting with the west general traffic access to the Trim Park and Ride facility. The design of the proposed OR174 W-S ramp shall provide for a "free-flow" southbound movement into a dedicated southbound lane on the existing Trim Road.
- (iii) DB Co shall design and construct the intersection of the realigned Trim Road and Jeanne d'Arc Boulevard North to accommodate the Design Criteria specified in Appendix A of this Part 2 and, as a minimum, the proposed minimum lane configurations specified in Appendix B of this Part 2.
- (iv) DB Co shall decommission the existing free flow W-S ramp that is located in the SW quadrant of the existing OR174 / existing Trim Rd intersection and design and construct a new W-S free flow ramp as per the appropriate standards referenced in this Article 6 that shall be located south of the existing SWM pond in that same quadrant. DB Co shall also design and construct a controlled intersection at the location where the proposed OR174 W-S ramp intersects with the existing Trim Road and west general traffic access to the Trim Park and Ride to accommodate, as a minimum, the configuration illustrated in Appendix B of this Part 2.
- (v) DB Co shall decommission the section of the existing Trim Road located between the existing access to 1125 Trim Road, through the existing Trim Road and OR174 intersection.
- A. DB Co shall maintain and provide for a 2-way access to and from the existing City yard property located at 1125 Trim Road at all times both

during construction and ultimately post commissioning to the satisfaction of the City.

- B. DB Co shall design and construct all necessary improvements on the adjacent local networks including but not limited to the upgrades required on the intersections of Jeanne d'Arc Boulevard with existing Trim Road and realigned Trim Road to accommodate the [REDACTED] facility's yard operation and traffic access to / from OR174.
- (vi) DB Co shall undertake necessary traffic and transit analysis including but not limited to level of service, capacity and delay analysis using the projected vehicular traffic for 2031 horizon, and movements of pedestrians and cyclists for the existing roundabout at the intersection of Trim Road and Taylor Creek Drive/ Dairy Drive. DB Co shall submit to the City and seek City's approval at least 20 days prior to PFDD submission regarding the findings and recommendations of the above-noted traffic analysis including all improvements necessary to ensure the roundabout will operate in an acceptable level of service. Upon the City's approval of the proposed improvements, DB Co shall design and construct all necessary improvements and modifications on the existing roundabouts including but not limited to additional widening and reconstruction required on the roundabout and on the approach and exit lanes, and upstream and downstream tapers and transitions as required.
- (vii) DB Co shall design and construct all necessary improvements on the existing and proposed roads and intersections to accommodate the termination of the Dairy Drive in the form of a cul-de-sac facility at an appropriate location in the close proximity of the existing Dairy Drive / South Frontage T-intersection within Lands as defined in Schedule 20 – Lands
- (viii) The proposed intersections and road network design for the existing and realigned Trim Road and all other new or impacted intersections and accesses shall accommodate all traffic movements accessing OR174 and the local road network including, but not limited to, Trim Road, Jeanne d'Arc Boulevard North, Inlet Private, Trim Park and Ride, South Frontage, Dairy Drive, Taylor Creek Drive and associated property accesses that are affected as the result of Works. DB Co shall undertake necessary traffic analysis and confirm the geometry, lane configuration, and traffic control types for all new and impacted Roadways, accesses, intersections, and roundabouts within the local road network can feasibly accommodate the existing, staged construction and future traffic demand considering projected traffic and transit volumes for a 2031 horizon year, including pedestrian and cyclist movements.
- A. The analysis shall include, but not be limited to, a network analysis and intersection operation analysis, including traffic operations for the existing Trim Road and OR174 intersection, new proposed signalized intersection for Trim Road and OR174, Trim Park and Ride and existing roundabouts, including area Roadways (including, but not limited to, Jeanne d'Arc

Boulevard North, Inlet Private, Trim Park and Ride, South Frontage, Dairy Drive and associated property accesses).

- B. DB Co's traffic and transit analysis shall address all vehicular access, traffic and transit requirements associated with the existing and realigned Trim Road / OR174 intersection improvements as a whole. The analysis shall also consider existing and potential developments in the area, and connectivity for pedestrians and cyclists.
 - i. DB Co shall also consider any transit priority measures required along both the existing and realigned Trim Road and the associated intersections that are impacted as the result of the Works in order to optimize transit operations in/out of Trim station and in/out of Trim Park and Ride facility. DB Co shall seek the approval of the City and OC Transpo prior to proceeding with the implementation of any proposed transit signal priority measures.
 - C. The results of the intersection operations analysis shall include, but not be limited to intersection layout configuration, traffic control types, and auxiliary storage lane requirements as per the requirements of the City of Ottawa TIA guidelines.
 - D. DB Co shall summarize and submit the findings/ recommendations from the analysis in a detailed report to the City of Ottawa for approval in the early stages of the preliminary design, a minimum of 20 Business Days prior to initiating the detailed design.
- (ix) The design and construction of the Trim Road and OR174 intersection modifications shall account for and include all modifications necessary to accommodate the requirements for the OR174 widening or realignment and Trim Park and Ride Facility improvements, as required to construct the Works.
 - (x) DB Co shall confirm through the traffic analysis noted above that the existing intersections at Trim Road and Jeanne d'Arc Boulevard North / Inlet Private and at Trim Road and Dairy Drive have sufficient traffic capacity for the projected traffic volumes. Based on the results of the traffic analysis, DB Co shall design and construct the required modifications, including intersection control type, to the intersections to provide for the additional capacity required..
 - (xi) DB Co shall design and construct all pedestrian and cycling facilities per the requirements of Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements.
 - (xii) Trim Park and Ride Facility:
 - A. DB Co shall design and construct the Trim Park and Ride Facility to include a bus station Facility with dedicated space for public parking. The

bus station Facility shall include a bus loop, bus bays, bus lay-bys, and bus station Platforms, ensuring all necessary bus movements are accommodated per OC Transpo's Transitway and Station Design Guidelines.

- i. The proposed improvements, and the specific functional and performance requirements, such as number of parking spaces, bus Platforms, and bus lay-bys and bus bays required for the Trim Park and Ride Facility shall meet the requirements of Schedule 15-2, Part 4, Article 3 – Station Specific Architectural Design Criteria and Schedule 15-2, Part 4, Appendix A.
- B. DB Co shall design and construct all the proposed improvements at the Trim Park and Ride as per the standards and requirements specified in Clause 6.9 of this Part 2, unless specified otherwise in Clause 6.19 of this Part 2.
- C. DB Co's design and construction of the Roadway improvements for Trim Park and Ride shall meet the requirements of Clause 6.18 of this Part 2.
- D. Refer to Schedule 15-2, Part 6, Article 2 – Design Criteria for the connectivity, landscape, and streetscape requirements for the Trim Park and Ride Facility.
- E. DB Co shall design and construct all temporary bus detours, temporary transit operations, traffic staging and access management strategies to ensure access and current functionality of the existing Park and Ride Facility is maintained during staged construction and temporary conditions. Refer to Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access, for the specific improvements noted above.
- F. DB Co shall design and construct all internal access road layouts to accommodate all mixed traffic access from the existing and realigned Trim Road. The layout of the Park and Ride Facility shall accommodate the turning movements of the appropriate design vehicle according to Clauses 6.8 and 6.9 of this Part 2.
- G. DB Co shall design and construct an access/egress to the mid-block of the proposed realigned Trim Road on the east side of the Trim Park and Ride facility in the form of a signalized T-intersection. The lane configuration for the T-intersection with the realigned Trim Road shall meet the requirements of Appendix A and Appendix B of this Part 2.
 - i. In addition to the lane diagrams shown in Appendix B of this Part 2, DB Co's design and construction of this intersection shall

prohibit the NB left turn movements from the realigned Trim Road in the Trim Park and Ride through this T-intersection

- H. DB Co shall design and construct the Trim Park and Ride Facility to include an exclusive bi-directional bus-only connection including designated single bus lanes, one in each NB and SB directions to accommodate OC Transpo's transit vehicle access/egress to the proposed Trim Park and Ride bus loop facility. The above-noted exclusive bus-only connection shall be located within the existing Trim Road corridor south of OR174 and connect the proposed controlled intersection of OR174 W-S ramp and west general access to the west side of the Trim Park and Ride bus loop in such a way that transit delays resulting from operating in mixed traffic (including pedestrian and cyclist traffic) are minimized. DB Co shall also design and construct a secondary bus access / egress to the bus loop internally through Trim Park and Ride. The secondary bus access / egress to the bus loop shall connect to the proposed signalized T-intersection at realigned Trim Rd located east side of the Trim Park and Ride and include appropriate lane configurations and traffic control improvements to accommodate the necessary Transit operations, at a minimum.
- I. DB Co shall evaluate the existing conditions and provide any widening or Pavement improvements requirement of the existing roads to accommodate safe bi-directional operation of transit vehicles. DB Co shall design and construct the widening within the existing ROW and within the Lands identified in Schedule 20 - Lands.
- J. DB Co shall design and construct all intersections to accommodate transit bus access and operations between the local road networks and the proposed bus station at Trim Park and Ride facility.
 - i. With the exception of the proposed Trim Road / OR174 intersection and the proposed T-intersection to the mid-block of the proposed realigned Trim Road on the east side of the Trim Park and Ride facility for which DB Co shall design and construct signalized intersections, for all other accesses from / to the Trim Park and Ride new intersections, and intersections that are impacted as the result of Works, DB Co shall determine the appropriate traffic control type and necessary intersection improvements required at all existing and proposed intersections and, where warranted, install new transit priority measures to provide precedence to transit operations.
 - ii. DB Co shall develop and confirm type of transit priority measures for each intersection, and shall seek approval from the City and OC Transpo prior to proceeding with the implementation of the proposed transit priority measures.

- K. DB Co shall design and construct the Trim Park and Ride Facility so the development meets the intersection capacity requirements based on the City of Ottawa's TIA guidelines.
- L. DB Co's design and construction of the Trim Park and Ride Facility shall not reuse the existing Pavement structure either partially or totally in the new improvements unless DB Co can satisfy the following conditions:
 - i. DB Co shall undertake a traffic assessment, detailed field survey, geotechnical investigation to evaluate the existing ground conditions, Pavement structure, and associated drainage conditions of the existing parking site.
 - ii. DB Co shall identify any risks associated with the substandard drainage and underlying ground conditions, evaluate the existing Pavement failure patterns and report on the adequacy of the existing subgrade and Pavement structure, and calculate the remaining service life of the existing Pavement structure using appropriate lab and field tests and design methods. DB Co shall develop site specific improvements and Pavement rehabilitation strategies in the proposed design and construction of Trim Park and Ride Facility to demonstrate that an acceptable design service life of the Pavement can be achieved that can meet or exceed the requirements of Clauses 6.10, 6.12, and 6.13 of this Part 2, and Clause 4.3 - Table 1-4.1 of Schedule 15-2, Part 1 – General Requirements.
 - iii. DB Co shall submit the findings, results, and recommendations of the above-noted investigations in the form of a comprehensive report and receive approval from the City of Ottawa prior to advancing the design that would make use of the existing Pavement in the proposed design and construction of the Trim Park and Ride Facility.
- M. DB Co shall design and construct the SWM requirements associated with the improvements to the Trim Park and Ride per Article 5 – Drainage and Stormwater Management Design Criteria, and Article 8 – Utility Infrastructure Design Criteria, of this Part 2.

(h) Richmond Road Complete Streets Improvements

- (i) The Works cover a section of Richmond Road, approximately 1,925m long, between a point 225m west of the existing McEwen Avenue / Richmond Road intersection and a point 140m east of the existing Cleary Avenue / Richmond Road intersection. The construction shall include the full reconstruction of all existing intersections impacted by the Richmond Road Complete Streets improvements.

- A. DB Co shall coordinate and make necessary arrangements with the City to ensure a feasible transition at the extents of the Works, integrating the proposed Richmond Road Complete Streets improvements with the existing lane configurations.
- (ii) DB Co shall design and construct the proposed improvements on Richmond Road according to the Design Criteria and minimum auxiliary storage length requirements included in Appendix A of this Part 2.
- (iii) DB Co shall limit the impacts to existing properties as a result of the design and construction of the vertical alignment in accordance with Clause 6.4 of this Part 2 and grading requirements in accordance with Clause 6.12 of this Part 2.
- (iv) DB Co shall ensure all grading along Richmond Road will contain all overland stormwater flows originating from within the City's ROW, maintaining positive drainage towards the appropriate municipal stormwater infrastructure, avoiding overflow onto adjacent private properties.
- (v) DB Co shall design and construct municipal infrastructure and utility relocations and conflicts in accordance with the requirements of Article 5 – Drainage and Stormwater Management Design Criteria, and Article 8 – Utility Infrastructure Design Criteria, of this Part 2.
- (vi) DB Co shall design and construct the intersections along Richmond Road impacted by the Works to meet the corresponding minimum lane configuration diagrams shown in Appendix B of this Part 2. DB Co shall design and construct the Richmond Road corridor and all intersections, including the improvements required on all impacted cross-roads, to meet the requirements of Complete Street standards. DB Co's design shall accommodate the following specific intersection improvements:
 - A. DB Co shall realign McEwen Avenue with Richmond Road to eliminate the skew angle at the existing intersection location, as per the TAC GDGCR.
 - B. DB Co's design shall accommodate feasible traffic operations, including fully protected left-turn signal phases, in both the EB and WB directions at the intersection of Richmond Road / Woodroffe Avenue. DB Co shall design and construct all the necessary Roadway and intersection improvements to avoid conflicting with opposing traffic movements and the bi-directional cycling facility specified on the southern (NB) approach to the intersection.
 - C. DB Co shall design and construct Ancaster Avenue between Richmond Road and Byron Avenue to prohibit the northbound left turn movement from Ancaster Avenue onto Richmond Road, including traffic signs.

- D. As per Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements, Redwood Avenue shall be closed at Richmond Road. In addition, DB Co shall realign Redwood Avenue to form a T-intersection with Byron Avenue at a right angle, eliminating the existing direct vehicular access between Richmond Road and Byron Avenue using Redwood Avenue. DB Co shall realign the new intersection at Redwood Avenue in-line with the proposed bi-directional cycling crossing on the northern (SB) approach to Cleary Avenue as per Clause 6.19(h)(vii)(C) of this Part 2.
- E. DB Co shall formally close vehicular access from Edgeworth Avenue to Richmond Road. DB Co shall design and construct a 3.0m paved bi-directional bike lane and sidewalk connecting Edgeworth Avenue with Richmond Road.
- F. For additional related road closures as a result of the Byron Linear Park improvements, DB Co shall refer to Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
- (vii) Cycling facilities on Richmond Road shall be in the form of unidirectional raised cycle tracks on the north and south side of Richmond Road, unless otherwise specified in the segments along Richmond Road noted below:
 - A. DB Co shall design and construct bi-directional raised cycle tracks on the south side in the section of Richmond Road between NCC's Pinecrest Creek Pathway connection to Richmond Road immediately west of [REDACTED] to the existing western dead-end limit of Byron Avenue, west of where Byron Avenue turns to Richardson Avenue.
 - B. DB Co shall design and construct bi-directional raised cycle tracks on the south side in the section of Richmond Road between the SW and SE quadrants at the intersection of Richmond Road and Woodroffe Avenue.
 - C. DB Co shall design and construct a bi-directional cycling pathway between the proposed cross-ride on Richmond Road, east of Cleary Avenue and the realigned Redwood Avenue intersection at Byron Avenue as per Clause 6.19(h)(vi)(D) of this Part 2, forming a north-south cycling facility connection between Richmond Road and Byron Avenue / Redwood Avenue.
- (viii) Refer to Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements, for additional design and construction requirements, including but not limited to, access modifications, landscaping, road furniture, and streetscapes elements along the Richmond Road and Byron Avenue.
- (ix) DB Co shall design and construct the signalized intersections along Richmond Road to include the improvements illustrated in Appendix D of this Part 2, but not

limited to, intersection widenings and realignments, travel lanes and auxiliary lanes, Pavement markings, intersection crossing treatments, and provisions for all pedestrian and cycling facilities and connections. The signalized intersections along Richmond Road include McEwen Avenue, New Orchard Avenue, Woodroffe Avenue, and Cleary Avenue.

- A. DB Co shall design and construct the above-noted intersection improvements to include the typical characteristics and elements for Protected Intersections as per Clause 6.6 (e) and Appendix D of this Part 2.
 - B. DB Co shall design and construct raised intersections at the intersections of New Orchard Avenue and Cleary Avenue on Richmond Road per the requirements of Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
- (x) DB Co shall design and construct signalized mid-block pedestrian crossing facilities in the form of City’s typical “Type B – PXO” as per the City of Ottawa’s Document 1 - Examples for PXO Types and Document 2 - City of Ottawa PXO Program at the following locations on Richmond Road:
- A. Approximate mid-lock location between Hartleigh Avenue and Richardson Avenue;
 - B. Immediately across from the Allison Avenue / Byron Avenue intersection;
 - C. Approximately 20m east of the existing Lockhart Avenue / Richmond Road intersection; and,
 - D. Approximately 166m east of the existing Lockhart Avenue / Richmond Road intersection.
- (xi) DB Co shall design and construct raised pedestrian and cycling crossings across all private approaches and crossroads listed below:
- A. Ancaster Avenue, and,
 - B. Lockhart Avenue.
- (xii) DB Co shall design and construct the necessary temporary improvements on Richmond Road as required to support unobstructed pedestrian access and uninterrupted traffic and transit operations during staged construction and temporary conditions. For the details of such temporary improvements, refer to Schedule 15-2, Part 7 - Traffic and Transit Management and Construction Access.
- (xiii) In extremely constrained conditions, such as the EB right turning movement at the intersection of Richmond Road and Woodroffe Avenue, where accommodations for the controlling design vehicle turning movements may not be feasible within

available ROW and/or without compromising planning, and design requirements specified in this Part 2 and Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements, DB Co shall identify and closely coordinate with the City to develop a feasible alternative design solution.

- A. The development of the design solution shall include the evaluation of other feasible design solutions to consider the advantages and disadvantages of each alternative.
 - B. DB Co shall demonstrate to the City, early in the preliminary design stage, how the necessary turning movements can be accommodated by compromising some design elements without compromising public safety or putting vulnerable users at risk. DB Co's proposed design solution shall be subject to the requirements of Schedule 15-2, Part 2, Article 6.18 – Road Safety Audits and Road Safety Design Reviews.
 - C. For any alternative design solutions, DB Co shall receive approval from the City 60 calendar days prior to issuing their Pre-Final Design Development submission per the requirements of Schedule 10 – Review Procedure for any such design compromises required in order to accommodate the controlling design vehicle turning movement.
- (xiv) DB Co's design and construction of Richmond Road shall reference Schedule 15-2, Part 4, Appendix E for permanent bus stop locations and meet the requirements of Article 6.9 of this Part 2.
- (i) Carling Avenue
- (i) DB Co shall design and construct the necessary temporary improvements on Carling Avenue as required in the section between the west of Edgeworth Avenue and the east of Connaught Avenue to support the pedestrians' accesses and uninterrupted traffic and transit operations during staged construction and temporary conditions. For the details of such temporary improvements refer to Schedule 15-2, Part 7- Traffic and Transit Management and Construction Access.
 - (ii) DB Co shall design and construct the necessary permanent improvements on Carling Avenue cross-section and on all accesses, ramps and intersections between the west of Edgeworth Avenue and the east of Connaught Avenue that are impacted as the result of Works as follows:
 - A. DB Co's design shall accommodate and improve all accesses from / to the adjacent properties including [REDACTED] that are impacted as the result of Works on Carling Avenue.
 - B. DB Co shall upgrade the Carling cross-section as per the requirements of the corresponding Design Criteria and lane configuration diagrams specified in Appendices A and B of this Part 2, respectively. The

improved Carling Avenue cross-section shall accommodate new raised cycle tracks for both the EB and WB directions of traffic. DB Co shall segregate the proposed raised cycle tracks from both the adjacent sidewalks and the adjacent curb lane by at least minimum 0.3m hard surface buffer. For additional requirements related to pedestrian connectivity treatments and LRT and bus station facilities used by pedestrians refer to Schedule 15-2, Part 4 – Stations, and Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.

- C. DB Co's design shall improve the proposed Lincoln Fields bus station and PPUDO access from / to Carling Avenue so that the existing signalized intersection layout and geometry will be improved as required in order to feasibly accommodate necessary bus and general traffic operations as well as non-vehicular movement and access including appropriate travel lanes, auxiliary lanes, sidewalk, median improvements, crosswalks and cross-rides and necessary transitions to tie-in to the existing conditions. For the proposed Lincoln Fields Bus station and PPUDO functional requirements refer to Schedule 15-2, Part 4 – Stations.
- D. DB Co shall design and construct a new signalized mid-block pedestrian crossing facility with associated cross-rides, crosswalk and a mid-block refuge treatment to allow for a 2-stage pedestrian crossing operation. DB Co shall locate the proposed pedestrian crossing facility at an approximate mid-block location between Lincoln Fields bus station access and the existing SJAM Parkway ramps, across the existing pathway ([REDACTED]) connection to the Carling Avenue southern sidewalk. The proposed pedestrian crossing signal shall accommodate the necessary signal heads and push buttons at all necessary locations and shall meet the requirements of the OTM (OTM Book 15, OTM Book 18, and OTM Book 12) guidelines.
- E. In all cases noted above, the intersections geometry layout shall accommodate the appropriate design vehicle and the intersection Pavement marking design shall provide for cross-ride facilities as per the requirements of the OTM Book 18 guidelines.

(j) Iris Street

- (i) DB Co shall design and construct the necessary temporary improvements on Iris Street and its impacted intersections, and bus transit facilities between north of Carling through to Baseline that are impacted as the result of Works as required to support the pedestrians' accesses and uninterrupted traffic and transit operations during staged construction and temporary conditions. For the details of such temporary improvements refer to Schedule 15-2, Part 7- Traffic and Transit Management and Construction Access.

- (ii) DB Co shall design and construct the necessary permanent improvements on Iris Street geometry and layout and on all Iris Street intersections and private property driveways that are impacted as the result of Works.
 - A. DB Co shall design and construct a road / rail grade separated facility including approach embankments under Iris Street at the mid-block location between Iris Street intersections with Adirondack Drive and Parkway Drive, where the proposed Iris Street crosses over the proposed LRT corridor. For the details of the proposed bridge structure requirements refer to Article 4 – Structural Design Criteria and Requirements of this Part 2.
 - B. DB Co's design shall accommodate the necessary permanent road cross-section improvements proposed for the Iris Street as per the requirements of the corresponding Design Criteria and lane configuration diagrams specified in Appendices A and B of this Part 2, respectively.
 - i. DB Co's design shall accommodate a new mid-block controlled pedestrian crossing on Iris Street in order to connect the proposed MUPs on the south side and north side of Iris Street. The design of the proposed pedestrian crossing facility shall meet the requirements of the OTM (OTM Book 15, and OTM Book 12) guidelines. DB Co shall select the optimum location of the proposed pedestrian crossing facility on Iris Street to enhance vehicular and non-vehicular traffic safety, operations and connectivity at this location considering the Iris Street vertical profile geometry, the PPUDO locations, the MUP realignments and grades, the bus stop locations, and the necessary stopping sight distance requirements as per the Iris Street corresponding Design Criteria. In particular, the location of the proposed pedestrian crossing facility shall maintain the grades of the proposed MUPs not to exceed 5%. For additional requirements for the proposed MUPs, PPUDOs and pedestrian connectivity refer to Schedule 15-2, Part 4 – Stations, and Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
 - C. DB Co shall design the Iris Street/LRT grade separated facility so that the Iris Street grade raise profile would be constructed on an embankment and the Track profile would be partially constructed in a cut section. The recommended profile for Iris Street grades shall be limited to a range between 3.5% and 5%. Only under constrained conditions and in short length sections less than 15m, maximum grades greater than 5% up to an absolute maximum of 6% may be acceptable. In all cases, DB Co's proposed profile design shall meet all the requirements of vertical curve geometry as per this Appendix A and applicable vertical curve and profile geometries and sight distance requirements as per this Article 6 as well as

the vertical clearance required underneath the bridge deck as per Article 4- Structural Design Criteria and Requirements of this Part 2.

- D. DB Co shall design and construct the necessary grading, SWM and drainage facilities, and vertical support systems for the proposed Iris Street in order to minimize the area impacts associated with the road embankment footprint and consistent with the requirements of the proposed Pinecrest Creek realignment including its associated grading and the proposed Pinecrest bridge Culvert. For additional requirements for the proposed Pinecrest Creek realignment and its associated grading refer to Article 5 – Stormwater Management and Drainage of this Part 2. For additional requirements for the proposed Pinecrest Creek bridge Culvert structure under Iris Street refer to Article 4 – Structural Design Criteria and Requirements of this Part 2. For the specific landscaping requirements of Pinecrest Creek realignment refer to Schedule 15-2, Part 6, Article 4 – Site Specific Desired Outcomes.

(k) Scott Street

- (i) In addition to all the necessary temporary improvements including traffic staging detours intersections, and bus transit facilities required on Scott Street as specified in Schedule 15-2, Part 7- Traffic and Transit Management and Construction Access, DB Co shall also design and construct the following final improvements and reinstatements as a part of the Scott Street reinstatement Works at the western leg of the Churchill Ave. / Scott Street, in order to meet the requirements of the existing [REDACTED] business property located at [REDACTED]:

- A. DB Co shall design and construct all the reinstatements and improvements as required for the section of Scott Street west of Churchill Avenue as described below:
- i. DB Co shall design and construct Scott Street west of Churchill Avenue to a minimum 6.0m wide urban cross section approaching the existing cul-de-sac. The cross section shall include a new 1.8m wide sidewalk along the south side and maintain all existing connections to existing pathways and sidewalks. This section of Scott Street shall be signed as a fire route.
 - ii. DB Co shall reinstate and improve the existing or reconstruct a new paved cul-du-sac that meet the requirements of the above-noted restaurant facility's general traffic and emergency and maintenance vehicular access using the appropriate design vehicles as specified in Appendix A of this Part 2.
 - iii. DB Co shall design and construct five perpendicular parking spaces on the north side of Scott Street and two perpendicular parking spaces on the south side of Scott Street, between Churchill

Avenue and the Scott Street cul-de-sac, per the requirements of the City of Ottawa's Parking By-Law No. 2003-530. DB Co's design shall include paved parking spaces.

- iv. DB Co shall design and construct all necessary improvements required at Scott Street / Churchill Avenue intersection associated with the above noted reinstatement and new construction.
- (ii) In addition to all the necessary temporary improvements including traffic and transit staging detours, and bus transit facilities required on Goldenrod Driveway and Scott Street / Goldenrod Driveway intersection as specified in Schedule 15-2, Part 7- Traffic and Transit Management and Construction Access, DB Co shall also design and construct the following final improvements and reinstatements as a part of the Scott Street and Goldenrod Driveway improvement Works:
- A. DB Co shall design and construct all necessary improvements required on an approximately +/-140m section of Goldenrod Driveway between north of Goldenrod Driveway / Yarrow Driveway intersection and south of Scott Street / Smirle Avenue intersection.
 - i. DB Co's design of horizontal alignment and vertical profile geometry of the proposed Goldenrod Driveway shall accommodate the location and vertical clearance requirements of the new Goldenrod Bridge as per Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements.
 - ii. DB Co's design shall include and accommodate all necessary vehicular and pedestrians and cyclist accesses and sidewalk and pathway connections along and across Goldenrod Driveway and from / to the proposed bus terminal at Tunneys Pasture Station in accordance with Schedule 15-2, Part 4 – Stations.
 - B. DB Co shall design and construct Scott Street between Ross Avenue and Caroline Avenue to meet the requirements of Appendices A and B of this Part 2. DB Co shall design and construct the widening on Scott Street to the north, which shall include all necessary intersection improvements, sidewalk, cycling facilities and pathway connections, to accommodate the movement of all road users, including vehicular traffic, pedestrians and cyclists, within the Scott Street corridor.
 - C. DB Co shall design and construct a new signalized intersection at the location of the Scott Street / Goldenrod Driveway intersection to accommodate all the necessary vehicular, pedestrian, and cyclists movements. DB Co shall design and construct Scott Street / Goldenrod Driveway/ Smirle Avenue to meet the requirements of a typical Protected Intersection as per Clause 6.6(e) of this Part 2.

- i. DB Co shall design and construct a 1.8m raised EB cycle track on the approach and departure from the above-mentioned intersection. On the approaches to the above-mentioned intersection in the WB direction, DB Co shall construct a 1.8m wide WB bike lane. For additional connectivity requirements, refer to Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access.
 - (iii) In extremely constrained conditions where accommodations for the controlling design vehicle turning movements may not be feasible within available ROW and/or without compromising planning, and design requirements specified in this Part 2 and Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements, DB Co shall identify and closely coordinate with the City to develop a feasible alternative design solution.
 - A. The development of the design solution shall include the evaluation of other feasible design solutions to consider the advantages and disadvantages of each alternative.
 - B. DB Co shall demonstrate to the City, early in the preliminary design stage, how the necessary turning movements can be accommodated by compromising some design elements without compromising public safety or putting vulnerable users at risk. DB Co's proposed design solution shall be subject to the requirements of Schedule 15-2, Part 2, Article 6.18 – Road Safety Audits and Road Safety Design Reviews.
 - C. For any alternative design solutions, DB Co shall receive approval from the City 60 calendar days prior to issuing their Pre-Final Design Development submission per the requirements of Schedule 10 – Review Procedure for any such design compromises required in order to accommodate the controlling design vehicle turning movement.
 - (l) Woodroffe Avenue
 - (i) DB Co shall design and construct all temporary improvements and modifications to Woodroffe Avenue from Baseline Road to north of Iris Street, including all affected driveway accesses and intersections in order to support the construction of Works. Refer to Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access, for the description of necessary site-specific improvements on affected Roadways, ramps, and intersections in order to accommodate the appropriate traffic and transit operations under staged conditions.
 - (ii) DB Co shall design and construct all permanent improvements and modifications to Woodroffe Avenue from Baseline Road to north of Iris Street, including all affected driveway accesses, intersections, boulevards, sidewalks and cycle tracks, in order to support the construction of Works as follows:

- A. DB Co shall maintain the existing lane configuration, including number of through lanes and auxiliary lanes, at all the affected intersections along Woodroffe Avenue from Baseline Road to north of Iris Street. DB Co shall maintain the existing storage lengths along Woodroffe Avenue and intersecting roadways.
- B. Where opportunities exist, DB Co shall maximize the width of ultimate urban cross sectional elements on Woodroffe Avenue and provide for the following width requirements:
 - i. The minimum width of the inside lane shall be 3.25m and the minimum width of outside lane shall be 3.5m.
 - ii. The minimum width of auxiliary left turning lanes shall be 3.4m.
 - iii. The desirable minimum width of the boulevard shall be 1.5m between the cycle track and travelled lanes.
 - 1 Where physical constraints exist at the intersection of Iris Street and Woodroffe Avenue, the minimum width of the boulevard shall be 0.5m.
 - iv. The desirable minimum width of the raised cycle track shall be 1.8m.
 - 1 Where physical constraints exist at the intersection of Iris Street and Woodroffe Avenue, the minimum width of the cycle track shall be 1.5m.
 - v. The desirable minimum width of the adjacent sidewalk shall be 2.0m, delineated from the adjacent cycle track by a minimum 0.3m wide hard surfaced buffer.
 - 1 Where physical constraints exist at the intersection of Iris Street and Woodroffe Avenue, the minimum width of the sidewalk shall be 1.5m. Under constrained conditions, the width of the buffer may be incorporated into the width of the sidewalk.
- C. DB Co shall design and construct a new pedestrian crosswalk and crossride facility at the location of the existing midblock crossing between Baseline Road and Adirondack Drive as per OTM Book 15 and Book 18.
 - i. The new midblock crossing facility shall be signalized and include 2 separate sets of pedestrian crosswalk and crossride facilities that are offset from each other on opposite sides (north and south) of

the driveway at the fire station, located at 1300 Woodroffe Avenue.

- ii. The above-noted midblock crossing facility shall be designed and constructed to operate under one coordinated crossing signal operation as per the requirements of Article 6.14 – Traffic and Transit Signals to the satisfaction of the City.

- D. The pedestrian and cycling facilities constructed on Woodroffe Avenue as part of the staged construction improvements specified in Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access shall remain following the construction of Works.
- E. DB Co shall design and construct appropriate transition to tie the new improvements into existing conditions between Baseline Road to north of Iris Street.
- F. DB Co shall ensure all required turning movements are accommodated as per the requirements of Article 6.8 – Design Vehicles to the satisfaction of the City.

(m) Corkstown Road

- (i) DB Co shall design and construct all the necessary temporary improvements on Corkstown Road, associated accesses and intersections, and adjacent Transitway and bus station facilities as required to accommodate pedestrian accesses and uninterrupted traffic and transit operations during staged construction and temporary conditions. For the details of such temporary improvements, refer to Schedule 15-2, Part 7 - Traffic and Transit Management and Construction Access.
- (ii) DB Co shall undertake a TIA study, including a detailed intersection operations and level of service analysis considering vehicular and non-vehicular road users needs on all new and existing intersections on Corkstown Road that are impacted as the result of Works. DB Co shall demonstrate that the traffic and transit operations and associated levels of service are acceptable and feasible using projected traffic volumes and expected transit operations for 2031 horizon year, including pedestrian and cyclist movements.
 - A. The results of the intersection operations analysis shall include, but not be limited to intersection layout configuration, traffic control types, and auxiliary storage lane requirements as per the requirements of the City of Ottawa TIA guidelines.
 - B. DB Co shall submit to the City the results of above-noted traffic analysis report and seek approval from the City at least 20 calendar days prior to initiating the development of the geometric design.

- (iii) DB Co shall design and construct all the permanent improvements for the Corkstown Road corridor, including existing and new intersections and accesses, the adjacent Transitway, bus station facilities and associated bus accesses that are impacted or required as a result of the Works, according to the requirements of this Article 6 and Appendix A and Appendix B of this Part 2.
 - A. DB Co shall be responsible for the design and construction of all such improvements if DB Co's traffic and transit assessment, modelling and analysis determine that additional traffic lanes and improvements are required at any of the new or existing intersection(s) on Corkstown Road corridor in addition to the information shown in Appendix B of this Part 2.
- (iv) DB Co shall design all Transitway bus access requirements from / to Moodie Station to meet the requirements of the City and seek approval from the City as a part of the above-noted traffic analysis report.
- (v) DB Co shall design and construct two PPUDOs on Corkstown Road, one on either side of Moodie Station, per the requirements of Schedule 15-2, Part 4 – Stations.
 - A. If the walking distance between the proposed location of the PPUDO west of Moodie Station and the entrance to Moodie Station is greater than 200m, DB Co shall design and construct an eastbound and westbound bus stop in accordance with the requirements of Schedule 15-2, Part 4, Appendix E, a controlled intersection and PXO across Corkstown Road.
 - i. As a minimum, DB Co shall design and construct a PXO – Type C across Corkstown Road as per OTM Book 15 and the City of Ottawa, Pedestrian Crossover Program and Examples Documents 1 and 2, and Appendix K of this Part 2, to accommodate safe and direct pedestrian access from / to the proposed Transitway bus access at Moodie Station and the surrounding community. DB Co shall complete a traffic study to finalize the traffic control type and lane configuration and review with the City with respect to the type of controlled crossing device to be implemented (pedestrian signal, full traffic signal, or PXO Type B, or C). DB Co shall implement the type of controlled crossing device selected by the City.
 - B. For improvements required on the existing PXO across Corkstown Road east of Moodie Station, DB Co shall refer to Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements. In the design and construction of the above-noted controlled crossings.
 - C. DB Co shall ensure the crossing facilities meet the appropriate sight distance requirements as per the TAC GDGCR and the safety audit requirements as Clause 6.18 of this Part 2.

- D. DB Co shall coordinate with the City to determine the appropriate traffic control type traffic control devices location and bus stop locations at least 20 calendar days prior to the submission of the PFDD and design and construct the controlled intersection to meet the OC Transpo's service and operational requirements accordingly.
- (vi) For additional requirements related to pedestrian connectivity treatments and Station facilities used by pedestrians from to Moodie Station and from / to the PPUDO, refer to Schedule 15-2, Part 4 – Stations, Appendix A of Schedule 15-2, Part 4, and Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
- (vii) DB Co shall design and construct Corkstown Road to permit one-way general traffic in the westbound direction, with general traffic in the eastbound direction limited to between Moodie Drive and the west PPUDO.
 - A. DB Co's design shall accommodate full inbound and outbound bus access at the east bus turnaround for Moodie Station to/ from existing Corkstown Road. At the west end of Moodie Station, bus access shall be provided from the intersection of Moodie Drive and Corkstown Road.
- (n) Moodie Extension Improvements
 - (i) All temporary and permanent improvements associated with the Confederation Line between Bayshore Station and the Moodie LMSF, including Holly Acres Road, Moodie Drive, interchange ramps and intersections, which interfaces between Highway 417 and municipal roadways, shall satisfy the requirements of Schedule 15-2, Part 9, Part B.

6.20 Provincial Roads Improvements

- (a) Highway 417
 - (i) DB Co shall refer to Schedule 15-2, Part 9 – Highway Works for all the design and construction requirements interfacing with MTO's Hwy 417.

6.21 Federal Roads Improvements

- (a) SJAM Parkway – north of [REDACTED] to Dominion
 - (i) DB Co shall design and reconstruct approximately +/- 1,650m of the SJAM Parkway corridor from a section north of [REDACTED], across SJAM Parkway to a section east of the proposed Dominion Station.
 - (ii) DB Co shall design and construct the temporary improvements on the SJAM Parkway eastbound and westbound travel lanes in the form of traffic detours and lane realignments in order to accommodate the construction of the proposed SJAM Parkway improvements specified in Clause 6.21(a) of this Part 2. For the

details of such temporary improvements refer to Schedule 15-2, Part 7 - Traffic and Transit Management and Construction Access.

- (iii) DB Co's design and construction of the Roadway improvements for the proposed SJAM Parkway in this section shall meet the requirements of Clause 6.18 of this Part 2.
- (iv) DB Co shall reference the design information noted in this Clause 6.21(a) and develop a consistent and compliant Roadway corridor design meeting the following specific requirements:
 - A. DB Co shall design and construct the proposed SJAM Parkway within the limits of construction with the objective of enforcing a lower operating speed such that the intended design speed and posted speed limit of the SJAM Parkway shall meet the requirements of Appendix A of this Part 2.
 - i. DB Co shall demonstrate, in the design submittals as per Schedule 10 – Review Procedure, how their proposed detailed design meets the requirements of Clause 6.21(a) of this Part 2 and all other improvements required for SJAM Parkway corridor under this PA within Lands. DB Co shall undertake additional design coordination and provide early documentation as specified in the Basis of Design reports submittals requirements for Federal Roadways as per Schedule 10 – Review Procedure to ensure a compliant design can be achieved that meets the City's requirements at an early stage of the preliminary design.
 - B. DB Co shall design the horizontal alignment, vertical profile, and cross section of the proposed SJAM Parkway corridor according to the Design Criteria specified in Appendix A and Appendix C of this Part 2.
 - i. Appendix C of this Part 2 includes the horizontal and vertical geometry and curve data for the proposed control line of the proposed SJAM Parkway.
 - ii. Appendix A and Appendix C of this Part 2 includes the basic elements of the SJAM Parkway's typical cross-section.
 - iii. DB Co shall design and construct appropriate cross falls and superelevations for the proposed SJAM Parkway as per the TAC GDGCR with consideration for the requirements of the applicable clauses of Article 5 - Drainage and Stormwater Management Design Criteria of this Part 2.
 - iv. DB Co shall determine the appropriate superelevation parameters for the proposed SJAM Parkway and demonstrate in the PFDD submission that DB Co's design satisfies the requirements of

Clause 3.2.4 - Development of Superelevation in the TAC GDGCR

- v. DB Co shall design and construct the SJAM Parkway so that the depth of earth cover under the SJAM Parkway compared to the top of Tunnel concrete slab shall be greater than 2.5m at any location where Roadway crosses over the LRT Tunnel, in order to accommodate the design and construction of the Roadway and stormwater management requirements of this Part 2
 - vi. DB Co shall design and construct the appropriate grading to allow (minimum) 6:1 side slopes at all locations where it is physically possible to do so and design and construct all surface drainage elements such as curb and gutters, outlets, bio swales, catch basins, maintenance holes, sewer pipes, ditches, and Culverts for the proposed SJAM Parkway improvements and MUP Overpass facility and consistent with the requirements of Article 5 – Drainage and Stormwater Management Design Criteria, of this Part 2. For additional grading requirements, DB Co shall meet Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements.
- C. For all road hazards that may be located in the vicinity of the proposed SJAM Parkway corridor within the limits of construction, DB Co shall undertake a roadside design analysis according to the design criteria specified in Chapter 7 – Roadside Design of the TAC GDGCR and develop appropriate improvement measures that meet the requirements of this Article 6 and also seek the City’s approval prior to submitting the PFDD submittal.
- (v) DB Co shall design and construct a pedestrian Overpass bridge including approach embankments under the proposed SJAM Parkway corridor that can accommodate direct pedestrian access via a MUP connection between the proposed MUP network located south of the SJAM Parkway and the NCC’s proposed linear park MUP(s) network located north of the proposed SJAM Parkway corridor. For the site-specific requirements for the proposed MUP connection, refer to Article 4 – Structural Design Criteria and Requirements, of this Part 2 and Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
- A. Appendix C of this Part 2 provides the approximate location of the proposed Cleary pedestrian Overpass.
- (vi) DB Co shall accommodate all the requirements of Clause 6.14 of this Part 2 for the design and construction of the following two at-grade signalized pedestrian crossing facilities located:

- A. The Rochester Field pathway crossing that is located between the NCC's Rochester Field MUP network, south of the proposed SJAM Parkway corridor and the NCC's proposed linear park MUP(s) network located north of SJAM Parkway corridor as shown in Appendix C of this Part 2; and,
 - B. The Dominion pathway crossing that is located between the proposed Dominion Station MUP network, south of the proposed SJAM Parkway corridor and the NCC's proposed linear park MUP(s) network located north of proposed SJAM Parkway corridor as shown in Appendix C of this Part 2.
- (vii) The City will supply and install all temporary and permanent aboveground traffic signal infrastructure at both of the Rochester Field and Dominion at-grade pedestrian crossing facilities as required by the NCC, per the requirements of Clause 6.14 of this Part 2.
 - A. The City shall supply all traffic signal posts, arms and accessories/hardware painted glossy black.
 - B. The City shall supply traffic signal heads and back boards with yellow fronts and black backs.
- (viii) The at-grade pedestrian crossings shall not be located where the Roadway crossfall or superelevation exceeds +2% or -2%. For additional information regarding the location and site-specific requirements of the above-noted at-grade pedestrian crossing facilities refer to Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements and all associated NCC's proposed landscape plans that are included in the pertinent Part 6 appendices.
 - A. All Pavement markings, Roadway signs and traffic signals shall accommodate separate pedestrian crosswalk and cycling Crossrides, pedestrian and cyclists signal head push buttons, and loop detectors, including full actuation and accessible pedestrian signal design that is fully compliant with AODA requirements and as per the requirements of the City of Ottawa's Standard Tender Documents and MTO's OTM books.
 - B. DB Co shall provide automatic detection facilities, as required, for all the proposed signalized intersections in the SJAM Parkway corridor within the limits of Works. The acceptable detection facility types and specifications shall meet the requirements of the appropriate inductive loop detectors, or radar detectors facilities approved by the City.
- (ix) In addition to the specific lighting requirements specified for the SJAM Parkway pedestrian crossing intersections in Clause 6.21 of this Part 2, DB Co shall also undertake a corridor-long lighting design study on SJAM Parkway corridor in the section between the west of the Rochester Field pedestrian crossing facility

through to the east of Kitchissippi lookout intersection in order to determine the adequacy of the lighting transitions between each two lit intersections and to ensure intermediate unlit gap sections on SJAM Parkway will not cause any safety concern, will not impact driver's work load or visibility due to variable or inconsistent lighting conditions. This study shall include specific countermeasures, warrant analysis, and recommendations for new construction, where applicable, and shall meet the requirements of the City of Ottawa's Right of Way Lighting Policy guideline. DB Co shall complete this study and receive the City of Ottawa's approval prior to the initiation of the design stage.

- (x) DB Co shall design and construct both the Rochester Field and Dominion pedestrian crossing facilities to be lit using LED-type luminaire NXT 48M 2ES 7 (Type 2 Distribution, 48W LED, 700mA Consumption, 4000k Colour Temperature) elements and consistent with the requirements of the NCC design drawings, standards and specifications per Appendix F of this Part 2. DB Co shall design and construct the infrastructure to accommodate the proposed illumination light levels specified below:
 - A. The proposed illumination light level on the SJAM Parkway in approach to pedestrian crossing facilities in the section between Cleary and Dominion section shall conform to 9 lux, 3:1 average/min uniformity.
 - i. For added clarity, other than transition sections in approach to pedestrian crossings on SJAM Parkway noted above, the remaining mid-block sections of SJAM Parkway in the sections between pedestrian crossings shall not be illuminated.
 - B. DB Co shall provide a proposed illumination light level of 15 lux, 3:1 average/min uniformity, at the Rochester Field pedestrian crossing facility.
 - C. DB Co shall provide a proposed illumination light level of 15 lux, 3:1 average/min uniformity, on the SJAM Parkway at Dominion pedestrian Crossing facility.
 - D. All street light posts located at the signalized intersections shall follow Street Lighting Standard Detail Drawings from the City of Ottawa's Standard Tender Documents for Material Specifications and Standard Detail Drawings complete with a glossy black powder coat finish.
 - E. Street light posts located at the approaches to intersections shall have a concrete aggregate base and follow approved NCC drawings found in Appendix F of this Part 2.
- (xi) DB Co shall submit a design report including the detailed Design Criteria and seek approval from the City a minimum of 20 Business Days prior to initiating the design.

- (xii) DB Co shall install modified Type Wyoming 830WYBRAIL 2-Tube Curb Mounted (PL-2) guiderail as per details provided in Appendix F of this Part 2.
 - A. DB Co shall install the above noted guiderails and all transitions, terminal elements and end treatments on curbs for the lengths of need in both approach and leaving sections.
 - B. DB Co shall design and construct all terminal elements and end treatments to fall outside of the SJAM Parkway clear zones and be no closer than 3m to the edge of adjacent travel lane, whichever is greater. Paved shoulders shall separate end treatments installed on concrete curbs from the travel lanes.
- (xiii) DB Co shall install vehicle/cyclist steel railing to be attached on top of the modified Wyoming guiderail at the SJAM Parkway WB and EB pedestrian underpass structures as per detail provided in Appendix F of this Part 2.
- (xiv) DB Co shall reference Appendix G of this Part 2 for the site specific utility servicing requirements of the Rochester Field Pathway.
- (xv) DB Co shall reference Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements, including associated appendices, for the urban design and landscape requirements of the Rochester Field Pathway.
- (b) SJAM Parkway at Churchill Avenue MUP Overpass
 - (i) DB Co shall design and reconstruct approximately +/- 450m of the SJAM Parkway corridor at an approximate location where the Churchill Avenue ROW extends further north and intersects with SJAM Parkway corridor.
 - (ii) DB Co shall design and construct the temporary improvements on SJAM Parkway EB and WB travel lanes in the form of traffic detours and lane realignments in order to accommodate the construction of the proposed Churchill Avenue MUP Overpass and associated MUP realignments. For the details of such temporary improvements refer to Schedule 15-2, Part 7- Traffic and Transit Management and Construction Access.
 - (iii) DB Co's design and construction of the Roadway improvements for the proposed SJAM Parkway in this section shall meet the requirements of Clause 6.18 of this Part 2.
 - (iv) DB Co shall reference the design information noted in this Clause 6.21(b) and develop a consistent and compliant Roadway corridor design, meeting the following specific requirements:
 - A. DB Co shall design and construct the proposed SJAM Parkway within the limits of construction with the objective of enforcing a lower operating

speed such that the intended design speed and posted speed limit of the SJAM Parkway shall meet the requirements of Appendix A of this Part 2.

- i. DB Co shall demonstrate, in the design submittals as per Schedule 10 – Review Procedure, how their proposed detailed design meets the requirements of Clause 6.21(b) of this Part 2 and all other improvements required for SJAM Parkway corridor within Lands. DB Co shall undertake additional design coordination and provide early documentation, as specified in the Basis of Design reports submittals requirements for Federal Roadways as per Schedule 10 – Review Procedure, to ensure a compliant design can be achieved that meets the City’s requirements at an early stage of the preliminary design.
- B. DB Co shall design the horizontal alignment, vertical profile, and cross section of the proposed SJAM Parkway corridor according to the Design Criteria specified in Appendix A and Appendix C of this Part 2.
 - i. Appendix C of this Part 2 includes the horizontal and vertical geometry and curve data for the proposed control line of the proposed SJAM Parkway.
 - ii. Appendix A of this Part 2 specifies the basic elements of the SJAM Parkway’s typical cross-section.
 - 1 DB Co shall design and construct the basic cross-section elements of SJAM Parkway at Churchill Avenue MUP Overpass consistent with those of the section of SJAM Parkway – north of [REDACTED] to Dominion as specified in Appendix C of this Part 2.
 - iii. DB Co shall design and construct appropriate cross falls and superelevations for the proposed SJAM Parkway as per the TAC GDGCR with consideration for the requirements of the applicable clauses of Article 5 - Drainage and Stormwater Management Design Criteria of this Part 2.
 - iv. DB Co shall determine the appropriate superelevation parameters for the proposed SJAM Parkway and demonstrate in the Pre-Final Design Development submission that DB Co’s design satisfies the requirements of Clause 3.2.4 - Development of Superelevation in the TAC GDGCR.
- (v) For all road hazards that may be located in the vicinity of the proposed SJAM Parkway corridor within the limits of construction, DB Co shall undertake a roadside design analysis according to the design criteria specified in Chapter 7 – Roadside Design of the TAC GDGCR and develop appropriate improvement

measures that meet the requirements of this Article 6 and also seek the City's approval prior to submitting the Pre-Final Design Development submittal.

- (vi) For the construction of the proposed Churchill Avenue MUP Overpass, DB Co shall design and construct the vertical profile geometry of the SJAM Parkway to include a grade raise to accommodate the clearance requirements of Article 4 – Structural Design Criteria and Requirements, of this Part 2. DB Co's design shall not change the existing horizontal alignment for the SJAM Parkway at this location.
- A. The proposed SJAM Parkway shall meet the requirements of the SJAM Parkway Design Criteria in Appendix A of this Part 2.
 - B. DB Co's design and construction of the roadway improvements for SJAM Parkway shall meet the requirements of Clause 6.18 of this Part 2.
 - C. DB Co shall design and construct a pedestrian Overpass including approach embankments under SJAM Parkway at an approximate location where the Churchill Avenue right of way extends further north and intersects with SJAM Parkway corridor. The proposed MUP Overpass location shall not impact the existing underground utilities including but not limited to the existing 600mm sanitary sewer and 1500mm storm sewer pipes that are currently located along the northerly extension of the Churchill Avenue right of way corridor across SJAM Parkway. For the details of the proposed Overpass Structure requirements refer to Article 4 – Structural Design Criteria and Requirements, of this Part 2.
 - D. DB Co shall design and construct the proposed Roadway improvements according to the requirements of Appendix A of this Part 2. DB Co shall design and construct the horizontal and vertical geometry of SJAM Parkway as per Appendix C of this Part 2.
 - i. For additional pedestrian connectivity requirements for the proposed MUP Overpass and for the realignment of the adjacent MUP network that are impacted as the result of Works refer to Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements.
 - ii. DB Co shall design and construct the appropriate grading to allow (minimum) 6:1 side slopes at all locations where it is physically possible to do so and design and construct all surface drainage elements such as catch basins, maintenance holes, sewer pipes, ditches, and Culverts for the proposed SJAM Parkway improvements and MUP Overpass facility and consistent with the requirements of Article 5 – Drainage and Stormwater Management Design Criteria, of this Part 2. For additional grading requirements

DB Co shall meet Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements

- (vii) DB Co shall install modified Type Wyoming 830WYBRAIL 2-Tube Curb Mounted (PL-2) guiderail as per details provided in Appendix F of this Part 2.
 - A. DB Co shall install the above noted guiderails and all transitions, terminal elements and end treatments on curbs for the lengths of need in both approach and leaving sections.
 - B. DB Co shall design and construct the all terminal elements and end treatments to fall outside of the SJAM Parkway clear zones and be no closer than 3m to the edge of adjacent travel lane, whichever is greater. Paved shoulders shall separate end treatments installed on concrete curbs from the travel.
 - (viii) DB Co shall install vehicle/cyclist steel railing to be attached on top of the modified Wyoming guiderail at the SJAM Parkway WB and EB pedestrian Overpass Structures as per detail provided in Appendix F of this Part 2.
 - (ix) DB Co shall design and construct the MUP pathway underneath the SJAM Parkway to have a minimum elevation of 56.0m. DB Co shall reference Article 4 – Structural Design Criteria and Requirements, of this Part 2, for the Structure, including the minimum clearance requirements.
- (c) SJAM Parkway at Kitchissippi Lookout Intersection
- (i) DB Co shall design and construct a new signalized intersection to provide access to the future parking areas that will be located north and south of the SJAM Parkway. Refer to Clause 6.21 of this Part 2, for the Kitchissippi Lookout signalized intersection. For the proposed MUP and pathway connections, refer to Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements.
 - A. DB Co shall design and construct the final lane configuration, including auxiliary lanes, Pavement markings and location of the proposed signalized intersection and receive approval from the City of Ottawa. Layout drawing F-1 in Appendix F of this Part 2, is for demonstration purposes only and is non-reliant. DB Co shall undertake a TIA study and determine the auxiliary lanes storage requirements at this signalized intersection. DB Co shall determine the appropriate location and layout of the proposed intersection and SJAM Parkway realignment considering the recommendations of the above-noted TIA study, so that efficient and safe accesses can be provided from / to the proposed parking sites with appropriate sight lines, and the proposed utility improvements can be feasibly designed and constructed as per the requirements of Article 8 – Utility Infrastructure Design Criteria, of this Part 2. The design shall not

involve any additional bridge widening work, with the exception of the 3.0m MUP requirement for the WB SJAM Parkway pedestrian underpass structure in Clause (iv) below. Refer to Article 4 – Structural Design Criteria and Requirements, of this Part 2 for the modifications to the SJAM Parkway WB pedestrian underpass structure.

- B. DB Co shall demonstrate, in the design submittals as per Schedule 10 – Review Procedure, how their proposed detailed design meets the requirements of Clause 6.21(c) of this Part 2 and all other improvements required for SJAM Parkway corridor within Lands. DB Co shall undertake additional design coordination and provide early documentation as specified in the Basis of Design reports submittals requirements for Federal Roadways as per Schedule 10 – Review Procedure, to ensure a compliant design can be achieved that meets the City’s requirements at an early stage of the preliminary design.
- (ii) DB Co’s design of SJAM Parkway shall meet the requirements of a 4-lane urban arterial divided cross-section (4L-UAD) as per TAC GDGCR. SJAM Parkway Design Criteria and geometry shall correspond to the following:
- A. For the proposed Design Criteria specific to SJAM Parkway at Kitchissippi Lookout Intersection refer to Appendix A of this Part 2.
 - B. For the proposed intersection lane configuration of the SJAM Parkway at Kitchissippi Lookout Intersection refer to Appendix B of this Part 2.
 - i. DB Co shall design and construct the eastern leg of the Kitchissippi Lookout intersection, including the curb return radii, to provide for a future roadway access. In the interim, DB Co shall install temporary precast concrete barriers, per OPSD 911.140, to prohibit vehicular access to this leg of the intersection to the satisfaction of the City.
 - ii. DB Co shall design and construct the western leg of the Kitchissippi Lookout Intersection to provide a realigned connection/ access road to the existing western parking lot as shown in Appendix F of this Part 2.
 - iii. In the design and construction of temporary and ultimate improvements intended on Kitchissippi Intersection and SJAM Parkway, DB Co shall maintain and provide for access to the abandoned site located east of the SJAM parkway at its current location.
 - iv. DB Co shall design and construct one marked pedestrian cross-walk, including sidewalk and TWSIs, per City of Ottawa Standard Tender Documents for Material Specifications and Standard Detail

Drawings, located at the southern limit of the Kitchissippi Lookout intersection as per drawing F-1 in Appendix F of this Part 2

- (iii) DB Co shall design the new SJAM Parkway horizontal and vertical alignment as per the proposed Design Criteria. DB Co shall design and construct the vertical profile of the SJAM Parkway in this section so that the new grades and Pavement elevations will remain as close as practically possible to the existing Pavement elevations and shall ensure positive Drainage is maintained within the limits of construction of Works. The proposed alignment of the EB SJAM Parkway lanes shall remain as close as practically possible to their current location while the proposed WB lanes will shift east, closer to the EB lanes, while maintaining a minimum 1.5m wide median separation at the proposed Kitchissippi Lookout signalized intersection.
- (iv) DB Co's design shall accommodate all the improvements required to ensure a safe and efficient traffic operations considering the intended reduction in the posted speed limit (from the existing speed limits of 60 km/hr to the proposed speed limit of 50 km/hr) in the sections of SJAM Parkway that are affected as the result of Works. DB Co shall ensure that appropriate speed transition zones are established as required and all pertinent improvements are included in the design of the realignment with appropriate traffic signage and pavement marking as per the requirements of MTO's OTM Books.
- (v) DB Co shall design and construct all modifications to the existing SJAM Parkway WB pedestrian underpass structure as required in order to accommodate a 3.0m MUP with 0.5m boulevard between the MUP and outside WB lane. Refer to Article 4 – Structural Design Criteria and Requirements, of this Part 2.
- (vi) DB Co shall install modified Type Wyoming 830WYBRAIL 2-Tube Curb Mounted (PL-2) guiderail as per details provided in Appendix F of this Part 2.
 - A. DB Co shall install the above noted guiderails and all transitions, terminal elements and end treatments on curbs for the lengths of need in both approach and leaving sections.
 - B. DB Co shall design and construct the all terminal elements and end treatments to fall outside of the SJAM Parkway clear zones and be no closer than 3m to the edge of adjacent travel lane, whichever is greater. Paved shoulders shall separate end treatments installed on concrete curbs from the travel lanes.
- (vii) DB Co shall install vehicle/cyclist steel railing to be attached on top of the modified Wyoming guiderail at the SJAM Parkway WB and EB pedestrian underpass structures as per detail provided in Appendix F of this Part 2.
- (viii) DB Co shall design and construct the surface Drainage system in the form of storm sewer network including storm sewer pipes, catch basins, maintenance

holes and all other SWM elements in order to maintain positive Drainage for the Kitchissippi Lookout signalized intersection and the realignment of SJAM Parkway, as per Article 5 – Drainage and Stormwater Management Design Criteria and Article 8 – Utility Infrastructure Design Criteria, of this Part 2.

- A. DB Co shall undertake a detailed site survey and confirm the location and conditions of all existing SWM elements within the limits of construction. DB Co shall clean and undertake CCTV inspections on existing storm sewer pipes, outlets and structures prior to altering the existing Drainage system, per City of Ottawa inspection standards. DB Co shall prepare a detailed existing conditions report, provide recommendations for the substandard conditions observed in the assessment and receive the City's approval 30 Business Days prior to advancing the design stage.
- (ix) Grading requirements shall conform to the SJAM Parkway Design Criteria as outlined in Appendix A of this Part 2 and relevant City Standards and Specifications as per Clause 6.12 of this Part 2.
- (x) DB Co shall undertake a TIA study and determine the level of service at the proposed signalized intersection considering projected traffic volumes, and pedestrian and cyclist movements. DB Co shall prepare and submit a traffic report to and receive the City's approval 20 Business Days prior to initiating the design. DB Co's design and construction shall provide for all intersection improvements including but not limited to left turn lane queue storage and taper length requirements to accommodate projected traffic volumes for year 2031.
- (xi) DB Co shall accommodate all the requirements of Clause 6.14 of this Part 2 for the design and construction of the Kitchissippi Lookout Intersection.
 - A. For added Clarity, the City shall supply and install all above ground traffic signal equipment including controller, poles, pedestrian and traffic heads, video detectors, push buttons, and audible displays for the Kitchissippi Lookout Intersection to meet the following specifications:
 - i. The City shall supply all traffic signal posts, arms and accessories/hardware painted glossy black.
 - ii. The City shall supply traffic signal heads and back boards with yellow fronts and black backs.
- (xii) DB Co shall provide automatic detection facilities, as required, for all the proposed signalized intersections in the SJAM Parkway corridor within the limits of Works. The acceptable detection facility types and specifications shall meet the requirements of the appropriate inductive loop detectors, or radar detectors facilities approved by the City.

- (xiii) DB Co shall design and construct all above and underground utilities and municipal services (water, sanitary and electrical), including underground ducts, maintenance holes, street lighting, and joint use poles as required and shall coordinate utility layout designs for hydro, gas and communications with all relevant utility companies as per the requirements of Article 8 – Utility Infrastructure Design Criteria, of this Part 2.
 - A. DB Co shall reference Appendix G of this Part 2, for the site specific utility servicing requirements for the NCC’s Kitchissippi Lookout intersection.
 - B. DB Co shall provide all necessary underground traffic plant to accommodate for possible future crossing movements by the City and shall meet the requirements of Clause 6.14 of this Part 2.
- (xiv) Pavement markings for the SJAM Parkway and Kitchissippi Lookout Intersection shall conform to Clause 6.15 of this Part 2 and the proposed Signage for the SJAM Parkway realignment and Kitchissippi Lookout Intersection shall conform to City standards and specifications.
- (xv) DB Co shall design and construct SJAM Parkway at Kitchissippi Lookout Intersection to be lit using LED-type luminaire NXT 48M 2ES 7 (Type 2 Distribution, 48W LED, 700mA Consumption, 4000k Colour Temperature) elements and consistent with the requirements of the NCC design drawings, standards and specifications per Appendix F of this Part 2. In particular, DB Co shall design and construct the infrastructure to accommodate the proposed illumination light levels specified below:
 - A. The proposed illumination light level on the SJAM Parkway in approach to the Kitchissippi Lookout Intersection shall conform to 9 lux; 3:1 average/min uniformity.
 - i. For added clarity, other than transition sections in approach to pedestrian crossings on SJAM Parkway noted above, the remaining mid-block sections of SJAM Parkway in the sections between pedestrian crossings shall not be illuminated.
 - B. The proposed illumination light level at the SJAM Parkway Kitchissippi Lookout Intersection shall conform to 15 lux; 3:1 average/min uniformity.
 - C. All street light posts at the signalized intersection shall follow Street Lighting Standard Detail Drawings from the City of Ottawa’s Standard Tender Documents for Material Specifications and Standard Detail Drawings complete with a glossy black powder coat finish.

- D. Street light posts located at the approaches to the intersection shall have a concrete aggregate base and follow approved NCC drawings found in Appendix F of this Part 2.
- (xvi) DB Co shall design and construct detailed traffic staging drawings and traffic control plans as per the requirements of OTM (OTM Book 7) and ensure travel lanes are maintained during staged construction at all time. For the minimum number of travel lane required during construction refer to Schedule 15-2, to Part 7 – Traffic and Transit Management and Construction Access.
- (xvii) DB Co shall undertake geotechnical investigations for the SJAM Parkway and Kitchissippi Lookout Intersection site in order to verify existing site conditions, soil contamination, ground water levels and provide asphalt Pavement designs. The geotechnical investigation and asphalt Pavement designs shall meet the requirements of Article 7 – Geotechnical Design Criteria and Requirements, of this Part 2. The proposed Pavement design shall meet the requirements of Clause 6.10 of this Part 2.
- (xviii) DB Co shall follow landscape drawings and Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements, for landscape, road furniture and streetscape elements, and pathway connections required along the SJAM Parkway corridor and Kitchissippi Lookout Intersection.
- (xix) DB Co's design and construction of the roadway improvements for SJAM Parkway shall meet the requirements of Clause 6.18 of this Part 2.

ARTICLE 7 GEOTECHNICAL DESIGN CRITERIA AND REQUIREMENTS

7.1 Reference Documents

- (a) Design and construction of all geotechnical and foundation Work shall comply with the criteria contained in this Article, and the Applicable Law, guidelines or practices applicable to the Project, including but not limited to the following Reference Documents. In the event of a conflict between the criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
- (i) Criteria contained in this Article;
 - (ii) Article 9 – Protection of Existing Adjacent Structures, of this Part 2;
 - (iii) Article 4 – Structural Design Criteria and Requirements, of this Part 2;
 - (iv) Schedule 15-2, Part 8 –Underground Structures;
 - (v) Schedule 17 – Environmental Obligations;
 - (vi) Municipal Standards according to Master Agreement including Schedule B, Appendix 2, Standard and Guidelines
 - (vii) OBC;
 - (viii) NBCC;
 - (ix) CHBDC;
 - (x) MTO, OPSS/OPSD;
 - (xi) CSA;
 - (xii) ASTM;
 - (xiii) CFEM;
 - (xiv) MOECC Regulations;
 - (xv) PEO, Guideline for Professional Engineers Providing Geotechnical Engineering Services
 - (xvi) AREMA
 - (xvii) OHSA and Applicable Law.

- (b) DB Co shall comply with the Applicable Law, design manuals or practices applicable to the Project, issued by all relevant third parties including MTO and the City. DB Co shall submit design and construction plan for all geotechnical and foundation works including excavation, backfilling, underpinning, modifications, monitoring and mitigation plans for review and acceptance by all relevant third parties including City, MTO, Utility Companies, other third party owners. DB Co shall comply with the following documents and requirements:
 - (i) Schedule 10 – Review Procedure.
 - (ii) To prevent impact to third parties' structures in the alignment, all construction activities such as groundwater control, excavation, underpinning, modification, and support of excavation systems shall meet third party stakeholders' requirements. In particular, for construction within or in the vicinity of the NCC land, specific design approaches shall be considered to avoid adverse impacts of construction dewatering operations on NCC land and other existing Structures.

7.2 General Requirements

- (a) Geotechnical and foundations design shall be performed in accordance with design concepts used in the reference documents listed in Clause 7.1 of this Part 2 such as the principles of LSD based on Load-and-Resistance Factor Design and WSD based on ARMEA. The factors of safety and allowable stress for the Track supports shall be based on the functional requirements of the Structure.
- (b) DB Co shall perform a geotechnical subsurface soil and groundwater conditions assessment using available data for the entire Guideway and shall provide a detailed and complete set of geo-engineering design reports including geo-engineering Design Criteria with a tabulated list of geotechnical and hydrogeological design parameters. The basis for selection of the Design Criteria shall be provided for all components of any Underground Structures, all components of any retaining and support of excavation structures, and at grade and elevated Structures. In addition, DB Co shall prepare stratigraphic profiles along the Guideway with proper cross-sections particularly for the underground sections along the alignment that shall be constructed by DB Co. The stratigraphic profiles shall include anticipated distribution of the various ground types and hydrogeological regimes and conditions, and Reports shall be submitted in accordance with Schedule 10 – Review Procedure.
- (c) DB Co shall consider the following in the design of all Structures during the Service Life specified in Table 1-4.1 in Schedule 15-2, Part 1 – General Requirements.
 - (i) Groundwater recharge or rebound that may occur after temporary groundwater control, unwatering, dewatering, and depressurization.
 - (ii) Groundwater condition changes including those caused by extreme weather events.

- (d) DB Co shall review all existing geo-environmental data and information and develop an Excess Materials Management Plan. Further details on environmental compliance and management requirements are provided in Schedule 17 – Environmental Obligations.
- (e) DB Co shall retain the services of qualified consultants who hold a Professional Engineers of Ontario Certificate of Authorization and practice as a geotechnical consultant. Geotechnical laboratories shall be certified by CCIL and shall have participated and met the MTO correlation program for soil testing. Environmental laboratories shall be accredited by the CALA for analytical tests.
- (f) DB Co shall retain the services of qualified consultants who hold an Association of Professional Geoscientists of Ontario Certificate of Authorization and practice as a hydrogeological consultant.
- (g) DB Co shall submit details of any proprietary geo-engineering systems, for review by the City in accordance with Schedule 10 – Review Procedure.
- (h) The frost penetration depth for Ottawa is 1.8 m. DB Co shall consider this and ensure sufficient frost protection is provided for all Structures.
- (i) DB Co shall demonstrate project experience designing and constructing Structures founded on the sensitive marine clays in the Ottawa area, locally known as Leda Clays, and shall retain personnel who have verifiable local design and construction experience with Leda Clay.

7.3 Foundations

- (a) Foundations for Structures shall be designed such that their displacements (Serviceability Limit States, as defined in the Relevant Codes and standards) are compatible with the structural design, function and performance requirements, and clearance envelope requirements over their Design Life. When a WSD is used, the allowable stress shall be checked under the various loading combinations defined in the relevant Codes and Standards.
- (b) DB Co shall assess and mitigate short-term and long-term adverse impacts to all Foundations for Structures including Tracks due to the swelling and degradation of shale rock that may occur during the Service Life specified in Table 1-4.1 in Schedule 15-2, Part 1 – General Requirements.

7.4 Permanent Cut and Fill Slopes

- (a) Permanent cut and fill slopes and geo-structures shall be designed according to applicable Standards and with adequate safety margin (such as factor of safety), as described in the relevant Codes and Standards.
- (b) Total and differential post-construction settlements along the Track bed or Pavement including those that may result from frost heave shall meet the requirements of Article 3

- Trackwork, and Article 6 – Roadways, Bus Terminals and Lay-Bys, of this Part 2. DB Co shall ensure that the smoothness and cross-slope requirements are met, ponding and sheeting of water is prevented, Pavement drainage is maintained, and the function of constructions and ditches is preserved.
- (c) No vertical offset at longitudinal joints in Pavement surfaces shall be permitted after construction.
- (d) No vertical offset at longitudinal or transverse joints along Station Platforms, interior walkways or at building connections shall be permitted after construction.

7.5 Permanent Retaining Structures and Cut-and-Cover Structures

- (a) The following requirements apply to new Cut-and-Cover structures, new retaining systems, and existing retaining walls and Cut-and-Cover structures:
 - (i) Permanent water-tight underground structures on the alignment shall be designed to resist groundwater pressures and shall account for the Project flood level requirements provided in Article 5 – Drainage and Stormwater Management Design Criteria, of this Part 2.
 - (ii) The lateral earth pressure coefficient corresponding to the characteristic at-rest (K_o) conditions and appropriate to the adjacent native ground or backfill soils shall be applied to determine the magnitude of the characteristic earth pressure distribution. The K_o conditions shall be determined and then reduced according to the proposed structure's characteristics (stiffness, deformability, etc.). DB Co shall estimate, or measure K_o by conducting testing using the appropriate standard methods in the field and in the laboratory.
 - (iii) Consideration of friction piles, micropiles and anchored systems for resisting uplift forces shall be incorporated into the Cut-and-Cover foundations design, provided redundancy is built in the design. For micropiles, the required redundancy shall be achieved by using adequate resistance factor provided that a testing program as indicated in OPSS 903 is followed. For frictional piles, adequate resistance factors with or without a load test shall be used in accordance with relevant design Codes and Standards. For anchored systems, the requirements as indicated in OPSS 942 shall be followed. The design reduction factor to be applied to the uplift resistance capacity of the friction piles and micropiles shall be based on the type of Structure, loading, allowable displacements, and soil and groundwater conditions.
 - (iv) DB Co shall not utilize side friction between the soil and Underground Structure walls to resist uplift, unless DB Co can demonstrate that side friction can be relied upon and will not induce detrimental effects to the Underground Structure. DB Co shall not utilize side friction between the soil and structure walls that have an exterior waterproofing system, to resist uplift.

- (v) All temporary excavation support systems for permanent Cut-and-Cover structures shall be performed in accordance with Clause 7.7 of this Part 2.
- (vi) The upper 1.8m, as measured from lowest adjacent grade, shall be discounted in any axial and lateral load analyses to account for possible future excavations around the pile group.
- (b) If DB Co engage in blasting as part of the Works within the Lands, DB Co shall provide the following:
 - (i) A BAR: This risk assessment report shall include but not be limited to the following details:
 - A. Work plan showing details of the proposed blasting operations;
 - B. Types of explosive and detonation to be adopted;
 - C. Protection against damage to the adjacent Structures in accordance with Article 9 – Protection of Existing Adjacent Structures, of this Part 2, underground and above-ground Utilities, and protection of the public safety including a blast damage mitigation plan and procedures including the proposed methods of remedial measures for damages caused by blasting;
 - D. Determination of the ZOI due to blasting, and assessment of the blasting effects to all Structures and Utilities within the ZOI;
 - E. Document all measures proposed to minimize blast waves regardless of when blasting will take place
 - F. Details of vibration monitoring;
 - G. Emergency responses to blasting damage; and,
 - H. Qualifications and experience of the individuals and specialists who are responsible for the blasting design and operations.
 - (ii) A production rate comparison showing the benefits for blasting over conventional rock excavation methods in terms of cost and schedule.
- (c) DB Co shall ensure that all blasting activities will conform to the City Special Provisions F-1201 and OPSS 120 entitled Use of Explosives, as amended. Prior to any blasting activities, a pre-blast survey shall be prepared as per City Special Provisions F-1201 for all existing and proposed Structures and underground structures including, but not limited to, buildings, Utilities, water wells, and facilities likely to be affected by the blast, in particular, those within 75m of the location where explosives are to be used. The standard inspection procedure shall include the provision of an explanatory letter to the owner or occupant and owner with a formal request for permission to carry out an inspection. DB

Co shall submit blasting limits to the City for review and approval. The City may require changes to ensure the integrity of adjacent Structures. DB Co shall submit the pre-blast survey and full blasting strategy to the City for review and approval at least ninety days prior to any blasting.

- (d) DB Co shall account for additional loads such as increase in lateral earth pressure due to fractured rock or weakened rock or soil zones resulting from blasting operations for the Works or for local developments outside the Works.

7.6 Services

- (a) All services, including installation and reconstruction of water and sewer lines, engineering fill application, pipe bedding, cover and trench backfill material, shall conform to the City requirements, including but not limited to requirements of Article 8 – Utility Infrastructure Design Criteria, of this Part 2.

7.7 Temporary Slopes and Retaining Structures

- (a) The performance of each temporary works shall be sufficient for its service life. All temporary Work shall comply with the OHSA, relevant design Codes and Standards and the Project requirements applicable at the time of excavation and the additional criteria:
 - (i) Temporary retaining structures shall meet the requirements of limiting Ground Movements, such as surface settlement, as stipulated under this Article.
 - (ii) Protection of Existing Adjacent Structures in accordance with Article 9 – Protection of Existing Adjacent Structures, of this Part 2.
 - (iii) Design, installation, and testing of tie backs shall follow OPSS 942;
 - (iv) DB Co shall comply with third party requirements for tie-back de-stressing as stated in this Article. Removal of temporary support system shall follow OPSS 539.
 - (v) All elements of temporary retaining structures within the upper 2m of the ground surface shall be removed and properly disposed of upon completion of backfilling.

7.8 Earthwork and GeoEnvironmental

- (a) Backfilling and reuse of excavated material on City property and ROW shall follow City Standards, Schedule 17 – Environmental Obligations and Third Party standards.
- (b) Buoyancy corresponding to inundation of the fill to the flood level shall be considered in the design of using lightweight fills. Permanent flood protection shall be provided for the area in which the fill is to be used. Fuel spills, salt, wheel loading, penetration from landscaping, and penetration from sign foundations shall also be considered.

- (c) Geo-Environmental requirements are specified in Schedule 17, Part 4 – Contamination and Excavated Material Management.
- (d) DB Co shall assess and mitigate adverse impacts to Structures including drainage components arising from the deformation of ground caused by swelling and degradation of the shale rock leading to drainage-related maintenance issues.

7.9 Geotechnical Instrumentation

- (a) DB Co shall determine and install geotechnical instrumentation in the key and critical areas described as follows where special attention or continued monitoring is required. As a minimum, DB Co shall determine instrumentation requirements, frequency and duration of monitoring for construction-induced noise and vibration, displacement and strains for fill embankments, groundwater elevation and pressure, Ground Movements adjacent to deep excavations, temporary retaining structures (including piles, struts and tiebacks), Tunnel and Tunnel portals, permanent retaining structures, Utilities Infrastructure, hydro towers, existing rail tracks, highways, Roadways and pathways, existing buildings, Bridges or other Structures along the alignment that shall remain in service.
- (b) Design of the geotechnical instrumentation and monitoring program shall be under the direct supervision of a Professional Engineer licensed in Ontario.
- (c) Staff for the design and implementation of the geotechnical instrumentation and monitoring program shall include personnel who have verifiable design and construction experience with similar programs.
- (d) In accordance with all applicable laws, regulations, and by-laws (as amended), DB Co shall decommission and dispose of all geotechnical, hydrogeological, and/or geo-environmental instrumentation installed by DB Co or the City for the purposes of this Project, at the end of construction or after the instrumentation is no longer required for Project activities. DB Co shall decommission and dispose of any existing geotechnical, hydrogeological, and/or geo-environmental instrumentation, that is documented in the Background Information or that may not be documented and otherwise encountered by DB Co during construction, used for monitoring/not used for monitoring, on, in, or under the Lands. DB Co shall obtain acceptance from the City prior to decommissioning and disposal of any existing geotechnical, hydrogeological, and/or geo-environmental instrumentation, that is documented in the Background Information or that may not be documented and otherwise encountered by DB Co during construction, used for monitoring/not used for monitoring, on, in, or under the temporary Lands as defined in Schedule 20 - Lands. DB Co shall provide decommissioning records to the City.
- (e) GIMP: DB Co shall prepare a comprehensive GIMP and submit to the City for review in accordance with Schedule 10 - Review Procedure. The GIMP shall be applicable for the duration of construction, testing, and Commissioning. As a minimum, the GIMP shall include the following:

- (i) A DMP which shall be a GIS-based system using a secure internet connection capable of receiving and visualizing near real time monitoring data. The DMP shall be used to create and send alarm reports/notifications and create monitoring reports including batch reports if Response Levels defined by DB Co and indicated in Article 9 – Protection of Existing Adjacent Structures, of this Part 2 are exceeded. DB Co shall provide access credentials to the City for simultaneous users for the DMP. DB Co shall set up the DMP such that the City is immediately notified of exceedances.
- (ii) Appropriate geotechnical instrumentation for Stations, Structures and Tracks. The instruments shall be capable of collecting and transmitting continuous real time monitoring data to be incorporated and visualized in the DMP. Collecting and transmitting real time monitoring data shall not be required when monitoring Structures that will not experience adverse impacts due to dewatering induced settlement as a result of construction excavation, such as Structures founded directly on intact bedrock or deep foundations extended to bedrock.
- (iii) All instruments including existing instruments turned over to DB Co by the City and instruments to be installed by DB Co.
- (iv) Typical installation details and location of additional instruments.
- (v) Schedule for installation, taking baseline readings, frequency and duration of monitoring for each phase of construction.
- (vi) Construction-induced noise and vibration control and monitoring plan.
- (vii) The plan and schedule for decommissioning and disposing of all additional instruments installed by DB Co as well as all existing instruments turned over to DB Co. DB Co shall notify the City of the intention to decommission instruments.
- (viii) All Response Levels (refer to Article 9 – Protection of Existing Adjacent Structures, of this Part 2), as specified and defined by DB Co.
- (ix) A Response Action Plan, which shall consist of methods and means to respond to various Review and Alert Level scenarios as outlined in Article 9 – Protection of Existing Adjacent Structures, of this Part 2 based on types of geotechnical instruments that indicate Review and Alert Levels. DB Co shall inform the City of subsequent response actions in accordance with the Response Action Plan. At a minimum, a Response Action Plan shall include the following:
 - A. Names, telephone numbers, and locations of persons responsible for implementation of contingency plans.
 - B. Materials and equipment required to implement contingency plans.

- C. Location on Site of all required materials and equipment to implement contingency plans.
 - D. Step-by-step procedure for performing works involved in implementation of the contingency plans.
 - E. Specific actions related to the Alert Level values for all instruments, including means of reducing or eliminating movements and rates of movements.
 - F. Inspection of affected facilities, structures and utilities and performance of acceptable corrective and restorative measures.
 - G. Clear identification of objectives of contingency plans and methods to measure plan success.
- (x) All measures and specific instrumentation and monitoring requirements to protect Existing Adjacent Structures in accordance with Article 9 – Protection of Existing Adjacent Structures, of this Part 2.
- (xi) All measures and specific instrumentation and monitoring requirements for protecting heritage buildings identified in the Project Assessment Study Environmental Project Report and relevant updated revisions which are within the Project ZOI as defined in Article 9 – Protection of Existing Adjacent Structures, of this Part 2.
- (xii) For all Underground Structures, DB Co shall provide, install, maintain, and monitor for the duration of construction, testing, and Commissioning a system of instruments that will indicate the pressures and deformations imparted to the permanent Structures. The instrumentation shall include:
- A. Two arrays of pressure cells with one array on each long side of the Station. Each array shall consist of three cells installed at three different elevations (top, middle and bottom levels along the vertical side walls and away from end walls). Pressure cells shall be installed behind the water proofing system on the overburden side, including soil and rock, prior to start of concrete pouring for the walls.
 - B. An instrument on both sides of the longest side of the Station to measure the deformations. This instrument shall consist of an array of either MEMS gravity sensors separated by special joints to measure tilt along three axes, or IPI, or equivalent.
 - C. Install a minimum of three equally spaced surface settlement monitoring points on both sides of the excavation along a line perpendicular to the excavation, with the first monitoring point located at the edge of the excavation, the second monitoring point located at the farthest point no

further away than the limits of the Project ZOI outlined in Article 9 – Protection of Existing Adjacent Structures, of this Part 2, and the third monitoring point located equally between the first and second monitoring points. These lines of monitoring points shall be spaced a maximum of every 30m running parallel to the excavation.

- D. Install In-Place-Inclinometers on both sides of the excavation spaced a maximum of 50m running parallel to the alignment. Inclinometers to be placed a maximum allowable distance of 1m from the edge of excavation.
 - E. Install piezometers on both sides of the excavation spaced a maximum of every 50m. DB Co to locate and monitor piezometers to ensure the groundwater drawdown restrictions of Clause 7.11 of this Part 2 are followed.
 - F. Install utility monitoring points, spaced a maximum of every 30m, for the 1500mm diameter West Nepean Collector.
 - G. At locations where the 1500mm diameter WNC is exposed, install structure monitoring points spaced every 3m, crack gauges at existing crack locations and strain gauges spaced every 3m. The limiting strain for the WNC shall be determined by DB Co and accepted by the City.
 - H. All the above instruments shall be connected directly or indirectly to permanent data loggers. Connecting instruments to permanent data loggers shall not be required when monitoring Structures that will not experience adverse impacts due to dewatering induced settlement as a result of construction excavation, such as Structures founded directly on intact bedrock or deep foundations extending to bedrock.
 - I. All of the above instruments shall have a minimum daily reading frequency when located less than or equal to 30m from the edge of excavation and a weekly reading frequency (a minimum of once per week) when located greater than 30m from the edge of excavation.
 - J. DB Co shall submit an updated monitoring report in electronic format, in accordance with requirements of Schedule 10 – Review Procedure every week.
- (f) DB Co shall establish permanent reference monuments and deep surveying benchmarks as required along the alignment, in accordance with the requirements of this Article 7.
 - (g) Provide a demonstration of the features of the instrumentation DMP to the City prior to the start of construction and afterwards as modifications are made to the website.
 - (h) Meet with the City as needed to discuss instrumentation levels and necessary actions to protect EAS.

- (i) Replace damaged or malfunctioning instrumentation. The City may order a temporary work stoppage in areas where there is insufficient working instruments to ensure the protection of EAS.
- (j) Accommodate the City in inspecting the installation of geotechnical instrumentation, related hardware, and in verifying the proper functioning of the instrumentation monitoring system including, but not limited to the collection, transmission, storage, backup, and reduction of data.

7.10 Monitoring Requirements

- (a) DB Co shall integrate the following monitoring requirements, in addition to other monitoring requirements outlined in Clause 7.9 of this Part 2.
- (b) DB Co shall incorporate into the monitoring program, data from existing condition surveys, including data provided by the City.
- (c) The monitoring reports prepared and submitted by DB Co shall be in accordance with Schedule 10 – Review Procedure.
- (d) Monitoring shall include logs and survey notes which contain the following information:
 - (i) Record of measurements of in-Tunnel or other deformations;
 - (ii) Construction staging, loading or other construction activities associated with the works in the vicinity of instruments; and,
 - (iii) Record of any cracks in, or damage to any Structures.
- (e) DB Co shall indicate locations where, due to contractual interfaces or changes in the extent of the Project ZOI outlined in Article 9 – Protection of Existing Adjacent Structures, of this Part 2, re-baselining of instrumentation readings shall be conducted.

7.11 Groundwater Control – Dewatering/Unwatering and Depressurization

- (a) For the purposes of this Clause, unwatering is defined as the removal of water that has accumulated in an excavation or Tunnel and is an element of groundwater control. Groundwater control is defined as dewatering/unwatering and/or aquifer depressurization.
- (b) DB Co shall develop and submit plans and procedures for groundwater control (including effluent discharge), in accordance with Schedule 10 – Review Procedure. The plans and procedure shall include, but not be limited to the following items:
 - (i) detailed shop drawings of the entire dewatering system(s) that bear the seal and signature of a professional engineer licensed in Ontario, and include, but not be limited to, details, and calculations of proposed type of dewatering system(s), showing arrangement, location, and depths of components of system including

details of screens and filter media, complete description of equipment and materials to be used, procedure to be followed, standby equipment, standby power supply, and proposed location(s) of points of discharge of water and abandonment of dewatering system(s), a description of any permits and approvals that pertain to the groundwater control activities;

- (ii) a discharge plan that includes: discharge location(s) including methods; procedures and equipment to convey water to discharge locations; location and dimensions of treatment equipment; procedures for water testing; water quality laboratory analyses procedures, test results or analyses, and water treatment methods; location and construction details of monitoring observation wells, and a description of any permits and approvals that pertain to the discharge activities.
- (c) DB Co shall apply for Permits, Licences and Approvals, including PTTW and/or Environmental Activity and Sector Registry, and discharge permits (e.g., Municipal, conservation authority and/or ECA).
- (d) Design, construction, and operation of groundwater control measures shall not induce detrimental short- and/or long-term movements of surrounding Structures, infrastructure and ground surface. Evaluation of detrimental movements shall follow provisions included in Article 9 – Protection of Existing Adjacent Structures, of this Part 2.
- (i) DB Co shall develop plans and procedures for groundwater control (including effluent discharge), establish monitoring requirements, and perform a hydrogeological impact assessment and associated risk assessment and submit to the City. This process shall consider all required project Permits and Approvals. DB Co shall ensure that any groundwater control, effluent discharge, and subsequent effects during construction or during the Design Life shall have no adverse impact on the following features within the Project ZOI: properties, adjacent Structures, infrastructure, active groundwater supply wells, and environmental features. Specifically, the following potential impacts shall be managed/mitigated such that they are not/do not become adverse:
 - A. Groundwater drawdown effects including impacts on the quantity and quality of groundwater available for groundwater dependent ecosystems and existing groundwater users;
 - B. Groundwater drawdown effects which may cause settlement of existing Structures or Utilities within the Project ZOI as required in Article 9 – Protection of Existing Adjacent Structures, of this Part 2; and,
 - C. Appropriate quantity and quality of dewatering effluent with respect to the receiver (e.g., municipal sewer, natural environment, off-site receiver, etc.), in accordance with all applicable Project permits and approvals.
- (e) Water level drawdown resulting from construction dewatering between the approximate coordinates with an easting of 362384.080 and a northing of 5027868.080 and an easting

of 362076.750 and a northing of 5027452.320 using MTM Zone 9 horizontal datum referenced to WGS84 (NAD 83), shall be limited to a maximum of 1m at an outward distance of 30m from the edge of excavation in this area.

- (f) Water level drawdown outside of the excavation footprint between the approximate coordinates with an easting of 362076.750 and a northing of 5027452.320 and an easting of 361947.010 and a northing of 5027195.440 using MTM Zone 9 horizontal datum referenced to WGS84 (NAD 83) shall not be permitted.
- (g) Water level drawdown resulting from construction dewatering between the approximate coordinates with an easting of 360996.150 and a northing of 5025700.750 and an easting of 361048.440 and a northing of 5025253.660 using MTM Zone 9 horizontal datum referenced to WGS84 (NAD 83), shall be limited to a maximum of 3m at the outward edge of excavation in this area.
- (h) Water level drawdown resulting from construction dewatering between the approximate coordinates with an easting of 361140.890 and a northing of 5024428.420 and an easting of 360821.350 and a northing of 5023869.960 using MTM Zone 9 horizontal datum referenced to WGS84 (NAD 83), shall be limited to a maximum of 3m at the outward edge of excavation in this area.
- (i) Any activity within RVCA or SNCA regulated area shall be performed in agreement with the applicable requirements and regulations and will require RVCA or SNCA review and approval.
- (j) DB Co shall design, install, operate, monitor, maintain, and decommission (as required) the project-specific groundwater control systems, as necessary to meet Project requirements and shall continue proper discharging of effluent according to the relevant City's Sewers Use By-law, as well as any other applicable regulatory (e.g., conservation authority and MOECC) approvals without any interruption or negative impact on existing Structures. It shall be the sole responsibility of DB Co to verify the condition of the groundwater control systems and operate them as required.
- (k) DB Co shall submit, on a quarterly basis, the data obtained from all instrumentation utilized for monitoring including hydrogeological and geotechnical instrumentation to the City for review in accordance with Schedule 10 – Review Procedure.
- (l) DB Co shall conduct all monitoring required by the obtained permits and approvals (including daily pumping volumes).
- (m) DB Co shall submit the monitoring results to the applicable agencies as stated in the obtained permits and approvals.
- (n) DB Co shall respond to/address any complaints received that are potentially related to groundwater control activities.

7.12 Seismic Design

- (a) DB Co shall design all Structures in compliance with this Schedule 15 including Underground Structures, partially buried, at grade, and elevated Structures.
- (b) DB Co shall perform an assessment of lateral displacement, liquefaction susceptibility, and cyclic softening and cyclic mobility of the soils for all the Lands.
 - (i) DB Co shall perform a detailed site-specific seismic Hazard Analysis for sites where soils have been identified as susceptible to liquefaction and lateral displacement in accordance with the CHBDC and AREMA. DB Co shall consider liquefaction and lateral displacement in the design of all Structures on these sites and shall provide mitigation measures as required.
 - (ii) DB Co shall consider cyclic softening and cyclic mobility and provide mitigation measures as required in the design of all Structures and slopes, for the sites for which soils will experience cyclic softening and cyclic mobility. DB Co shall utilize local experience and a case-history review combined with in-situ testing and analyses for this assessment.
- (c) Seismic Site classification
 - (i) DB Co shall complete a site classification and seismic response study and provide a report to the City. Site classification and seismic response shall follow NBCC and OBC as applicable.
- (d) Seismic Load
 - (i) The design of the Underground Structures shall use a dual-level seismic design criterion with an upper level design earthquake to provide a life safety performance objective and a lower level design earthquake for operational performance objective. The design shall conform to Clause 3.3 of Schedule 15-2, Part 8 – Underground Structures and the following:
 - A. The upper level design earthquake is an MDE where the probability of exceedance is approximately 4% in the 100-year Design Life, which corresponds to the 2% probability of exceedance in 50 years that is specified in the NBCC. The Underground Structures shall be designed with adequate strength and ductility to resist loads and deformations imposed on the structures during the MDE, thereby preventing Structure collapse and maintaining life safety; and,
 - B. The lower level design earthquake shall be the ODE where the probability of exceedance is approximately 20% in the 100-year Design Life, which corresponds to the 10% probability of exceedance in 50 years that is defined by the GSC using the NBCC seismic Hazard maps. When subjected to ODE, the Underground Structures shall be designed to

respond essentially in elastic manner. There shall be no collapse, and no damage to primary structural elements. The Structure shall remain fully operational immediately after the earthquake, at a full operational status.

- (ii) For partially buried Structures (Structures partially above ground and partially below ground surface), the design shall account for the effect of the above-ground portion.
- (iii) The design shall use ground deformation methods that account for soil-structure interaction in assessing the seismic effect on Underground Structures. DB Co shall perform rigorous numerical modeling methods such as dynamic finite element and finite difference methods (as required). Interior Structure not rigidly connected to the exterior Tunnel Structure shall be analysed using the response spectra method. Restrained Structures that oscillate in phase with or are rigidly attached to the Tunnel shall be analysed using ground deformation methods.

7.13 Subsurface Investigations and Testing Prior to Construction

- (a) DB Co shall review all provided geo-engineering data and shall be responsible to undertake additional subsurface investigations to enable the design and construction of the Project. Results of investigations shall be provided to the City. The actual design basis shall conform to the available and additional geo-engineering data. Copies of any reports and interpretations provided by DB Co for design shall be submitted to the City to review for design consistency purposes;
- (b) All field and laboratory testing shall be performed in accordance with Applicable Law including but not limited to CSA, MTO or ASTM standards. The locations and elevations of all boreholes, test pits, cone penetration tests, and other field testing or sounding locations shall be surveyed in accordance with the requirements of Schedule 15-2, Part 1, Article 4 – Design and Construction.

ARTICLE 8 UTILITY INFRASTRUCTURE DESIGN CRITERIA

8.1 DB Co General Responsibility

- (a) The timing of Utility Work including relocations shall be subject to operational constraints. DB Co shall coordinate the scheduling of all Utility Work including relocation work with the relevant Utility Companies.
- (b) DB Co shall be solely responsible for identifying the actual locations and condition of all existing Utility Infrastructure to complete the Utility Work, identifying all Utility Infrastructure relocation requirements, developing and preparing a Utility Infrastructure Relocation Plan, and performing all required work to protect, safeguard, remove, and relocate Utility Infrastructure as required and obtaining requisite consents from and with all Utility Companies with respect to the design, construction, installation, servicing, operation, repair, preservation, relocation, and or Commissioning of Utility Infrastructure in, on, under, over, or adjacent to the Lands. The Utility Infrastructure Relocation Plan shall include:
 - (i) identification of existing Utilities;
 - (ii) recommended Utilities Work;
 - (iii) assumptions and considerations;
 - (iv) approach to, and documentation of, communication and coordination with Utility Companies including articulating an understanding of Utility Companies' operational constraints;
 - (v) approach to communication and coordination with other Stakeholders including businesses and property owners;
 - (vi) approach to managing service interruption to Utilities customers including property owners;
 - (vii) providing early identification and approach to mitigation of impacts to critical Utility Work;
 - (viii) identification of, and applications for, Permits, Licences, and Approvals required for Utility Work;
 - (ix) evidence of coordination with all other Utility Infrastructure relocations in the same area; and,
 - (x) approach to supplying Utility services to the Project.
- (c) DB Co shall prepare and submit a Utility Infrastructure Relocation Plan to each Utility Company and a fully coordinated overall Utility Infrastructure Relocation Plan to the City, in accordance with Schedule 10 – Review Procedure.

- (i) DB Co shall submit at a minimum submit Utility Relocation Plans, without limitation for the following areas:
 - A. Utilities on Richmond Rd and Byron Ave in conflict with the Guideway;
 - B. Utilities on Carling Ave. and in proximity to Lincoln Fields Station;
 - C. Utilities located on the existing BRT, and between the BRT and Bayshore Shopping Centre;
 - D. Utilities impacted by the Connaught Tunnel; and,
 - E. Utility Work otherwise identified under Clause 8.10 of this Part 2.
- (d) DB Co shall provide to the City, copies of transmittals only, for all submittals provided to and from Utilities Companies within two Business Days of the date of each transmittal. For clarity, transmittals shall be provided to the City for information purposes only.
- (e) DB Co shall provide within two Business Days all documentation to and from Utilities Companies upon the City's request.
- (f) DB Co shall prepare and submit a written workplan and schedule that addresses the Utility Infrastructure Relocation Plan including:
 - (i) durations and timelines for each Utility relocation and or other strategies, by location; and,
 - (ii) identifying dependencies and conflicts with overall Works Schedule.
- (g) DB Co shall be solely responsible for identifying the requirements for and obtaining all consents and approvals, including without limitation, crossing and other agreements in favour of the City from Utility Companies and others having rights over and an interest in the Lands, whether below, at, or above grade.
- (h) All Utility Work shall conform with all relevant codes and standards, of each Utility Company and with the requirements of all federal, provincial, municipal, and safety approving authorities/organizations, and with the requirements of this Project Agreement.
- (i) The Utility Work shall preserve the existing Utility Company network performance and existing capacity subject to relevant codes and standards, of each Utility Company and with the requirements of all federal, provincial, municipal, and safety approving authorities/organizations, where DB Co has identified that Utility Infrastructure shall be relocated or removed and replaced.
- (j) DB Co shall provide access within two hours of request from all Utility Companies to their respective Utilities. DB Co shall provide the City uninterrupted access to watermain valves.

- (k) DB Co shall coordinate Utility Work with the overall system design such that any operations, maintenance, repair and/or replacement activities undertaken by the Utility Company shall not interrupt the operation of the system.
- (l) DB Co shall not construct, install or permit the construction or installation of any Utility Infrastructure on, in, under or over the Lands or any part thereof without the prior written consent of Utility Companies, the City, and any other entity whose consent is required and without obtaining all required permits and approvals.
- (m) Without limiting the generality of the foregoing, at no time shall DB Co use or permit the use of the Lands or any other Project infrastructure for the purpose of protecting, safeguarding, removing and/or relocating Utility Infrastructure (other than Utility Infrastructure, if any, located within the Lands at Commercial Close) without the prior written consent of the City (which may be given or withheld at the discretion of the City).
- (n) DB Co shall replace all surface and subsurface features and Utility Infrastructure disturbed, damaged or temporarily removed during the activities related to Utility Work and reinstate in accordance with the requirements of this Part 2.
- (o) All lane closures, detour routes, Lane Shifts and diversions required to undertake Utility Work shall be in accordance with the requirements of Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access.

8.2 General Provisions for Utility Work

- (a) DB Co shall coordinate and perform Utility Work so as to minimize impact to continuity of service and disruption to property owners and customers of the Utility Companies to the satisfaction of the Utility Companies, private Utility owner and the City.
- (b) Utility Infrastructure shall be relocated such as to provide access, acceptable to the Utility Company, for maintenance and repairs. Sufficient width shall be provided to accommodate all required Utilities and provide the necessary clearances as determined by the Utility Companies and any applicable City standards;
- (c) The demarcation point between any Utility service and the system shall be defined as the point where the responsibility of ownership transitions from the Utility Company to the owner. The location and configuration of demarcation points between any Utility service and the system shall comply with relevant Utility Company standards and industry practices between the Utility Company and its customers. Where no such appropriate Utility Company standards and industry practices exists, the location and configuration of demarcation points shall be mutually agreed upon between the Utility Company and DB Co.
 - (i) For [REDACTED], the civil demarcation point shall be defined as the point where the ownership of the civil infrastructure associated with electrical services transitions from [REDACTED] to the City. The location and configuration of the civil demarcation shall comply with [REDACTED] Conditions of Service. The

electrical ownership demarcation point may not be the same as the electrical demarcation.

- (ii) For [REDACTED], the electrical demarcation point shall be defined as the point where the ownership of electrical infrastructure transitions from [REDACTED] to the City. The location and configuration of the electrical demarcation shall comply with [REDACTED] Conditions of Service.
 - (iii) For [REDACTED] at the LMSF facility, the demarcation point shall be at the secondary side of the gang operated load break overhead switches. All equipment beyond the demarcation point shall be purchased and installed by DB Co and owned by the City.
 - (iv) Trim Road Station is within the [REDACTED] distribution boundaries. The proposed Supply Point is at the overhead pole line located at N45.494989°, E - 75.483315°. For [REDACTED] the demarcation point shall be at the designated overhead Supply Point disconnect.
- (d) DB Co shall not construct new maintenance holes, water valve box assemblies or locate valve chamber frame(s) and cover(s) on OR174 paved surfaces, shoulders, median or interchange ramps, except:
- (i) Catch basin maintenance holes dedicated to highway drainage shall be permitted on the shoulder of the Highway.
- (e) DB Co shall relocate existing maintenance holes, water valve box assemblies, valve chamber frame(s) and cover(s) where located in the OR174 median, median shoulders, paved surfaces, or interchange ramps to outside of the median, median shoulder and paved surfaces of the Roadway. Existing maintenance holes, water valve box assemblies, valve chamber frame(s) and cover(s) in the outside shoulder shall be permitted to remain.
- (f) DB Co shall use trenchless methods where constructing new or relocating utilities beneath the paved surfaces, shoulders, median or interchange ramps of OR174 that are otherwise only to be resurfaced.
- (g) DB Co shall provide or maintain access to maintenance holes and watermain valves, located outside the Guideway by rubber tire vehicle.
- (h) DB Co shall not attach, construct or relocate any fluid carrying Utilities to new, reconstructed or existing City owned Bridge Structures.
- (i) DB Co shall be permitted to reinstate non-fluid carrying Utilities into existing conduit on existing City owned Bridge Structures that are otherwise not reconstructed.
- (j) DB Co may attach new non-fluid carrying Utilities to new, existing or reconstructed City owned Bridge Structures. Utilities shall not be permitted under sidewalks, in parapet walls or directly suspended from thin deck slabs.

8.3 Protection of Utilities

- (a) DB Co shall be responsible for protection and all repairs as a result of any damages caused by any actions, or neglect of any actions, by DB Co or any DB Co Party to Utility Infrastructure. DB CO shall further be responsible for ancillary costs related to maintaining normal levels of service or incurred by the Utility Company as a result of these damages. Refer to Article 9 – Protection of Existing Adjacent Structures, of this Part 2, for the minimum CIAR requirements for existing Utility Infrastructure within the ZOI and the baseline performance criteria for Utility Infrastructure impact mitigation to be used in the development of the GIMP Response Action Plan.
- (b) All Utility Infrastructure located at Commercial Close or thereafter on, in, under, over, or adjacent to the Lands (including Utility Infrastructure within any excavation) shall remain in service and be protected and preserved by DB Co throughout the construction unless otherwise agreed upon by the Utility Company.
- (c) DB Co shall be responsible for any damage done by DB Co or any DB Co Party to Utility Infrastructure throughout the construction.
- (d) For all existing and new Utilities crossing the Lands, utilize and adhere to all requirements of the Transport Canada document titled Standard Respecting Pipeline Crossings Under Railways TC E10. This document shall be utilized for all Utilities regardless of the age of the Utility.
- (e) DB Co shall maintain the existing OC Transpo optical fibre feed to the Transitway Stations during construction Any temporary communications arrangements to maintain the OC Transpo communications network during construction shall not disrupt OC Transpo operations or degrade existing OC Transpo network performance.

8.4 Project Utilities Services

- (a) DB Co shall be responsible for all Utility Work for all temporary and permanent Utilities services for the Project necessary to comply with the requirements of relevant standards, codes and approvals, as described in this Project Agreement.

8.5 Location and Condition of Utility Infrastructure

- (a) DB Co shall be responsible for identifying and ascertaining the locations and conditions of all Utility Infrastructure, located on, in, under, over or adjacent to the Lands and ensuring compliance at all times with the provisions of this Project Agreement. DB Co shall not rely solely on previous engineering work, location plans, as-built or record drawings supplied by Utility Companies or other similar documents for confirming locations of Utility Infrastructure.

8.6 DB Co Responsibilities for Utility Work

- (a) All Utility Work shall be performed by, or under the supervision of, and at the risk and expense of DB Co subject to the rights of Utility Companies to specify who will perform the Utility Work. Without limiting the generality of the foregoing, DB Co shall be responsible for:
- (i) obtaining all rights of entry or access to the relevant Utility Infrastructure in connection with the Utility Work and providing access to the relevant Lands if such Utility Work is to be performed by the Utility Company;
 - (ii) identifying all requirements in respect of the Utility Work, including determining the most effective strategies for undertaking the Utility Work;
 - (iii) liaising, arranging, coordinating, and entering into all necessary agreements with relevant Utility Companies in connection with the Utility Work, including obtaining any necessary consents or approvals in connection therewith, providing access for inspections and providing information and plans during and following completion of the Utility Work;
 - (iv) obtaining all Permits, Licences, and Approvals for the Utility Work;
 - (v) observing and complying with any instructions or directions relating to the Utility Work that may be issued by the City on its own behalf or on behalf of a relevant Utility Company;
 - (vi) securing or causing to be secured the entry into or execution of all relevant design, construction, crossing, and maintenance agreements, service contracts, and other agreements in connection with the Utility Work;
 - (vii) DB Co shall complete any Utility Infrastructure abandonment as per the standards of relevant Utility Company and City standards, guidelines and specifications. Abandoned underground utility infrastructure which results from the relocation of utility plant, shall be removed up to the first utility structural chamber beyond the abandoned sections;
 - (viii) For telecommunication Utility Companies, DB Co shall design and install all necessary temporary and/or permanent Civil Works associated with the relocation of the Utility Infrastructure, which may include duct banks, maintenance holes, handwells, vaults, pads, etc. for the purpose of the installation of the relevant telecommunication utility company's plant. The Civil Works shall be installed as per the standards and specifications of the corresponding Utility Company;
 - A. General requirements for telecommunication Utility Company duct banks shall be as follows:

- i. Duct banks under Roadway, sidewalk, MUPs and boulevards, or where a duct bank requires three ducts or more, the duct bank shall be concrete encased;
 - ii. Duct conduit shall be permitted to be direct buried under parkland; and,
 - iii. Ducts shall be permitted to be direct buried for any lateral duct bank, (max two ducts) going to a pole, pedestal or building.
- (ix) For [REDACTED], DB Co shall install all necessary temporary and/or permanent Civil Works associated with the relocation or protection of the Utility Infrastructure, which may include duct banks, maintenance holes, handwells, vaults, pads, groundling grids, etc. for the purpose of the installation of the [REDACTED]'s plant.
- (x) For [REDACTED], DB Co shall install all necessary temporary and/or permanent Civil Works associated with the supply of power to stations and/or Traction Power Systems beyond the [REDACTED] Supply Point and [REDACTED] civil demarcation point.
- (xi) For [REDACTED] and [REDACTED], Civil Works design for specialty structures inclusive of Bridges, vaults, viaducts, buildings, pipe chases, utility protective structures and vent shafts shall be DB Co's responsibility and shall be coordinated with other [REDACTED] or [REDACTED] Civil Works design.
- (xii) The new installation, modification, relocation, and/or upgrade all Utility services and related assets for Stations and other systems as necessary to meet Project requirements; and,
- (xiii) The provision of new Utility services for Track switches and switch heaters where required.
- (xiv) The provision of new or alteration of existing low voltage electrical services for streetlighting and traffic signals as coordinated by City signals and streetlighting departments.
- (b) The Utility Companies shall be individually responsible for the following work which will be covered in the Utility Company Works Cash Allowance as noted in Project Agreement Section 11.29. For clarity, only Utility Work up to the Utility demarcation point and where explicitly described here shall be subject to Utility Company Works Cash Allowance. Work by the Utilities beyond the Utility ownership demarcation point shall not attributable to Utility Company Works Cash Allowance:
 - (i) Telecommunication Utility Companies shall be responsible for the design and installation of any temporary and/or permanent plant works including wiring, cables, fibres, equipment, etc., installed or placed in, on, over, under or through

the Civil Works including connections to existing Utility Infrastructure that is associated with Utility relocation. Utility Works performed associated with new telecommunication services is not attributable to Utility Company Works Cash Allowance;

- (ii) [REDACTED] shall be responsible for the design of all necessary temporary and/or permanent Civil Works, excluding specialty structures as per Clause 8.6 of this Part 2, associated with the relocation of the Utility Infrastructure, which may include duct banks, maintenance holes, handwells, pads, etc. for the purpose of the installation of the [REDACTED]'s plant.
- (iii) [REDACTED] shall be responsible for the design and construction of all temporary and/or permanent plant works required including wiring, cables, equipment, etc., installed or placed in, on, over, under or through the Civil Works including connections to existing Utility Infrastructure for their plant;
- (iv) [REDACTED] in coordination with DB Co shall be responsible for the design, supply and installation of all wiring and connection assets including primary switchgear, [REDACTED] metering and Station transformers which are before the [REDACTED]/customer demarcation point. Refer to Schedule 15-2, Part 4, Article 6 – Electrical Design Criteria, for further clarity on [REDACTED]/customer demarcation points.
- (v) [REDACTED] shall be responsible for design and construction of all necessary temporary and/or permanent Utility poles, line cover-ups and associated wiring with the relocation of Utility Infrastructure;
- (vi) [REDACTED] shall be responsible for the design and construction of all necessary temporary and/or permanent Civil Works, excluding specialty structures as per Clause 8.6 of this Part 2, associated with the relocation of the Utility Infrastructure, which may include duct banks, maintenance holes, handwells, vaults, pads, etc. for the purpose of the installation of the [REDACTED]'s plant.
- (vii) [REDACTED] shall be responsible for the design and construction of all temporary and/or permanent plant works required including wiring, cables, equipment, etc., installed or placed in, on, over, under or through the Civil Works including connections to existing Utility Infrastructure for their plant;
- (viii) [REDACTED] shall be responsible for design and construction of all necessary temporary and/or permanent Utility poles, line cover-ups and associated wiring with the relocation of Utility Infrastructure.
- (ix) [REDACTED] shall be responsible for all design and construction of all temporary and/or permanent works associated with required relocation for their plant. Works associated with new natural gas services is not attributable to Utility Company Works Cash Allowance.

- (x) The City shall be responsible for final connections for watermain equal or less than 406 mm in diameter. The City shall also be responsible for installation of new water services and water meters, and disinfection of new water infrastructure where required.
- (c) Within the limits of excavation at Underground Stations, DB Co shall be responsible for:
 - (i) removal of City Utility Infrastructure that is abandoned as a result of Utility Work;
 - (ii) removal and disposal of existing abandoned City Utility Infrastructure that is exposed by DB Co or any DB Co Party;
 - (iii) DB Co shall complete any abandonment of City Utility Infrastructure in accordance with City standards and guidelines; and,
 - (iv) DB Co shall not be responsible for removal and disposal of existing abandoned City Utility Infrastructure outside of the limits of excavation.

8.7 Watermain Requirements

- (a) All watermain design and construction shall conform to all relevant codes, standards and City of Ottawa Design Guidelines – Water Distribution 2010 and Technical Bulletins.
- (b) DB Co shall coordinate the scheduling of all watermain relocation work with the City.
- (c) DB Co shall be responsible for City of Ottawa drinking water permits related costs for final connections, testing, chlorination and commissioning of all water related works.
- (d) All watermain designs are subject to review and final approval by the City.
- (e) Timing for the temporary removal of watermain from service for relocation, protection, or facilitating other construction shall be subject to operational constraints. The City will review requests for isolations on a case by case basis with consideration to :
 - (i) Hydraulic modelling performed by the City to verify that adequate supply of water can be maintained;
 - (ii) Seasonal demand variations, where typically Maximum Daily Demands are realized May 15th to Oct 15th of any calendar year, and Basic Day Demands are realized elsewhere. Exact dates are dependent on recent climatic conditions and vary from year to year;
 - (iii) Other capital works or maintenance activities which may impact the water distribution network;
 - (iv) Available redundancy in water distribution system to ensure acceptable levels of risk to normal service delivery are maintained;

- (v) Unforeseeable conditions due to system failures or maintenance which may impact water service delivery.
 - (vi) Winter potable water treatment and production operation capacities which may be reduced with colder water temperatures.
 - (vii) For large diameter watermain (greater than 406mm) , isolation requests shall be made a minimum of 60 days in advance of the date required, specifying the extents and duration of the isolation.
 - (viii) Known constraints on watermain isolations and the removal of watermain from service. Refer to the “Confederation Line Extension Project Drinking Water Operational Constraints Matrix” for specific references in this Article and other background information.
- (f) Construction of, or near large diameter watermain (greater than 406mm), in a pressurized or non-pressurized state shall be subject to requirements of CIAR submittals. The City retains the right to reject construction means and methods where in the City's opinion there is unacceptable potential for impacting feedermain integrity and or threatening normal service levels in ongoing water service delivery. Requirements for construction monitoring including but not limited to settlement and vibration monitoring may be imposed by the City as deemed necessary and shall be accommodated by DB Co.
- (g) DB Co shall provide full time qualified inspection services where constructing or altering large diameter watermain (greater than 406mm) and related infrastructure (valves, chambers. etc.) to witness and ensure quality control activities are completed at prescribed intervals, materials, material handling and construction are as per design specifications and is completed in accordance with industry standards, manufacturer and City standard specifications, report and take corrective action to remedy deficiencies where required.
- (h) DB Co shall engage a company that can demonstrate a minimum of 10 years of experience in large diameter watermain installation, three references where large diameter watermain installation has been provided within the last five years, and describe the experience of said company, as well as the individuals who shall be responsible for the management and services delivery and their relevant experience and qualifications, to the City in accordance with the requirements of Schedule 10 – Review Procedure.
- (i) For pre-stressed concrete pressure pipe watermain with diameter greater than or equal to 610mm, the following coating, lining and mortar special provisions shall apply:
- (i) The concrete mortar exterior coating mix shall have properties that limit the potential for chloride-induced corrosion by reducing the permeability of the concrete coating. The exterior pipe mortar shall be type 10HSF cement with high quality 9% silica fume additive in accordance with AWWA C205. The high quality silica fume shall comply with C.S.A A23.5-M98. The exterior mortar shall have a thickness of 25mm measured from the outer edge of the prestressed wires.

The cement coating shall be able to withstand occasional freezing/thawing cycles during the lifetime of the pipe.

- (ii) The pipe exterior surface shall be completely coated in the factory with a polyurethane coating 40 mils DFT Corrotec, as manufactured by [REDACTED] or an equivalent approved by the City. The coating shall pass an A.C. Holiday Detector Test set at a voltage of 4000 Volts. The adhesion of the Corrotec onto the concrete shall exceed 700 psi (4830 kPa).
 - (iii) All piping with coatings and linings delivered to the site shall be inspected for defects and cracks. Any repairs to coatings and linings shall comply with the applicable AWWA and ASTM standards. Any damages to the pipe exterior surface shall be repaired by cleaning the area affected and completely coating with a polyurethane coating 40 mils DFT Corrotec, as manufactured by SICO Inc. or an equivalent approved by the City. A pipe shall be deemed as extensively damaged and the pipe will be rejected, if defects or damages in any section of a pipe are numerous or severe enough that, in the City's judgement, it would be unsatisfactory to make separate repairs to the coating or linings.
 - (iv) The exterior pipe joints shall be made using a pre-packaged grout consisting of one part type 10HSF cement with high quality 9% silica fume additive, in accordance with AWWA C205, to two parts of chloride free sand. The high quality silica fume shall comply with C.S.A A23.5-M98. The installation of the field grout shall follow the manufacturer's recommendations. The joint shall be poured using a "Stretch Coat" bitumous diaper that will remain in place after pouring the grout. The addition of excessive water to the grout mix will reduce strength and shall not be tolerated. In order to seal the joints, the diaper shall overlap the pre-stressed concrete pressure pipe Corrotec coating by a minimum of 50mm. The exterior polyurethane coating shall be cut back (not applied) 60mm from both pipe ends to ensure that the poured diaper grout be in contact with the pipe exterior mortar cover for optimal adhesion.
 - (v) Pipe interior joints shall be mortar lined to completely fill the gap with an NSF 61 compliant mortar. All interior exposed steel shall also be similarly mortar lined with an NSF 61 compliant mix. An NSF 61 compliant epoxy coating shall be factory applied to the exposed steel of the bell interior and spigot exterior at the pipe joint (around the gasket area), where interior joints cannot be mortar lined due to size restrictions. The epoxy shall have a minimum thickness of 20 mils.
 - (vi) At the tie-in connection closure piece, the welded split sleeve and any exposed steel shall be grouted. The joint shall be mortar covered with grout using a "Stretch Coat" bitumous diaper or shall be concrete encased with the encasement covered with a Bituthene 3000 waterproof membrane which shall be formed in place.
- (j) DB Co shall not construct Foundations above or within 3m horizontally of watermains or valve chambers.

- (k) DB Co shall not construct or relocate watermains or valve chambers to underneath or within 3m of any Station, Platform or Foundation. DB Co shall not construct valve chambers within 3m of Bridges.
- (l) DB Co shall relocate all water valves and valve chambers out of the Guideway.
- (m) DB Co shall not construct Bridges within 3m horizontally of valve chambers.
- (n) DB Co shall not construct Platforms above or within 3m horizontally of watermains or valve chambers.
- (o) DB Co shall sleeve new and relocated watermains located beneath the Highway 174 paved surfaces, shoulders and median. DB Co shall sleeve new and relocated watermains beneath the Highway 174 a minimum of 5m horizontally past the edge of paved surfaces.

8.8 Storm and Sanitary Sewerage System Requirements

- (a) All storm and sanitary sewer design and construction shall conform to all Applicable Codes, standards and City of Ottawa Sewer Design Guidelines 2012 and Technical Bulletins.
 - (i) DB Co shall relocate all sanitary sewer maintenance holes out of the Guideway.
 - (ii) DB Co shall conduct a precondition survey by way of CCTV on all storm and sanitary sewers within the ZOI as per the City of Ottawa Standard Tender Documents for Unit Price Contracts, Volume 1 and 2.
 - (iii) DB Co shall conduct post construction condition survey by way of CCTV within 90 calendar days on all storm and sanitary sewers within the ZOI as per the City of Ottawa Standard Tender Documents for Unit Price Contracts, Volume 1 and 2.
 - (iv) DB Co shall conduct post construction condition survey by way of CCTV at a minimum of one year following completion of construction on all storm and sanitary sewers within the ZOI as per the City of Ottawa Standard Tender Documents for Unit Price Contracts, Volume 1 and 2.
 - (v) DB Co shall conduct post construction condition survey by way of CCTV within 90 days for all newly constructed or modified storm and sanitary sewers as per the City of Ottawa Standard Tender Documents for Unit Price Contracts, Volume 1 and 2.
 - (vi) All CCTV condition surveys shall include sonar sensing technology, for sanitary or combined sewers greater than 1500 mm diameter.
 - (vii) DB Co, at the City's request, shall conduct additional CCTV surveys or other condition assessments where in the City's opinion may be impacted by construction activities.

- (viii) Where CCTV reports are received and, in the opinion of the City, pipe sections are not of satisfactory cleanliness to adequately assess the condition of the pipe, DB Co, at the City's request, shall be required to clean the respective pipe sections and re-inspect.
- (ix) DB Co shall not construct Foundations over or within 3m horizontally of sewers.
- (x) DB Co shall not construct or relocate sewers beneath or within 3m of any Platform or Foundation.
- (xi) DB Co shall relocate all storm sewer maintenance holes out of the Guideway unless the maintenance hole is part of a storm sewer system dedicated to Guideway drainage.
- (xii) DB Co shall not construct Platforms over or within 3m horizontally of sewers.
- (xiii) DB Co shall not construct Bridges within 3m horizontally of sewer maintenance holes.
- (xiv) DB Co shall not construct sewer maintenance holes within 3m horizontally of Bridges.
- (b) All sewer designs shall be subject to review and final approval by the City.
- (c) The employment of inverted siphons shall be prohibited other than where specified below:
 - (i) There is a conflict of the proposed Tunnel through the SJAM Parkway with the existing 600mm storm water outfall at Mansfield Avenue and Skead Street. An acceptable resolution shall be the construction of a 600mm inverted siphon beneath the existing 1220mm watermain, at an elevation allowing an open channel gravity outfall above the Tunnel to the Ottawa River.
 - (ii) The existing 675mm storm sewer inverted siphon crossing the Transitway corridor from Dominion Street to Workman Avenue, may be lowered and or extended as an acceptable means to deal with further conflicts to the LRT alignment.
- (d) Construction of, or near large diameter sanitary or combined sewers (greater than 750mm), shall be subject to the requirements of CIAR submittals. The City retains the right to reject means and methods where in the City's opinion there is potential for impacting sewer integrity and or threatening normal service levels. Requirements for construction monitoring including but not limited to settlement and vibration monitoring may be imposed by the City as deemed necessary.
- (e) DB Co shall develop a CIAR for construction over, under or near the WNC, in accordance with Schedule 10 - Review Procedure.

- (f) DB Co, in conjunction with the City shall develop an ERP for constructive works over, under or near the WNC, as readiness to mitigate any environmental or service delivery impacts as a result of any damage to the sewer.

8.9 [REDACTED]

- (a) Refer to the “[REDACTED] Information to Support the City of Ottawa’s Proposed light Rail System – Stage 2 Confederation Line” for specific references in this Article and other background information.
- (b) [REDACTED] shall designate the Supply Point locations for the project’s electrical connections and the ownership, control, & maintenance demarcation points between [REDACTED]’s distribution system and the Ottawa Light Rail Transit system. The proposed Supply Points and available capacities are listed in Tables 1-1 and 1-2 of Appendix I. [REDACTED] will designate the final Supply Point.
- (c) [REDACTED] will operate up to the electrical ownership demarcation point and may operate the customer’s first protective device in from [REDACTED]’s distribution system. [REDACTED] clarifies the customer’s interface responsibilities with the connection agreement. [REDACTED] defines three areas of responsibility between itself and the customer’s interface: ownership demarcation (‘O’), electrical control authority (‘C’), and maintenance authority (‘M’). All electrical devices and support structures on [REDACTED]’s distribution system receive unique identifying nomenclature with the required ‘OCM’ suffix indicating the defined roles.
- (d) In the [REDACTED]’s Offer to Connect, Installation & Service agreement and operation & maintenance agreement associated with each project electrical connection, the on-going roles, responsibilities, and ownership shall be defined between the Utility Company, the City, and DB Co. These agreements shall be executed between the three parties within 30 Business Days after the electrical detail design is approved for each Project electrical connection and before construction starts for each Project electrical connection.
- (e) [REDACTED] shall purchase, install and own Supply Point connection assets including primary switchgear, metering equipment, and Station transformers, where there are no TPSS or ventilation loads connected to the Station electrical service.
- (f) For Stations with a TPSS, revenue class [REDACTED] metering shall be provided downstream of the customer owned main breaker in the TPSS.
- (g) DB Co shall file detailed maximum Supply Point loading schedule and its assumptions with [REDACTED] at least two years before energization of the Confederation Line facility is required.
- (h) DB Co shall ensure that [REDACTED]’s control authority and staff has 24/7 access to its primary circuits to control the distribution system, ensure public safety, and replace failed components, and a maximum field emergency response time of 60 minutes not

withstanding a force majeure. Typical circuit restoration times are outlined in the “[REDACTED]” report. DB Co shall ensure it has only one control authority over the Project’s electrical system.

- (i) Other than the Utility Work identified to be paid by the City, DB Co shall pay for any Utility Works for additional Supply Points over those identified in Tables 1-1 and 1-2 of Appendix I.
- (j) Other than the Utility Works identified in this Project Agreement to be paid by the City, DB Co shall pay for the Utility Works that may occur where DB Co requests a change in the Utility Owner’s Supply Point location.
- (k) Automatic load transfer schemes may be deployed by DB Co where redundant electrical servicing is required. Such schemes are subject to [REDACTED] approval and any such scheme will be required to be break before make (open transition of greater than 100 milliseconds) configuration. Automatic transfer schemes shall have provisions for remote monitoring and blocking to the [REDACTED] control centre. Procedures related [REDACTED] ATS blocking shall be developed with consultation to [REDACTED] and included in the [REDACTED] Operations and Maintenance Agreement
- (l) DB Co shall ensure rubber tire vehicle access suitable for [REDACTED] maintenance vehicles outside the Guideway is maintained to existing [REDACTED] underground plant along the north side of the BRT between Holly Acres Road and Woodridge Crescent for the final design and constructed Works.
- (m) DB Co shall be responsible for the costs associated with any temporary electrical services and associated energy accounts.

8.10 Utility Works Special Provisions

- (a) Shefford Road OR174 Watermain
 - (i) DB Co shall undertake Utility Work to replace the existing 406mm watermain that crosses the OR174 from Shefford Road to the 406mm branch valve on the south side of OR174 with a 610mm watermain. Construct a 406mm to 610mm increaser on the existing 406mm branch valve on the south side of the OR174. Construct a new 610mm valve on the new 610mm watermain north of the OR174. Construct a 610mm to 406mm reducer after the new 610mm valve and connect to the existing 406mm watermain on Shefford Road.
- (b) Richmond Road Complete Streets Utility Upgrades
 - (i) DB Co shall undertake Utility Work to design and reconstruct the existing drinking water, sanitary sewer and storm sewer Utility Infrastructure on Richmond Road, Byron Avenue, and their respective connecting cross streets.

A. General design and construction requirements are as follows:

- i. Refer to “Cleary and New Orchard Planning Study Area Future Buildout – Building Population” for specific references in this Article and other background information.
 - 1 DB Co shall perform design calculations and modelling to determine the required size of reconstructed and new drinking water and sanitary sewer Utility Infrastructure on Richmond Road, Byron Avenue, and their respective connecting cross streets. Calculations shall include the 20-year building population forecasts, the design of Richmond Road Complete Streets, and the design of the Confederation Line West Extension. This investigation shall be submitted in accordance with Schedule 10 – Review Procedure.
 - 2 DB Co shall perform design calculations to determine the required size for replacement and new storm sewer infrastructure on Richmond Rd, Byron Ave, and their respective cross streets. Storm sewers shall be sized with capacity for the 5-year storm. The capacity of the catch basin inlets shall be restricted to the 2-year storm. This investigation shall be submitted in accordance with Schedule 10 – Review Procedure.
 - ii. DB Co shall reconstruct all water, sanitary, and storm services within the City ROW to the property line.
- B. Refer to “Richmond Road Complete Streets – Prescribed Water, Sanitary and Storm Replacements” for specific references in this Article. Specific drinking water requirements shall be as follows:
- i. Hydrant spacing shall be reviewed and hydrants added or removed as required to provide coverage in accordance with the Drinking Water Guidelines.
 - ii. DB Co shall design and reconstruct drinking water system Utility Infrastructure as follows:
 - 1 Richmond Road from the Sir John A. McDonald Parkway (360025V247) through to Midway Avenue (360025V084);
 - 2 McEwen Avenue / Edgeworth Avenue from McEwen Avenue (360025V064) through to Edgeworth Avenue (360025V069);

- 3 Richmond Road / Byron Avenue from Hartleigh Avenue (360025V080) through to Redwood Avenue (360026V095);
- 4 Richardson Avenue from Richardson Avenue (360025V094) through to Byron Avenue;
- 5 Ambleside Drive from Ambleside Drive (360026V003) through to New Orchard Avenue;
- 6 New Orchard Avenue from New Orchard Avenue (360026V002) through to Richmond Road (360026V007);
- 7 Richmond Road from Richmond Road (360026V007) through to Redwood Avenue (360027V001);
- 8 Woodland Avenue from Woodland Avenue (360026V015) through to Byron Avenue;
- 9 Harcourt Avenue from Harcourt Avenue (360026V013) through to Byron Avenue;
- 10 Allison Avenue from Allison Avenue (360026V043) through to Byron Avenue;
- 11 Ancaster Avenue from Ancaster Avenue (360026V040) through to Byron Avenue;
- 12 Compton Avenue from Compton Avenue (360026V036) through to Byron Avenue;
- 13 Woodroffe Avenue from Woodroffe Avenue (360026V033) through to Woodroffe Avenue (360026V026);
- 14 Woodroffe Avenue from Woodroffe Avenue (360026V26) through to Woodroffe Avenue (360026V025);
- 15 Lockhart Avenue from Lockhart Avenue (360026V070) through to Byron Avenue;
- 16 Lockhart Avenue from Lockhart Avenue (360026V065) through to Byron Avenue;
- 17 Sherbourne Avenue from Sherbourne Avenue (360026V088) through to Byron Avenue;

- 18 Cleary Avenue from Cleary Avenue (360026V142) through to Richmond Road; and
 - 19 Redwood Avenue from Redwood Avenue (360026V098) through to Richmond Road (360027V001).
- C. Refer to “Richmond Road Complete Streets – Prescribed Water, Sanitary and Storm Replacements” for specific references in this Article. Specific sanitary sewer requirements shall be as follows:
- i. DB Co shall replace the sewer laterals for [REDACTED] to the building foundation;
 - ii. DB Co shall construct a new additional maintenance hole structure outside of the Byron Avenue ROW on New Orchard Avenue, Woodland Avenue, Harcourt Avenue, Allison Avenue, Compton Avenue, and Sherbourne Avenue. New maintenance hole structures shall be located less than 10m from the Byron Avenue ROW. Connect to existing Utility Infrastructure.
 - iii. DB Co shall design and reconstruct sanitary sewer system Utility Infrastructure as follows:
 - 1 Richmond Road from the Sir John A. McDonald Parkway (MHSA01248) through to Midway Avenue (MHSA26107);
 - 2 McEwen Avenue / Edgeworth Avenue from McEwen Avenue (MHSA25339) through to Edgeworth Avenue (MHSA25343);
 - 3 Byron Avenue from Richardson Avenue (MHSA25389) through to Ancaster Avenue (MHSA25395);
 - 4 Richmond Road from Richmond Road (MHSA25381) through to New Orchard Avenue (MHSA26049);
 - 5 New Orchard Avenue from the new maintenance hole structure on New Orchard Avenue through to Byron Avenue (MHSA25390);
 - 6 New Orchard Avenue from New Orchard Avenue (MHSA25391) through to New Orchard Avenue (MHSA25380);
 - 7 Richmond Road from New Orchard Avenue (MHSA25382) through to Woodroffe Avenue (MHSA26110);

- 8 Woodland Avenue from the new maintenance hole structure on Woodland Avenue through to Byron Avenue (MHSA25392);
- 9 Harcourt Avenue from the new maintenance hole structure on Harcourt Avenue through to Byron Avenue (MHSA25393);
- 10 Allison Avenue from the new maintenance hole structure on Allison Avenue through to Byron Avenue (MHSA25394);
- 11 Ancaster Avenue from Ancaster Avenue (MHSA25428) through to Byron Avenue (MHSA25395);
- 12 Compton Avenue from the new maintenance hole structure on Compton Avenue through to Byron Avenue (MHSA26191);
- 13 Byron Avenue from Compton Avenue (MHSA26191) through to Redwood Avenue (MHSA26311);
- 14 Woodroffe Avenue from Woodroffe Avenue (MHSA26200) through to Byron Avenue (MHSA26193);
- 15 Woodroffe Avenue from Woodroffe Avenue (MHSA26162) through to Richmond Ave (MHSA26160);
- 16 Richmond Avenue from Woodroffe Avenue (MHSA26160) through to Richmond Avenue (MHSA01725);
- 17 Lockhart Avenue from Lockhart Avenue (MHSA26157) through to Richmond Avenue (MHSA26163);
- 18 Sherbourne Avenue from the new maintenance hole structure on Sherbourne Avenue through to Richmond Avenue (MHSA01725);
- 19 Richmond Road from Richmond Road (MHSA61485) through to Richmond Road (MHSA01725);
- 20 Cleary Avenue from Cleary Avenue (MHSA26169) through to Richmond Avenue (MHSA01724); and
- 21 Richmond Avenue from Richmond Avenue (MHSA26171) through to Cleary Avenue (MHSA26170).

- D. Refer to “Richmond Road Complete Streets – Prescribed Water, Sanitary and Storm Replacements” for specific references in this Article. Specific storm sewer requirements shall be as follows:
- i. DB Co shall utilize CCTV, smoke/fog testing, and/or dye testing to determine all storm sewers connected and contributing to the sanitary sewer system. The investigation shall include all flat roofs, depressed laneways, parking garages, parking lots, and private catch basins to determine connection points. Known flat roofs include but are not limited to [REDACTED]. This investigation shall be submitted in accordance with Schedule 10 – Review Procedure. Where storm sewers are connected to sanitary sewer systems, DB Co shall:
 - 1 Construct new storm lateral sewers to separate sanitary and storm services. All new storm laterals shall include backwater valves. Connect to storm sewers to City storm sewer Infrastructure; or
 - 2 Where extraneous flow is quantified and is unable to be directed to a new or existing storm sewer due to private property constraints, DB Co shall account for the additional flow in the design and construction of the new sanitary sewer as per the City of Ottawa Sewer Design Guidelines.
 - ii. DB Co shall design and reconstruct storm sewer system Utility Infrastructure at the intersections of Richmond Road, Byron Avenue, and Woodroffe Avenue. DB Co shall construct additional catch basins to eliminate the current ponding and drainage issues at this intersection. List of reconstructed storm sewers are as follows:
 - 1 Richmond Road from Richmond Road (MHST53979) through to Woodroffe Avenue (MHST53982); and
 - 2 Woodroffe Avenue from Woodroffe Avenue (MHST78275) through to Woodroffe Avenue (MHST26040).
 - iii. DB Co shall design and construct new storm sewers on Byron Avenue and Richmond Road with capacity for the 5-year storm. Flows to the minor system shall be restricted to the 2-year peak flow rate. Major system flows shall be designed to pond on the street consistent with requirements in this Article and the City of Ottawa Sewer Design Guidelines. Design and construction shall conform to Article 5 – Drainage and Stormwater Management Design Criteria, and Article 6 – Roadway, Bus Terminals and Lay-Bys of this Part 2. List of new storm sewers is as follows:

- 1 Byron Avenue from Richardson Road to Woodroffe Avenue, to provide minor system drainage of the roadway, and to accept minor system flows from the tributary areas to the south;
 - 2 Byron Avenue from Lockhart Avenue to Woodroffe Avenue, with drainage connections to properties on the south side of Byron, to provide minor system drainage of the roadway and to accept minor system flows from tributary areas to the south; and
 - 3 Richmond Road from Cleary Avenue to Woodroffe Avenue to provide drainage for the arterial roadway, the Byron linear park, tributary areas to the south, and properties on the north side of Richmond Road.
- iv. As part of Richmond Road Complete Streets and Byron Avenue reconstruction, DB Co shall design and construct SWMPs as outlined in Clause 5.7 of this Part 2.

(c) NCC Specific Utility Servicing Requirements

- (i) DB Co shall undertake Utility Work to provide drinking water, sanitary and storm services to the Rochester Fields site ([REDACTED]) and Kitchissippi Lookout for future development and use by the NCC. Elements of the Utility Works shown on the drawings provided by the NCC in Appendix G of this Part 2, shall form part of the requirements as described below.
- A. General construction requirements shall be as follows:
- i. All construction on NCC lands shall follow the City of Ottawa Drinking Water Guidelines and City of Ottawa Sewer Design Guideline;
 - ii. DB Co shall provide sufficient appurtenances to flush stagnant water from constructed watermains. DB Co shall be responsible for water flushing during construction until the site is transferred back to the land owner as per City of Ottawa Standard Specification F-4491. The land owner shall be responsible for flushing post-construction.
 - iii. Sanitary sewer grading shall allow for gravity drainage of buildings.
- B. Prescriptive requirements of the Utility Works shown on the provided drawings shall be as follows:

- i. The routing of all Utility Works.
- ii. Minimum clearances prescribed between Utility Works and existing infrastructure.
- iii. All connections points into municipally or privately owned Infrastructure. All termination points capped for future use;
- iv. All drinking water pipe sizes and type. All sanitary and storm sewer sizes and type;
- v. The location and features of all maintenance holes, valve chambers, tees, reducers, subdrains, catch basins, infiltration based LID, inlet control devices, curb stops, hydrants;
- vi. The features and routing of all joint utility crossing ducts and joint utility crossing duct banks. For the location and additional requirements of the proposed Kitchissippi Lookout Intersection, refer to Clause 6.21 of this Part 2.
- vii. The water and sanitary services at Westboro Beach/Atlantis shall cross the SJAM Parkway in the Kitchissippi Lookout Intersection. For the location and additional requirements of the proposed Kitchissippi Lookout Intersection refer to Clause 6.21 of this Part 2.

(d) Lawn Avenue Parkette & Community Garden Servicing Requirements

- (i) DB Co shall undertake Utility Work to improve the storm water services at the intersection of Edgeworth Avenue and Lawn Avenue and to provide drinking water services to the proposed Lawn Avenue parkette community garden.

A. General requirements shall be as follows:

- i. All Utilities constructed beneath the Lawn Avenue parkette shall be located no greater than 4.5m from the centreline of the park.
- ii. DB Co shall demonstrate to the City through hydrologic/hydraulic modeling that the cumulative impacts of the Works will not increase peak flow rates or the peak hydraulic grade line of the enclosed portion of Pinecrest Creek known as the ORPP for all rain events up to the 100-Year Storm. This analysis shall be submitted in accordance with Schedule 10 – Review Procedure.

B. Specific drinking water requirements shall be as follows:

- i. Provide a 50mm drinking water service on municipal lands at the NCC property line south of the proposed park pathway. construction shall follow the City of Ottawa Standard Design

Drawing W31.1 to provide water to the proposed community garden. The curb stop shall be located at the intersection of Edgeworth Avenue and Lawn Avenue.

C. Specific storm water requirements are as follows:

- i. Clean, repair and re-grade ditches and storm water Culverts along Edgeworth Avenue from [REDACTED] (300m) and along Lawn Avenue from Hartleigh Avenue to Edgeworth Avenue (160m). Grading shall flow towards the intersection of Edgeworth Avenue and Lawn Avenue;
- ii. Upsize the storm Culverts at the intersection of Edgeworth Avenue and Lawn Avenue to 500mm diameter;
- iii. Re-grade the intersection of Edgeworth Avenue and Lawn Avenue towards the catch basin and inlets at the intersection of Edgeworth Avenue and Lawn Avenue. Reinstall road features affected by the work of replacing and upsizing the Culverts. Install the frost tapers;
- iv. Provide a below-grade storm sewer beneath the Lawn Avenue parkette. Connect the storm water Culvert catch basin at the intersection of Edgeworth Avenue and Lawn Avenue to the Lawn Avenue parkette storm water sewer. No overland flow shall be permitted through the Lawn Avenue parkette up to the 5-Year storm event;
- v. Connect the Lawn Avenue parkette storm sewer to the ORPP.

(e) Southwest Transitway Storm Culvert replacements

- (i) DB Co shall undertake Utility Works to reconstruct the storm sewers (STM64602, STM64606, STM64613 and STM64599) between Baseline Road and Iris Street. Existing headwalls and wingwalls shall remain.

(f) Moodie LMSF

- (i) DB Co shall be permitted to construct the LMSF Vehicle storage Tracks and roof Structure above the existing 900mm West Nepean trunk sanitary sewer. Where the West Nepean trunk is located beneath the LMSF Vehicle storage Tracks and roof Structure:

- A. DB Co shall demonstrate the proposed LMSF design, construction and operation does not impose unacceptable operational, life-cycle or access risk to the trunk sewer to the satisfaction of the City in the pre-final design submission.

- B. DB Co shall maintain a 3m horizontal clearance to maintenance hole structures from the storage Tracks and roof Structure.
 - (ii) DB Co shall designate a natural gas supply point location on Corkstown Road. DB Co shall file forecasted demands and required gas service date for the LMSF facility. The City shall cover the costs of [REDACTED] system expansion up to the designated supply point.
- (g) Moodie Station Watts Creek Relief Sewer
 - (i) DB Co shall not construct a pedestrian Bridge overpass crossing the alignment of the 1950mm Watts Creek Relief Sewer sanitary sewer at Moodie Station.
 - (ii) DB Co shall not construct or maintain maintenance holes for the Watts Creek Relief Sewer within the Moodie BRT loop or travelled lanes.
- (h) Iris Grade-Separation Bridge Sanitary Sewer
 - (i) DB Co shall abandon the 300mm sanitary sewer on Iris Street from Parkway Drive to Adirondack Drive.
- (i) [REDACTED]
 - (i) No permanent utility easements shall be permitted on the property parcel at [REDACTED] except:
 - A. A storm sewer easement within 9m of the property parcel at [REDACTED] shall be permitted.
- (j) McRae Avenue Bridge [REDACTED] Transmission Cables
 - (i) [REDACTED] maintains high voltage transmission cables over the existing BRT supported by a steel structure. DB Co shall design OCS elements and an insulating barrier to protect against arching and grounding of the OCS to the steel structures. The design shall be approved by [REDACTED]. Refer to [REDACTED] located in the Background Information.

8.11 Enabling Utility Works

- (a) The City, in conjunction with [REDACTED], has initiated and will complete the following [REDACTED] relocations. Further information can be found in the [REDACTED] planning report:
 - (i) Montreal Road and OR174 Interchange: The [REDACTED] pole line on the north side of Montreal Road will be relocated over the extents from Shefford Road to approximately 300m east of Montreal Road. Relocation is complete.

- (ii) LMSF: [REDACTED] overhead lines crossing Highway 417 at the LMSF facility will be relocated underground immediately east of their current overhead location. Civil works are expected to commence in spring 2020.
- (b) The City, in conjunction with [REDACTED], will complete the relocation of the [REDACTED] direct buried ducts approximately located at station 303+110 of Confederation East. The ducts and fibers be will relocated south and away from the proposed Hwy 174/Montreal Bridge abutments as shown in the Reference Concept.
- (c) The City, in conjunction with [REDACTED], has initiated and will complete the following [REDACTED] relocations. Further information can be found in the [REDACTED]:
 - (i) Lincoln Fields: The [REDACTED] underground transmission line, which crosses the SJAM Parkway immediately south of Carling Avenue is anticipated to be relocated by August 2020. Schedule and relocation requirements will be finalized with DB Co.
 - (ii) Trim Rd: The [REDACTED] overhead transmission cables, which cross Trim Rd. parallel to Hwy 174 are to be elevated to meet clearance requirements for the proposed pedestrian Bridge. Schedule and relocation requirements will be finalized with DB Co.

ARTICLE 9 PROTECTION OF EXISTING ADJACENT STRUCTURES

9.1 Scope

- (a) This Article provides requirements for the following:
 - (i) Determination of the Project ZOI, as defined below, to assess the potential impacts to EAS due to the construction activities associated with the Works;
 - (ii) Criteria for evaluating impacts on EAS;
 - (iii) Development of mitigation measures as necessary to ensure safety and continued operation of the EAS; and,
 - (iv) Pre- and post-construction condition surveys.
- (b) Project ZOI shall refer to the area within and adjacent to the Works, including EAS, that potentially may be impacted by construction activities associated with the Works including dewatering.

9.2 General Requirements

- (a) DB Co shall:
 - (i) Assess the effects of construction related Ground Movements including dewatering on EAS. Prepare and submit for the City review a report in accordance with Schedule 10 – Review Procedure documenting anticipated impacts. Integrate the pertinent requirements of this Article into the report.
 - (ii) Based upon the report conclusions, design and implement mitigation measures as necessary to ensure that the structural integrity of EAS is maintained and that the appearance, functionality, operability, and durability of EAS are unimpaired.
 - (iii) Receive condition survey reports conducted by other parties where available and perform pre and post-construction condition surveys to document the condition of the EAS. Surveys shall be submitted in accordance with Schedule 10 - Review Procedure.
 - (iv) Remedy all damage caused by construction activities associated with the Works, including demolition, to pre-existing conditions. A complete report, that includes all temporary and permanent corrective measures, shall be submitted after completion of construction confirming all damages had been remedied.
 - (v) DB Co shall obtain necessary Permits, Licences, Approvals and Agreements from third party owners of the EAS to perform necessary works. For communication protocols, DB Co shall follow Schedule 18 - Communications and Stakeholder Engagement Obligations. DB Co shall not use any existing permits to enter to the EAS that had been granted for other projects or other purposes.

- (vi) Ensure that utility isolation or relocations do not affect the electrical safety grounding of EAS.

9.3 Qualifications

- (a) Determination of the ZOI, evaluation of impacts on EAS and the design and implementation of mitigation measures shall be undertaken by staff who have verifiable design and construction experience with similar programs and be directly supervised by a Professional Engineer.
- (b) The individual responsible for the surveyors shall be a registered land surveyor in the Province of Ontario with experience in measurements of the types of accuracies that shall be required for geotechnical instrumentation monitoring.

9.4 Design Requirements

- (a) DB Co shall:
 - (i) Obtain pertinent information of EAS and utilities.
 - (ii) Obtain all specific design, protection and monitoring requirements from third party owners including but not limited to City requirements for excavations adjacent to the structures including bridge components and other structures, Utility Companies, and other third party owners.
 - (iii) More specifically, prior to undertaking any excavations, DB Co shall provide the predicted movements (vertical, horizontal, rotational, tilt, relative movement) for review by the City. For such excavations, a detailed real time (24/7) monitoring plan to monitor settlements, Ground Movements and tilting/movement of adjacent bridge components shall be implemented in the GIMP and made available on DMP. If blasting is considered as a means of rock excavation in accordance with the restrictions of Schedule 15-2, Part 1, Clause 5.2, the anticipated ground vibrations shall be determined based on DB Co's blasting design and blasting plan to ensure compliance with the blasting limitations of Article 7 of this Part 2. City structures staff shall be notified, according to the communication protocols stipulated in Schedule 18 - Communications and Stakeholder Engagement Obligations, if any Alert Levels are exceeded. For further negotiations with City, DB Co shall provide modelling and assessment of the anticipated settlement in a CIAR-2 level report as well as a sensitivity analysis of the impact of varying settlement levels on the City bridges to be undertaken in 5mm increments.
 - (iv) Complete EAS verification study to include confirming information related to EAS locations, dimensions, elevations, foundations, structural details, materials, and other information necessary to complete a deformation analysis of the structures. Perform field surveys, utility locates, and foundation test pits as needed
 - (v) Deformation Analysis

- A. DB Co shall consider the available Site specific geotechnical reports and reference documents to identify the Project ZOI. The Project ZOI shall be determined by DB Co using engineering analyses and shall include all sources of Ground Movements that may be caused by construction activities associated with the Works including dewatering for temporary and permanent structures. At a minimum the Project ZOI shall be as follows:
- i. A horizontal distance from the edge of any supported excavation or temporary slope equal to twice the excavation depth as measured from the existing ground surface.
- B. Design Reports:
- i. Prepare and submit CIAR-1 and CIAR-2 in accordance with the requirements of Schedule 10 – Review Procedure. CIAR-1 and CIAR-2 shall include magnitude and distribution of Ground Movements as well as potential impacts on EAS. CIAR-1 is applicable to:
- 1 First level of assessment and screening for all EAS.
 - 2 EAS such as low rise commercial buildings and single family residences that are assumed to be flexible small frame buildings.
 - 3 EAS which are absent of any large rigid grade beam elements, which may have the potential to attenuate ground settlements.
 - 4 Small, low-rise non-critical EAS where the predicted impact poses no risk to public safety or loss of functionality.
 - 5 Utilities within the Project ZOI.
- ii. To assess the magnitude of impact to EAS and facilities, CIAR-1 analysis shall include the following tasks as a minimum:
- 1 Review of literature on impact assessment methodologies.
 - 2 Conduct building, bridge and utility inventory by identifying buildings, bridges and utilities within the settlement trough using building type and use survey.
 - 3 Overall evaluation of EAS and facilities potentially at risk.
 - 4 Detailed definition of damage levels.

- 5 Determine strain, settlement, and angular distortion limits for each building.
 - 6 Determine joint rotation, joint pull-apart, and tensile strain limits for each utility.
 - 7 Determine EAS or locations requiring a further CIAR-2 analysis.
- iii. CIAR-2 analysis is generally appropriate for EAS that meet any of the following criteria:
- 1 EAS recommended by the findings of CIAR-1.
 - 2 Exterior cladding systems that generally consist of non-load bearing masonry, precast concrete or glass.
 - 3 EAS that generally include deep, multi-storey basements which could possibly alter the slope of the ground settlement profile
 - 4 Mid-rise and high-rise EAS.
 - 5 Critical EAS that are considered to be of historical or cultural significance, heritage buildings or essential services buildings and utilities that exceed a CIAR-1 predicted impact levels.
- iv. The representative EAS for CIAR-2 analysis, as a minimum, shall be selected based on the following criteria:
- 1 Results of CIAR-1.
 - 2 Proximity to the cut-and-cover excavation zone or dewatering zone.
 - 3 Potential to sustain cut-and-cover excavation or dewatering induced settlement impacts.
 - 4 Type and sensitivity of superstructure and cladding.
- v. As a result of this selection process, the CIAR-2 analyses are expected to provide an estimate of the potential structural impacts due to cut-and-cover excavations. The results of these CIAR-2 analyses shall be used to predict excavation induced settlement impact to other similar EAS within the Project limits.

- vi. DB Co shall use established numerical simulation methods such as finite element method or finite difference method. Simplified numerical methods and empirical methods may be used only for CIAR-1 for screening purposes.

(b) Impact Mitigation Design

- (i) Design Structure-specific mitigation measures needed to prevent a loss in appearance, structural integrity, functionality, operability and durability of potentially impacted EAS and ensure safety and continued operation of the EAS. Demonstrate the effectiveness of the proposed mitigation measures by engineering analysis. Confirm and document that the proposed mitigation is acceptable to all potentially affected EAS owners which shall also include but will not be limited to City structures and Utility Companies. Determine instrumentation monitoring requirements, include Review and Alert Levels in the GIMP (refer to Article 7 – Geotechnical Design Criteria and Requirements, of this Part 2) for evaluating the effectiveness of the mitigation measures during construction that is consistent with the means and methods for construction. The DMP, as stated in this Article, shall be used to create and send alarm reports/notifications if Alert Levels are exceeded. DB Co shall inform the City of subsequent response actions taken by DB Co.
- (ii) DB Co shall prepare a Response Action Plan, as stated in Article 7 – Geotechnical Design Criteria and Requirements, of this Part 2, which shall consist of preliminary methods and means to respond to various Review and Alert Level scenarios based on types of geotechnical instruments that indicate Review and Alert Levels. Review and Alert Levels shall be determined based on the predicted Ground Movements and the results of the CIAR and shall also comply with the following criteria,
 - A. The Review Level is a geotechnical instrument reading that triggers a set of review and mitigation actions to ensure that the Alert Level is not exceeded. Review Level shall not exceed 10mm movement.
 - B. The Alert Levels is maximum permissible geotechnical instrument reading that triggers consideration of temporary work stoppage to prevent damage to EAS. Alert Levels shall not exceed 25mm movement.
 - C. DB Co shall adhere to the allowable joint pull-apart, joint rotation and tensile strain in table below for utilities within the Project ZOI.

| Material | Joint Pull-Apart (mm) | Joint Rotation (rad) | Tensile Strain ($\mu\epsilon$) |
|------------------|-----------------------|-----------------------------|----------------------------------|
| Cast Iron | 15 ⁽¹⁾ | 0.0075 ⁽²⁾ | 150 ⁽¹⁾ |
| Steel | 25 ⁽²⁾ | 0.0075 ⁽²⁾ | 550 ⁽²⁾ |
| Ductile Iron | 25 ⁽²⁾ | 0.0075 ⁽²⁾ | 500 ⁽¹⁾ |
| RCP | 25 ⁽²⁾ | 12.5mm/diam. ⁽²⁾ | 300 ⁽³⁾ |
| Brick & Concrete | NA | NA | 150 ⁽³⁾ |
| Precast Concrete | 25 ⁽²⁾ | 12.5mm/diam. ⁽²⁾ | 300 ⁽³⁾ |

1 Bracegirdle et al. (1996)

2 CIRIA No. 30 (1992)

3 North American Tunneling Proceedings (2014)

- i. DB Co shall develop limits for Concrete Pressure Pipe joint pull-apart, joint rotation and tensile strain in accordance with the pipe manufacturer's recommendations and industry standards, whichever is the more stringent.
 - ii. If blasting is used for rock excavation in accordance with the restrictions of Schedule 15-2, Part 1, Clause 5.2 and the requirements of Article 7 of this Part 2, the CIAR shall demonstrate that the tensile strain limits of brick and concrete Utilities listed above are not exceeded for the WNC based on DB Co's blasting design and plans. The minimum stand-off distance for rock blasting between the WNC and Parkway Tunnel shall not be reduced from that specified in Schedule 15-2, Part 1, Clause 5.2 but may be increased based on the results of this CIAR and as determined by the City.
- (iii) DB Co shall include in the GIMP all measures and specific instrumentation and monitoring requirements for protecting EAS within the Project ZOI as defined by DB Co.
- (c) Pre, during- and post-construction condition surveys
 - (i) DB Co shall be solely responsible to perform required condition surveys for the purpose of inspecting and documenting the existing condition of EAS prior to, during and after construction. Record information about EAS damage or repairs, defects, unusual aspects of construction, presence of sensitive equipment, and similar pertinent information. Perform this work in accordance with Applicable Law, relevant standards, regulations and by-laws including but not limited to the City municipal code. Survey information shall be submitted according to Schedule 10 – Review Procedure.

- (ii) Where pre-construction condition surveys for EAS are performed by DB Co, survey reports shall be prepared and submitted for review in accordance with the requirements of Schedule 10 – Review Procedure. The survey reports shall consist, at a minimum, of the completed standard form, photographs with photo description log sheet, and DVD of digital video and digital photographs. The report shall be stamped by the Professional Engineer licensed in Ontario responsible for performing the survey.
- (iii) Perform during- or post-construction condition surveys for EAS where the Response Levels of structure movements or deformation have been exceeded, or a damage claim has been received.

9.5 Existing Adjacent Structures Owner Interactions

- (a) DB Co shall:
 - (i) Follow communication protocols established in Schedule 18 - Communications and Stakeholder Engagement Obligations, for interactions with EAS owners and other impacted or potentially impacted parties.
 - (ii) Work with owners of EAS to perform required inspections. Develop and implement, where required, acceptable mitigation measures and geotechnical instrumentation monitoring requirements and perform pre- and post-construction condition surveys.
 - (iii) The process of identifying impacts to EAS and developing monitoring and mitigation requirements shall generally be as follows:
 - A. Step 1: Owners of potentially affected EAS, as identified in the CIAR-1, shall be briefed of the CIAR-1 findings by DB Co.
 - B. Step 2: CIAR-2 shall be prepared and provided to potentially affected EAS owners and the City.
 - i. DB Co shall consider each of the above steps as iterative depending on specific requirements of individual EAS owners including but not limited to the City, Utility Companies and other third party owners. DB Co shall be proactive and thorough in their approach.
 - ii. Develop and maintain a schedule of the EAS and other stakeholders that rely on EAS. This document shall be updated as required and shall be used to track the completion of the impact assessments and obtaining acceptances of the monitoring and mitigation plans including review and approval by all relevant third parties including but not limited to the City, Utility Companies and other third party owners. Submit the updated

document to the City on a quarterly basis in accordance with Schedule 10 – Review Procedure requirements.

9.6 Future Adjacent Construction Requirements and Protection of Project Infrastructure

- (a) At the City's request DB Co shall be required to review the existing Developer's Guide prepared by the City as it relates to proximity of proposed Third Party development in relation to the Confederation Line East Extension and Confederation Line West Extension alignment, Lands and Facilities, and provide comments regarding the defined Development ZOI compared with the Project ZOI.
- (b) Assist the City with the review of submitted documentation for proposed development throughout the construction. DB Co review comments will be used by the City for approval of DB construction and implementation procedures required prior to construction of future adjacent projects to ensure that no adverse impacts will be caused to the system. DB Co shall coordinate and cooperate with the City with respect to the established development review process recognizing that:
 - (i) The City will be responsible for performing development reviews in accordance with the process;
 - (ii) The City will retain an independent consultant and/or utilize internal staff resources to undertake the development reviews;
 - (iii) The City will be responsible for screening development applications that require a development review;
 - (iv) DB Co shall be responsible for reviewing and commenting on the draft development review findings; and,
 - (v) DB Co's contributions to the review process will be formalized in a City by-law to be enacted by the City.

ARTICLE 10 OR174 STREET LIGHTING

10.1 Introduction

- (a) This Article presents the roadway lighting Design Criteria and lighting performance requirements for transition highway lighting at the Stations. Transition lighting shall be provided at Station locations and shall be compatible with anticipated future lighting requirements for the full highway. Full lighting shall be provided at the Montreal Road interchange and the new Trim Road intersection.

10.2 Reference Documents

- (a) The road lighting design and construction shall comply with the criteria contained in this Article, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - (i) The criteria contained in this Article;
 - (ii) Ontario Electrical Safety Code, Electrical Safety Authority – Last Edition;
 - (iii) MTO – Electrical Engineering Manual;
 - (iv) Road interchanges Lighting Policy;
 - (v) Right-of-way lighting policy;
 - (vi) Roadway lighting ANSI/IES RP-8-14;
 - (vii) Illumination Warrant Policies PLNG-B-05 & PLNG-B-06;
 - (viii) Ontario MTO Provincial Highway Directives, MTO;
 - (ix) MTO accepted luminaire Photometric list;
 - (x) Policy for spill light beyond MTO Right-of-away and for Light Trespass onto the MTO Right-of-way;
 - (xi) MTO Drawings (MTOD);
 - (xii) OPS;
 - (xiii) DSM;
 - (xiv) TAC – Guide for design of roadway lighting

- (xv) Highway Element Investment Review Guidelines (HEIR);
- (xvi) Roadside Safety Manual, MTO;
- (xvii) Geometric Design Standards for Ontario Highways, MTO;
- (xviii) City of Ottawa standards;
- (xix) Other relevant municipal standards;
- (xx) NEMA;
- (xxi) CSA;
- (xxii) IESNA Lighting Handbook;
- (xxiii) IEEE;
- (xxiv) IEC;
- (xxv) [REDACTED] Specifications;
- (xxvi) [REDACTED] Specification.

10.3 Basis for Design

- (a) All lighting within the ROW of OR174 including on and off ramps to the OR174 shall conform to MTO Standards, specifications and drawings. Lighting design for all other City ROWs shall conform to the requirements in Article 6 - Roadways, Bus Terminals and Lay-Bys of this Part 2.
- (b) Calculations
 - (i) Lighting level calculations around the Stations shall be completed in conjunction with the final retained concept. DB Co shall use one of the following modeling software programs to develop and verify the design of all the photometric aspects.
 - A. AGI 32 version 2.36
 - B. Autolux version 8.05
 - (ii) Calculations shall include luminaire locations, mounting heights, manufacture's catalog data sheet with product selections and options indicated, lamp data sheet, wattage lumens, color rendering index, light loss factors, and photometric file used.
 - (iii) DB Co shall provide modeling simulations for each Station. The calculations shall show the calculated lighting levels.

- (iv) Voltage drop calculations shall be completed for maximum loads, long run circuits and feeders. Voltage drop shall not exceed 5 %.
- (v) DB Co shall submit the lighting calculation results to the City of Ottawa for review in accordance with Schedule 10 – Review Procedure.
- (c) General requirements
 - (i) All lighting poles shall be base mounted with underground ducts and wiring.
 - (ii) All Roadway lighting Design Criteria shall meet the TAC and MTO requirements.
 - (iii) DB Co shall design a roadway illumination concept for the following locations :
 - A. Montreal Road Station
 - B. Jeanne d’Arc Boulevard Station
 - C. Orléans Boulevard Station
 - D. Place d’Orléans Station
 - E. Trim Road Station
 - (iv) DB Co shall determine the need for any additional illumination within the Lands, interchanges, crossing roads and adjacent highways if applicable.
 - (v) DB Co shall design and construct full interchange lighting for the Montreal Road/OR174 and lighting as appropriate for the Trim Road/OR174 intersection, including interchange ramps. The lighting identified above for Montreal Road Station and Trim Road Station and Park and Ride shall be designed in conjunction with the interchange/intersection lighting.
 - (vi) The products or materials used for the illumination on OR174 shall be as per the MTO standards and shall be LED fixtures.
 - (vii) Lighting system shall be designed so that the failure of any single luminaire or lighting circuit in areas accessible to the public does not leave an area in total darkness.
 - (viii) Lighting system shall be energy-efficient using high-efficiency light sources and auxiliary equipment and shall be LED equipment.
 - (ix) Lighting equipment shall be vandal-resistant where accessible to the general public.
 - (x) The design of the illumination systems shall provide safety, reliability, and continuous operation.

- (xi) Lighting design and construction shall be coordinated with other building elements so as not to affect the expected works.
- (d) Design Criteria
 - (i) The DB Co design shall meet the minimum illumination levels listed below:
 - A. Luminance
 - i. Minimum average maintained 0.6 cd/m²
 - ii. Average to Minimum Uniformity ratio ≤ 3.5
 - iii. Maximum to Minimum Uniformity ratio ≤ 6
 - B. Illuminance
 - i. Minimum average maintained 9 lux
 - ii. Average to Minimum Uniformity ratio ≤ 3.0
 - C. Veiling luminance
 - i. Recommended ≤ 0.3
 - (ii) DB Co shall perform a detailed illumination analysis for the Station locations.
 - (iii) The lighting design shall meet the illumination levels and uniformity requirements for both day and night time operations.

10.4 Functional requirements

- (a) Luminaires
 - (i) All roadway lighting fixtures shall be LED type III, cut-off or full cut-off.
 - (ii) Luminaire housing/refractor assembly shall be designed and fabricated to prevent the ingress of moisture, dirt and other foreign materials.
 - (iii) Luminaire shall have a minimum of 10 years warranty.
- (b) Poles
 - (i) DB Co shall provide poles in accordance with the City of Ottawa or MTO requirements and the requirements of Clause 10.1 (a) of this Part 2.
 - (ii) Poles shall be direct buried.
 - (iii) Poles shall be base mounted.

- (iv) Poles shall be installed in Earth. When rock is encountered, the method of installation shall be chosen from those specified in the contract documents. Each method of installation in rock shall be approved by the Engineer prior to construction.
 - (v) All poles shall be inspected for any obvious flaws, prior to erection.
- (c) Cables and wiring
 - (i) Cables and wiring shall be installed in accordance with the City or MTO Standards.
- (d) Grounding
 - (i) The roadway lighting electrical distribution system shall be solidly grounded, designed to meet the City or MTO Standards.
 - (ii) The system ground wire and the service ground wire shall be connected to the same neutral bus.
- (e) Electrical ducts and fittings
 - (i) Two different types of ducts shall be permitted. All of them shall meet the City requirements.
 - A. Rigid PVC ducts using a rigid PVC coupling sleeve;
 - B. Flexible Polyethylene ducts joined by cutting a sleeve from the next larger size
 - (ii) Rigid PVC electrical ducts shall be direct buried and installed in trench.
 - (iii) The materials shall meet the requirements of the City and MTO.
- (f) Power distribution
 - (i) The power distribution system shall provide enough power for the illumination components that require electrical power.
 - (ii) DB Co shall undertake all coordination with Utility Companies for all required servicing and shall provide a list of all electrical loads to the power Utility Companies.
 - (iii) DB Co shall provide power installations and connections to all illumination components that require electrical power.
- (g) Power supply

- (i) Power supply equipment shall comply with the City and MTO Standards.
 - (ii) Supply control cabinets shall be mounted securely on poles using stainless steel strapping.
 - (iii) DB Co shall inspect the power supply equipment to ensure that it meets the requirements of the contract. A visual inspection of all the power supply equipment is preferable prior to its delivery.
- (h) Coordination with local utilities
 - (i) DB Co shall coordinate along the DB construction staging with all the involved local utilities.
 - (ii) DB Co shall plan measures to protect existing underground utilities.

**SCHEDULE 15-2
DESIGN AND CONSTRUCTION REQUIREMENTS**

**PART 3
SYSTEMS**

ARTICLE 1 INTRODUCTION

1.1 General Overview

- (a) This Part 3 is written using design standards typical of North America unless otherwise specified.
- (b) DB Co shall declare and apply the selected standards consistently throughout the full range of the Systems designs.
 - (i) DB Co shall provide the Systems in accordance with the requirements set out in this Project Agreement and any deviations or variances to the application of the selected standards shall be subject to approval by the City.
- (c) DB Co shall ensure that each system design includes the ability to support the extension and system expandability.
- (d) DB Co shall ensure that equipment from selected vendors is implemented consistently from the same vendors throughout the Confederation Line Extension.
- (e) This section provides a description of the elements contained within the general heading of systems. Systems include the following functional elements:
 - (i) Traction Power System;
 - (ii) OCS;
 - (iii) Revenue Vehicles; the City to procure all Revenue Vehicles required for the extension;
 - (iv) Maintenance Vehicles; the City to procure all Maintenance Vehicles required for the extension ;
 - (v) Communications
- (f) DB Co shall develop the performance specifications, produce the design, supply and test the Signalling and Train Control System.
- (g) DB Co shall design, procure, install, test and commission the S&TC infrastructure items required to support the overall S&TCS implementation. The S&TC system will be an

extension of the Existing Confederation Line system and as such shall be consistent with the existing system in design approach, architecture and technology. The S&TC shall, as far as possible, deploy the identical functions, features and equipment. Changes to the existing design shall be limited to those specifically required for the extensions to the guideway and associated facilities, including any new hazards or requirements

- (h) DB Co shall produce the specifications, develop the interfaces and manage the integration testing and Commissioning of the communications Systems listed below.
 - (i) CTS;
 - (ii) PA/PIDS system ;
 - (iii) CCTV System
 - (iv) IAC System
 - (v) Telephone and Intercom System
 - (vi) SCADA System
 - (vii) Voice Radio Communications (including BTS hotel, conduits along the alignment, fibre along the alignment, conduits at Stations, fibre & coax cable at Stations, leaky coaxial cable in Tunnel and equipment in communications equipment rooms)

1.2 Systems Element Summary

- (a) TPSS – detailed in Article 13 – Traction Power System, of this Part 3.
 - (i) DB Co shall design the Traction Power System that supplies a dual end fed DC voltage into the OCS.
 - (ii) DB Co shall ensure that the TPSS be placed alongside the Guideway at locations dictated by the Train performance criteria, maintenance consideration, available property and availability of utility power connection. Refer to Schedule 15-2, Part 4, Article 2 – Architectural Design Criteria, for TPSS location restrictions.
 - (iii) DB Co shall ensure that the TPSS be modular in design. Equipment within the TPSS shall be easily accessible for performing maintenance.
 - (iv) DB Co shall ensure that the design and positioning of the TPSS take into account any environmental and aesthetic constraints resulting from their chosen locations.
 - (v) DB Co shall ensure that The TPSS conform to EMI & EMC requirements set forth in Article 11 – EMI/EMC of this Part 3.

- (vi) DB Co shall minimize stray current through compliance with the corrosion requirements set forth in Article 12 – Corrosion Control, of this Part 3.
 - (vii) DB Co shall ensure that the Utility feed to TPSS be obtained at the utility transmission voltage level.
 - (viii) DB Co shall ensure that the System include built-in redundancy to maintain normal revenue Train operations with a single point of failure, sub-transmission systems shall be designed with two cable circuits, each capable of carrying the full-load current.
 - (ix) DB Co shall ensure that a computerized analysis be performed to develop an optimum Traction Power System configuration defining TPSS locations, equipment ratings and cable sizes. DB Co shall ensure that the design meet specified systems performance under normal and degraded operation conditions. DB Co shall produce and submit the report to the City for review and comment.
 - (x) DB Co shall ensure that the System design take into consideration personnel and equipment safety requirements, proper clearances, and required lockout functions, controls, warning alarms, and other equipment operating functions.
- (b) OCS – detailed in Article 14 – Overhead Contact System, of this Part 3.
- (i) DB Co shall provide an OCS to supply Traction Power to Revenue Vehicles and Maintenance Vehicles throughout the Confederation Line.
 - A. The OCS shall consist of the messenger and contact wires which are supported from poles, portals, cross-spans, bridge supports and tunnel supports as required. The contact wire shall be installed at constant height with respect to the Track and shall be suspended from the messenger wire by means of hangers.
 - B. The OCS design shall include the selection of support structure spacing along tangent and curved Track, and the messenger and contact conductor tensions. The design shall optimise the selection of these parameters to achieve the most complete and functional design while the pantograph does not leave the contact wire under the most onerous conditions of operation.
 - C. The OCS shall be designed to have a low visual impact, high reliability, provide safe operation and maintenance and operate within the environment installed.
- (c) Signalling and Train Control System – detailed in Article 10 – Signalling and Train Control System, of this Part 3.

- (i) DB Co shall ensure that the S&TCS be based on a proven ATC architecture supporting a wide range of operating environments.
 - (ii) DB Co shall ensure that the S&TCS be designed to maximize the safety, reliability, operational flexibility and fault tolerance.
 - (iii) DB Co shall ensure that the S&TCS support operational performance and service plan as described in Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements.
- (d) DB Co shall provide all field cables. DB Co shall provide all civil infrastructure (conduits duct banks, inserts, etc.) and installation required to support the S&TCS design. DB Co shall terminate and test all cabling.
- (e) EMC/EMI – detailed in Article 11 – EMI/EMC, of this Part 3.
 - (i) All supplied equipment and systems within the DB Co System Infrastructure shall meet the EMC/EMI requirements set out in Article 11 – EMI/EMC, of this Part 3.
- (f) DB Co shall ensure that all systems elements be designed, implemented and configured as required to support the future implementation of PEDs at all Underground Stations.
- (g) DB Co shall produce and provide a register to the City with all Confederation Line Extension Project asset data for incorporation into the CMMS developed as part of the Existing Confederation Line. DB Co shall provide the CMMS data for the East Extension and the West Extension six months prior to Substantial Completion.
- (h) The City will provide the prescribed format to DB Co for development and incorporation of the asset data.
- (i) Radio Systems
 - (i) In Article 2 – Communications Transmission Systems, of this Part 3, the term “train to wayside wireless” includes all three of the train to wayside radio systems being constructed as part of the Confederation Line West Extension and Confederation Line East Extension and described below.
 - (ii) A Voice Data Radio (P25) system is being provided for Project wide communications and ESP use. The scope of work with regards to the locations of DB Co responsible items has been included in Article 5 – Voice/Data Radio System, of this Part 3.
 - (iii) In Clause 8.8 (a) (vi.), of this Part 3, the term “train to wayside” is being used to include the Voice/Data (P25) Radio System and the HSDR system.

- (iv) A wireless radio system is being included as part of the CBTC system, as outlined in Article 10 – Signalling and Train Control System. The location of all radio system components included as part of this system is included as part of the CBTC system design and installation.
- (v) A High Speed Data Radio System is being provided for data communications between the vehicles and the wayside infrastructure, as outlined in Article 17 – high Speed Data Radio System, of this Part 3. The actual locations of the wayside devices shall be determined during the design phase.

1.3 Systems Engineering Principles

- (a) All the Systems described in this Part 3 shall be designed and implemented following the Systems Engineering principles (as set out in ISO/IEC 15288 and as described in Schedule 15-2, Part 1 – General Requirements) and the S&TCS will be consistent with [REDACTED] as described in the [REDACTED]. The Systems Engineering and Systems Integration Management processes shall ensure that systems expanded, or provided, by DB Co will interface with Existing Confederation Line systems to create a fully integrated expanded system.
- (b) This systems engineering approach shall be applicable for all levels in the system hierarchy and for all disciplines.
- (c) Submittal requirements are outlined in Schedule 10 – Review Procedure.
- (d) DB Co shall:
 - (i) Implement a SEMP that outlines the engineering organization, the facilities needed and where they will be located; the interaction between each of the engineering phases and what criteria is necessary to be completed prior to moving on to the next phase; each of design phases and the requirements, processes and steps taken to successfully complete each; how technical issues will be resolved; description of how external interfaces will be developed and managed; implementation planning including training of users; and a description of how production will be managed; the SEMP shall include the plan & process for requirements review and approval as well as how issues will be resolved between the City and DB Co.
 - (ii) DB Co shall develop and implement a comprehensive Grounding and Bonding Plan that outlines how all elements (above ground and underground Stations, Track, TPSS, OCS, bridges and overhead structures, etc.) of the System are grounded and bonded. The plan shall describe how the elements of the Confederation Line shall be grounded and bonded to ensure an electrically safe design and to prevent adverse stray current conditions that could impact the overall operational state of the System and surrounding non-system elements. The plan shall be submitted to the City for review and comment.

1.4 RAM Targets

- (a) DB Co shall provide equipment/subsystem equipment to meet the following RAM targets:
- (i) General
- A. For the requirements pertaining to this Clause 1.4, a re-use of equipment from the Existing Confederation Line will be deemed compliant. DB Co shall provide the respective information for reliability and MTTR for the intended re-use equipment from the Existing Confederation Line. DB Co shall demonstrate to the City that the equipment to be re-used from the Existing Confederation Line for the Confederation Line East Extension and Confederation Line West Extension is from the same supplier, with the same model number, and has been accepted for use on the Existing Confederation Line. In the case that equipment cannot be re-used from the Existing Confederation Line due to actual or planned obsolescence, DB Co shall be entitled to use a more recent and equivalent model recommended by the equipment supplier, provided it meets or exceeds the specifications of the original equipment and is compatible with the existing interface.
- B. MTTR – For the purpose of the prescribed requirements in this Clause 1.4, the design MTTR shall be used for analysis and demonstrated at the First Article Inspection or at a site demonstration, if a First Article Inspection is not required.
- C. All workstations (excluding keyboard, monitor, mouse) shall have a minimum MTBF of 50,000 hours.
- i. MTTR < 0.5 hours.
- D. All servers shall have a minimum MTBF of 50,000 hours.
- i. MTTR < 0.5 hours.
- E. Network switches shall have an MTBF of 500,000 hours.
- i. MTTR < 0.5 hours.
- F. Station Controllers for emergency sound system/CCTV/PIDS (as applicable) shall have a minimum MTBF of 120,000 hours.
- i. MTTR < 1.0 hours.
- G. Elevators shall have an Availability of > 97%.

- i. Availability is calculated as total operational time (in hours) divided by the total number of downtime (in hours) plus total operational time (in hours).
 - ii. $A\% = \text{total operational time} / (\text{total operational time} + \text{total downtime})$.
 - iii. $MTTR < 4 \text{ hours}$.
 - H. Escalators shall have an Availability of $> 97\%$.
 - i. Availability is calculated as total operational time (in hours) divided by the total number of downtime (in hours) plus total operational time (in hours).
 - ii. $A\% = \text{total operational time} / (\text{total operational time} + \text{total downtime})$.
 - iii. $MTTR < 4 \text{ hours}$.
 - I. Switch Heater (gas for yard and electric for mainline):
 - i. Each switch heater shall have an MTBF of 2000 operational hours with an MTTR of 1 hour.
- (ii) Communications Equipment
 - A. CCTV:
 - i. Each camera shall have a minimum MTBF of 120,000 hours.
 - ii. $MTTR < 0.5 \text{ hours}$.
 - B. NVR shall have a minimum MTBF of 50,000 hours.
 - i. $MTTR < 0.5 \text{ hours}$.
 - C. PA / PIDS:
 - i. Each speaker shall have a minimum MTBF of 120,000 hours.
 - ii. Each display shall have a minimum MTBF of 50,000 hours.
 - iii. $MTTR < 0.5 \text{ hours}$.
 - D. ETEs and FTEs:

- i. Each outdoor phone shall have a minimum MTBF of 50,000 hours.
 - ii. Each indoor phone shall have a minimum MTBF of 130,000 hours.
 - iii. Each intercom shall have a minimum MTBF of 130,000 hours
 - iv. MTTR < 0.5 hours
 - (iii) S&TCS:
 - A. Wayside Radio Unit Assembly:
 - i. Includes radio, antenna and peripherals and shall have an MTBF greater than 50,000 hours.
 - ii. MTTR < 0.5 hours.
 - B. Zone Controllers:
 - i. Each single checked redundant (2oo2) zone controller shall achieve an MTBF greater than 16,000 hours.
 - ii. MTBSAF of 50,000 hours.
 - iii. MTTR < 0.5 hours.
 - C. Switch Machine:
 - i. Each switch machine shall achieve an MTBF of 200,000 hours.
 - ii. MTTR < 2 hours.
 - D. Transponder Tags:
 - i. Each tag shall achieve an MTBF of 3,000,000 hours.
 - ii. MTTR < 0.5 hours.
 - (iv) Traction Power:
 - A. TPSS:
 - i. Switchgear shall have an MTBF of 20,000 hours, MTBSAF of 50,000 hours and an MTTR of < 4 hours.

- ii. Transformer/Rectifier Unit MTBF of 20,000 hours, MTBSAF of more than 250,000 hours and an MTTR of < 4 hours.
- B. UPS Equipment provided for applicable system power supply back-up:
 - i. UPS assembly shall have an MTBF of 25,000 hours, MTBSAF of 250,000 hours and an MTTR of 0.5 hours.
- C. OCS:
 - i. DB Co shall provide an MTBF and MTBSAF analysis for the Overhead Contact System (inclusive of poles, mounts, messenger and contact wire, tensioners, mounts, etc.) to demonstrate that the design meets or exceeds the performance of the Existing Confederation Line.
 - ii. MTTR < 8 hours.

ARTICLE 2 COMMUNICATIONS TRANSMISSION SYSTEM

2.1 General Requirements

- (a) The CTS shall serve as communications backbone to provide data, voice and video communications between the TOCC, BCC, Moodie LMSF, Belfast MSF, the Stations and wayside facilities.
- (b) DB Co shall ensure that the CTS design provide hi-speed fibre optic communications transmission for the various Confederation East/West communications subsystems, including, CCTV, PA, PIDS, telephone & intercom, IAC, fare collection, FLS, radio, Train to wayside wireless and SCADA systems. Train Control data for the Confederation Line communication shall be on a separate wireless network, see Article 10 – Signaling and Train Control System, of this Part 3, for details. The CTS design shall also include any fibre required for the voice radio system and the cellular network in the Tunnels and for any parts of the Works.
- (c) DB Co shall ensure that the CTS design for Confederation Line shall include integration of the proposed CTS with the existing CTS.
- (d) DB Co shall ensure that the CTS design be capable of providing automatic protection switching for link recovery in case of failure.
- (e) DB Co shall ensure that if a complete fibre optic cable break should occur, the system shall perform a loop back operation, isolating the fault, and maintaining communications with all equipment that remains connected to the network. Should a major node failure occur, the network shall automatically create and startup a new configuration without the node.
- (f) DB Co shall ensure that all restoration times shall be limited to a maximum of 50 milliseconds.
- (g) DB Co shall provide the system of ductwork, conduits, pull boxes, man holes and fibre optic splice enclosures required for the CTS extension. DB Co shall ensure that manholes can be secured and allow access only to authorized persons.
- (h) DB Co shall ensure the system of ductwork, conduits, pull boxes and manholes to be provided along the mainline to transport the CTS cables is physically separated by providing a system along both sides of the alignment that connects with the Existing Confederation Line infrastructure.
- (i) DB Co shall design, manage the interfaces, supply and install, the CTS civil infrastructure both outside and inside the Stations including conduits, pits, foundations, buildings and cabinets.
- (j) DB Co shall provide rack space at underground Stations for cellular service equipment.

- (k) The mainline CTS system of ductwork and conduits shall include manholes strategically located throughout the alignment to facilitate connection of fibre cables from the Stations to the TPSS.
- (l) DB Co shall design, manage the systems interfaces, procure, install, conduct PICO and SAT of the CTS facility to facility fibre optic cable.
- (m) DB Co shall terminate fibre runs into the fibre entrance cabinets in Station communications rooms and from there to CTS rack patch panels.
- (n) DB Co shall design, manage the systems interfaces, procure, install, conduct PICO and SAT of the CTS stations to wayside fibre cable.
- (o) DB Co shall design, manage the interfaces, supply (including Pre-delivery Test), install, terminate, conduct PICO and SAT on the fibre runs from fibre entrance cabinets in Station communications rooms to any CTS wayside patch panels and from FECs to CTS rack patch panels.
- (p) DB Co shall design, supply (including Pre-delivery Test), install, conduct PICO, SAT and commissioning of all CTS cable terminations.

2.2 Operational Requirements

- (a) The existing TOCC, located at 875 Belfast Road, Ottawa, Ontario (referred to as 875 Belfast herein), includes all of the systems and subsystems necessary to provide the command, control and monitoring necessary for the delivery of the services. The existing communications elements managing these functions are located either in the Belfast MSF communications room or in TOCC.
- (b) The City will purchase all required server licenses, data storage, and any other system expansion equipment required to connect the new CTS field equipment to the equipment located in the Belfast MSF.
- (c) The City will integrate, test, and commission all OLRT Stage 2 communications equipment at the TOCC and BCC head-ends.

2.3 CTS Core Network Switch/Router Requirements

- (a) The core network switches/routers within the Stations shall have a minimum of 4 X 10Gbps ports to connect on the ring to the next Station on the loop and interconnect the core switches/routers.
- (b) The core network switches/routers within the Station shall be interconnected using two 10 Gbps fibre interfaces. The switches shall be sized for the port density required within each Station including network connections on each core network switch/router for local critical equipment such as SCADA, VOIP gateways and CCTV NVRs, and PA network

interfaces. All systems equipment with two network interfaces shall connect to a port on each of the core Station switches or access switches. If the core network switches/routers do not have the port density to support all network equipment in the Stations then additional access switches with high network interface ports shall be supplied to connect to CCTV cameras, and other equipment that only support single network connections. The access switches shall be connected to each of the core switches for redundancy. The core network switches located in each Station shall support at a minimum the following features:

- (i) Standard 19 inch rack mountable.
- (ii) Dual redundant hot swappable power supplies connected to the UPS and a separate electrical panel feed. Field replaceable fans.
- (iii) Local switch management.
- (iv) Minimum switch fabric non-blocking throughput of 40Gbps.
- (v) Provide switch aggregation or switch stacking.
- (vi) Support minimum 4 x 10 Gbps interfaces.
- (vii) Support minimum of 20 additional ports either single mode or multimode fibre or 10/100/1000 TX.
- (viii) Support the following network protocols:
 - A. G 8032 Ethernet Ring Protection and/or MPLS and/or SPB IEEE 802.1aq;
 - B. IEEE 802.1Q VLAN Tagging;
 - C. IEEE 802.3ad Link aggregation;
 - D. IEEE 802.1 Prioritizing;
 - E. IEEE 802.3w Rapid Spanning Tree;
 - F. IGMP V2, V3;
 - G. IEEE SBP Shortest Path Bridging;
 - H. IEEE 802.3af Power over Ethernet; and,
 - I. SNMP MIBs for remote management.
- (ix) Port Security:

- A. All ports shall be disabled unless specifically configured;
 - B. Port security shall be set by MAC address, Sticky mac address, VLAN trunk; and,
 - C. Learned MAC address.
- (x) Switch Security:
 - A. Switch shall require user and password to login; and,
 - B. Remote MIBs to support SNMP V3 for security.
- (c) DB Co shall design the new extension's CTS to include a WAN component and LAN component. The LAN shall provide local network traffic switching and aggregation of the network traffic at each Station, TPSS, and the Moodie LMSF, for transport over the WAN.
- (d) The City shall configure the existing network hardware to accept the expanded CTS. The City shall configure the existing network software to accept the expanded CTS.
- (e) The City shall update the existing head-end management platform and verify the CTS connectivity from the field equipment to the TOCC, BCC, MYCC and BYCC. This is the network equipment (switches, routers, etc.) that make up the active CTS equipment along the main line.

2.4 Performance Requirements

- (a) DB Co shall ensure that the CTS expansion for the Project shall include fibre optic cables, network transmission equipment, and other equipment necessary for a complete communications network.
- (b) DB Co shall provide, as a minimum, cable sizes and quantity of strands that match what has been installed on Stage 1. DB Co shall also provide a minimum of 50% spare fibre/copper cable and port capacity for future expansion of the CTS.
- (c) DB Co shall design the network expansion to be a high bandwidth and fault tolerant system. The system shall be of a compatible design with that of the existing City system and shall have no single point of failure.
- (d) The City shall be responsible for protecting and maintaining the existing optical fibre feeds on the Confederation Line until Substantial Completion. The WAN shall be configured in a path-diverse topology in order to minimize single point failure. WAN network equipment shall support fast (sub-50 milliseconds) automatic network recovery (self-healing) in the event of a network link failure.

- (e) DB Co shall ensure all CTS equipment include redundant power supplies. In the event of a power outage, the equipment shall remain operational for a minimum of 24 hours through the use of uninterruptible power supplies, generators, and/or other backup power equipment.
- (f) DB Co shall ensure that all new equipment be compatible with the existing NMS and shall be managed and monitored by the NMS.
- (g) The City shall be responsible for the integration into the TOCC & BCC. The existing NMS shall automatically discover all new network devices and network connections within the CTS. In the event of a network failure, the NMS shall perform root cause analysis to pin-point location of failure.
- (h) The CTS shall be designed such that these component failures are minimized by redundancy. The availability of the Confederation Line system (i.e. availability of all system hardware, cabling) equipment shall be greater than 99.9%.

2.5 City Traffic Operations Communications Infrastructure

- (a) DB Co shall supply and install a twenty-four strand single-mode fibre optic cable for dedicated use by the City along the whole length of the Confederation Line alignment, including 17 break-out points (with the breakout point at Carling (Lincoln Fields) serving as the junction point for the lines to Moodie and Baseline) and manholes throughout the alignment; seven of these shall be on the East extension, and ten shall be on the West extension.
- (b) DB Co shall supply and install fibre cable rated for the environmental considerations and shall meet all regulatory requirements regarding installation along a transit corridor.
- (c) DB Co shall ensure at each break-out point, a concrete encased 100mm duct shall deviate from the mainline and connect to breakout manholes. The fibre cable shall run from the main duct to the manhole and return to the main duct. The location of manholes will be determined based on consultation with the City, but shall be located outside of the Confederation Line ROW, and shall be as close as practicable to the locations proposed in Table 3-2.1. The manholes shall be designed to meet current City specifications for traffic maintenance holes. The manholes shall be located at street level and provide sufficient clearance from obstacles to allow City staff to access the manhole.

Table 3-2.1: Proposed Breakout Points for Traffic Operations Fibre

| Confederation Line Breakout Points | Lat | Long | Description |
|---|------------|-------------|--------------------|
| Confederation Line East Extension | | | |

| | | | |
|-----------------------------------|-----------|------------|--|
| Blair Rd | 45.433117 | -75.607537 | Southwest corner of the 174 WB Off ramp & Blair Rd |
| Montreal Road | 45.45106 | -75.584471 | Southeast corner of the 174 WB Off ramp & Montreal Rd (North side of the Jersey Barrier) |
| Jeanne D'Arc | 45.468264 | -75.545546 | Northwest Corner of the 174 EB On/Off ramp & Jeanne d'Arc |
| Orleans Blvd | 45.47328 | -75.534117 | Southwest corner of the 174 & Orleans Blvd Overpass |
| Place D'Orleans | 45.479667 | -75.517476 | Southeast corner of the 174 & Champlain Overpass. Northeast corner of the Champlain & Place d'Orleans Drive Intersection |
| Tenth Line | 45.486967 | -75.503442 | Southwest Corner of the Tenth Line & 174 WB Off ramp Intersection |
| Trim Rd | 45.494774 | -75.482003 | Southwest Corner of the 174 & Trim Intersection |
| Confederation Line West Extension | | | |
| Tunny's Pasture | 45.404002 | -75.734266 | Northeast Corner of the Scott & Holland Intersection (Manhole existing as part of Stage 1 LRT) |
| Island Park | 45.399004 | -75.745968 | Southeast corner of the Confederation line and Island Park. Northeast corner of the Island Park & Scott Intersection |
| Scott Street | 45.394975 | -75.755324 | Northeast corner of the Scott & Churchill intersection |
| Woodroffe N | 45.377793 | -75.774967 | North corner of the Richmond & Woodroffe Ave N Intersection |
| Carling Rd | 45.364693 | -75.783757 | Northeast Corner of the SJAM Parkway On Ramp & Carling Ave |

| | | | |
|--------------------|-----------|------------|--|
| Baseline Rd | 45.351552 | -75.763422 | Northwest corner of the Baseline & Woodroffe Intersection. |
| Pinecrest | 45.350655 | -75.790239 | Southeast corner of the Pinecrest & 417 WB Off ramp Intersection |
| Richmond Rd (West) | 45.347805 | -75.803548 | Southwest corner of the Richmond & Bayshore Intersection |
| Holly Acres | 45.344746 | -75.814196 | Southeast corner of Holly Acres & Transitway Intersection |
| Moodie | 45.343011 | -75.842018 | Northeast Corner of Moodie & Corkstown Intersection |

- (d) DB Co shall ensure that the fibre have 10m of slack for each direction of travel coiled within each manhole.
- (e) DB Co shall ensure that the installed fibre not have any splice points within the duct and shall be one unbroken cable from breakout point to breakout point.
- (f) Where the Confederation Line splits (south to Baseline Road and west to Moodie Drive) the fibre shall be installed in both branches, with the breakout point at Carling Road serving as the junction point for both of the branches. The City shall be responsible for any splicing and/or termination work at the junction.

2.6 City Traffic - Intelligent Transportation System Devices

- (a) DB shall provide 120/240 VAC and Traffic Signal Disconnect with Cabinet External Meter (EB99) (DWG NO T31-M date Dec 2010) along with Disconnect Pad Foundation (DWG NO. T26 Rev. date March 2012) at each of the 14 locations (4 for Traffic Engineering; 10 for Traffic Management) identified in Table 3-2.2 below.
- (b) DB Co shall relocate affected devices at current locations if required due to Roadway modifications. Some devices shall be relocated irrespective of Roadway modifications. The City shall have final approval of identified device locations.

Table 3-2.2: Proposed Locations for Power, Disconnect Cabinets and Pads

| Owner | Device | Location | Current Connection | Scope | Extra Scope |
|---------------------|---------------|-------------------------|---------------------------|----------------------|--------------------|
| Traffic Engineering | Camera 234 | NE corner of Hwy 174 EB | Hydro & | Relocate existing if | N/A |

| Owner | Device | Location | Current Connection | Scope | Extra Scope |
|-------|------------|---|--------------------|--|----------------------|
| Group | | on/off ramp & Blair Rd intersection | wireless | required due to Roadway modifications | |
| | Camera 235 | NE corner of Hwy 174 WB off ramp & Blair Rd intersection | Hydro & wireless | Relocate existing if required due to Roadway modifications | N/A |
| | Camera 200 | Hwy 174 Transitway overpass, near SE corner of bridge deck | Solar & wireless | Relocate existing if required due to Roadway modifications | Provide Hydro power. |
| | Camera 199 | Hwy 174 WB (north side), ~505m east of Montreal Rd | Hydro & DSL | Relocate existing if required due to Roadway modifications | N/A |
| | Camera 198 | Hwy 174 EB (south side), ~25m east of Jeanne d'Arc Blvd | Hydro & DSL | Relocate existing if required due to Roadway modifications | N/A |
| | Camera 197 | NW corner of Champlain St & Place d'Orleans Dr intersection | Hydro & DSL | Relocate existing if required due to Roadway modifications | N/A |
| | Camera 72 | Hwy 174 WB (north side), | Hydro & DSL | Relocate existing if required due | N/A |

| Owner | Device | Location | Current Connection | Scope | Extra Scope |
|--------------------------|------------------------------------|---|--------------------|--|--|
| | | ~85m east of Trim Rd | | to Roadway modifications | |
| | Wavetronix B | Hwy 174 EB (south side), ~240m east of Blair Rd | Solar & Cell | Relocate existing if required due to Roadway modifications | Provide Hydro Power. |
| | Wavetronix C | Hwy 174 EB (south side), ~1075m east of Blair Rd | Solar & Cell | Relocate existing if required due to Roadway modifications | Relocate to Hwy 174 EB (south side), ~1185m east of Blair Rd. Provide Hydro power. |
| | Wavetronix D | Hwy 174 EB (south side), ~940 west of Montreal Rd | Solar & Cell | Relocate existing if required due to Roadway modifications | Provide Hydro Power. |
| Traffic Management Group | BlueToad 655 | Hwy 174 EB (south side), ~245m west of Jeanne d'Arc Blvd | Solar & Cell | Relocate existing if required due to Roadway modifications | N/A |
| | Wavetronix 3 | Hwy 174 WB (north side), ~505m east of Montreal Rd | Solar & Cell | Relocate existing if required due to Roadway modifications | N/A |
| | FVMS: 174 EB for Jeanne d'Arc Blvd | Hwy 174 EB (south side), ~1635m west of Jeanne d'Arc Blvd | Solar & Cell | Relocate existing if required due to Roadway modifications | Provide Hydro Power. |

| Owner | Device | Location | Current Connection | Scope | Extra Scope |
|-------|------------------------------------|---|----------------------|--|----------------------|
| | FVMS: 174 WB for Montreal Rd | Hwy 174 WB (north side), ~1635m west of Jeanne d'Arc Blvd | Solar & Cell | Relocate existing if required due to Roadway modifications | Provide Hydro Power. |
| | FVMS: 174 WB for Trim Rd | Hwy 174 WB (north side), ~525m east of Trim Rd | Hydro & Cell | Relocate existing if required due to Roadway modifications | N/A |
| | FVMS: 174 EB for Montreal Rd | Hwy 174 EB (south side), ~1185m east of Blair Rd | N/A (Future Devices) | N/A (Future Devices) | Provide Hydro power. |
| | FVMS: 174 WB for Blair Rd | Hwy 174 WB (north side), near south end of Shefford Rd | N/A (Future Devices) | N/A (Future Devices) | Provide Hydro power. |
| | FVMS: 174 EB for Champlain St | Hwy 174 EB (south side), on west side of embankment for Orleans Blvd overpass | N/A (Future Devices) | N/A (Future Devices) | Provide Hydro power. |
| | FVMS: 174 WB for Jeanne d'Arc Blvd | Hwy 174 WB (north side), on east side of embankment for Orleans | N/A (Future Devices) | N/A (Future Devices) | Provide Hydro power. |

| Owner | Device | Location | Current Connection | Scope | Extra Scope |
|-------|--------------------------------|--|----------------------|----------------------|----------------------|
| | | Bldv overpass | | | |
| | FVMS: 174 EB for Tenth Line Rd | Hwy 174 EB (south side), ~440m east of Champlain St | N/A (Future Devices) | N/A (Future Devices) | Provide Hydro power. |
| | FVMS: 174 WB for Champlain St | Location: Hwy 174 WB (north side), ~520m west of Tenth Line Rd | N/A (Future Devices) | N/A (Future Devices) | Provide Hydro power. |
| | FVMS: 174 EB for Trim Rd | Location: Hwy 174 EB (south side), ~900m east of Tenth Line Rd | N/A (Future Devices) | N/A (Future Devices) | Provide Hydro power. |
| | FVMS: 174 WB for Tenth Line Rd | Hwy 174 WB (north side), somewhere along Parkrose Pvt | N/A (Future Devices) | N/A (Future Devices) | Provide Hydro power. |

ARTICLE 3 TELEPHONE AND INTERCOM SYSTEM

3.1 General Requirements

- (a) DB Co shall design a telephone and intercom system that provides emergency and non-emergency voice grade communications.
- (b) DB Co shall design the telephone and intercom system to ensure that all telephones route through the Confederation Line's existing telephone system. The emergency intercom systems (emergency and elevator help) shall provide a direct connection to the TOCC and BCC.
- (c) DB Co shall ensure that staff telephones be deployed in specific locations in the Stations to support operations.
- (d) DB Co shall supply and install maintenance telephones in the communications equipment rooms, elevator/escalator machine rooms, EERs, TPSS, CIH, and vent plants and shall route through the existing Confederation Line's telephone system.
- (e) DB Co shall coordinate the expansion of the telephone system with the City. The City shall expand the telephone system to support the new telephones with the new licenses and expansion modules.

3.2 Operational Requirements

- (a) DB Co shall design, manage the interfaces supply, install, conduct PICO, SAT, SIT and commissioning of the telephone and intercom system. Refer to Schedule 15-2, Part 4 – Stations for locations including the equipment cabinets and racks. The telephone system shall include the following types of telephones:
 - (i) ETEL;
 - (ii) FTEL
 - (iii) HINT;
 - (iv) ICP Phones
 - (v) ITEL;
 - (vi) STEL;
 - (vii) MTEL;
 - (viii) HFI; and,
 - (ix) Public Telephones (by others).

- (b) DB Co shall perform static subsystem test of the of the telephone systems.

3.3 Performance Requirements

- (a) The City shall perform all addition/modifications to the Existing Confederation Line telephone System head-end equipment at the TOCC and BCC.
- (b) DB Co shall install ETELS a minimum of every 30m on Platforms and a minimum of every 30m in TSA.
- (c) DB Co shall install ETELS at each Station entrance, along the concourse areas and in general passenger circulation areas including concourse areas and corridors.
- (d) DB Co shall ensure that Emergency telephones and staff telephones be VoIP and be routed through the existing PBX.
- (e) DB Co shall ensure that the ETELS be of identical construction and branding as the Existing Confederation Line. ETEL are identified in accordance with Schedule 15-2, Part 4, Appendix D – Signage and Wayfinding Cyrville Station (Segment 5) IFC package.
- (f) DB Co shall ensure that Emergency telephones be rated for outdoor use, with IP66 rated enclosures, and vandal-resistant. Refer to Schedule 15-2, Part 4 – Stations for location information.
- (g) DB Co shall design, supply, and install the telephone systems E&M infrastructure including conduits, mounting brackets, etc.
- (h) Emergency telephones and elevator help telephones shall interface with the CCTV system to automatically provide video of the activated telephone and area to the TOCC, BCC, MYCC and BYCC receiving a call from these phones. A minimum of two fixed cameras shall view the areas so that cameras cannot be purposely panned away from possible incidents.
- (i) ETEL Alarm Monitoring
 - (i) The ETELS located on Platforms shall have an off-hook auxiliary relay installed in the ETEL enclosure. This auxiliary relay shall be hard wired to the Station's SCADA system. This shall enable the SCADA system to send commands to the CCTV system to control CCTV cameras close to the ETELS to capture video and display it on a workstation monitor when the ETEL is being used. The ETELS located in the TSA shall be monitored by a fixed camera at all times. For Emergency situations, when the call button is activated an alarm shall be sent to the SCADA system from the auxiliary relay. This causes the nearby PTZ cameras to pan towards the area providing two views of the area. These functions shall be performed by the SCADA system, cameras shall then be displayed on the video wall in the TOCC and BCC.

- (ii) The ETEs located elsewhere on the Platform or in the concourse area of the Station shall be monitored by either a fixed camera at all times or by a nearby PTZ camera which shall be homed to that area when the push button on that particular ETE is pressed.
- (j) Elevator Help Intercoms
 - (i) The EHFI and faceplate shall be provided by the elevator supplier. An analog EHFI shall be deployed in each elevator cab of all Stations on the Confederation Line connected to a VOIP terminal adapter over CAT 3 cable, provided within the elevator travelling cable. Customers using the elevator shall be able to communicate with the TOCC and BCC by the push of a button when and if they feel threatened.
 - (ii) All EHFIs shall be connected to an interface panel in their designated elevator room connected via the elevator travelling cable. From the terminal adapter in the elevator room they shall be routed back to the nearest communications room by a fibre optic cable or an Ethernet cable depending on the distance between both rooms and the length of the travelling cable. In the communications room, EHFIs shall be terminated in the same patch panels used for ETEs. The EHFI include a LED on the faceplate to indicate “Help is on the way” that can be controlled remotely using a DTMF code to illuminate the LED. The EHFI phones’ DTMF codes shall be configured using the embedded HTTP web configuration tool or through a TFTP file. The EHFI units shall be flush-mounted at an accessible height, and shall be equipped to be accessible to Passengers with hearing and/or visual impairments. The EHFIs shall be rated for outdoor use and are vandalism-proof.
- (k) EHFI Alarm Monitoring
 - (i) Similar to ETEs, EHFIs shall be equipped with an auxiliary relay, which shall be connected to the Station SCADA system for monitoring purposes via the interface panel. The auxiliary relay shall be activated when the red HELP button is pressed.
 - (ii) Each EHFI shall be monitored by a fixed CCTV camera located in the cab. When the help button is pressed, CCTV shall start recording at a higher frame rate and video from this camera shall be fed to the video wall in the control room at the TOCC and BCC.
- (l) Information Telephone
 - (i) ITEs shall be used by the public for assistance with any issues related to tickets, or any other non-Emergency purposes. These ITEs shall be installed on the fare paid side of the fare gates within the utility cabinets. ITEs shall be used by customers for information and to communicate with customer service for issues such as fare information, Ticket Machine errors, and if they need any non-

Emergency assistance. ITELs shall be programmed to connect directly to the customer service personnel. ITELs shall be power over Ethernet VoIP based hands free units. They shall be powered by power over Ethernet and shall be a different color than the Emergency phones to avoid confusion between both types of telephones. ITELs shall function outdoors and be able to withstand the local climate conditions. They shall be provided with the equipment necessary to assist Passengers with visual impairment. ITELs shall be connected using CAT6 to the CTS rack's patch panel in the communications room of the Station. From there, they shall be routed through the CTS back to the City's PABX.

(m) ITEL Alarm Monitoring

- (i) Alarm alerts shall not be necessary when ITELs are used by customers as these phones are expected to be used for non-Emergency purposes; however, the personnel in the TOCC and BCC shall be able to monitor these devices by using existing fixed cameras or nearby PTZ cameras in case these phones are used for an Emergency purpose.

(n) Maintenance Telephones

- (i) MTEs shall be located in all technical rooms (electrical rooms, communications rooms, elevator machine rooms, SER, etc.). In addition to these technical rooms, MTEs shall be installed at the LMSF, and within all TPSS for maintenance staff to communicate with each other and OC Transpo staff as necessary. Similar to the STEs, each MTE shall be supplied with a wall mounting bracket. Staff using these phones shall be able to call any other STE or MTE by dialing the extension of a particular telephone. These phones shall have a dial pad to dial numbers. These phones shall have conference calling and call forwarding capabilities. The MTEs shall be power over Ethernet VoIP based telephones with speed dial programming capabilities that shall allow staff to utilise the short dialing feature of the programmable telephones. They shall be routed to a new PABX located in the Belfast MSF.

(o) MTE Alarm Monitoring

- (i) There is no alarm monitoring for maintenance telephones.

(p) Staff Telephones

- (i) STEs shall to be installed in specific locations such as the TOCC, BCC, MYCC, BYCC and staff multipurpose rooms. STEs help OC Transpo staff communicate via Confederation Line telephones for Confederation Line operations support. Each telephone shall be supplied with a wall mounting bracket. STEs located in the TOCC, BCC, MYCC and BYCC shall sit on the console desktops. Staff using these phones shall be able to call any other STE or MTE by dialing the extension of a particular telephone. These phones shall have a dial pad to dial

numbers. These phones shall have conference calling and call forwarding capabilities. The handset shall be a power over Ethernet VoIP based telephone with speed dial programming capabilities that shall allow staff to utilise the short dialing feature of the programmable telephones. They shall be routed through the City PBX via the CTS.

(q) STEL Alarm Monitoring

- (i) There is no alarms monitoring for STELs.

(r) HFI

- (i) HFIs shall to be installed in the Moodie LMSF yard, the LMSF Building, and at main entrances to the site. HFIs shall be provided for use by maintenance staff for communication with the MYCC. HFIs are power over Ethernet VOIP based telephones and pre-programmed to call a specific number at the MYCC. HFIs shall be rated for outdoor operations and shall be wall mounted at accessible heights.

(s) HFI Alarm Monitoring

- (i) There will not be any active monitoring available for HFIs, but HFIs located beside level crossings and near external doors or entrances shall be visible from PTZ cameras located nearby.

(t) Circuit Wiring

- (i) The telephone wiring between the communications room and telephone devices (ETELs, STELs, ITELs, MTELs, HFIs, etc.) shall use CAT6E cables for power over Ethernet connections. For intercoms requiring fibre (e.g. in the Moodie LMSF where the unit is more than 90m from a network switch), an industrial grade media converter shall be installed in the intercom housing and powered with a 48VDC power supply which requires a 120VAC input. The CAT6E cables (from switch or media converter) shall be connected to telephone wall jacks to accommodate a connection with the RJ-45 plugs of the telephone sets.

(u) IP Connectivity

- (i) Each telephone shall be configured to have a unique IP address and caller ID. The caller ID shall help locate a telephone if it has an error, or in the event of an alarm monitoring event.
- (ii) Telephones shall be assigned an IP address for their location. Circuit wiring for EHFIs in elevators shall be run from the Communications Room to interface with the panel in the elevator room. A two core cable shall be run along the elevator travelling cable for alarm monitoring.

(v) AODA Compliance

- (i) All the telephones which shall be used by patrons to communicate with OC Transpo staff, such as, ETEls, ITELs, EHFIs and HFIs shall be AODA compliant. The telephones shall have an amplifier producing sound at approximately 88db to help hearing impaired customers. To help visually impaired customers, all of the above mentioned public accessible telephones shall have their function written in Braille on the phone. The ETEls, ITELs, EHFIs and HFIs shall be equipped with an LED indicator marked as “Help is on the Way” in English and French. The LED shall be connected to the telephones auxiliary relay that is controlled by a digital phone that supports DTMF codes. The telephone shall be programmed with a selectable code of up to 25 characters that enables the LED. The phone shall be configured for the LED to stay on for a predetermined time, or to stay on permanently until the code is resent.

ARTICLE 4 PA SYSTEM/PASSENGER INFORMATION DISPLAY SYSTEM

4.1 General Requirements

- (a) DB Co shall design all Confederation Line Extension Stations with a PA system to broadcast audio announcements of arrivals, departures, general and emergency/security information from a microphone or headset connected to the PA/PIDS console located in the TOCC, BCC, MYCC and BYCC. DB Co shall design the PA system to provide uniformly distributed audio throughout public areas of the Stations. The PA system shall be synchronized with the Vehicle announcements for the Confederation Line so that announcements on the Vehicle do not occur at the same time as announcements on the Platforms.
- (b) PIDS shall be capable of displaying text in both English and French including accents in upper and lower case letters.
- (c) Each new Station shall be equipped with PIDS signs to provide real time, specific, location-based, visual operational and safety-related messages for customer awareness. The PIDS shall be individually addressable and shall be accessed from the existing PA/PIDS console located in the TOCC and BCC. Under normal operating conditions, information presented on the PIDS shall include, but not be limited to: date, time, arrival time and destination of the next Train (one arrival time per line), safety messages, Train delays, holiday schedules, and other ad-hoc messaging. In an Emergency condition, the PIDS shall display both pre-programmed Emergency announcements and simultaneous visual display of the PA system Emergency announcements.
- (d) DB Co shall design, supply, install and test the PA E&M system infrastructure including conduits, mounting brackets, etc.
- (e) DB Co shall design, manage the interfaces, procure, install, conduct PICO, SAT, SIT, and commissioning of the Station PA system.
- (f) DB Co shall provide the Station speakers/microphone and Station rack with connectivity to the TOCC and BCC via the CTS.
- (g) DB Co shall produce the design, supply (including Pre-delivery Test), install test and coordinate with the City during the Systems integration, testing and Commissioning of the Station PA system.
- (h) DB Co shall provide the relevant technical staff, tools and test equipment to support the City during Systems integration, testing and Commissioning of the PA system.

4.2 Operational Requirements

- (a) DB Co shall ensure that the PA/PIDS System Station equipment interface to the existing PA/PIDS servers at the Belfast MSF.

- (b) The City shall expand the existing head-end equipment including system servers and voice recorder(s) as required to accommodate the new Station equipment.
- (c) DB Co shall provide one new PA/PIDS console at the TOCC.
- (d) The City shall ensure that the PA/PIDS system integrate with the existing GUI which shall serve as the means of interface between the system and the operator.

4.3 Performance Requirements - PA

- (a) DB Co shall ensure that the PA system announcements be addressable to single and multiple zones within individual and/or groups of Stations. Separate zones with separate amplifying channels and speaker systems shall be accessible individually or in combination. Stations shall have up to five zones covering each Platform, mezzanine, and ancillary area.
- (b) DB Co shall ensure that the PA system maintain a uniformly distributed sound level at least 10 dB above ambient Station operating noise level measured at 1.5 m above floor. Stations SPL shall be not less than 60 dB plus or minus 30 degrees off axis, 1.5 meter above the floor, at Vehicle ambient noise level. The PA system in the in the Stations shall also provide a STI of 0.6.
- (c) DB Co shall ensure that the automatic gain adjustment of the PA system be provided based upon ambient noise levels captured by ambient noise sensors. The system shall adjust volume and clarity in proportion to the increase in noise level from a pre-set quiet level.
- (d) DB Co shall ensure that the PA system be capable of playing pre-recorded messages in both English and French.
- (e) DB Co shall ensure that the PA system be designed such that the component failures are minimized by redundancy. The availability of the system (i.e. availability of all system hardware, cabling) shall be greater than 99.9%.
- (f) DB Co shall ensure that the PA system be fully supervised with failure annunciation at the TOCC, BCC, MYCC and BYCC of all major system components such as preamplifiers, power amplifiers, supervision detectors, and power supplies.
- (g) DB Co shall ensure that the PA announcements from TOCC shall be delivered to the Station PA controllers over the CTS using TCP/IP protocol.
- (h) DB Co shall ensure that the in the event of a power outage, the PA system shall remain operational for a minimum of 4 hours through the use of uninterruptible power supplies, generators, and/or other backup power equipment.

- (i) DB Co shall ensure that the PA system be designed to accept several competing inputs with successful transmission designated according to assigned priorities. DB Co shall coordinate with OC Transpo to determine priority levels. The system shall be prioritized for TOCC, BCC, MYCC, and BYCC communications consoles, Station PA microphone in the ICP, and pre- recorded announcement devices.
- (j) The PA system shall be prioritized for TOCC communications consoles, Station microphones, fire alarm panels, and pre-recorded announcement devices.
- (k) DB Co shall ensure that the PA system work in conjunction with the PIDS system to provide synchronous broadcasting of audio and visual pre-recorded announcements and to provide synchronous transmission of live announcements.
- (l) DB Co shall ensure that the PA system be synchronized with in-Vehicle PA systems for the Confederation Line to prevent audible delays between the two systems while a Vehicle is at the Station.
- (m) DB Co shall ensure that the PA system announcements shall be recorded on the existing City voice recorder at 875 Belfast.
- (n) The voice recording system may need to be expanded to accommodate the additional PA system requirements.
- (o) The City shall design the PA system to be capable of expansion to accommodate additional equipment and licenses as required.

4.4 Performance Requirements - PIDS

- (a) DB Co shall design, manage the interfaces, supply, install, conduct PICO, SAT, SIT and commission the PIDS.
- (b) DB Co shall design, supply and install the PIDS E&M infrastructure including conduits, mounting brackets, etc.
- (c) DB Co shall install, conduct PICO and SAT of the PID signs.
- (d) Due to the unique physical characteristics of the signage, DB Co shall procure and install Station racks with connectivity to the TOCC and BCC via the CTS.
- (e) On each Platform, DB Co shall install PIDS displays such that at least one display is visible and legible from any location along the Platform edge. DB Co shall ensure that Two-Platform Stations whether side or centre 90m in length have a minimum of two PIDS spaced no further than 30m apart. Longer Platforms may require additional PIDS. DB C shall install separate displays for each Platform edge on center Platforms. DB Co shall place displays to maximize visibility throughout the Platform area. Refer to Schedule 15-2, Part 4 – Stations for locations.

- (f) The City shall integrate the PA/PIDS system with the existing centralized message generator and dispatch functions at the existing PA/PIDS workstation in the TOCC & BCC to address individual zones, Stations, groups of Stations, or System Infrastructure-wide announcements for PIDS installed on the System.
- (g) DB Co shall ensure that Stations have zones covering each Platform, mezzanine, and ancillary area that correspond with the PA system zones.
- (h) DB Co shall ensure that the PIDS have the capability of displaying messages in both English and French. All pre-programmed messages shall be provided in both languages.
- (i) DB Co shall ensure that the PIDS be designed to accept several competing inputs with successful transmission designated according to assigned priorities. DB Co shall coordinate with OC Transpo to determine priority levels. The system shall be prioritized for TOCC, BCC, MYCC, and BYCC communications consoles, an automatic pre-defined emergency PIDS message triggered from the Station PA microphone in the ICP, and pre-recorded announcement devices.
- (j) The City shall ensure that the PIDS is integrated with the PA system to provide synchronous broadcasting of audio and visual pre-recorded announcements and to enable near-synchronous transmission of live announcements.
- (k) DB Co shall ensure that the PIDS be fully supervised with failure annunciation at the TOCC of all major system components such as PIDS displays, Station controllers, and power supplies.
- (l) DB Co shall ensure that all PIDS announcements be recorded in a database on the existing head end PIDS system servers.
- (m) DB Co shall ensure that all PIDS display Station time, which shall be synchronised with the existing central time server over the CTS.
- (n) DB Co shall ensure that the PIDS be designed that in the event of a power outage, PIDS equipment shall remain operational for a minimum of 4 hours through the use of uninterruptible power supplies, generators, and/or other backup power equipment.
 - (i) PIDS signs shall have a visual message when the sign is not operational.

4.5 PID Signs

- (a) Physical / Functional Attributes
 - (i) The overall size inclusive of housing shall be no larger than 1500mm (W) x 475mm (H) x 300mm (D), to accommodate space constraints along the underground Station Platforms. Refer to Schedule 15-2, Part 4 – Stations for location information.

- (ii) The PID sign shall have a maximum weight of 70 Kg (for double-sided signs).
- (iii) The PID signs shall feature the following characteristics:
 - A. Less than or equal to 8mm resolution pitch.
 - B. High contrast display using a monochromatic amber colour LED full matrix on a black glare-free background (590nm wavelength).
 - C. Ambient light adjustment - automated dimming of LEDs using ambient light sensors. E.g. in a darkened ambient light condition, LEDs would be dimmed to prevent eyestrain.
 - D. All outdoor PID signs (above ground Stations) shall be equipped with sunlight readable LED's (up to 5000 cd/m² (nits) brightness level if required).
 - E. Wide viewing angle (minimum 120 degrees horizontal and vertical).
- (b) Mechanical Attributes
 - (i) The PID sign shall be modular and designed for ease of service taking into consideration the clearances around the PID sign (reviewing adjacent architectural elements and spacing).
 - A. Keyed power switch and internal electronics accessible from the front top hinged doors, and;
 - B. Easily replaceable LED modules.
 - (ii) The PID housing shall be vandal and graffiti resistant with break, shatter proof, and scratch resistant display glass, resilient against dust, discoloration, atmospheric pollutants and salty dust.
 - (iii) PID signs should be able to sustain frequent cleaning using commercially available cleaning products approved by the manufacturer.
 - (iv) The PID housing shall be constructed of aluminum, galvanized steel and/or stainless steel.
 - (v) The PID housing components and fasteners shall be corrosion resistant.
 - (vi) The PID housing colour shall be provided by the City.
 - (vii) The PID signs shall be mounted from two HSS supports within which will run the power and data cables (installation by DB Co).

- (viii) Under a regular scheduled maintenance program, the Design Life of the PID signs shall be 20 years.
- (c) Electrical
 - (i) The main power supply shall be 90-132Vac, 1 phase, 60 Hz (110Vac nominal)
 - (ii) Data connection - the PID sign shall accept either UTP CAT6 or Fibre depending on the distance to the network switch.
 - (iii) The PID shall have CSA approval.
 - (iv) The cable routing and conduit design shall be performed by the DB Co.
- (d) Data Communication
 - (i) Connectivity with the head end systems shall be through the CTS.
 - (ii) The PID signs shall be connected to PID controllers which in turn shall interface with the CTS via dedicated IP switch ports in the Station's communications room
 - (iii) A VLAN shall be created within the CTS that will segregate all PIDS traffic.
 - (iv) The PIDS shall use open standard communication protocol.
 - (v) The Station PIDS shall communicate with a head end server, via a dedicated IEEE 802.3
 - (vi) Ethernet connection at 10/100 Mbps minimum using TCP/IP protocol.
 - (vii) Each PID shall have an addressable unique IP address.
 - (viii) Each PID shall have a unique alphanumeric ID.
 - (ix) Standard messages may be either sent from the head end system, or stored locally in the PID controller's local digital message store and be broadcast in response to instructions sent from the central equipment in the Belfast MSF.
 - (x) The PID shall optionally have wireless WiFi 802.11b/g/n connectivity.
 - (xi) The PIDS network shall be designed to handle an estimated network load of 100 kbps.
- (e) PID Layout Design
 - (i) The PID shall be ADA compliant spacing (in term of character height) as given below:

- A. Character separation: 10%
 - B. Line spacing: 35%
 - C. Stroke thickness: 10% - 30%
 - D. Character width: 55%
- (ii) The PID signs shall be designed to display three lines of text with a minimum character height of 76mm.
 - (iii) The ETA/ETD screen display shall emphasize the top line of text (using a larger font and/or bolded).
 - (iv) The following examples describe an ETA/ETD screen display adhering to the given PID sign and character sizing constraints above:
 - A. 176 x 40 pixel active display; 7.62mm pixel; active area measuring roughly 1341mm x 305mm (~1481mm x 445mm overall area with 70mm border).
 - i. 11 pixels height top line (83.83mm) and bolded,
 - ii. 10 pixels height second and third lines (76.2mm) in height.
 - B. 224 x 48 pixel active display; 6mm pixel; active display measuring roughly 1344mm x 288mm (1484mm x 428mm overall area with 70mm border).
 - i. 14 pixels height top line (84mm) and bolded,
 - ii. 13 pixels height second and third lines (78mm) in height.
- (f) The examples above can accommodate the 3-line ETA or a 3-line general announcement of up to 25 - 76.2mm mono-spaced characters - in practice, proportional characters shall be used which will accommodate more characters per line depending on message content.
 - (g) Failure Monitoring/Diagnostics
 - (i) The PID signs shall have built-in diagnostic capabilities and be monitored periodically by the PIS via a scheduled polling or subscribe/notify software architecture. The PID diagnostics and control shall include, but not limited to the following:
 - A. Power supply unit failure

- B. High temperature warning. Temperature sensor(s) shall monitor the overall temperature in the PID sign case. In the event of a high temperature condition, the PID sign shall automatically shut off and an alarm generated.
 - C. Pixel failure (test). Each PID sign shall have embedded self-cycling pixel test.
 - D. Brightness level test
 - E. Communication failure/Message time out (handled by the head-end PIS)
 - F. Remote power cycle / re-boot function
- (ii) Communications Failures
- A. Each PID sign's network connection shall be monitored.
 - B. The PID shall be capable of displaying a default message such as time and date or a preconfigured message stored locally in the display. The message shall be activated by user-defined scenarios, including but not limited to, loss of communication with the head end system.
 - C. Locally stored default messages shall be displayed in the event that no content has been received from the PIS. If the communications fail (no heart beat message response), the display shall be blanked after a pre-set delay or shall default to a predetermined message stored locally (e.g. "Out of Service").
- (iii) The head end PIDS shall log and timestamp all alarms/events.
- (iv) The PID shall optionally have a local RS232/485/422 serial maintenance port for maintenance and diagnostic capabilities.
- (h) Electrical and Cabling Design
- (i) DB Co shall ensure that design is stamped & sealed by a Professional Engineer.
 - (ii) Racks

DB Co shall supply and install all rack cabling required for connections between equipment. All cabling and wires shall be traceable within the shop drawings of the equipment racks.
 - (iii) PID Sign Circuits

All PID sign network cabling shall be designed to be routed and terminated onto the patch cords in the back of the appropriate network equipment rack located in the Facility's communications room

(i) Cable Rating

- (i) All cables called up in DB Co's installation design shall be CSA approved and meet the requirements of NFPA 130.
- (ii) The insulation for all PIDS cabling installed shall be FT-4-ST1 as a minimum and specified with LSZH jacketing where cables are run through public areas.

ARTICLE 5 VOICE / DATA RADIO SYSTEM

5.1 General Requirements

- (a) The City shall design the Voice/Data Radio system for Confederation Line to include all BTS, back office, portables and handheld equipment required to provide coverage for the Confederation Line East Extension and Confederation Line West Extension including Moodie Station, Moodie LMSF and the Parkway Tunnel, Connaught Tunnel and Baseline Station Tunnel.

| Tunnel Name | Length (meters) |
|-------------------------|-----------------|
| Parkway Tunnel | 2500 |
| Connaught Tunnel | 400m |
| Baseline Station Tunnel | 400m |

- (b) The City shall provide DB Co with design details/drawings and specifications identifying equipment/device placement for all active and passive system electronics to DB Co. The City shall provide final specifications and details on cable sizing.
- (c) The City shall locate the primary head-end (radio shelter) at the West Portal.
- (d) The system shall take the radio signal off-air at the radio shelter and distribute it to the remote amplifier over single mode fibre to each Station where it would be amplified and used to provide coverage enhancement to both the Tunnel and the Station.
- (e) A conduit or duct shall be required from the radio shelter to the West Portal to allow for fibre optical cable and coaxial cable routing.
- (f) A 48-strand fibre optic cable shall be provided from the radio shelter to each communications room along the Parkway Tunnel to feed each of the remote fibre optic amplifiers (BDA).
- (g) The City shall locate the secondary head-end (radio shelter) at Dominion Station.
- (h) The system shall take the radio signal off-air at the radio shelter and distribute it to remote amplifiers over single mode fibre to each Station where it would be amplified and used to provide coverage to both the Tunnel and the Station.
- (i) A conduit or duct shall be required from Dominion Station to the East Portal to allow for fibre optical cable and coaxial cable routing.

- (j) A 48-strand fibre optic cable is required to each telecom room along the Parkway Tunnel to feed each of the remote fibre optic amplifiers (BDA).
- (k) The primary system shall allow for the distribution of radio frequency signals down the Tunnel and throughout the Cleary Station and New Orchard Station and in case of a critical Failure the secondary system would automatically be activated to take over the coverage.
- (l) DB Co shall include/reserve space along the wayside, in Tunnels, rack space in the equipment rooms, Moodie LMSF and other areas for Voice/Data Radio System equipment per the City's placement details/specifications.
- (m) DB Co shall install the conduits and cables required to connect the Voice/Data Radio System equipment in the Underground Stations to equipment in the Tunnels.
- (n) DB Co shall complete installation of the Voice/Data Radio system infrastructure and provide the City with full access to the Site to install their communications rack and active system electronics in communication rooms and/or in Tunnels.
- (o) DB Co shall complete the installation of the Voice/Data Radio System tunnel infrastructure including power, communications, and the redundant radiating cable no later than 90 days prior to initial Train movements in the Tunnel otherwise subject to further schedule coordination with the City.
- (p) DB Co shall complete the final outfitting of the communications rooms where the Voice/Data Radio system is to be located no later than 90 days prior to Train movements in the Tunnel otherwise subject to further schedule coordination with the City.
- (q) Once the Voice/Data Radio System infrastructure is in place and tested by DB Co, the City shall install, configure and test the Voice/Data Radio System equipment.
- (r) DB Co shall design the infrastructure including power and conduit. The City shall specify the cables and the equipment/device locations.
- (s) DB Co shall install the infrastructure including power, conduit and cables (fibre and radiating).
- (t) DB Co shall procure and install the fibre, coax, radiating cables and installation hardware.
- (u) DB Co shall design, manage the interfaces, supply (including Pre-delivery Test) and install the connections of the voice/data radio System civil infrastructure outside of the ROW including conduits, pits, foundations, buildings, cabinets, etc.
- (v) Radio communications system shall be provided. The system shall allow for voice communications between the following:

- (i) Trains and Controllers;
- (ii) Trains and rail staff;
- (iii) Rail staff and Controllers;
- (iv) Non-Revenue Vehicles and Controllers;
- (v) Maintenance personnel and Controllers;
- (vi) Trains and maintenance personnel;
- (vii) Controllers and other Emergency service providers along the ROW;
- (viii) Trains and Emergency service providers; and,
- (ix) Rail supervisors and Emergency service providers.
- (w) DB Co shall utilize the existing City of Ottawa Public Safety radio system. DB Co shall be responsible for purchasing licenses and paying the monthly fees for all new mobiles that are used by DB Co through the construction period.
- (x) DB Co shall provide rack space (2 racks) at each underground station for Voice/Data Radio System Radio equipment.
- (y) The City shall verify Station, Tunnel, and the Moodie LMSF coverage of the Voice/Data Radio System.
- (z) The City shall verify Emergency services coverage of the Voice/Data Radio System.
- (aa) DB Co shall design, supply, and install (design reviews, drawings, system integration) the redundant feeder coaxial cables and redundant radiating cable (and accessories) and ensure that all electrical, mechanical, physical interfaces are reviewed and approved.
- (bb) DB Co shall provide appropriate conduits or pathways to cater for coax cabling from the radiating cable exiting the Tunnel to the remote amplifier within the Stations, Station transition areas, or Tunnels.
- (cc) DB Co shall design antennae mounting locations throughout the Underground Stations to cater for the antennas required for the DAS. Antennas shall be located at the Platform level, concourse level, entrances, any Tunnel transition areas and will ensure that cellular coverage is provided in all public areas or on the Vehicle while entering the Platform or stationary at the Platform. Any interfacing hardware for the antennas are to be provided by the City.
- (dd) DB Co shall provide suitable locations (will need to be accessible by the City) on Platform and or concourse areas to locate City DAS equipment as required. DB Co shall

- provide power to this equipment. The City will provide exact sizing of equipment during design phase of the project. Normally all Voice/Data System equipment is in the communication room.
- (ee) DB Co shall provide appropriate conduits or pathways to cater for coax cabling from the remote amplifiers, switches or patching device to the antennas within the Stations.
 - (ff) DB Co shall provide appropriate space in each Stations' Communication rooms for two 19 inch racks (supplied by the City) of equipment and one fiber entrance panel.
 - (gg) DB Co shall provide appropriate access to the third party supplier to the various project locations, no different than any other supplier on the project.
 - (hh) Immediately west of the Pinecrest rail junction, the Confederation Line alignment crosses over Pinecrest Creek on a Bridge Structure, skirts the Hanlon sports field and starts to descend to enter the Connaught east portal. This Tunnel will be 3 to 4 metres below grade at the Connaught Avenue and will emerge east of the proposed Queensview Station along Highway 417. The Tunnel is estimated to be approximately 400 metres in length.
 - (ii) For redundancy purposes, the City shall supply 2 off-air channelized BDAs, one at the east portal of the tunnel and the second installed at the Queensview station. Each BDA's donor antenna would face a different P25 radio site. Since no structure is available at the east portal the city shall supply a radio shelter within close proximity of the Tunnel.
 - (jj) DB Co shall provide all electrical work including a new protected AC circuit for this new equipment.
 - (kk) The amplified signal from the east portal BDA shall be routed down to the tunnel (½" coaxial cables provided by DB Co) and feed a single DB Co installed radiating cable. For redundancy, the amplified signal from the Queensview BDA shall feed a second DB Co installed radiating cable mounted on the opposite wall. The radiating cables shall serve as the signal source for the coverage enhancement. Conduit from the Queensview station to the Connaught tunnel's west portal shall be provided by DB Co. Due length of the cable, DB CO shall install two 7/8" cable radiating cables.
 - (ll) At Baseline Station, to provide redundancy, the City shall use 2 off-air channelized BDAs. Each BDA's donor antenna would face a different P25 radio site. The preferred location for the donor antennas is on the roof of the [REDACTED]. The two donor antennas shall be at least 15m apart from each other. Each shall feed a channelized 800 MHz BDA located in a telecom room in the building or in a telecom room in the Baseline Station Tunnel.
 - (mm) The amplified signal from each of the BDA shall then be routed down to the Station (two ½" coaxial cables provided by DB Co) and down to the Tunnel where it shall feed the DB Co supplied radiating cable. Again, for the purpose of redundancy, DB Co shall install two independent radiating cables mounted on opposite walls. The radiating cables shall

serve as the signal source for the coverage enhancement. Due to the length of the cable and its loss, DB Co shall install two 7/8" cable radiating cables.

- (nn) DB Co shall provide the electrical work including a new protected AC circuit for this new equipment

5.2 Operational Requirements

- (a) The City shall develop the performance specifications for the Voice/Data Radio System that provides complete coverage of the Confederation Line Extension, including but not limited to the Guideway, City spaces at the Moodie LMSF and all required materials within the tunnels to ensure full radio reception is achieved from portal end to portal end and all areas within the underground Stations
- (b) The City shall integrate the voice/data radio System into the TOCC, BCC, MYCC and BYCC.
- (c) The City shall procure, install and test all materials (radios, control head, antenna, base stations/amplifiers, combiner, microphone, batteries, chargers, base transmission system) required for a fully functional integrated system. The City shall pay all associated access fees and on-going maintenance fees associated with the radios to be used by the City's operations personnel through the construction period.
- (d) The City shall provide all necessary equipment to expand the existing voice recorder at the TOCC.
- (e) The City shall install, integrate, test and commission the one new radio dispatch console at the Moodie LMSF for the MYCC.
- (f) Battery backups shall be provided for all active components for a minimum of four hours.

ARTICLE 6 FARE CONTROL

6.1 General Requirements

- (a) DB Co shall provide power source provisions within the Station electrical service for all fare collection equipment. DB Co shall supply each Ticket Machine and each fare gate with one 15 amp individual circuit for each.
- (b) Data communication channels shall be provided within the Station communications rooms so that fare vending equipment may communicate with the existing fare collection head end equipment and accounting personnel located within the TOCC. The fare collection data shall communicate using its own network and fibre optic cabling that extends from the Existing Confederation Line fare collection network backbone cabling. DB Co shall extend the dark fibre to all new Stations and provide space for the City to install their equipment.
- (c) DB Co shall procure and install an interposing relay at each Station that when a fire alarm is initiated from the FDAS to the interposing relay, it will cut power to the fare gates. By cutting power, the gates shall default open allowing customers to safely exit the facility.
- (d) The City shall procure, install and test all fare control equipment (Ticket Machine, fare gates and servers). Refer to Schedule 15-2, Part 4 – Stations for location and quantity information.

6.2 Operational Requirements

- (a) Ticket Machine, Power and Data requirements:
 - (i) DB Co shall provide slab conduits to bring UPS protected power cabling from the Station power panel to the Ticket Machine. Refer to Schedule 15-2, Part 4 – Stations for electrical details.
 - (ii) DB Co shall provide slab conduits from the Communications room/cabinet to allow for data cabling to the Ticket Machines locations. DB Co shall ensure that no conduits or ducts are exposed.
- (b) Fare Gates, Power and Data requirements:

DB Co shall provide the Power for the fare gates by a single circuit breaker protected line delivered by slab conduits to the base of the fare gate. DB Co shall ensure that no conduits or ducts are exposed.

 - (i) DB Co shall provide slab conduits from the communications room/cabinet to allow for data cabling to the fare gate locations. DB Co shall ensure that no conduits or ducts are exposed.

ARTICLE 7 CCTV SYSTEM

7.1 General Requirements

- (a) DB Co shall provide a CCTV system that serves both operational and security needs of the Confederation Line. The CCTV system shall allow operations, security staff and ESP the ability to monitor elements of the system remotely from the TOCC, BYCC, MYCC, and BCC. DB Co shall ensure that the Confederation Line Extension Project CCTV System integrates with the head end of the existing Confederation Line CCTV system to facilitate seamless interaction.
- (b) All NVR's shall be connected to the CTS and able to transmit all required live and recorded video to the TOCC while multiple users are using the system at one time. All NVR's shall be located at each Station or facility and will locally record all video from the same facility.
- (c) DB Co shall procure and install NVRs that match the Existing Confederation Line units.
- (d) Each Station shall have at least two NVRs to ensure redundancy. Each camera shall be assigned to a recording device via the VMS to balance the load on each NVR. Cameras located within the same area shall be recorded on a different NVR. The video storage capacity varies by Station. The NVR shall be capable of recording up to 200 channels however the system shall be designed to limit 50 cameras per recorder. All NVRs shall be the same model but with different hard drive sizes based on the total storage per NVR storage unit. Storage capacity shall be based on 30fps frame rate and native resolution of the camera being recorded for 31 days.
- (e) The total capacity of the NVR at each Station shall be based on the number of cameras at each Station. Common factors affecting the NVR size shall include video compression, resolution, frame size and frame rate of cameras connected to the NVR.
- (f) DB Co shall undertake a risk and safety assessment of the System and shall install CCTV's and / or any other security devices as an outcome of the assessment.
- (g) The City shall update the CCTV into the existing head-end management platform at the TOCC and BCC to ensure that OC Transpo personnel have supervisory control of the new extension's CCTV system equipment.
- (h) The City shall update the existing head-end management platform at the TOCC and BCC to ensure that operators have access and the ability to view video from the new extension's CCTV system equipment.
- (i) DB Co shall design the CCTV cameras in Facilities to be connected to the system-wide backbone network for transmission of images to the TOCC and BCC.

- (j) DB Co shall ensure that security video that is required for long term storage from any Station or facility be stored in a centralized long term storage server at the Belfast MSF; no security video storage is permitted at any other Facility.
- (k) DB Co shall design the CCTV system with the capability to identify each camera with a unique IP identification number.
- (l) DB Co shall provide commercially available, high quality cameras from reputable and established manufacturers. The cameras shall be fixed cameras and PTZ cameras. The cameras located within the Stations shall be chosen for their ability to meet functional specifications and for their aesthetic appearance. Cameras shall use 6.35mm or 8.5mm CMOS type sensors and be able to operate in all expected light levels down to a level of <2 lux. The cameras shall be able to switch to black and white mode in low light conditions (below 0.1 lux).
 - (i) The cameras shall be:
 - A. High Resolution Fixed Cameras, minimum 1 MP, 3.3-12mm lens – Platforms, concourses, ETEs, escalators, elevator landings, stairs, communications equipment rooms/cabinets, bike racks, Tunnel portals and egress entrance/exits, yard perimeter fences and intrusion monitoring, monitoring of Train movements.
 - B. High Resolution Fixed Cameras, minimum 1 MP, 2.5-6mm lens – elevators.
 - C. High Resolution Fixed WDR cameras, minimum 1 MP, 3-9mm – Platforms, Platform edges/Train doors, TSAs, Ticket Machines, fare gates.
 - D. Super High Resolution Fixed Cameras, 2 MP, 3-9mm – external cameras for exterior of Stations and viewing large areas.
 - E. High Resolution PTZ Cameras, HD, 1.3 MP, 4.3-129mm – Platforms, PPUDO, parking lot and yard, yard perimeter fences and intrusion monitoring, monitoring of Train movements.
 - F. Identification Cameras, 3-6mm – Moodie LMSF Yard vehicle entrance.

7.2 Operational Requirements

- (a) DB Co shall design the CCTV cameras to meet the following requirements:
 - (i) In keeping with CPTED principles, including but not limited to complete CCTV coverage of entrances to washrooms, Park & Rides, bicycles parking areas, all (Bus & Train) Platforms, Train doors, corridors, elevators, escalators, and stairways;

- (ii) Cameras shall cover every door of the Train servicing the Station and general circulation areas, all entrances to Stations/Platforms and fare equipment.
 - (iii) Cameras shall monitor all Station and Tunnel entrance and exit points.
 - (iv) Through the combination of fixed and PTZ cameras, the CCTV system shall provide the TOCC and BCC with complete coverage of all exterior areas of each Station including but not limited to MUPS, Station plazas and general circulation areas, interior and full exterior coverage of all four sides of each TPSS.
- (b) DB Co shall provide the Station/Guideway cameras, accessories and Station rack for data/images to be transferred back to the TOCC and BCC via the CTS.
 - (c) DB Co shall design, manage the interfaces, install, conduct PICO, SAT, SIT and commission the City provided Platform edge cameras for Stations including accessories and Station rack for transferring of data/images back to the TOCC & BCC via the CTS.

7.3 Performance Requirements

- (a) DB Co shall design a CCTV system that is proactive in determining intrusion into the alignment and private areas through interface with the SCADA and IAC Systems.
- (b) DB Co shall ensure that The CCTV system be designed to interface to the ETEs and access control system so that any events are automatically recorded at higher frame rates and resolution.
- (c) DBCO shall design the CCTV system where images can be transmitted from the Station area to the vehicle while the vehicle is located within a Station. DB Co shall design the CCTV system such that recorded video can be downloaded from the on-board Vehicle CCTV system at the Belfast MSF for long term storage for up to 3 years
- (d) DB Co shall design the CCTV system based on a distributed video storage architecture; some data will be captured and stored at Stations, some will be captured and stored on Trains. DB Co shall ensure that data stored in local NVRs at each Station and in Trains for a maximum of 31 calendar days with minimum 1080P and 30 fps at H.264 compression.
- (e) Expansion of the long term storage servers up to three years and system management servers installed in the data room at 875 Belfast shall be required.
- (f) The City shall manage the addition/modification to the Belfast MSF head-end equipment (VMS Server and workstations); to accommodate any expansion.
- (g) DB Co shall provide complete CCTV coverage for the System based on Good Industry Practices, for example as described in the most recent edition APTA Standards Development Program Recommended Practice CCTV (APTA IT-CCTV-RP-001-11).

- (h) DB Co shall design a CCTV system that complies with MFFIPA and the current Surveillance System for Transit Network Access and Privacy Policy dated 2016.
- (i) DB Co shall provide a CCTV System comprised of network based fixed, HD fixed, and HD PTZ digital cameras, along with associated power supplies, cabling, network media converters, video storage devices, viewing stations and control panels, all of which is managed by the IP video system. The CCTV sub-system shall provide records for post event review and analysis. DB Co shall ensure that cameras are rated for the environment installed, including day/night capabilities, heater/blower, appropriate housing, NEMA 4X (IP-66) rated and IEC 62262 IK10 impact resistant enclosure
- (j) DB Co shall locate the cameras to ensure the views are clear, unobstructed, and not impaired by structures, signage, foliage, intense lights, or any other obstacles.
- (k) DB Co shall ensure that Camera views of the fare collection area be arranged to provide images of the customer's frontal interface with the Ticket Machines and Fare Gates.
 - (i) DB Co shall ensure that fixed cameras are installed to monitor the following locations:
 - A. Platform edges including Train doors;
 - B. Emergency telephones located in TSAs;
 - C. Elevator cabs and landings, escalator and stair landings;
 - D. Public and employee washroom entrances;
 - E. Tunnel access/egress points and entrance/exits;
 - F. Fare collection equipment;
 - G. All restricted areas;
 - H. TPSS interiors and exteriors;
 - I. Station entrances and exits;
 - J. Bike racks;
 - K. Concourse level corridors/passenger circulation area;
 - L. Station Platforms (bus and Train); and,
 - M. Tunnel portals.

- (ii) DB Co shall ensure that PTZ cameras are provided to monitor the following locations:
 - A. Concourse level corridors/Passenger circulation areas;
 - B. Station Platforms (bus and Train);
 - C. Coiling grills at some Stations;
 - D. PPUDO; and,
 - E. High rail vehicle access points/gates.
- (iii) DB Co shall ensure that high resolution cameras with low lux capabilities are installed to monitor tunnel entrances.
- (iv) The City shall develop the performance specifications and manage the interfaces for the CCTV equipment.
- (v) DB Co shall design, install, test and perform testing and commissioning of the portal CCTV equipment together with the City.
- (l) DB Co shall supply and install the CCTV system E&M infrastructure (conduits, poles, brackets, etc.).
- (m) The City shall provide all additions/modifications to the TOCC head-end equipment (VMS Server and workstations).
- (n) DB Co shall design the CCTV system to interface to the Emergency telephone systems. Upon activation of Passenger Emergency telephones or elevator help telephones, the CCTV system at the TOCC and BCC shall automatically display the CCTV camera with the best view of the telephone area.
- (o) DB Co shall design the CCTV system to interface to the IAC System. The CCTV system shall be capable of automatically displaying a view of the activated access control device, either via fixed camera or PTZ pre-set, upon activation of an IAC System alarm or use, whether authorized or unauthorized.
- (p) The City shall integrate the new CCTV system into the existing head-end management platform so that it is capable of including or excluding automatic display of video coverage of any device, type of device, specific event, or general event type as needed.
- (q) DB Co shall design the CCTV system such that all alarms can be assessed and if determined that the video/images are required, they will then be saved to the long term storage server. DB Co shall design the CCTV system such that all alarms can be assessed and if determined that the video/images are required, they will then be saved to the long

- term storage server. DB Co shall design the CCTV System such that Recordings be digitally watermarked to detect tampering.
- (r) The City shall integrate the CCTV System into the existing head-end management platform to ensure that access to recordings is restricted to OC Transpo personnel only.
 - (s) DB Co shall design the System such that the resolution and clarity of captured images be maintained under a range of lighting conditions from darkness through bright sunlight while ensuring optimal picture quality.
 - (t) DB Co shall design the CCTV System to provide spare recording capacity to allow for the addition of up to 40% video inputs for future expansion.
 - (u) DB Co shall design the CCTV System to allow an administrator to dynamically specify resolution and frame rate variation at a particular camera location for monitoring that location while not affecting the recording parameters.
 - (v) DB Co shall design the cameras to have de-icing and lens clearance protection. All cameras shall have a unique identity and provide a means of detecting image loss.
 - (w) DB Co shall design the CCTV System to store all recorded images in an accepted industry standard format.
 - (x) DB Co shall design the CCTV System that in the event of a power outage, the equipment shall remain operational for a minimum of 4 hours through the use of uninterruptible power supplies, generators, batteries, and/or other backup power equipment.
 - (y) DB Co shall design the CCTV System to ensure cameras installed in public areas are placed in protective vandal resistant environmental enclosures. Refer to Schedule 15-2, Part 4- Stations for location information.
 - (z) DB Co shall design the CCTV System to ensure that Cameras are located so that they never directly view the sun. The field of view of cameras shall be adequately illuminated either by natural light or by luminaires. Within the field-of-view, particular care shall be taken to avoid extremes of light, shadow and reflection from extreme glare.
 - (aa) DB Co shall design the CCTV System to provide a video feed to the ICP at each Underground Station.

ARTICLE 8 SCADA SYSTEM

8.1 Scope of Work

- (a) The SCADA system shall provide supervisory control of the support systems. The SCADA system(s) provided shall be of the same manufacturer as installed on the Existing Confederation Line. The existing system servers are located at the Belfast MSF and manage all system controls and indications for the System.
- (b) The City shall integrate the new SCADA system with the existing GUI and include the ability to filter out unnecessary indications and alarms according to user preference.
- (c) DB Co shall ensure that all equivalent equipment included on the Existing Confederation Line SCADA points list is included on the Confederation Line Extension Project points list. DB Co shall ensure that the Existing Confederation Line asset ID convention is followed for the Confederation Line Extension Project.
- (d) DB Co shall ensure that all Confederation Line Extension Project systems which interface with SCADA that are expansions of the Existing Confederation Line systems interface using the same architecture as in the Existing Confederation Line.
- (e) There are a total of four SCADA system functions required which include:
 - (i) Traction Power System
 - A. The Traction Power System SCADA shall be an on-line, real-time, interactive system operated by TOCC personnel at the existing maintenance console to monitor and control power distribution and equipment. The SCADA system shall provide remote control capability for TOCC to sectionalize or isolate any section of contact rail or item of equipment in the TPSS or other Traction Power Facilities. Also, discrete input points shall be provided from Traction Power equipment to SCADA for display of status and to alarm abnormal operating conditions.
 - B. DB Co shall design, supply, install test, perform systems integration and testing of the Traction Power System SCADA field wiring; all wiring from substation protection and control devices to Marshalling Panel including IED interface with control PLC.
 - C. The City shall be responsible for integration of the extension's new SCADA system equipment into the existing SCADAs head-end management platform at the TOCC and BCC.
 - D. DB Co shall supply the local field SCADA cabinet/housing
 - (ii) Signaling & Train Control

- A. The Signaling & Train Control system shall have a separate Train Control SCADA monitoring system operating over the CBTC wireless network. Refer to Article 10 – Signalling and Train Control System, of this Part 3 for details;

(iii) BMS

- A. The BMS system shall monitor Station electronics, electrical and mechanical equipment.
- B. DB Co shall design, supply and install the conduits, cabling and mounting hardware to provide connectivity and protection of all cabling required to connect field equipment to communications equipment rooms and other equipment rooms.
- C. DB Co design, manage the interfaces, and install the E&M equipment for the BMS including interfaces with the FADS.
- D. DB Co shall be responsible for all field wiring to marshalling panel; design and install associated conduits and mounting hardware.
- E. The City shall update the existing SCADA head-end platform at the TOCC & BCC to accommodate the extension's new BMS Station equipment.

(iv) BAS

- A. The BAS system shall monitor and control the Tunnel ventilation systems and FLS systems. This system shall be compatible with the Existing Confederation Line systems and be interfaced with the fire annunciator panel in the TOCC.
- B. DB Co shall design the TVS interfaces with the SCADA System to be consistent with the Existing Confederation Line.
- C. DB Co shall design, supply, install, conduct PICO and SAT of the control system, damper control panels, and MCC/VFDs.
- D. DB Co shall design, procure and install the BAS E&M infrastructure (Conduits, mounting hardware, etc.).
- E. The City shall be responsible for head-end SCADA integration; software integration of the tunnel ventilation system control equipment with the head-end SCADA management platform in the TOCC and the BCC at the Belfast MSF via the CTS. Refer to Schedule 15-2, Part 4, Article 6 – Electrical Design Criteria for details.

8.2 General Requirements

- (a) The existing SCADA head-end equipment consists of master terminal equipment, including servers and workstation GUIs, to control, monitor, gather data and communicate with field equipment. The SCADA system shall be a continuous, dynamic scanning type for gathering information and status indication of all points. Each point shall be sequentially scanned point by point under normal conditions and the status of all points shall be continuously transmitted to the existing SCADA head-end.
- (b) DB Co shall design the SCADA system to facilitate the transmission of indications and alarms from the RTUs to the TOCC and the transmission of controls from the TOCC to the RTUs via the CTS.
- (c) DB Co shall design the system such that signals transmitted from RTUs to the processors at the TOCC shall be processed to provide monitoring information to all required subsystems, generate commands to be transmitted back to the RTUs, provide information for displays and alarm processing at the control consoles, and store information and historical data for future processing.
- (d) DB Co shall ensure that for each remote location, the SCADA system shall display the following items on the SCADA monitoring workstations in the TOCC:
 - (i) Current system and subsystem status;
 - (ii) Control panel status;
 - (iii) Remote control RTU functions;
 - (iv) Alarm handling and fault resets; and,
 - (v) Historical event logging.
- (e) Each RTU shall be designed to interface to the CTS.
- (f) The City's Existing Confederation Line SCADA servers and related processing equipment is located at the main communications room in the Belfast MSF and connected to a redundant LAN.
- (g) DB Co shall design the SCADA System to ensure that schematic, one-line, pictorial, and alphanumeric displays of the SCADA system have the capability to be generated, altered, or deleted online by existing GUI.
- (h) DB Co shall design the SCADA system for ease of expansion and alteration in an economical and efficient manner to protect for future System expansion.

8.3 Control and Monitoring Requirements

- (a) DB Co shall ensure that TOCC, BCC and SCADA system shall operate as a homogenous control system. This system provides indications from field equipment to the TOCC & BCC and controls from the TOCC & BCC to field equipment.
- (b) DB Co shall ensure that each remote monitored location shall provide a local HMI for local alarm annunciation and system control.
- (c) DB Co shall ensure that each communications cabinet/ signal case and TPSS report status of intrusion detection, fire alarm, to the TOCC & BCC via the SCADA system.

8.4 SCADA Configuration

- (a) DB Co shall ensure that SCADA RTUs provide the interface between the field equipment and the CTS, which includes the communications backbone network.
- (b) DB Co shall ensure that SCADA RTUs utilize an Ethernet connection via the CTS to communicate with the existing TOCC & BCC head-end equipment.
- (c) DB Co shall ensure that Error correction and detection schemes utilize an industry standard (such as CCITT CRC-16) and, at a minimum shall:
 - (i) Detect all errors of up to 16 continuous bits; and,
 - (ii) Detect at least 99% of all error bursts greater than or equal to 16 bits.
- (d) DB Co shall ensure that The RTU be designed and implemented so that wiring and cabling between the RTU and field devices are uniform in type, routing, and connection locations. The following field interface requirements shall be met:
 - (i) Signals between the RTU and Train Control houses/cases shall terminate at one centralized location;
 - (ii) Signals between RTU and TPSS sites shall terminate at one centralized location;
 - (iii) RTU terminations shall include test points and rapid disconnect; and,
 - (iv) All wires and cables shall be labeled using a logically consistent labeling convention consistent with the existing system labeling.

8.5 Development and Configuration Tools

- (a) The City shall ensure that SCADA RTUs be supplied with hardware and software tools and documentation for reconfigurations and expansion.

- (b) DB Co shall design the SCADA subsystem such that no action or lack of action by the users or any malfunction of the SCADA subsystem equipment can cause an unsafe condition.
- (c) DB Co shall ensure that should the SCADA subsystem become completely inoperative, for any reason, the System shall continue to operate normally and safely.

8.6 Remote Terminal Units

- (a) DB Co shall ensure that the requirements for the SCADA RTUs are provided as follows:
 - (i) Solid-state, microprocessor-based with logic elements and auxiliary components configured on easily replaceable plug-in modules;
 - (ii) Provide interchangeability of modules; all RTUs shall be of a common design;
 - (iii) Operate normally unattended. RTU logic and configuration data shall reside in non-volatile memory;
 - (iv) Perform self-tests upon power up and on command from local test equipment and from the TOCC. Self-tests shall also be performed by input/output subsystems and input/output cards;
 - (v) Provide for maintenance of input/output circuits (including disabling power to output circuits) and safe replacement of input/output cards while power is applied. Possess the capability to continue operation in outdoor weather conditions with 0 to 95% humidity (non-condensing);
 - (vi) Operate within a power supply range of plus or minus 5% of its nominal value and a frequency range of plus or minus 1% of its nominal value;
 - (vii) Support local initialization and troubleshooting with either a local control panel or workstation or portable test equipment; and,
 - (viii) Be modular in design to provide expansion of performance and capacity by adding subsystem modules. This shall include the ability to add a minimum of 20% more input/output subsystem modules.

8.7 Operational Requirements

- (a) DB Co shall ensure that RTUs operate in a full-duplex mode in which each continuously scans and reports the status of indicators and commands.
- (b) DB Co shall design the SCADA RTUs to continue operations with the loss of communication to head-end as a result of either communication equipment failures or head-end equipment failures. Upon return to service of failed equipment, the SCADA

system shall automatically resume normal monitoring and management of that equipment.

- (c) DB Co shall ensure that SCADA RTUs are designed to continue operation in the electromagnetic environment where they shall be located, such as TPSS, Train control cases/houses, traffic cabinet and communications equipment cabinets.

8.8 Interface Requirements and Data Exchange

- (a) The SCADA System RTUs shall support discrete inputs and outputs via relay contact closures (or optically isolated solid-state equivalents such as silicon controlled rectifiers). All discrete inputs to the RTU shall be of the same type. All discrete outputs by the RTU shall be of the same type. The following RTU input and output requirements shall be met:
 - (i) Digital inputs to the RTU shall be from Form C relay contacts. The sensing voltage DC power supply shall be in the RTU domain;
 - (ii) Input and output signals shall be electrically isolated from the RTU;
 - (iii) RTU shall generate outputs via relays. Relays and transient suppression circuits shall be provided. RTU interface relays and relay contacts shall have a MTBF, at rated loads, of 5,000,000 cycles or more;
 - (iv) RTU outputs shall be momentary contact closures with a time duration that is stable and adjustable;
 - (v) RTUs shall prevent unintended action such as energizing output circuits upon power-up and power-restore; and,
 - (vi) A serial digital data interface may be used between the RTU and other processor-based devices, such as Train-to-wayside communications. All serial interfaces to RTUs shall be optically isolated.

8.9 Performance Requirements

- (a) The City shall ensure that the elapsed time from the first possible detection by an RTU or equivalent field device of an alarm or change of state, until display at the TOCC shall not exceed 2.0 seconds, unless otherwise approved.
- (b) DB Co shall ensure that when a user enters a command for any individual device control, the RTU shall generate the associated output signal, in the field, in no more than 2.0 seconds, unless otherwise approved. In the event a device equivalent to an RTU is used, the network shall deliver the command to the equivalent device in no more than 2.0 seconds, unless otherwise approved.

- (c) DB Co shall ensure that the specified SCADA equipment shall have the ability to integrate into the existing system without degrading performance and security of the system.
- (d) DB Co shall ensure that the SCADA HMI hardware shall have TCP/IP with 10/100Mbps connectivity for network communication.
- (e) DB Co shall ensure that the SCADA HMI software shall comply with the Open Process Control standards to assure interoperability of the data servers between different RTU Platforms.

8.10 RTU Configuration Requirements

- (a) DB CO shall design and procure one RTU to be installed in the data room at the Belfast MSF to support the Confederation Line Extensions' additional SCADA system requirements. The new RTUs shall be 19 inch rack mountable; capable of supporting a minimum of 16 I/O modules within the main RTU rack; capable of adding expansion racks; 256 MB of high speed DDR SDRAM and 128 MB of on board flash memory; capable of supporting 2000+ I/O point capacity; supports field and remote update of system programs.
- (b) The initial DB Co provided MSF RTU shall be configured with a minimum I/O of; AI Card (8 I/O), DI Card (160 I/O), DO Card (32 I/O) including 15% spare I/O for future expansion.
- (c) The RTU I/O modules shall meet the ANSI C37.90-1978 standard for surge protection.
- (d) The Belfast MSF RTU shall have a LCD display/keyboard/touch screen console unit that shall be capable of being mounted on the enclosure door and connected by cable to the processor module.
- (e) The City shall install, test and commission the RTU in the computer room at the Belfast MSF.
- (f) DB Co shall design, procure, install, test and commission RTUs in each of the new Station CERs and the Moodie LMSF to support the Confederation Line Extensions' additional SCADA system requirements. The new RTUs shall be 19 inch rack mountable; capable of supporting a minimum of 16 I/O modules within the main RTU rack; capable of adding expansion racks; 256 MB of high speed DDR SDRAM and 128 MB of on board flash memory; supports field and remote update of system programs.
- (g) The initial DB Co provided Station RTUs shall be configured with a minimum I/O of; AI Card (8 I/O), DI Card (132 I/O), DO Card (32 I/O) including 15% spare I/O for future expansion.
- (h) The RTU I/O modules shall meet the ANSI C37.90-1978 standard for surge protection.

- (i) The Station RTUs shall have a LCD display/keyboard/touch screen console unit that shall be capable of being mounted on the enclosure door and connected by cable to the processor module.
- (j) DB Co shall design, procure, install, test and commission RTUs in each of the new TPSS to support the Confederation Line Extensions' additional SCADA system requirements. The new RTUs shall be 19 inch rack mountable; capable of supporting a minimum of 16 I/O modules within the main RTU rack; capable of adding expansion racks; 256 MB of high speed DDR SDRAM and 128 MB of on board Flash memory; supports field and remote update of system programs.
- (k) The initial DB Co provided TPSS RTUs shall be configured with a minimum I/O of; AI Card (8 I/O), DI Card (160 I/O), DO Card (32 I/O) including 15% spare I/O for future expansion.
- (l) The RTU I/O modules shall meet the ANSI C37.90-1978 standard for surge protection.
- (m) The TPSS RTUs shall have a LCD display/keyboard/touch screen console unit that shall be capable of being mounted on the enclosure door and connected by cable to the processor module.
- (n) The Belfast MSF, Station (including Moodie LMSF) and TPSS RTUs shall support all five industry standard IEC 61131-3 PLC programming languages.
- (o) The Belfast MSF, Station and TPSS RTUs shall support the following protocols:
 - (i) Modbus;
 - (ii) DNP3;
 - (iii) SNMP;
 - (iv) BACnet; and,
 - (v) NTP.
- (p) DB Co shall procure and provide the installation, maintenance and Operator manuals that accompanies the supplied RTUs.

ARTICLE 9 INTRUSION ACCESS CONTROL SYSTEM

9.1 General Requirements

- (a) DB Co shall design the IAC system to control access and provide for detection of intrusion into non-public or otherwise restricted areas in Stations including coiling grilles, service entrances and along the alignment.
- (b) DB Co shall design the IAC system such that Intrusion sensors shall sound an audible alarm locally and trigger an automatic alarm notification to the workstation GUI in TOCC, BCC and MYCC for unauthorized entry or tampering to IAC equipment.
- (c) DB Co shall design the IAC system such that major access control equipment in Facilities include smart card readers, request-to-exit detectors, door contacts, electrified lock sets, and ACPs. ACPs shall be connected to the local network switch associated with the CTS. Card readers and ACPs shall be designated matching products or equivalent to ensure system compatibility with the existing IAC System.
- (d) DB Co shall supply, install, and test all Station IAC equipment. DB Co shall also be responsible for Station IAC equipment integration with the Station E&M RTU and the Station CTS. The City shall be responsible for head-end integration; software integration of the IAC with the head-end management platform.
- (e) DB Co shall design the IAC system such that all access-controlled doors in Stations and buildings shall be monitored by the CCTV System.

9.2 Operational Requirements

- (a) DB Co shall design the IAC system to provide controlled access and detect intrusion of the following:
 - (i) Public to non-public doorways;
 - (ii) TPSS;
 - (iii) CIH;
 - (iv) Station communications rooms;
 - (v) Elevator machine rooms;
 - (vi) Escalator machine rooms;
 - (vii) Electrical equipment rooms;
 - (viii) Vent plants;

- (ix) Mechanical rooms;
- (x) Crew/operational Rooms;
- (xi) Platform end gates;
- (xii) Station perimeter doors and coiling grilles (at some Stations);
- (xiii) ICP;
- (xiv) Restricted areas; and,
- (xv) Moodie LMSF; and,
- (xvi) High rail vehicle access points/gates.

9.3 Performance Requirements

- (a) Access Cards – access cards shall be provided as follows:
 - (i) Access cards shall be provided by the City to approved staff for entry into the CIHs, TPSS, and vent plants. The access cards shall be compatible with the existing IAC System.
- (b) DB Co shall design the IAC system such that access authorization be verified based on data submitted from any credential and retained in the system controller database, granting access by releasing electronic door locks once all correspondence is deemed accurate.
- (c) DB Co shall design the IAC system to ensure that all access decisions/credential transactions be processed locally at the card reader interface board as it receives data from the system controller, minimizing network traffic while also providing real-time access determinations.
- (d) DB Co shall design the IAC system to ensure that all cardholders shall have access based on Facility, card reader, time, and day. The system shall allow access levels to be defined and to be applied to any or all cardholders. Access authorization shall be denied by credential holder, time of day, group of staff, shift, and any additional characteristics that are identified by the system controller database.
- (e) DB Co shall design the IAC system to ensure that provisions be made for remote signalling of the door unlocking to an IAC panel.
- (f) DB Co shall design the IAC system to provide a means to bypass zones for facilities/locations where certain alarm zones are not 24 hour zones and be capable of being armed and disarmed from the TOCC and BCC.

- (g) DB Co shall design the IAC system to incorporate an interface to the fire alarm panel to allow override of door locks in an emergency situation. DB Co shall ensure that any door lock that restricts egress is code compliant and includes approved hardware and signage. Refer to Schedule 15-2, Part 4 – Stations for additional information.
- (h) DB Co shall ensure that the IAC System can be interfaced with the CCTV system to allow the display of video upon activation of an IAC alarm or use of an access control device at the TOCC.
- (i) DB Co shall design the IAC system to ensure that in the event of a power outage, IAC equipment shall remain operational for a minimum of 4 hours through the use of uninterruptible power supplies, generators, batteries, and/or other backup power equipment.
- (j) DB Co shall design the IAC system to ensure a fully distributed system architecture, with access control and event processing undertaken by intelligent controllers, and shall be designed with the following capabilities:
 - (i) Support multiple card readers for access control, alarm input devices, and control outputs.
 - (ii) Designed for multi-tasking, capable of maintaining system operations while other applications are being performed in the host computer.
 - (iii) Prepare, process, and display video photo identification badges.
 - (iv) System shall be interlocked with the fire alarm system such that if a zoned fire alarm is activated, all access-controlled doors within that zone are automatically unlocked for free egress.
 - (v) Designed for 24-hour per day, 7 days a week operation.
 - (vi) Generate reports based upon system configuration database as well as historical system activity.

ARTICLE 10 SIGNALLING AND TRAIN CONTROL SYSTEM

10.1 Scope of Work

- (a) DB Co shall provide a complete Signalling and Train Control System (S&TCS) in accordance with these Output Specifications. The S&TCS for the new segments of the Confederation Line shall be an extension of the same CBTC system used on the existing Confederation Line and as described herein.
- (b) DB Co shall provide all necessary infrastructure and installation of the S&TCS equipment/cabling to support the design of the S&TCS in accordance with these Output Specifications.
- (c) DB Co shall be responsible for all modifications to the Existing Confederation Line signal equipment, including signal equipment at the central location and other distributed system elements as necessary (e.g. software updates), to interface the existing signal system with the signal system as described herein. Modifications shall be made in such a manner that operations are fully supported until the new system is ready to be tested and commissioned.
- (d) The City shall provide that all Revenue Vehicles be equipped with S&TCS equipment to meet the requirements set out in the Output Specification.
- (e) DB Co shall design S&TCS for the safe operation of the Trains, Maintenance Vehicles, non-communicating Trains and non-equipped vehicles throughout the Confederation Line at all times.
- (f) DB Co shall provide all necessary wayside signs required for manual operation of Trains and work zones. DB Co shall install the wayside signs.
- (g) DB Co shall provide maintenance planning information for S&TCS to support the asset management planning.
- (h) DB Co shall provide training equipment in order to allow training of maintenance staff, including troubleshooting, fault finding and system updates.
- (i) DB Co shall provide the training equipment, or update the existing equipment, to be consistent with system operating functions and features.
- (j) DB Co shall provide remote diagnostic capability and additional portable test units for S&TCS equipment. The list in the table below defines the minimum equipment to be provided and may be changed during the design process based on obsolescence.
 - (i) DB Co shall provide CBTC Test Equipment for the Project as listed below.

| Test Equipment | Part Number | Quantity |
|-----------------------|--------------------------------|-----------------|
| FLMD Laptop | 3CU10081ADAA | 2 |
| DCS FLMD Laptop | 3CU10081AJAB | 2 |
| TAG Programming Kit | 183000, plus 612835, 612836 | 2 |
| Handheld Tag Reader | HR-2 Handheld Reader | 2 |

- (k) DB Co shall provide the City with all necessary Project data as required to sequentially update the CBTC simulator.
- (l) DB Co shall provide the same level of redundancy built into the S&TCS as the existing Confederation Line.
- (m) DB Co shall develop the performance specifications, produce the design, manage the interfaces and supply (including Pre-delivery Test) the CBTC wayside equipment including wayside terminal boxes, switch machines, transponders, wheel detectors (as required), Wayside Radio Units and Signals.
- (n) DB Co shall install, conduct PICO, SAT and SIT and commissioning of the CBTC wayside equipment including wayside terminal boxes, switch machines, wheel detectors (as required), transponders, Wayside Radio Units and Signals.
- (o) DB Co shall upgrade the head-end management platform in the TOCC and BCC to accommodate the new CBTC equipment installed for the Confederation Line East and West Extensions. DB Co shall be responsible for certifying the head-end management platform based on upgrades required to add the Confederation Line East and West Extensions.
- (p) DB Co shall upgrade the VOBC software to support the various phases of the software integration and the final alignment including Confederation Line East and West Extensions.
- (q) DB Co shall develop the performance specifications, produce the design, manage the interfaces and supply (including Pre-delivery Test) the CBTC Station equipment including Zone Controllers, Relay Racks, FODF, Control CTFs, point Controllers, Isolations Transformers, GIDS and FDAS interfaces.
- (r) DB Co shall install, conduct PICO, SAT and SIT and commissioning of the CBTC Station equipment including Zone Controllers, Relay Racks, FODF, Control CTFs, point Controllers, Isolations Transformers, GIDS and FDAS interfaces.

- (s) DB Co shall be responsible for confirming the S&TC wayside equipment properly communicates with the VOBC.
- (t) DB Co shall develop the performance specifications and produce the design requirements of the CBTC fibre optic civil infrastructure including conduits, trenches, sub-ducts, etc.
- (u) DB Co shall develop the final design, supply, and install the CBTC fibre optic civil infrastructure including conduits, trenches, sub-ducts, etc.
- (v) DB Co shall develop the performance specifications for the CBTC civil infrastructure for the main cable runs both outside and inside the stations including conduits, pits, foundations, buildings and cabinets.
- (w) DB Co shall design, supply (including Pre-delivery Test), install conduct PICO and SAT of the CBTC civil infrastructure for the main cable runs both outside and inside the Stations including conduits, pits, foundations, buildings and cabinets.
- (x) DB Co shall develop the performance specifications and produce the design requirements of the CBTC civil infrastructure within the Ballast, i.e. to and from the switch.
- (y) DB Co shall produce the final design, supply, install and test the CBTC civil infrastructure within the ballast, i.e. to and from the switch.
- (z) DB Co shall develop the performance specifications and produce the design requirements for the CBTC station to station cable and fibre within the Stations to the local junction boxes near the equipment (copper and fibre network).
- (aa) DB Co shall produce the final design, supply, install and test the CBTC Station to Station cable and fibre within the Stations to the local junction boxes near the equipment (copper and fibre network).
- (bb) DB Co shall supply, install, and conduct PICO of the CBTC Station to Station cable and fibre within the Stations to the local junction boxes near the equipment (copper and fibre network).
- (cc) DB Co shall develop the performance specifications and produce the design requirements for the CBTC cable connecting the local equipment (fibre & copper) local cable network from the junction box to the equipment.
- (dd) DB Co shall produce the final design, supply, install, conduct PICO, SAT, and SIT of the CBTC cable connecting the local equipment (fibre & copper) local cable network from the junction box to the equipment.
- (ee) DB Co shall develop the performance specifications for the CBTC fibre and copper terminations

- (ff) DB Co shall produce the design, supply, install, terminate and test the CBTC fibre and copper terminations.
- (gg) DB Co shall coordinate to ensure that enough space is made available within the systems rooms for all DB Co supplied equipment in addition to space required for any equipment delivered by the City.

10.2 General Requirements

- (a) All elements of the S&TCS shall be designed to be fail safe and maximize the safety and security of all personnel, Passengers, and equipment.
- (b) The S&TCS shall be designed for the operation and control of all equipped Revenue Vehicles.
- (c) The S&TCS shall be designed to accommodate the safe operation of the Maintenance Vehicles.
- (d) The S&TCS shall be designed to allow additional equipment for expandability and extendibility without replacement of previously provided equipment. This shall not prevent minor hardware and software upgrades.
- (e) The S&TCS expandability and extendibility criteria shall include as a minimum:
 - (i) additional Tracks;
 - (ii) additional interlockings;
 - (iii) additional vehicles;
 - (iv) additional Station/Stops; and,
 - (v) technology refresh (i.e. hardware and software).
- (f) The S&TCS shall be capable of adapting to the foreseen conditions and constraints such as failures, emergencies, weather conditions, abnormal conditions and interruptions. It shall be DB Co responsibility to identify and mitigate them while ensuring safe and reliable operations at all times.
- (g) The S&TCS shall optimize the Train movements and operational speed in accordance with vertical and horizontal Track alignment.
- (h) The S&TCS shall be capable of reading and reacting to the inputs from supervisory and control systems as required.
- (i) The CBTC system of the existing Confederation Line uses the **[REDACTED]** moving block system capable of operating in manual, restricted manual or ATO Modes, including

STO and UTO, with UTO restricted to yard areas for storage and other yard movements. The moving block system creates a virtual block of protection for each individual Train, dynamically calculated based on the Train's location, speed, and direction. The system shall prevent any Train from entering the virtual block of another Train, while maintaining a variable safe separation distance adjusted according to their actual speeds.

- (j) On the mainline, the Trains shall be capable of operating in restricted manual, manual mode under ATP or STO mode. The Trains are driven in STO mode with Operator assistance by the VOBC based on a MA received from the zone controller over the DCS.
- (k) With the exception of the MOW Shed, the LMSF yard shall be CBTC territory. Train Operators take control of the Trains for Revenue Service operations at a handoff platform. Transfer between yard and mainline control shall occur at the handoff platform. Train Operators handback control of the Train at the handoff platform. Trains shall be routed directly between the handoff platform and the mainline by the signal system.
- (l) Subject to specific hazard analyses, wheel detectors shall be used to detect unauthorized movements of non-communicating Trains on to mainline territory. Trap switch functionality shall be deployed to ensure a route must be set to allow movements onto the Mainline. Once the route has cleared, the switch shall automatically realign to prevent unauthorized movement onto the Mainline.
- (m) In the non-revenue areas, up to the handoff platform, including the carwash, Trains shall be capable of operating in UTO mode, under complete control of the signal system.

10.3 Codes, Standards and Manuals

- (a) The design and construction of the Works shall comply with the criteria contained in this Article 10, and all standards, regulations, policies, and applicable law, applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - (i) AREMA Communications and Signal Manual.
 - (ii) EN 50126 Railway Applications – The Specification and Demonstration of Reliability, Availability, Maintainability and Safety
 - (iii) EN 50128 Railway Applications – Communication, Signalling, and Processing systems – Software for Railway Control and Protection Systems
 - (iv) EN 50121 Railway Applications – Electromagnetic Compatibility
 - (v) EN 50129 Railway Applications – Communication, Signalling and Processing systems – Safety Related Electronics for Signalling

- (vi) EN 50155 Railway Applications – Electronic Equipment Used on Rolling Stock
- (vii) EN 50159-2 Railway applications – Communication, Signalling and Processing Systems -- Part 2: Safety Related Communication in Open Transmission Systems
- (viii) IEEE Std. 1474.1 IEEE Standard for Communications-Based Train Control (CBTC) Performance and Functional Requirements
- (ix) IEEE Std. 1474.2 IEEE Standard for Functioning of and Interfaces Among Propulsion, Friction Brake and Train-borne Master Control on Rail Rapid Transit Vehicles
- (x) IEEE Std. 1474.3 IEEE Recommended Practice for Communications-Based Train Control (CBTC) System Design and Functional Allocations
- (xi) IEEE Std. 1483 IEEE Standard for Verification of Vital Functions in Processor-Based Systems Used in Rail Transit Control

10.4 Existing CBTC System Description

- (a) CBTC of the Existing Confederation Line:
 - (i) Uses the **[REDACTED]** moving block system capable of operating in manual, restricted manual or ATO Modes. The moving block system creates a virtual block of protection for each individual Train, dynamically calculated based on the Train's location, speed, and direction. The moving block system shall support an 80-90 second design headway. The system shall prevent any Train from entering the virtual block of another Train, while maintaining a variable safe separation distance adjusted according to their actual speeds.
 - (ii) Operates in Revenue Service in either a manual mode under ATP (ATPM) or in STO mode. The Trains are driven in STO Mode with Operator assistance by the VOBC based on MA received from the Zone Controller.
 - (iii) Operates in non-revenue areas of the yard in UTO mode, under the complete control of the CBTC system.
 - (iv) Consists of equipment located on the wayside, at the TOCC, BCC, BYCC and onboard each Train. The wayside, TOCC, BCC, MYCC, and BYCC equipment connects to each other through redundant fibre optic networks. The onboard equipment communicates to the wayside and TOCC, BCC, MYCC and BYCC equipment through wireless AP connected into the CBTC network.
 - (v) Utilizes an ATS system management interface between the CBTC system and the operations/maintenance personnel. The ATS does not inherently provide any functionality for safety.

10.5 New CBTC System Description

(a) General

- (i) The CBTC system for the Confederation Line East and West Extensions shall consist of equipment located on the wayside, including the Moodie LMSF and MYCC, with additional equipment or upgrades (e.g. software) at the TOCC, BCC, Belfast MSF and onboard each Train. The wayside, TOCC, BCC, Moodie LMSF, and MYCC equipment shall be connected to each other by redundant fibre optic networks. The onboard equipment shall communicate to the wayside through wireless APs connected into the CBTC Network. Systems providing the same functionality, Safety and level of redundancy as that described below are acceptable regardless of the assignment of functions among hardware or the terminology used.

10.6 System Architecture

(a) TOCC, BCC, Moodie LMSF and Belfast MSF Equipment

- (i) The TOCC and BCC serve as the command and control centers for the Confederation Line. ATS Workstations located in the TOCC, BCC, and the Belfast and MYCCs shall communicate with redundant ATS and ATC servers located in the Belfast MSF. The ATS workstations shall allow the TOCC, BCC, BYCC and MYCC personnel to setup routes through interlockings in their control areas using entrance/exit selection or direct switch control, and to clear, cancel or fleet signals. Using this system, TOCC and BCC personnel shall also be able to stop and release any Train or group of Trains in Revenue Service. The TOCC and BCC personnel shall be able to put the ATS servers in an automatic mode to automatically set up routes through interlockings, send ATS commands to Trains to control Dwell Times, speeds, and acceleration or braking rates to manage headways, and schedules and/or optimize energy usage. In ATO mode, the ATS system shall also route Trains, with Operator support, out of and into the Moodie LMSF to build up and reduce service around the rush hours.
- (ii) The ATC servers shall maintain the most up to date Track Database. The ATC servers shall push the latest version of the Track Database including Track profile, Station locations and civil speed out to the Zone Controllers and to all Trains. Handshaking shall be provided to ensure that all ATC servers, Zone Controllers and vehicles maintain the same up to date version of the Track database. The Zone Controllers shall maintain a registry of all equipped Vehicles in CBTC territory. Authorised TOCC personnel shall be able to use workstations to update, add or remove speed restriction zones and work zones.
- (iii) One additional ATS workstation shall be installed in the TOCC to supplement the existing workstations. The ATS workstations at the TOCC shall have at

minimum, two additional overhead video display screens that allow TOCC personnel to view the entire line and all the Trains, interlockings and switch positions as well as equipment warnings, alarms, temporary speed restriction zones and work zones. General user interface controls shall be provided to allow the TOCC personnel to control interlockings and switches, to clear, cancel and fleet signals, to turn switch point heaters on and off, to stop and release Trains and to transfer interlockings and the entire line between automatic and manual operation.

- (iv) CBTC maintenance database servers shall be provided, or the existing servers upgraded, at the Belfast MSF to record all faults from additional wayside and on board CBTC and network equipment required by the extensions.
 - (v) Fault alerts and easy database access shall be provided for maintenance personnel.
 - (vi) The ATS shall interface to the SCADA. SCADA shall provide the data to the PID systems.
- (b) Zone Controllers
- (i) DB Co shall provide all CBTC Station equipment including Zone Controllers. DB Co shall be responsible for all infrastructure and installation.
 - (ii) Zone Controllers shall be distributed throughout the line to control the Train movements in the various zones. Redundant Zone Controllers shall be provided in each zone. The number of zones shall be determined by the latency requirements to provide the required headways, the availability requirements, the product limitations (e.g. capacity), as well as the requirements of the vital interface with the interlocking controllers provided.
 - (iii) Each Zone Controller shall:
 - A. Receive Train location, length, speed and identification messages from each Train;
 - B. Ensure that the Track database version is compatible with the VOBC and ATS database versions;
 - C. Where applicable read inputs from the smoke detector and intrusion detection systems, GIDS and TVS;
 - D. Interface to Emergency stop buttons and Emergency stop key switches (yard only);
 - E. Request and receive the Track database version from each Train in its zone;

- F. Deny MA to Trains without a valid Track database version until the database is made current;
 - G. Send movement authorities to all Trains within its zone including overlap into adjacent zones;
 - H. Provide Train location to the ATS system;
 - I. Inform adjacent Zone Controllers of all switch, signal positions and Train location information within its own zone; and,
 - J. Read inputs from the intrusion detection system installed at Tunnel Portals and the Guideway intrusion systems at Platform ends.
- (iv) Read inputs from the intrusion detection system installed at Tunnel portals and Guideway Intrusion from Platform ends. Redundant Zone Controllers shall be provided for each zone.
- (c) Local ATS Processor
 - (i) DB Co shall provide, and test all ATS processors. DB Co shall provide all infrastructure and installation required to support the S&TCS design.
 - (ii) Redundant local ATS processors shall provide a non-vital interface between the ATS servers and the VMIS to allow ATS control of interlockings. The local ATS processors shall also allow local control of the interlocking, through a local ATS workstation.
 - (iii) The local ATS function may be combined in various hardware configurations and location provided:
 - A. Local control of the turn backs at terminal locations and of the interlocking controlling entrance to and exit from the Moodie LMSF is not dependent on the health of the line CBTC network.
- (d) Interlocking Control
 - (i) Vital interlocking logic shall include control of traffic direction between interlockings. Traffic direction status shall be vitally maintained through power failures. Vital interlocking control may be integrated into the Zone Controller package provided that:
 - A. Local control of the turn backs at terminal locations is not dependent on the health of the line CBTC network;

- B. Failure of the CBTC portion of the Zone Controller shall not disable local control of terminal location turn backs or the interlocking controlling entrance to and exit from the Moodie LMSF;
 - C. The non-vital interface shall support a local control panel for testing and Emergency operation of the interlocking; and,
 - D. In local automatic operation, Trains shall be routed to the inbound Platform Track first and only if that Track is occupied to the other Platform Track. Provisions shall be made for taking a Platform Track out of service.
- (ii) In case of CBTC system failure, signals will go red.
- (e) Signal Equipment Room
- (i) The S&TCS interior equipment shall be installed within a designated SER location within the Station building such that it is in close proximity to the interlocking as dictated by performance requirements of the signalling system equipment.
 - (ii) DB Co shall provide and test all equipment located within the SER. DB Co shall provide all infrastructure and installation required to support the S&TCS design.
 - (iii) All interlockings shall be controlled from a SER.
 - (iv) The SER shall be secured in accordance with safety and security requirements.
 - (v) The SER shall be provided with doors with locks. The doors shall also have an emergency bar on the inner side of the door which shall bypass the lock and open the door.
 - (vi) The SER shall house all microprocessor systems, relays, electronic switch controllers, etc. necessary to control the interlocking from the central ATS servers.
 - (vii) The SER shall house, as necessary, CBTC equipment such as Zone Controllers, local ATS processors, CBTC networking equipment, etc.
 - (viii) Local Track switch controls, signal controls and switch indications shall be provided through the local ATS. Controls to select local or central ATS control, and local automatic or local manual control shall be provided.
 - (ix) The SER shall be resistant to corrosion and weather damage.

- (x) The SER shall be insulated to a level that minimizes heating and cooling loads for the HVAC and heating systems.
 - (xi) DB Co shall provide a single phase AC feed with appropriate step down transformer(s) and distribution panels for signal power and for power outlets, lighting, HVAC etc.
 - (xii) DB Co shall provide a transfer switch and a connection for a portable emergency generator and pad for placement of that generator
 - (xiii) Power for vital signal systems shall not be grounded.
 - (xiv) HVAC and heating systems shall be provided with sufficient capacity to maintain room temperatures between 15°C and 22°C.
 - (xv) A fire detection and suppression system shall be provided which shall be integrated into the central SCADA system.
 - (xvi) A control head, transceiver and antenna shall be provided for the radio.
 - (xvii) The SER shall be properly grounded. All racks in the SER shall be connected to the earth ground bus.
 - (xviii) Where high density termination blocks are used in signalling equipment located within the SER, the types used shall:
 - A. Allow for circuit isolation without disconnecting wires from the terminal blocks;
 - B. Provide crimped terminations on wires to provide strain relief at the wire insulation;
 - C. Provide cable identification; and,
 - D. Provide evidence of environmental testing to EN50125-3 Environmental conditions for equipment, equipment for Signalling and Telecommunications. Special attention shall be paid to the clearance and creepage requirements and lightning suppression for entrance rack terminations.
 - (xix) The SER shall be monitored for intrusion detection by either the IAC or SCADA.
- (f) S&TCS Backup Power Supply System
- (i) DB Co shall provide a UPS system for the S&TCS that is capable of providing a minimum of four hours of backup power after the primary source of power is not

available. An additional minimum of eight hours of supplementary backup power shall be provided by an external generator.

- (ii) If batteries are used:
 - A. The battery bank system shall be constantly recharged by the primary power source. Therefore when the primary power source is out, the batteries are no longer recharged but will continue to provide power until the batteries are exhausted. An external generator shall provide the second backup source of power.
 - B. UPS filtering shall be sufficient that the ripple requirements of attached processor systems can be met in all conditions.
 - C. Batteries provided shall be selected for the required capacity and minimal degradation of capacity with age and suitable for the environmental conditions outlined in Schedule 15-2, Part 1, Article 4 – Design and Construction.
 - D. Batteries shall not be lead acid.

(g) Switch Machines

- (i) DB Co shall provide all switch machines, switch machine layouts and switch heaters.
- (ii) DB Co shall provide all civil infrastructure (conduits duct banks, inserts, etc.) and installation required to support the S&TCS design.
- (iii) DB Co shall terminate and test all cabling.
- (iv) Power switch machines provided shall:
 - A. Have heaters to prevent internal condensation;
 - B. Have a removable hand crank to perform manual switch moves; and,
 - C. Have a record of reliable operation in heavy traffic transit operation.
- (v) Switch heaters provided shall prevent ice and snow from building up and immobilizing the switch points and switch rods. Switch heaters shall:
 - A. Be equipped with both rail temperature and precipitation sensors allowing for automatic operation.

- B. Be equipped with remote control via SCADA by the TOCC, BCC, BYCC and MYCC with local manual control available for maintenance and troubleshooting;
 - C. Have sufficient thermal rating and capacity with appropriate controls to operate successfully and be effective in the Ottawa climate;
 - D. Report the status of the switch heater (ON/OFF) for each switch to the local control panel and to the TOCC;
 - E. Failure of switch heaters status to correspond to command status shall cause an alarm indication; and,
 - F. Include capability for remote control and indications (control on/off, status on/off, status alarm/normal) to be transmitted via SCADA
 - G. Switch heaters shall operate effectively in the Ottawa climate as described in Schedule 15-2, Part 1, Clause 4.3.
- (vi) Electric switch heaters shall be utilized for all main line switches:
- A. A switch heater case shall be provided at each interlocking or group of interlockings to distribute power to each switch heater;
 - B. A main circuit breaker and disconnect shall be provided at each switch heater case; and,
 - C. The power for the switch heater for each switch shall be separately current protected.
 - D. Electric switch heaters used on the mainline shall be hot air blower type with a minimum of 153,000 BTU/hr.
- (vii) Gas heaters shall be utilized for all yard switches:
- A. Flameout and ignition failure shall be provided; and,
 - B. A safety analysis of gas heaters as well as the gas delivery or storage systems shall be provided.
 - C. Gas switch heaters used in the Moodie LMSF shall have a minimum output of 400,000 BTU/hr.
- (viii) Switch machine controls shall provide overload protection and automatic recycling in case of obstructions.
- (ix) Switch heater feeds that are powered from a TPSS shall be metered.

- (h) Wayside Signals
 - (i) DB Co shall provide and test all wayside signal layouts. DB Co shall provide all civil infrastructure (conduits duct banks, foundations, etc.) and installation required to support the S&TCS design. DB Co shall terminate and test all cabling.
 - (ii) Wayside signals shall be provided only in the Moodie yard and at mainline interlockings.
 - (iii) Wayside signals shall be mounted such that the vertical center of the signal head is approximately 2.6m above top of rail. Lower signals may be provided in the Moodie LMSF yard but the bottom of the signal head shall be at least 1 meter above top of rail.
 - A. Built in ladders shall be provided on high signal masts to permit the changing of aspect lamps.
 - (iv) Signal heads shall be located outside the dynamic envelope of the LRV.
 - (v) Wayside signals shall be mounted on the right hand side of the alignment for normal running.
- (i) Location Norming Transponders
 - (i) Passive transponders with location and Track information shall be supplied and installed by DB Co along each Track in CBTC territory. The transponders shall be located at intervals as required to provide the specified Train location error limits, to provide verification of Track at interlockings and to provide the specified Station stopping precision.
 - (ii) The LRV VOBC shall detect missing or malfunctioning norming transponders and shall report this failure to the CBTC maintenance server.
- (j) CBTC Network
 - (i) DB Co shall provide a CBTC network that supports the requirements of these Output Specifications. DB Co shall provide all civil infrastructure (conduits duct banks, inserts, etc.) and installation required to support the S&TCS design. DB Co shall terminate and test all cabling.
 - (ii) The TOCC, BCC, MYCC workstations, Belfast MSF servers and all wayside CBTC controllers and interfaces, shall be connected to each other and to wayside APs over independent redundant fibre optic networks.
 - (iii) Networks design and equipment shall be based upon an open standard such that replacement equipment may be procured from multiple sources.

- A. Copper Category 6A or higher cables may be used within control rooms.
- B. The fibre optic backbone networks shall be designed such that for each node there are 2 paths to any other node.
- C. Network switches shall be located in SERs, CILs and in Station communications rooms as needed.
 - i. All network switches regardless of location shall have at least 4 hours of battery backed up power.
- (iv) The network shall be designed to reliably meet the latency requirements determined by the Headway requirements outlined in Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements.
- (v) The integrity of vital messages shall not depend on network protocols but upon error checking and time stamp checking methods used by the attached vital systems.
- (vi) The CBTC system fibres shall be run in separate cables from all other communications systems. Each of the two CBTC fibre optic networks shall be run in a separate cable and a separate conduit or trough. The routing of fibre cables shall minimize the possibility of disabling both networks with a single digging accident or lightning strike.
- (k) CBTC Wireless Communication
 - (i) APs provided by DB Co shall be provided along the right of way. DB Co shall install all civil infrastructure (conduits, duct banks, inserts, etc.).
 - (ii) Communications between APs and Trains shall be based upon an open or proprietary standard such that replacement APs may be procured from multiple sources.
 - (iii) Advanced encryption and error checking, time stamping, etc. in accordance with EN 50159-2 and other applicable standards shall be used to prevent deliberate and random message falsification and to guarantee message integrity. Additional measures shall be taken to mitigate the possibility of and damage from non-safety critical interference such as denial of service and man in the middle attacks and to reduce potential interference from external wireless networks.
 - (iv) The CBTC wireless communication system shall not carry data for any other vehicle or wayside system.
 - (v) Nodes on both backbone networks shall be able to talk to all APs.

- (vi) APs shall be spaced along the alignment as needed to provide redundant radio coverage for each Train antenna at all times.
 - (vii) AP electronics shall be protected in sealed enclosures watertight to IP67 or NEMA equivalent. Alternatively, they shall be IP65, and be mounted high enough to prevent them being under water due to any environmental condition.
 - (viii) DB Co shall perform propagation studies and intermodulation studies to determine placement of APs and antennas on the wayside.
 - (ix) Frequency selection and antenna placement for Vehicle voice and non CBTC data radios shall be coordinated to minimize interference with CBTC wireless communication.
 - (x) Power for all APs shall be provided from a source with a minimum of a 4 hour battery backup. Power distribution to the APs shall be redundant. A short in a single AP shall not affect the operation of any others.
- (l) Event Recording
- (i) An event recording system shall be provided by the City and updated by DB Co, to record changes in switch positions, and signal aspects, fixed block occupancy, Train location, and ATS commands to the interlockings and Trains.
 - (ii) All events shall be time stamped.
 - (iii) Sufficient storage shall be provided by DB Co to record all events for a minimum of 60 days.
 - (iv) Onboard CBTC systems shall report all changes in MA, all Onboard Computer Train control commands, all changes in speed limits, etc. to the vehicle event recorder.
- (m) Onboard CBTC Systems
- (i) The City shall install and test the updated onboard CBTC System. Any software or database updates for the onboard CBTC System shall be provided by DB Co.
- (n) Train Initiation
- (i) Before any equipped Train may enter CBTC mainline territory and receive MA it shall register with the wayside CBTC system.
 - (ii) During Train initiation the Onboard Computer shall:

- A. Provide all data required by the wayside CBTC system to Track the Train and the moving or virtual block it is occupying;
 - B. Verify the Track database; and,
 - C. Provide any other information required for ATS scheduling and routing.
- (o) Non-Revenue Vehicles
 - (i) Non-Revenue high rail vehicles provided by the City shall be detected by the SCADA system displayed on ATS and protected by TOCC, BCC, MYCC and BYCC Operators setting a manual reservation for each non-revenue vehicle on the Guideway.
- (p) Emergency Stop Devices
 - (i) Emergency Stop Devices shall be provided by the DB Co in the Moodie yard consisting of ESB and ESS.
 - (ii) ESBs shall be distributed around the yard. If the ESB is activated, the Tracks associated with the ESB shall be closed. If the ESB is released to the non-active state, the CBTC system shall allow the Tracks to be re-opened.
 - (iii) The ESS is a keyed switch located at the entrance to the access points to maintenance platforms and other locations based on based on the Hazard Analysis. Activation of the switch shall close the associated Tracks to protect the maintenance crews' activities. The ESS shall be able to be activated without a key, but shall only be returned to the non-active state using the key.
 - (iv) Locations and quantities of ESB and ESS devices shall be determined based on safety analyses to ensure the safety of maintenance and other personnel that may require yard access.
- (q) External wayside and central S&TCS Interfaces:
 - (i) The ATS interfaces to SCADA and PIDS over an existing network interface.
 - (ii) The SCADA interface to the ATS shall provide Traction Power and UPS equipment status information. This interface allows the ATS to provide Train location information to the TVS, including onboard smoke detection status.
 - (iii) The ATS interface to PIDS shall provide Train prediction and other information required for Passenger information displays and automated Passenger announcements at Stations.

- (iv) The interface to the smoke detectors and intrusion detection shall be via one pair of normally closed dry contacts per detection device for monitoring by the Zone Controller. Each Underground Station has one set of smoke detectors for each side of the Station. Each Tunnel Portal has one set of intrusion detectors. Each Platform has one Guideway intrusion detector at each end.

10.7 Modes of Operation

- (a) Design work for the S&TCS system to be capable of the required modes of operation shall be performed by DB Co and shall mirror operation on the Existing Confederation Line with any specific adaptations required by the additional guideway and Moodie yard.

10.8 Interface with Passenger Information and City of Ottawa Systems

- (a) Design work required for interface with Passenger Information and the City of Ottawa systems shall be performed by DB Co.

10.9 Monitoring and Diagnostics

- (a) The Vehicle borne CBTC systems including fault monitoring and diagnostic capabilities necessary to meet the requirements of the Existing Confederation Line Vehicles, shall be provided by the City.

10.10 Signal Cable, Signal Case and Junction Box Requirements

- (a) Signal Cable
 - (i) DB Co shall provide all civil infrastructure (conduits duct banks, etc) cabling and installation required to support the S&TCS design. DB Co shall terminate and test all cabling.
 - (ii) The design and manufacture of all signal cables shall meet the requirements of AREMA 10.3.17 for armoured cable.
 - (iii) Signal Cable used in Tunnels shall be provided with a low smoke zero halogen jacket.
 - (iv) Signal wires from cables shall be terminated with compression lugs.
- (b) Junction boxes
 - (i) DB Co shall provide install and test all junction boxes associated with the S&TCS design. DB Co shall provide all civil infrastructure (conduits duct banks, foundations, etc.) and installation required to support the S&TCS design. DB Co shall terminate and test all cabling.

- (ii) Junction boxes, and switch heater cases shall be constructed of stainless steel, aluminum or fibreglass with locking doors and neoprene door seals.
- (iii) Junction boxes shall be earth grounded.

10.11 Performance Requirements

- (a) Latency and Response Times
 - (i) Communications latency and CBTC equipment response times shall be optimized to facilitate the operational performance requirements outlined in Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements.
- (b) Maximum Position and Speed Errors
 - (i) Base ATP location error shall not exceed 5 meters for each vehicle with all wayside transponders working and without any slides or spins or significant creepage due to prolonged acceleration or deceleration.
 - (ii) The Train shall stop reliably such that all doors are located on the Platform, with the required door setbacks from the Platform ends.
 - A. The braking profile shall be adjustable to prevent Station over runs during low adhesion conditions.
 - (iii) The S&TCS shall have the capability to support the future addition of Platform screen doors.

10.12 System Safety

- (a) Safe Braking
 - (i) The OBC shall generate penalty brake speed profiles within the limits of the safe braking model described in IEEE STD 1474.1
 - (ii) The penalty brake for CBTC shall be an emergency friction brake without any Track brake application. Propulsion shall be disabled in a fail safe manner. Sanding shall be provided but shall be assumed not to work for purpose of safe braking computation.
 - (iii) The Guaranteed Emergency Brake Rate used by the safe braking model shall be based upon an analysis of plausible combinations of brake failure modes and on brake testing under the full range of adhesion conditions.
- (b) Train Operation During Train/Wayside Communication Failure

- (i) If the OBC fails to receive a MA update from the Zone Controller it shall continue to enforce the speed profiles from the previous MA as well as speed restrictions. If the communications failure continues for longer than 5 seconds the Onboard Computer shall command and enforce a full service brake to stop.
- (c) Response to Intrusion
 - (i) The CBTC System shall respond to intrusion detection by alarming drivers and enforcing stop and proceed orders, speed restrictions or stop and hold orders as warranted by the Safety analysis.
- (d) Fire and Smoke
 - (i) The Zone Controllers shall stop any Trains from entering the Tunnel or approaching an area, either in response to smoke detectors, or in response to TVS operation. Trains shall not be prohibited from moving in the Tunnel beyond and away from the fire zone.
- (e) Speed Restrictions and Work Zones
 - (i) The speed limit of any temporary or civil speed restriction zone shall be enforced while any part of the Train is within the boundaries.
 - (ii) When a Train approaches a work zone, ATO operation shall be suspended. The Train shall operate in ATP Only Mode, and the assigned speed limit or stop shall be enforced.
 - A. Some work zones may require operation at limited speed while others may require a stop before proceeding on permission of the work crew. Both rules shall be enforced by the CBTC system.
- (f) Degraded Modes of Operation
 - (i) The CBTC system design shall account for degraded modes of operation and shall develop a Safety Analysis of degraded mode operation in accordance with the standards outlined in this Article 10.
 - (ii) Solutions and operational policies for degraded modes of operation such as manual operation through interlockings with switch point detection problems, failed fixed block detection units, developed and implemented for the Existing Confederation Line shall be applied for the Confederation Line Extension.
- (g) Safety Design Standards Reference Documents
 - (i) The CBTC system shall meet the safety requirements of IEEE STD 1474.1 and IEEE 1483-2000 and the formal verification methods referenced in EN 50126,

EN50128 and EN 50129. All required safety documentation of the generic products and the specific application and the operation the CBTC/signal system shall be provided.

10.13 Environmental Requirements

- (a) Environmental requirements measures shall be included as part of the overall System design considerations from the start of the design to the final in-service testing. The wayside and onboard systems supplied shall be designed to meet the climate conditions provided in Schedule 15-2, Part 1, Article 4 – Design and Construction.
- (b) At a minimum, all wayside equipment shall meet all of the environmental requirements as delineated in the AREMA Environmental Requirements. DB Co shall test equipment and submit certified test results showing the dates, locations and testing agency that performed the verification, at the City's request, unless the equipment has been proven in service in an equivalent environment and test results are available which can support this.

10.14 Testing

- (a) General
 - (i) DB Co shall be responsible for testing the CBTC onboard software changes necessary to support the new Confederation Line Extension segments and required safety regression tests.
- (b) Interlocking Testing
 - (i) Interlocking tests shall include point to point and vital break down tests of control wiring, insulation resistance testing of cables, and full functional testing of switch locking and signal and switch control.
 - (ii) All non-vital route setup, switch blocking, switch control, signal clearing and cancellation functions shall also be tested from the local control panel and from the ATS work station.
- (c) CBTC System Tests
 - (i) Vital communications between VMIS and zone controllers shall be fully tested for each bit or variable transferred.
 - (ii) CBTC software shall be subjected to the test cycles required during development by the safety verification standards cited in Clause 10.12 (g) (i) of this Part 3.
 - (iii) Before any wayside or vehicle CBTC equipment is installed, functional simulations and load testing of the software shall be conducted for the Confederation Line Extension. During load testing, delays shall be simulated to

verify the cycle times can be met under heavy traffic and less than optimal transmission and reception conditions. Actual load tests shall be conducted on site as part of SAT activities.

- (iv) CBTC equipped Vehicles shall be used to test communications quality along the Confederation Line West Extension and the Confederation Line East Extension.
- (v) Station stopping tests shall be performed under all weather and grade conditions to verify the validity of the speed profile algorithms at the Platforms of the Confederation Line Extension Stations.
- (vi) All CBTC safety and supervisory functions shall be tested including: Train separation, coupling, work zones, automatic and manual interlocking control, headway adjustment, adding and removing Trains from the line, ATS workstation displays, local control panels, etc.
- (vii) All degraded modes of operation shall be tested.
- (viii) The proper functioning of system redundancy including power redundancy shall be tested at all levels.
- (ix) The CBTC fault reporting system shall be tested.

ARTICLE 11 EMI / EMC

11.1 Scope of Work

- (a) DB Co shall develop the specifications, design and manage the interfaces for the EMI/EMC program.
- (b) DB Co shall perform an overall EMI program and develop the requirements to install.
- (c) DB Co shall conduct and document a program in which the system achieves compliance with EMC and EMI as set out in this Article 11, while providing safe and reliable operation in all specified functions and modes.
- (d) DB Co shall apply the EMI/EMC program requirements to all Systems and sub-contractors within DB Co.'s scope of work including Revenue Vehicle EMI immunity which complies with the Existing Confederation Line Vehicles.
- (e) DB Co shall ensure that all equipment provided under this Output Specification and the Performance Specifications provided by the City, taken individually and together, complies with the EMI/EMC requirements set out in this Article 11, in normal, degraded, and emergency operating and maintenance modes.
- (f) DB Co shall demonstrate to the City that the equipment installed shall not interfere with any other systems or equipment.
- (g) In order to identify existing sensitive receptors and emitters, DB Co shall conduct an EMI Site Survey along the alignment early in the design process as well as prior to the completion of system Commissioning;
 - (i) DB Co shall engage affected stakeholders to ensure that mutual EMI/EMC concerns are appropriately addressed and mitigated; and
 - (ii) DB Co shall work with the Authorities (i.e. Industry Canada), or other affected stakeholders to resolve any EMI/EMC problems identified during design, construction, Commissioning and operation and maintenance in accordance with Schedule 15-2, Part 1 – General Requirements and Schedule 17 – Environmental Obligations.
 - (iii) DB Co shall work with the identified locations below, for Confederation West, in addition to other locations identified during their design survey;

| Sensitive Receivers - Confederation West | | | | |
|--|------------|--------------------------------------|-------------|-----------|
| Approx. Distance From Bayview Meters | Track Side | Approx. Distance to Centerline | Description | Rationale |

| (Feet) | | Meters (Feet) | | |
|------------------------------|---------------------------------|------------------|-----------------------------|---|
| 0-1676 (0-5,500) | East | 6.1 (20) | Power lines | Low frequency magnetic and electric fields |
| 1219 (4,000) | Perpendicular to Track | N/A | Power line Crossing | Low frequency magnetic and electric fields |
| 1219 (4,000) | West | 46 (150) | Transformer Station | Low frequency magnetic and electric fields |
| 2286 (7,500) | East | 305 (1000) | [REDACTED] | Medium to high frequency plane waves |
| 3810-4724 (12,500-15,500) | East Side, Parallel to Track | 31 (100) | Power lines | Low frequency magnetic and electric fields |
| 6919 (22,700) | Perpendicular to Track | N/A | Power Line Crossing | Low frequency magnetic and electric fields |
| EOL | East | 610 (2000) | Queensway Carleton Hospital | Multiple Sources of Possible Electromagnetic Interference: Low, medium, and high frequency magnetic and electric fields, medium to high frequency plane waves, conducted low and high frequency phenomena, and Electrostatic Discharge |

- (iv) DB Co shall work with the identified locations below, for Confederation East, in addition to other locations identified during their design survey;

| Sensitive Receivers - Confederation East | | | | |

- (h) DB Co shall ensure that there is no harmful or disturbing electrical interference of the Systems with external systems, (City traffic system, human beings, radio/television receivers, radio/television transmitters, cellular systems, wireless systems, power gridlines, power substations, cars, buses, police, emergency vehicles, and any other equipment belonging to Passengers, pedestrians and neighborhoods).
- (i) DB Co System Infrastructure shall be designed and commissioned to be electromagnetically compatible and not cause any electromagnetic interference to other adjacent railway systems ([REDACTED] and [REDACTED]).
- (j) DB Co shall cooperate with Industry Canada and third party stakeholders in the investigation and resolution of complaints regarding documented or suspected EMI/EMC issues.
- (k) DB Co shall provide an O&M manual detailing all identified sensitive receivers, mitigation measures taken, and required maintenance on any EMI/EMC management systems/equipment. The City will consider any EMI issues arising post Completion as a warranty issue or latent defect.

11.2 Reference Documents

- (a) The works shall comply with the criteria contained in this Article 11, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents:
 - (i) EN 50121, Railway applications – Electromagnetic compatibility Part 1, Part 2, Part 3-1, Part 3-2, Part 4 and Part 5;
 - (ii) Industry Canada ICES:

- A. ICES-001: Industrial, Scientific and Medical Radio Frequency Generator;
 - B. ICES-002: Spark Ignition Systems of Vehicles and Other Devices Equipped with Internal Combustion Engines;
 - C. ICES-003: Information Technology Equipment (including Digital Apparatus - Limits and Methods of Measurement;
 - D. ICES-004: Alternating Current High Voltage Power Systems;
 - E. ICES-005: Radio Frequency Lighting Devices;
 - F. ICES-006: AC Wire Carrier Current Devices (Unintentional Radiators);
- (iii) OESC.

11.3 General Requirements

- (a) DB Co shall meet current Industry Canada EMI/EMC regulations and licensing regulations at all times during the Maintenance Period.
- (b) DB Co shall ensure that all equipment meets emission regulations and that all radio equipment is type certified for use in Canada.
- (c) The equipment shall be designed to be compatible with the surrounding electromagnetic environment.
- (d) Each system, subsystem or component thereof, installed as part of the work, shall comply or be compatible with applicable Canadian EMC standards (ICES).
- (e) The System shall be designed and constructed such that the System does not electrically or magnetically interfere with the safe and proper operation of the Revenue Vehicles, and Maintenance Vehicles, and wayside equipment, including external systems and equipment.
- (f) An EMI/EMC Control Plan for the entire System shall be submitted, based on EN50121 standard series and related Canadian EMI/EMC standards, according to Schedule 10 – Review Procedure.
- (g) The EMI/EMC Control Plan shall define a process for early identification of interference risk areas and development of solutions to mitigate the risk of the electromagnetic interferences and the electromagnetic compatibilities of the System elements in the operating EMC environment. DB Co shall, at minimum, include the following items into the EMI/EMC Control Plan:

- (i) Identification of roles and responsibilities for EMI/EMC management and compliance;
 - (ii) Identification of the applicable standards and equipment characterization tests;
 - (iii) Ensuring that the EMI/EMC requirements are clearly understood by design and construction team;
 - (iv) Providing proper definition and support for analysis and allocation of EMI/EMC requirements in applicable system, subsystem and component specifications, and interface control drawings;
 - (v) Ensuring that the EMI/EMC requirements are met by design and construction teams by reviewing all applicable drawings and specifications prior to their release for proper EMI/EMC control content;
 - (vi) Compliance with statutory regulations and relevant standards via participating in EMI/EMC design reviews, EMI/EMC control board meetings and test result review;
 - (vii) Coordination with the regulatory organizations during the design, construction, operation and maintenance shall be maintained to ensure that the EMC requirements are addressed and that necessary licences and approval are acquired and maintained; and,
 - (viii) Undertaking an EMC risk assessment of the design in order to detail the potential risks for EMC and determine the necessary mitigations to reduce or eliminate those risks.
- (h) DB Co shall ensure that each system configuration complies with the EMI/EMC requirements, in all possible operating modes to ensure that all supplied equipment shall operate, without degradation or failure resulting from the installed environment nor cause any other equipment, existing or new, degradation or failure due to emitted interference.
- (i) Qualification test reports shall clearly identify the pass/fail status of each test.
- (i) Where any test is failed, a clearly defined remedial action report shall be included in the test report identifying the reason for the failure and the proposed remedial action.
- (j) No product, system, subsystem or component shall be installed until it has successfully passed EMI/EMC qualification testing.
- (k) DB Co may use equipment that can demonstrate prior EMI/EMC performance testing and in-service proven ability.

- (i) Use of the service proven equipment shall be assessed on prior records; if this is demonstrable, their inclusion into the design shall be justified using an EMI/EMC risk assessment.
- (l) DB Co shall ensure that the equipment is adequately protected against radio frequency emissions from nearby mobile and handheld radios or cellular telephones.
- (m) The operation and maintenance manual shall describe the equipment protections as well as any restrictions on equipment operation or maintenance necessary to ensure immunity control (e.g. leaving covers on equipment enclosures).
- (n) DB Co shall perform a radio immunity qualification test on equipment to demonstrate its immunity against radio emissions. Radio emissions immunity qualification tests shall demonstrate the following:
 - (i) Demonstrate that the designed susceptibility thresholds are met under normal and failure conditions, and at the limits of permissible field adjustments. Failure conditions shall include failures identified in the safety analysis above, including relevant un-annunciated failures and maladjustments.
 - (ii) Demonstrate that the designed susceptibility thresholds are adequate to permit operation with worst-case conducted and inductive emissions expected from Trains in all possible operating configurations.

ARTICLE 12 CORROSION CONTROL

12.1 Reference Documents

- (a) The design and construction of corrosion control work shall comply with the criteria contained in this Article 12, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following latest revision of the Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
- (b) American Concrete Institute
 - (i) ACI Publication SP-77 Sulphate Resistance of Concrete;
 - (ii) ACI Publication 201.2R Guide to Durable Concrete;
 - (iii) ACI Publication 222R Protection of Metals in Concrete Against Corrosion; and,
 - (iv) ACI Publication 506.2 Below Grade Shotcrete Used as Permanent Support.
- (c) ASTM International
 - (i) ASTM A536 Standard Specification for Ductile Iron Castings;
 - (ii) ASTM A716 Standard Specification for Ductile Iron Culvert Pipe;
 - (iii) ASTM A746 Standard Specification for Ductile Iron Gravity Sewer Pipe;
 - (iv) ASTM B418 Standard Specification for Cast and Wrought Galvanic Zinc Anodes;
 - (v) ASTM B843 Standard Specification for Magnesium Alloy Anodes for Cathodic Protection;
 - (vi) ASTM C452 Standard Test Method for Potential Expansion of Portland-Cement Mortars Exposed to Sulfate;
 - (vii) ASTM D256 Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics;
 - (viii) ASTM D516 Standard Test Method for Sulfate Ion in Water;
 - (ix) ASTM D570 Standard Test Method for Water Absorption of Plastics;
 - (x) ASTM D638 Standard Test Method for Tensile Properties of Plastics;

- (xi) ASTM D1248 Standard Specification for Polyethylene Plastics Extrusion Materials for Wire and Cable;
 - (xii) ASTM D2216 10 Standard Test Methods for Lab Determination of Water Content of Soil;
 - (xiii) ASTM D4327 Standard Test Method for Anions in Water by Suppressed Ion Chromatography;
 - (xiv) ASTM D4658 Standard Test Method for Sulfide Ion in Water;
 - (xv) ASTM G16 Standard Guide for Applying Statistics to Analysis of Corrosion Data;
 - (xvi) ASTM G51 Standard Test Method for Measuring pH of Soil for Use in Corrosion Testing; and,
 - (xvii) ASTM G57 Standard Test Method for Field Measurement of Soil Resistivity Using the Wenner Four-Electrode Method.
- (d) AWWA
- (i) AWWA C104/A21.4 Cement-Mortar Lining for Ductile-Iron Pipe and Fittings;
 - (ii) AWWA C111/A21.11 Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings;
 - (iii) AWWA C116 Protective Fusion-Bonded Coatings for the Interior and Exterior Surfaces of Ductile-Iron and Gray-Iron Fittings;
 - (iv) AWWA C151/A21.5 Ductile-Iron Pipe, Centrifugally Cast;
 - (v) AWWA C200 Steel Water Pipe 6 Inch (150mm) and Larger;
 - (vi) AWWA C203 Coal-Tar Protective Coatings and Linings for Steel Water Pipelines-Enamel and Tape-Hot Applied;
 - (vii) AWWA C207 Standard for Steel Pipe Flanges for Waterworks Service-Sizes 4 In. Through 144 In. (100mm Through 3,600mm) for Potable Water and Other Liquids;
 - (viii) AWWA C209 Cold-Applied Tape Coatings for the Exterior of Special Sections, Connections, and Fittings for Steel Water Pipelines;
 - (ix) AWWA C210 Liquid Epoxy Coating Systems for the Interior and Exterior of Steel Water Pipelines;

- (x) AWWA C213 Liquid Epoxy Coating Systems for the Interior and Exterior of Steel Water Pipelines;
 - (xi) AWWA C214 Tape Coating Systems for the Exterior of Steel Water Pipelines;
 - (xii) AWWA C215 Extruded Polyolefin Coatings for the Exterior of Steel Water Pipelines;
 - (xiii) AWWA C216 Heat-Shrinkable Cross-Linked Polyolefin Coatings for the Exterior of Special Sections, Connections, and Fittings for Steel Water Pipelines; and,
 - (xiv) AWWA C302 Reinforced Concrete Pressure Pipe, Non-cylinder Type.
- (e) Canadian Electrical Code
- (i) CSA C22.1 Canadian Electrical Code Part I Safety Standard for Electrical Installations;
 - (ii) CSA C22.2 Canadian Electrical Code Part II General Requirements; and,
 - (iii) CSA C22.3 No. 4-1974(R1995) Control of Electromechanical Corrosion of Underground Metallic Structures.
- (f) Electronic Industry Association (EIA)

- (q) NFPA
 - (i) NFPA 70 National Electric Code; and,
 - (ii) NFPA 130 Standard for Fixed Guideway Transit and passenger Rail Systems.

12.2 Scope of Work

- (a) Introduction
 - (i) This Article 12 describes the Design Criteria for corrosion control. Corrosion control is required to prevent premature corrosion failures on System facilities, on metallic and concrete pipes, and on other underground structures. Such measures shall also minimize stray current levels and their effects on underground and

above-grade structures. Types of corrosion control include mitigation for stray currents and protection against atmospheric and underground corrosion. Corrosion control systems should be economical to install, operate, and maintain.

(b) Objective

- (i)** Corrosion-control Design Criteria encompass all engineering disciplines applied to the Project.
- (ii)** The criteria are separated into three areas: stray current corrosion, soil corrosion, and atmospheric corrosion. The Design Criteria for each of these categories, and their implementation, shall meet the following objectives:
 - A.** Realize the Design Life of System facilities by avoiding premature failure caused by corrosion;
 - B.** Minimize annual operating and maintenance costs associated with material deterioration;
 - C.** Provide continuity of operations by eliminating corrosion-related failures of systems and subsystems;
 - D.** Minimize to a tolerable limit the detrimental effects to facilities belonging to others that may be caused by stray earth currents from transit operation; and,
 - E.** Provide a means for monitoring stray current and corrosion control systems including electrical continuity, cathodic protection, and coating integrity.
- (iii)** DB Co shall ensure all structures be protected against environmental conditions by the use of coatings, insulation, cathodic protection, electrical continuity, or a combination of the preceding, as appropriate.

12.3 General Requirements

- (a)** DB Co shall design the ground of all Structures and equipment meets the requirements for protection of the public as described in IEC 62128-1 and IEEE C2 NESC 2012.
- (b)** DB Co shall retain a NACE certified corrosion specialist or cathodic protection specialist with a certification in cathodic protection and 10 years of experience on transit systems with a similar level of complexity as this Project to serve as the responsible professional and approve and coordinate all elements of the corrosion mitigation measures for the Project.

- (i) DB Co.'s responsible professional shall be approved by the City and shall provide all reference materials regarding similar projects, certifications, and experience with references for the City's approval.
 - (ii) DB Co.'s corrosion control measures shall be coordinated by DB Co with the other relevant disciplines including Track, Traction Power, OCS, signaling and Train control, communications, EMI/EMC, facilities, safety, civil, structural, geotechnical, electrical, and mechanical.
 - (iii) DB Co. shall produce a Project corrosion control and stray current mitigation coordination management plan report to address the corrosion control mitigation technologies to be employed, the coordination with the discipline designers, and the coordination with the adjacent and outside utilities. DB Co shall complete the Corrosion Control and Stray Current Mitigation Coordination Management Plan no later than 120 days after Commercial Close.
- (c) Soil Corrosion Control
 - (i) Soil corrosion control requirements apply to systems or measures installed to mitigate corrosion caused by soil, rock and groundwater.
 - (ii) The designs required to mitigate soil corrosion control shall be implements within 30 calendar days after Commercial Close and completed within the Project design duration for each identified Utility or Structure.
 - (iii) DB Co shall be responsible to obtain adequate soil/rock samples and ground water samples in areas of anticipated extensive below grade construction. The soil/rock samples shall be analyzed for resistivity (or conductivity), moisture content, pH, chloride and sulphate ion concentrations and for the presence of sulphides.
 - (iv) DB Co shall be responsible to obtain in-situ Wenner 4 electrode soil resistivities along the ROW at 150m spacings and at electrode spacings of 1.5, 3.0, 4.5, and 6.0m and at electrode spacings of five times the diagonal distance of the anticipated ground mat diagonal distance. These data shall be used to calculate the Barnes layer resistivity for each layer and both the average and Barnes layer data shall be statistically analyzed to determine the overall corrosivity of the ROW. These data shall also be used in the computer Track-to-earth resistance simulation to calculate the allowable stray current levels and required Track-to-earth resistance to minimize stray current to 0.075 volts earth potential gradient per 300 meter distance perpendicular to the Tracks.
 - (v) DB Co shall coordinate with the geotechnical engineering firm to obtain soil samples at a minimum of 10% of boring locations for chemical analysis testing to include moisture content, pH, concentration of chlorides, concentration of sulfates, presence of sulfides, and saturated resistivity to assess corrosivity.

- (vi) DB Co shall obtain in-situ soil resistivity measurements, in accordance with IEEE81, using the Wenner 4 pin method at all TPSS locations for the design of ground mats. The location of the in-situ tests shall be within the footprint of the substation location and in accordance with IEEE80.
- (d) Stray Current Corrosion Control
 - (i) DB Co shall develop stray current corrosion control designs and reports early in the project and coordinate with the utility designers and adjacent utilities to ensure that the designs can be implemented during construction of the facilities and utilities and cause no impact to the project schedule. DB Co shall initiate the Stray current corrosion control design within 30 calendar days after Commercial Close and completed within the project duration for each identified Utility or Structure.
 - (ii) Stray current corrosion control minimum requirements apply to measures installed with the Traction Power System and Trackwork to assure that stray earth traction currents do not exceed maximum acceptable levels. These levels are based on system characteristics and the characteristics of underground Structures and shall be obtained from the soil resistivity study and the load flow program.
 - (iii) These minimum requirements also apply to measures installed with fixed facilities, and to facilities belonging to others. They are based on anticipated stray earth traction current levels and the characteristics of fixed facilities and other buried Structures.
 - (iv) DB Co shall perform a baseline stray current survey for post-construction and pre-energization to establish the reference levels of stray current existing prior to energization of the System. DB Co shall ensure the baseline stray current survey include transit facilities, adjacent utilities, and Third Party Utilities and structures. DB Co shall provide the report of this testing to the City.
 - (v) A revenue stray current survey shall be performed by DB Co no later than 90 days after the start of Revenue Service to determine the levels of stray current generated by the new system extensions on transit facilities, adjacent utilities and Third Party Utilities and structures. The report of this testing shall be provided to the City.
 - (vi) The DB Co shall provide continuous Track to ground current monitoring to detect any stray current faults.
 - (vii) DB Co shall provide an annual survey that includes stray current monitoring for transit structures and adjacent utility structures at least 90 days prior the end of the construction warranty period and provide the reports to the City

- (viii) DB Co shall provide Track-to-earth resistance testing for all Track during construction including Mainline Track and Yard Track of Track-to-earth resistance unless measures are incorporated to allow for indirect testing of Track-to-earth resistance during revenue serviced provide the reports to the City.
- (e) Atmospheric Corrosion Control
 - (i) Atmospheric corrosion control requirements apply to systems or measures installed to mitigate corrosion caused by local climatological conditions including condensation, temperature cycling, industrial and vehicle emissions, salt spray by motor vehicles and snow and air pollutants.
 - (ii) DB Co shall apply the requirements to all areas where atmospheric corrosion may be anticipated, are selection of materials of proven durability, protective coatings both barrier and sacrificial, sealants to prevent moisture intrusion and prohibiting the use of dissimilar metals.
 - (iii) DB Co shall ensure that the electrical insulation design is not affected by the contamination from adjacent road de-icing or dust suppression, which includes but may not be limited to the following compounds:
 - A. Sodium Chloride (NaCl);
 - B. Calcium chloride (CaCl₂);
 - C. Magnesium chloride (MgCl₂);
 - D. Potassium chloride (KCl);
 - E. Brines used in road de-icing/salting; and
 - F. The salt portion of abrasive mixtures and additives commonly used in road salts (ferrocyanides).
- (f) Coatings
 - (i) Coatings specified for corrosion control of buried metallic or concrete facilities shall satisfy the following requirements:
 - A. Minimum thickness as recommended for the specific system, but not less than 380 microns in accordance with NACE International Standard SP0169 and the manufacturers' recommendations;
 - B. A chemical or mechanical bond to the metal or concrete surface; Pressure-sensitive systems shall not be accepted; non-bonding systems may be used in special instances, after review;

- C. Minimum 15-year performance record for the intended service;
 - D. Mill application wherever possible, with field application of a compatible system; and,
 - E. Mechanical characteristics capable of withstanding installation abuse during handling and earth pressure after installation for the Design Life of the system.
- (g) Electrical Insulation of Piping
- (i) DB Co shall design all devices used for electrical insulators for corrosion control to include non-metallic inserts, insulating flanges, couplings, unions, and/or concentric support spacers.
 - (ii) DB Co shall design all devices to meet the following requirements:
 - A. A minimum resistance of 10 Megaohms prior to installation;
 - B. Sufficient electrical resistance after insertion into the operating piping system such that no more than 2 percent of a test current applied across the device flows through the insulator, including flow through conductive fluids if present;
 - C. Mechanical and temperature ratings equivalent to the Structure in which they are installed;
 - D. Internal coating (except complete non-metallic units) with a polyamide epoxy for a distance on each side of the insulator equal to two times the diameter of the pipe in which they are used. Where conductive fluids with a resistivity of less than 2,000 ohm-centimeters are present, internal coating requirements shall be based on separate evaluation and comply with NSF/ANSI 61 for potable water systems;
 - E. Devices (except non-metallic units) buried in soils shall be encased in a protective coating bonded coating or a petrolatum 4 part coating system;
 - F. Devices (except non-metallic units) installed in chambers or otherwise exposed to partial immersion or high humidity shall have a protective coating applied over the components or a petrolatum 4 part coating system;
 - G. Inaccessible insulating devices, such as buried or elevated insulators, shall be equipped with accessible permanent test facilities; and,

- H. In the event that construction of the System disturbs or affects an existing grounding system, DB Co shall be responsible for the reinstatement or modification of the system equal to the pre-existing conditions.
- (iii) DB Co shall ensure a minimum clearance of 300mm is provided between new and existing metallic structures. When conditions do not allow a 300mm clearance, the design shall include special provisions to prevent electrical contact with existing Structure(s).
- (h) Electrical Continuity of Piping
 - (i) DB Co shall ensure electrical continuity is provided for the non-welded metallic pipe joints and shall meet the following requirements:
 - A. Use of direct burial, insulated, stranded, copper wire with the minimum length necessary to span the joint being bonded;
 - B. Wire size shall be based on the electrical characteristics of the structure and resulting electrical network to minimize attenuation and allow for cathodic protection; and,
 - C. Any coating damage incurred from the installation of pipe joint bonds shall be repaired.
 - (ii) DB Co shall design a minimum of two wires per joint for redundancy.
- (i) Cathodic Protection
 - (i) DB Co shall accomplish cathodic protection by sacrificial galvanic anodes to minimize corrosion interaction with other underground Utilities. DB Co shall use impressed current systems only when the use of sacrificial systems is not technically and/or economically feasible. DB Co shall not use cathodic protection schemes that require connection to the transit System negative return system, in lieu of using a separate isolated anode ground bed.
 - (ii) DB Co shall coordinate all cathodic protection systems with the utility operators including water mains, gas mains, petroleum pipelines, power transmission/distribution pipe type cables, lead sheath cables, underground storage tanks, and any other structure that can be impacted by stray current and/or corrosion control.
 - (iii) DB Co shall base the Cathodic protection system design on theoretical calculations that include the following parameters:
 - A. Estimated percentage of bare surface area (minimum 1 percent);

- B. Cathodic protection current density;
- C. Estimated current output per anode;
- D. Estimated total number of anodes, size, and spacing;
- E. Minimum anode life of 30 years; and,
- F. Estimated anode ground bed resistance.
- G. Impressed current rectifier systems shall be capable of operating in constant voltage, constant current or potential control mode. Rectifiers shall be rated at a minimum of 50 percent above calculated operating levels to overcome a higher-than-anticipated anode ground bed resistance, lower-than-anticipated coating resistance, or presence of interference mitigation bonds. Other conditions which may result in increased voltage and current requirements shall be considered.
- H. Test facilities consisting of a minimum of two structure connections, one coupon reference electrode connection, conduits and termination boxes shall be designed to permit initial and periodic testing of cathodic protection levels, interference currents, and system components (anodes, insulating devices, and continuity bonds). The designer shall specify the locations and types of test facilities for each cathodic protection system.

(j) Structures and Facilities

- (i) The following paragraphs establish the protective measures to be incorporated for specific underground Utilities and buried Structures.

A. Ferrous Pressure Piping

- i. All new buried cast iron, ductile iron, and steel pressure piping shall be cathodically protected. System design shall satisfy the following minimum requirements and in accordance with NACE International SP0169;
- ii. Application of a bonded protective coating to the external surface of the pipe;
- iii. Electrical insulation of pipe from interconnecting pipe, other Structures and segregation into discrete electrically isolated sections depending upon the total length of piping;
- iv. Electrical continuity through the installation of copper wires across the mechanical pipe joints other than intended insulators;

- v. Permanent test/access facilities to allow for verification of electrical continuity, electrical effectiveness of insulators and coating, and evaluation of cathodic protection levels, installed at the insulated connections. Additional test/access facilities shall be installed at intermediate locations, at intervals determined on an individual Structure basis; and,
- vi. Number and location of anodes and size of rectifier (if required) shall be determined on an individual Structure basis.

B. Copper Piping

- i. Buried copper pipe shall be cathodically protected and electrically isolated from non-buried piping, such as that contained in a Station Structure, through use of an accessible insulating union installed where the piping enters through a wall or floor. Pipe penetrations through walls and floors shall be electrically isolated from building structural elements. The insulator shall be located inside the Structure and not buried.

C. Gravity Flow Piping

- i. Corrugated steel piping shall be internally and externally coated with a sacrificial metallic coating and a protective organic coating.
- ii. Cast or ductile iron piping shall be designed and fabricated to include the following provisions:
 - 1 An internal mortar lining with a bituminous coating on ductile iron pipe only (not required for cast iron soil pipe);
 - 2 A bonded protective coating on the external surfaces in contact with soils;
 - 3 An unbounded dielectric encasement shall not be allowed; and,
 - 4 A bituminous mastic coating on the external surfaces of pipe 150mm on each side of a concrete/soil interface.
- iii. Reinforced concrete non-pressure piping shall include the following provisions:
 - 1 Water/cement ratios meeting the minimum provisions of ACI Publication 201.2R ACI Publication 222R; and,

2 Maximum 250 ppm chloride concentration in the total concrete mix.

D. Electrical Conduits

i. Buried metallic conduits shall include the following provisions:

1 Galvanized steel with PVC or other coating acceptable for direct burial, including couplings and fittings. The PVC coating is not required when conduits are installed in concrete; and,

2 Electrical continuity through use of standard threaded joints or bond wires installed across non-threaded joints.

E. Hydraulic Elevator Cylinders

i. Steel hydraulic elevator cylinders shall be designed, fabricated and installed to meet the following requirements:

1 External protective coating resistant to deterioration by petroleum products;

2 Outer concentric FRP casing. Casing thickness, diameter and resistivity shall be designed to prevent moisture intrusion (including the bottom) and to maximize electrical insulation between the cylinder and earth;

3 Sand fill between the cylinder and FRP casing with a minimum resistivity of 100,000 ohm-centimeters, a pH of between 6 and 8 and a maximum chloride content of 250 ppm;

4 Cathodic protection through the use of impressed current with the anodes installed in the sand fill;

5 Permanent test facilities installed on the cylinder, anodes and earth reference to permit evaluation, activation, and periodic retesting of the protection system;

6 Removable moisture-proof sealing lid installed on the top of the casing prior to installation of the cylinder. The top of the casing shall be permanently sealed against moisture intrusion after installation of the cylinder; and,

7 Alternative protective measures in lieu of cathodic protection shall be Union Gard 160 or equal.

(ii) Buried Concrete/Reinforced Concrete Structures

- A. The design of cast-in-place concrete Structures shall be based on the following provisions and the Design Life requirements included in Schedule 15-2, Part 1, Article 4 – Design and Construction:
- i. Use Type I cement. ASTM C452-75 and ACI Publication SP-77 Sulfate Resistance of Concrete shall be used as guidelines for evaluating the sulphate resistance of concrete mixes with non-standard cement types;
 - ii. Water/cement ratio and air entrainment admixture in accordance with the structural requirements to establish a dense, low permeability concrete. Refer to applicable sections of ACI 201.2R Guide to Durable Concrete;
 - iii. Maximum chloride concentration of 250 ppm in the total mix (mixing water, aggregate, cement, and admixtures). The concrete mix shall be such that the water soluble and acid soluble chloride concentrations, at the concrete/ reinforcing steel interface, do not exceed 0.15 and 0.2 percent by weight of cement, respectively, over the life of the Structure. Refer to applicable sections of ACI 222R Corrosion of Metals in Concrete;
 - iv. Concrete cover over reinforcing steel shall comply with appropriate codes and provide a minimum of 50mm of cover on the soil/rock side of reinforcement when pouring within a form and a minimum of 75mm of cover when pouring directly against soil/rock; and,
 - v. The need for additional measures, as a result of localized special conditions, shall be determined on an individual basis.
- B. Precast standardized facilities, such as vaults and maintenance holes, shall be reviewed on an individual basis to determine alternative requirements when they cannot be practically modified to meet some or all of the requirements herein.
- C. Precast segmented concrete ring construction shall meet the requirements of this Article 12 or be reviewed on an individual basis to determine alternative requirements when they cannot be practically modified to meet some or all of the provisions specified.
- D. Support Pilings

- i. The following is applicable only to support piling systems which are to provide permanent support. Pilings used for temporary support do not require corrosion control provisions.
- ii. Designs based on the use of metallic supports exposed to the environment, such as H or soldier piles, shall include the use of a barrier coating. The need for special measures, such as cathodic protection, shall be determined on an individual basis, based on type of Structure, analysis of soil borings for corrosive characteristics and the degree of anticipated structural deterioration caused by corrosion.
- iii. Reinforced concrete piling, including fabrications with prestressed members, shall be designed to meet the following minimum requirements:
 - 1 A Design Life as per the requirements included in Schedule 15-2, Part 1, Article 4 – Design and Construction;
 - 2 Water/cement ratio and cement types in accordance with Applicable Codes;
 - 3 Chloride restrictions for concrete with non-prestressed members shall be in accordance with Applicable Codes;
 - 4 Chloride restrictions for concrete with prestressed members shall be in accordance with Applicable Codes, with exception that the concrete mix shall be such that the water soluble and acid soluble chloride concentrations, at the concrete/prestressed steel interface, do not exceed 0.06 and 0.08 percent by weight of cement, respectively, over the life of the Structure; and,
 - 5 A minimum of 75mm of concrete cover over the outermost reinforcing steel, including prestressing wires, if present.
- iv. Concrete-filled steel cylinder columns, where the steel is an integral part of the load bearing characteristics of the support structure, shall be designed considering the need for special measures, such as increased cylinder wall thickness, external coating system, and/or cathodic protection. The design shall be determined on an individual basis, based on type of Structure, analysis of soil borings for corrosive characteristics and the degree of anticipated structural deterioration caused by corrosion.

(k) Stray Current Corrosion Control

- (i) This section provides requirements for designs to minimize the corrosive effect of stray earth traction currents from transit operations on transit Structures and Adjacent Structures.
- (ii) Stray current control shall reduce or limit the level of stray currents at the source, under normal operating conditions, rather than trying to mitigate the corresponding effects (possibly detrimental) which may otherwise occur on transit facilities and other underground Structures. The basic requirements for stray current control are as follows:
 - A. Maximize the isolation of the electrical systems and prevent inadvertent electrical connections between the positive and negative Traction Power distribution circuits and ground; and,
 - B. Design the Traction Power System and Trackwork to minimize stray earth currents during normal revenue operations.
- (iii) Traction Power System
 - A. Traction Power supply System shall be designed as a dedicated system, providing power to the System. The Traction Power supply System shall be designed electrically isolated.
 - B. TPSS shall be spaced at intervals such that maximum Track-to-earth potentials do not exceed 50 volts during normal operations and 75 volts during contingency operation as defined in Article 14 – Overhead Contact System, of this Part 3.
 - C. Substations shall be provided with access to the dc negative bus and ground mat for stray current monitoring in the same enclosure. Access shall be provided either inside, through use of dedicated space if available, or outside through the use of a weather tight enclosure with an open conduit between the enclosure and the dc negative bus.
 - D. Substations shall be provided with a Utility drainage panel(s) for connection of Utility drain cables if deemed necessary. The drainage panels shall be connected through a raceway system to a drainage pullbox exterior to the substation to facilitate Utility interconnection.
 - E. Provisions shall be included to monitor Track-to-earth potentials on a continuous basis at TPSS.
 - F. TPSS shall include a negative return shunt with test lead access to the current monitoring terminals in the negative bus and ground mat enclosure identified in C above.

(iv) Positive Distribution System

- A. Positive distribution system shall be normally operated as an electrically continuous bus, with no breaks, except during Emergency or fault conditions. Intentional electrical segregation of mainline positive distribution systems is the only type of segregation permitted.
- B. OCS, consisting primarily of support poles, insulators, the contact wire and the messenger wire, shall be designed to meet the following minimum requirements and include the following minimum provisions:
 - i. Discrete grounding of individual at-grade support poles, in lieu of interconnecting poles to each other or to a common ground electrode system. Establish electrical continuity of reinforcing steel in OCS support poles by fillet welding of the reinforcing steel and electrically connect support poles to the foundation reinforcing steel through the use of an embedded plate to protect the copper bond cables from vandalism; and,
 - ii. Common grounding of support poles on aerial structures through electrical connection to either bonded (welded) reinforcing steel in the deck or to each other and a common ground electrode system, when present.

(v) Negative Return System

- A. Running Rails. The mainline, including Special Trackwork, and grade crossings shall be designed to have a minimum, uniformly distributed, in-service resistance to earth per 300 m of Track (two rails) (based on 115# rail resistance) as determined by the following:
 - i. A computerized simulation shall be used to determine the level of stray current to be permitted and the required Track to earth resistances; and,
 - ii. Soil layer resistivity (ASTM G-57) along the entire alignment shall be used in the above simulation to determine anticipated earth potential gradients.
- B. The requirements shall be met through the use of appropriately designed insulating Track fastening devices, such as insulated tie plates, insulated rail clips, direct fixation fasteners, rail boots, or other approved methods.
- C. Ballasted Track construction shall meet the following minimum provisions:

- i. Use of a hard rock, non-porous, well drained ballast material;
 - ii. A minimum 25mm clearance between the ballast material and the metallic surfaces of the rail and metallic Track components in electrical contact with the rail;
 - iii. Mainline Track shall be electrically insulated;
 - iv. Mainline Track shall be electrically insulated from foreign railroad connections (sidings) by use of insulating rail joints. Location of the insulating joints shall be chosen to reduce the possibility of a vehicle bridging the insulator(s) for a time period larger than required moving onto or off mainline;
 - v. Select grade crossing and Track locations shall utilize permanent reference electrode arrays with test stations for monitoring of stray current activity and evaluating the isolation of Track. The requirements for the use of these earth potential gradient test arrays shall be based upon a case by case review of the Track or grade crossing location, type of Track construction, adjacent critical utility Structures and others as deemed appropriate.
- D. Track-to-earth resistance shall be monitored periodically during construction to detect variations or decrease in resistance. Investigations shall be initiated as soon as a low resistance reading is obtained and the cause of the low reading repaired.
- E. Minimum Track-to-earth resistance requirements based on the type of Track shall be based on the computer simulation and not less than the following values:
 - i. Concrete tie-and-ballast Track, yard and mainline, 500 ohms-300-Track meters;
 - ii. Direct fixation Track, 500 ohms-300-Track meters;
 - iii. Embedded Track using girder rail with rail boot system including special Track construction, 250 ohms-300-Track meters;
 - iv. Embedded Track using tee rail with rail boot and snap-on flangeway filler, 200 ohms-300-Track meters; and,
 - v. Embedded Track using tee rail with rail boot and screeded concrete flangeway, 200 ohms-300-Track meters.
- F. Ancillary Systems

- i. Switch machines, signalling devices, Train to wayside Communication Systems, and other devices or systems attached to the rails shall be electrically isolated from the rails. The requirements shall be met through the use of dielectric materials electrically separating the devices/Systems from the rails.

G. Electrical Continuity

- i. The running rails shall be constructed as an electrically continuous Traction Power return circuit through use of rail joint bonds, continuously welded rail, or a combination of these, except for the use of insulated rail joints at specific locations. To allow isolation of each special Trackwork area, the maximum spacing between insulated joints shall be 3000m. The linear resistance of each individual negative rail shall not exceed the resistivity of the steel alloy used for the running rails (18 micro-ohm centimeters), the cross sectional area of the running rail, and the length of the running to calculate the actual resistance.

(vi) Underground Trackway Structures

- A. Reinforcing steel in underground Trackway structure inverts shall be made electrically continuous. Minimum requirements for the reinforcing steel from the top of rail down shall include the following:
 - i. Welding of all longitudinal lap splices in the top layer of first pour reinforcing steel;
 - ii. Welding of all longitudinal members to a transverse (collector) member at intervals not exceeding 150 m and at electrical (physical) breaks in the longitudinal reinforcing steel, such as at expansion joints; and,
 - iii. Electrical interconnection of first pour reinforcing steel to second pour reinforcing steel at all collector bars through use of insulated copper cables or steel straps. Longitudinal steel in the second pour shall be made electrically continuous by tack welding all lap splices.
- B. Test facilities shall be installed at each end of the structure and at every collector bar. Facilities shall consist of insulated copper wires, conduits, and enclosures terminated at an accessible location.
- C. Precast segmented concrete ring tunnel construction shall meet the requirements in Section 3.1 and the following or be reviewed on an

individual basis to determine alternative criteria when they cannot be practically modified to meet the provisions specified below:

- i. Embedded steel reinforcing members should be constructed without special provisions for establishing electrical continuity.
- ii. Connecting hardware between adjacent rings and ring segments should be constructed without provisions for establishing electrical continuity between segments.
- iii. Any metallic components which will be exposed to the soils/groundwaters should be coated with a fluidized bed epoxy resin system or coal tar epoxy system.
- iv. Application of a coal tar epoxy coating system to the external surfaces of each precast panel.

- D. Steel liner tunnel construction must be reviewed on an individual basis to determine the need for special measures, such as increased liner thickness, external coating system, and/or cathodic protection.

(vii) Aerial Trackway Structures

A. Column and Bearing Assemblies, Tie and Ballast

- i. This section applies to aerial structures and Bridges that use a column and bearing assembly, but with tie and ballast Track construction. Welding of reinforcing steel in the deck is not required for this configuration.
- ii. A waterproof, electrically insulating membrane (with protection board on top of the membrane) shall be provided over the entire surface of the deck that shall be in contact with the ballast. The membrane system shall have a minimum volume resistivity of 1×10^{12} ohm-cm.
- iii. Electrical isolation of reinforcing steel shall be provided in deck/girders from columns, abutments, and other grounded elements. Isolation can be established through the use of insulating elastomeric bearing pads, dielectric sleeves and washers for anchor bolts and dielectric coatings on selected components. Use of bearings shall take into account the appropriate electrical grounding to ensure that stray current does not pass through the bearing race.

B. Column and Bearing Assemblies, Direct Fixation.

- i. This section applies to aerial Structures and bridges that use a column and bearing assembly that can be electrically insulated from deck or girder reinforcing steel and shall have insulated Trackwork construction.
- ii. Provide a fusion bonded epoxy coating to all reinforcing steel and provide a wire mesh current collector mat or provide electrical continuity of top layer reinforcing steel in the deck/girder by welding all longitudinal lap splices.
- iii. If the top layer of reinforcing steel is made electrically continuous, electrically interconnect all top layer longitudinal reinforcing steel by welding to transverse collector bars installed at breaks in longitudinal reinforcing steel, such as at expansion joints, hinges, and at abutments. Connect collector bars installed on each side of a break with a minimum of two cables.
- iv. If the top layer of reinforcing steel is made electrically continuous provide additional transverse collector bars at intermediate locations to maintain a maximum spacing of 150 m between collector bars.
- v. Provide a ground electrode system at each end of the Structure and at intermediate locations to maintain a maximum spacing between ground electrode systems of 450 m. The number, location, and earth resistance of the ground electrode system shall be determined on an individual structure basis.
- vi. Provide test facilities at each end of the Structure and at intermediate locations to maintain a maximum spacing of 500 ft between test points. The facilities shall house test wires from the collector bars and ground electrode system, if present.
- vii. Provide electrical isolation of reinforcing steel in deck/girders from columns, abutments, and other grounded elements. Isolation can be established through the use of insulating elastomeric bearing pads, dielectric sleeves and washers for anchor bolts and dielectric coatings on selected components.

C. Bents and Girders, Tie and Ballast

- i. This section applies to aerial Structures that use bent type supports with reinforcing steel extending into the deck/girders, but with tie and ballast Track construction.

- ii. Provide electrical continuity of the column/bent steel by fillet welding appropriate reinforcing to at least two vertical column bars. Make these connections to each of the two vertical bars at the top and bottom of the column/bent. The use of sacrificial reinforcing steel bars shall be considered to eliminate degradation of structural steel bars by welding.
- iii. Provide electrical continuity of the deck longitudinal bars by fillet welding all lap splices or fillet welding sacrificial reinforcing steel bars and wire tying the structural bars together and to the welded reinforcing steel.
- iv. Electrically interconnect column/bent steel to deck/girder steel by fillet welding at least two vertical column bars to collector bars installed at bents or fillet welding sacrificial reinforcing steel bars between column/bent and deck.
- v. Electrically interconnect column/bent steel to footing steel when column/bent steel penetrates the footing. Fillet weld at least two vertical column/bent bars to footing reinforcing steel.
- vi. Electrically interconnect pre or post tensioned cables to continuous longitudinal reinforcing steel by fillet welding a cable between each anchor plate and the longitudinal reinforcing steel.
- vii. Provide test facilities at each hinge and expansion joint and at every other column/bent, starting with the first column/bent from an abutment. Test facilities at hinges and expansion joints shall house bonding cables from adjacent collector bars on each side of the hinge/joint.
- viii. Facilities at columns/bents shall house two wires from vertical column/bent steel and from the collector bar at the top of the bent.
- ix. Provide a waterproof, electrically insulating membrane (with protection board on top of the membrane) over the entire surface of the deck that shall be in contact with the ballast. The membrane system shall have a minimum volume resistivity of 1×10^{12} ohm-cm.

D. Bents and Girders, Direct Fixation.

- i. This section applies to aerial Structures that use bent type supports with reinforcing steel extending into the deck/girders. Girders can

- ii. Provide electrical continuity of top layer reinforcing steel in the deck/girder by welding all longitudinal lap splices.
- iii. Electrically interconnect all top layer longitudinal reinforcing steel by welding to transverse collector bars installed at bents and on each side of breaks in longitudinal reinforcing steel, such as at expansion joints, hinges and at abutments (deck side only). Connect collector bars installed on each side of a break with a minimum of two cables.
- iv. Provide electrical continuity of all column/bent steel by welding appropriate reinforcing to at least two vertical column bars. Make these connections to each of the two vertical bars at the top and bottom of the column/bent.
- v. Electrically interconnect column/bent steel to deck/girder steel by welding at least two vertical column bars to collector bars installed at bents.
- vi. Electrically interconnect column/bent steel to footing steel when column/bent steel penetrates the footing. Weld at least two vertical column/bent bars to footing reinforcing steel.
- vii. Electrically interconnect pre or post tensioned cables to continuous longitudinal reinforcing steel by welding a cable between each anchor plate and the longitudinal reinforcing steel.
- viii. Provide test facilities at each hinge and expansion joint and at every other column/bent, starting with the first column/bent from an abutment. Test facilities at hinges and expansion joints will house bonding cables from adjacent collector bars on each side of the hinge/joint. Facilities at columns/bents will house two wires from vertical column/bent steel and from the collector bar at the top of the bent.
- ix. If electrical continuity of the reinforcing steel is not provided, other methods of stray current control may be employed such as the use of epoxy coated reinforcing steel and stray current collector mats with test facilities.

E. Concrete Deck/Exposed Steel, Tie and Ballast

- i. This section applies to Bridge Structures that use a reinforced concrete deck with exposed steel superstructure and have insulated Trackwork with tie and ballast Track construction. Welding of reinforcing steel in the deck is not required for this configuration.

- ii. Provide a waterproof, electrically insulating membrane (with protection board on top of the membrane) over the entire surface of the deck that shall be in contact with the ballast. The membrane system shall have a minimum volume resistivity of 1×10^{12} ohm-cm.
- iii. Provide electrical isolation of reinforcing steel in the deck and superstructure steel from columns, abutments and other grounded elements. Isolation can be established through the use of insulating elastomeric bearing pads, dielectric sleeves and washers for anchor bolts and dielectric coatings on selected components.
- iv. If electrical isolation of reinforcing steel in the deck and superstructure steel from columns, abutments, and other grounded elements cannot be obtained, then electrical continuity of metallic components within these latter elements shall be established by appropriate welding and bonding procedures.

F. Concrete Deck/Exposed Steel, Direct Fixation.

- i. This section applies to bridge structures that use a reinforced concrete deck with exposed steel superstructure and shall have insulated Trackwork construction. This type of construction precludes the electrical insulation of deck reinforcing steel from superstructure steel.
- ii. Provide electrical continuity of top layer reinforcing steel in the deck/girder by welding all longitudinal lap splices.
- iii. Electrically interconnect all top layer longitudinal reinforcing steel by welding to transverse collector bars installed at breaks in longitudinal reinforcing steel, such as at expansion joints, hinges, and abutments. Connect collector bars installed on each side of a break with a minimum of two cables.
- iv. Provide additional transverse collector bars at intermediate locations to maintain a maximum spacing of 150m between collector bars.
- v. If the total structure length exceeds 3,000m provide a ground electrode system at each end of the structure and at intermediate locations to maintain a maximum spacing between ground electrode systems of 450m. The number, location and earth resistance of the ground electrode system shall be determined on an individual structure basis.

- vi. Provide test facilities at each end of the structure and at intermediate locations to maintain a maximum spacing of 150m between test points. The facilities will house test wires from the collector bars and ground electrode system, if present.
- vii. Provide electrical isolation of reinforcing steel in the deck and superstructure steel from columns, abutments and other grounded elements. Isolation can be established through the use of insulating elastomeric bearing pads, dielectric sleeves and washers for anchor bolts and dielectric coatings on selected components.
- viii. If electrical isolation of reinforcing steel in the deck and superstructure steel from columns, abutments and other grounded elements cannot be obtained, then electrical continuity of metallic components within these later elements must be established by appropriate welding and bonding procedures.
- ix. If electrical continuity of the reinforcing steel is not provided, other methods of stray current control may be employed such as the use of epoxy coated reinforcing steel and stray current collector mats with test facilities.

(viii) Retaining Walls

- A. The longitudinal bar overlaps in both faces of the wall, including the top and bottom bars in the footing, shall be tack welded to insure electrical continuity. Longitudinal bars in the footing shall be made electrically continuous to the longitudinal bars of the walls. Collector bars, bonding cables and test facilities shall be installed.

(l) OCS Pole Foundation Grounding

- (i) All metallic components, inclusive of the pole baseplate, that shall be partially embedded or come in contact with concrete surfaces shall be coated with a sacrificial/barrier coating. The coating shall be applied to the entire component. The coating shall extend a minimum of 152.4mm into the concrete and a minimum of 12.7mm above the surface of the concrete.
- (ii) At-Grade OCS Support Poles
 - A. Electrical continuity of reinforcing steel within support pole foundations shall be established to provide an adequate means for dissipating any leakage current from the contact wire and, where applicable, the messenger wire. The following minimum provisions shall be included with design:

- i. The outermost layer of vertical reinforcing steel within the concrete foundation shall be tack welded at the intermediate vertical lap joints and to reinforcing bar collector rings (two) installed at the top and bottom of the reinforcing bar cage;
- ii. A copper cable shall be connected between the base of the catenary support pole and the foundation reinforcing steel. The cable shall be thermite welded or brazed to the support pole and routed in such a manner that it shall not be susceptible to damage during construction or after installation is complete. The connection to the pole shall be coated with a zinc-rich weather resistant coating material; and,
- iii. The copper cable shall be sized based upon anticipated fault current and fault clearing time.

(iii) OCS Poles on Aerial Structures

- A. OCS poles located on aerial structures shall include either of the following minimum set of provisions, depending on the type of aerial structure.
- B. Where the aerial structure includes welded deck reinforcing steel connected to a ground electrode system, electrically interconnect the OCS support poles on the structure and connect these poles to the ground electrode system.
 - i. Cabling used to interconnect the poles and the ground electrode system shall be sized based upon anticipated fault current and fault clearing time.
 - ii. The cabling shall be routed in conduit and terminated in junction boxes or test cabinets that also house wires from the deck reinforcing steel and the ground electrode system.
 - iii. Cabling shall be designed to allow for connection of interconnected OCS poles along the aerial structure to the ground electrode systems installed with a particular aerial structure.
- C. Where the aerial structure has welded deck reinforcing steel but does not include a ground electrode system, electrically connect the OCS support poles to the welded deck reinforcing steel.
 - i. Provide a copper cable from each OCS support pole to the deck reinforcing steel. The copper cable shall be sized based upon anticipated fault current and fault clearing time.

- ii. Thermite weld or braze the cable to the OCS support pole and to the nearest transverse collector bar installed in the aerial structure deck.
- iii. Where it is not practical to connect an OCS pole directly to a transverse collector bar, because of excessive distance or other factors, connect the pole to a local transverse reinforcing bar using a copper cable and weld the transverse reinforcing bar to at least three upper layer longitudinal reinforcing bars in the deck.

(m) Utility Structures

- (i) Piping and conduit shall be non-metallic, unless metallic facilities are required for specific engineering purposes.

(n) Metallic Facilities (Systemwide)

- (i) Pressure or non-pressure piping exposed in crawl spaces or embedded in concrete inverts shall not require special corrosion prevention provisions.
- (ii) Pressure piping that penetrates foundation, or Station walls shall be electrically insulated from the external piping to which it connects and from watertight wall sleeves. Electrical insulation of interior piping from external piping shall be made on the inside of the foundation or wall.

(o) Facilities Owned by Others

(i) Replacement/Relocated Facilities

- A. Corrosion control facilities provided for protection of buried Utilities and installed by DB Co as part of the System shall become the responsibility of the individual Utility owner/operator following acceptance of the corrosion protection system.
- B. DB Co shall protect the buried Utilities including City water mains so that the maximum anodic potential shift caused by dynamic stray currents on any water main or buried Utility along the alignment shall not exceed 50 mV anodic shift from the average baseline value of the voltage time data logger graphs. Monitoring locations of the dynamic potential shifts and stray currents shall be at the discretion of the Utility operators. DB Co shall obtain copies of the sample baseline monitoring charts and information on some of the possible future monitoring locations from the individual Utilities. Such testing shall be performed by a corrosion/cathodic protection specialist. Where the anodic shift exceeds 50 mV, cathodic protection shall be installed by DB Co at all affected areas to

mitigate any adverse impact of corrosive stray currents that are induced by the System.

- C. Relocated or replaced Utilities installed by DB Co as part of a separate contractual agreement between DB Co and the Utility, shall be installed in accordance with the Utility owner agreed upon specifications and shall include the following minimum provisions. These provisions are applicable to ferrous and reinforced concrete pressure piping. Other materials and Structures shall require individual review.
- i. Electrical continuity through the installation of insulated copper wires across the mechanical joints for which electrical continuity cannot be assured;
 - ii. Electrical access to the Utility Structure via test facilities installed; and,
 - iii. The need for additional measures, such as electrical isolation, application of a protective coating system, installation of cathodic protection, or any combination of the preceding, shall be based on the characteristics of the specific Structure and to not adversely affect the existing performance within the environment.

(ii) Existing Utility Structures

- A. The need for stray current monitoring facilities shall be jointly determined by DB Co and the individual Utility operators. If utilities have no stray current guidelines, DB Co shall provide direction based on the following:
- i. Test facilities at select locations for the purpose of evaluating stray earth current effects during start-up and revenue operations. Guidelines for location of test facilities shall be as follows:
 1. At the utility crossings with the system and on Structures parallel to the Tracks; and,
 2. At locations on specific utility Structures that are near the System TPSS.

(iii) Existing Bridge Structures

- A. Stray current corrosion control for existing Bridge Structures shall be addressed by limiting earth current levels at the source (running rails). Meeting the requirements established shall provide the primary stray current control for these facilities.

- (p) Corrosion control coatings
 - (i) Coatings shall have established performance records for the intended service and be compatible with the base metal to which they are applied.
 - (ii) Coatings shall be able to demonstrate satisfactory gloss retention, color retention, and resistance to chalking over their minimum life expectancies.
 - (iii) Coatings shall have minimum life expectancies, defined as the time prior to major Maintenance or reapplication, as determined by the manufacturer's standard.
 - (iv) Metallic-Sacrificial Coatings
 - A. Acceptable coatings for carbon and alloy steels for use in crawlspaces, vaults, or above grade shall be as follows:
 - i. Zinc (hot-dip galvanizing or flame sprayed);
 - ii. Aluminum (hot-dip galvanizing or flame sprayed);
 - iii. Aluminum-zinc;
 - iv. Cadmium and electroplated zinc (sheltered areas only); and,
 - v. Inorganic zinc (as a primer).
 - (v) Organic Coatings
 - A. Organic coating systems shall consist of a wash primer (for galvanized and aluminum substrates only), a primer, intermediate coat(s), and a finish coat. Acceptable organic coatings, for exposure to the atmosphere, are as follows:
 - i. Aliphatic polyurethanes;
 - ii. Vinyl copolymers;
 - iii. Fusion-bonded epoxy polyesters, polyethylenes, and nylons;
 - iv. Acrylics, where not exposed to direct sunlight;
 - v. Alkyds, where not exposed to direct sunlight; and,
 - vi. Epoxy as a primer where exposed to the atmosphere or as the complete System where sheltered from sunlight.
 - (vi) Conversion Coatings

- A. Conversion coatings, such as phosphate and chromate coatings, shall be used as pre-treatments only for further application of organic coatings.
- (vii) Ceramic-Metallic Coatings (Cermets)
 - A. This hybrid-type coating system shall be acceptable for use on metal panels and fastening hardware.
- (viii) Sealants
 - A. Crevices shall be sealed with a polysulfide, polyurethane or silicone sealant.
- (ix) Barrier Coating System
 - A. One of the following barrier coating systems shall be used where corrosion protection is required but appearance is not a primary concern:
 - i. Near white blast surface according to NACE NO. 2/SSPC-SP 10;
 - ii. Commercial blast surface according to NACE NO. 3/SSPC-SP 6;
 - iii. Near white blast surface according to NACE NO. 3/SSPC-SP 10;
or,
 - iv. Apply the coatings according to manufacturer's specifications.
 - B. Use one of the following barrier coating systems where corrosion protection and good appearance is needed.
 - i. Near white blast surface according to NACE NO. 2/SSPC-SP 10;
 - ii. Near white blast surface according to NACE NO. 2/SSPC-SP 10;
 - iii. Commercial blast surface according to NACE NO. 3/SSPC-SP 6;
 - iv. Commercial blast surface according to NACE NO. 3/SSPC-SP 6;
or,
 - v. Apply the coating according to manufacturer's specifications.
- (q) Grounding Coordination
 - (i) Coordination shall be undertaken to ensure that grounding design and corrosion control measures do not conflict so as to render either the grounding system or the corrosion control system ineffective.

- (r) DB Co shall implement a stray current test program prior to Commissioning. The DB Co test program shall be a pre-operation baseline and serve as the basis for decisions regarding mitigation of System caused stray current impacts.

ARTICLE 13 TRACTION POWER SYSTEM

13.1 Scope of Work

- (a) The Traction Power supply System shall consist of a network of TPSS and all equipment between the interface point with [REDACTED] and/ or [REDACTED] and the interface point with the catenary and the negative return systems and the interface points of the Existing Confederation Line TPS. The TPS shall be designed and constructed to accommodate future expansion. This section provides the performance objectives for the TPS. The TPS shall be designed to be an integrated system for supplying power to the Vehicles, switch heaters, and related equipment in order to meet the Project operational performance requirements provided in Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements. These criteria govern the design, performance, and installation requirements of the TPS. The system shall provide safe, efficient and continuous operation in all operational and environmental conditions. The TPS and associated components shall perform to the environmental characteristics defined in Schedule 15-2, Part 1, Article 4 – Design and Construction. In areas where the Traction Power equipment presents high risk of visual intrusion DB Co shall provide design enhancements to minimise or mitigate visual impact. In all other areas, the equipment shall be of a style and appearance similar to that used by comparable transit systems.
- (b) The equipment includes, but is not limited to the following: AC cables and raceway systems, AC switchgear, transformer-rectifier unit, DC switchgear, positive and negative raceway systems, positive and negative cables, negative drainage panel and cables, rail to ground monitoring equipment, prefabricated substation housing (or dedicated space in or adjacent to a Station facility) and foundation, grounding system, protective device systems, communications interface systems, auxiliary power supply system, climate control, UPS systems, intrusion access control system, interior and exterior CCTV cameras, MV lightning arresters, high voltage protection, alarm control, monitoring health and safety equipment, and SCADA equipment.

13.2 Codes, Standards and Manuals

- (a) The design and construction of the Works shall comply with the criteria contained in this Article 13, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - (i) ANSI;
 - A. ANSI C34.2-1968, Practices and Requirements for Semiconductor Power Rectifiers

- B. ANSI C37.14-2015 - IEEE Standard for DC (3200 V and below) Power Circuit Breakers Used in Enclosures
 - C. ANSI C37.20.2-2015, IEEE Standard for Metal-Clad Switchgear
 - D. ANSI C37.20.6-2015 - IEEE Standard for 4.76 kV to 38 kV Rated Ground and Test Devices Used in Enclosures
 - E. ANSI C57.12.01-2015, Standard Requirements for Dry Power Transformers
 - F. IEEE C57.18.10 Requirements for Semiconductor Power Rectifier Transformers
 - G. IEEE C57.12.91 Requirements for Dry-Type Distribution and Power Transformer
- (ii) NEMA;
- (iii) CSA;
- (iv) City of Ottawa Codes and By-Laws;
- (v) IEEE;
- A. IEEE 80-2013, IEEE Guide for Safety in AC Substation Grounding
 - B. IEEE 519-2014, IEEE Recommended Practice and Requirements for Harmonic Control in Electric Power Systems
 - C. IEEE 1653.2-2009, IEEE Standard for Uncontrolled Traction Power Rectifiers for Substation Applications Up to 1500 V DC Nominal Output
 - D. IEEE C37.14-2015, IEEE Standard for Low Voltage DC Power Circuit Breakers Used in Enclosures
 - E. IEEE C37.20-2015, IEEE Standard for Metal Clad Switchgear
 - F. IEEE 81-2012 Guide for measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of A Grounding
- (vi) IEC;
- A. IEC 61992-1:2006, Railway applications - Fixed installations - DC switchgear - Part 1: General

- B. IEC 61992-2:2006: Railway applications - Fixed installations - DC switchgear - Part 2: DC circuit-breakers
 - C. IEC 62271-1, High-voltage switchgear and control gear—Part 1: Common specifications
 - D. IEC 62271-100, High-voltage switchgear and control gear—Part 100 High voltage alternating current circuit breakers
 - E. IEC 62271-1020, High-voltage switchgear and control gear—Part 102 Alternating current disconnect switches and earthing switches
 - F. IEC 62271-200, High-voltage switchgear and control gear—Part 200: AC metal-enclosed switchgear and control gear for rated voltages above 1 kV and up to and including 52 kV
- (vii) UL and ULC;
 - (viii) IBC;
 - (ix) ICEA;
 - (x) EIA;
 - (xi) ASTM;
 - (xii) NETA;
 - (xiii) NECA;
 - (xiv) OEC;
 - (xv) OESC;
 - (xvi) AREMA;
 - (xvii) APTA; and,
 - (xviii) NFPA:
- A. NFPA 72: National Fire Alarm and Signaling Code.

13.3 Performance Requirements

- (a) DB Co shall provide a Traction Power System that is a fully integrated system of TPSS which shall support normal and contingency operations with no degradation of performance. Normal and contingency operation of the TPS shall be defined as:

- (i) Normal: The Traction Power supply System is in full operation with all feeder breakers in closed positions. All scheduled service is running in accordance with the headway and consist with all civil speeds applied; and
 - (ii) Contingency: The Traction Power supply System shall maintain full performance service with any one TPSS completely out of operation. In order to maximize the allowable Train voltage during contingency operations, the DC breakers shall remain closed or the motor operated DC bypass switches and paralleling switches shall be closed at the affected TPSS thereby utilizing the TPSS as a DC tie station. At end of line substations motor operated DC OCS paralleling switch shall be closed when the end of the line TPSS is out of operation.
- (b) DB Co shall design, procure, install, and test the Traction Power System to perform satisfactorily under the environmental conditions identified in Schedule 15-2, Part 1, Article 4 – Design and Construction.
- (c) DB Co shall design, procure, install and test a The Traction Power System that is a high resistance grounded system, meaning the running rails are insulated from ground and there is no intentional connection to ground (earth potential).
- (d) The traction return shall be through both running rails of each Track and cross-bonds shall be installed where necessary. Negative cables shall be appropriately sized between the running rails and the TPSS. As per the Existing Confederation Line, a bolted connection shall be used to connect the negative return cables to the running rails.
- (e) DB Co shall base the design and analysis of the TPSS locations and ratings and voltage shall be confirmed by load flow studies that DB Co performs. The studies shall be real time computer generated simulations of the electrical system utilizing validated traction system software and performance based upon the operational performance requirements. The load flow study shall utilize the following criteria:
 - (i) Final Track alignment:
 - A. Track horizontal alignments, vertical profiles, Station locations, and operating speeds shall be based on the latest Track drawings.
 - (ii) Operating Plan:
 - A. Normal Operations:
 - i. 2 minute headways: Lincoln Fields Station to Trim Station.
 - ii. 4 minute headways: Baseline Station to Lincoln Fields Station.
 - iii. 4 Minute headways Moodie Station to Lincoln Fields Station.

- B. Contingency Operations:
- i. 2 minute headways: Lincoln Fields Station to Blair Station.
 - ii. 2-2-4 minute headways: Blair Station to Trim Station.
 - iii. 4 minute headways: Baseline Station to Lincoln Fields Station.
 - iv. 4 minute headways: Moodie Station to Lincoln Fields Station.
- (iii) Utility Source Short Circuit Availability: 250 MVA.
- (iv) TPRU:
- A. 3 MW Extra heavy traction service per IEEE 1653.2.
 - B. DC voltage regulation is 5.0% up to 200% load, 5.25% between 200% to 300% load, and 5.5% above 300% load.
- (v) Substations:
- A. 14 new 3 MW TPSS's:
 - i. On the Confederation Line East Extension: Montreal Station, Jeanne d'Arc Station, Orleans Blvd Station, Place d'Orléans Station and Trim Station.
 - ii. On the Confederation Line West Extension: Dominion Station, Cleary Station, Lincoln Fields Station, Baseline Station, Queensview Station, Bayshore Station, Moodie Station, Moodie LMSF and one 1 MW TPRU at Moodie LMSF Shop.
- (vi) Light Rail Vehicle:
- A. **[REDACTED]** two car Train with AW2 loading. Vehicle operates at full performance above 1275V. Per the Vehicle manufacturer, between 1275V and 1050V, the current is reduced from 100% to 0%. At 1050V the Vehicle has no tractive effort.

| Parameter | Value |
|-----------------|------------------|
| Nominal Voltage | 1500 V dc |
| Cars per Train | 2 cars per Train |
| Car length | 48.89m per car |

| | |
|--|-----------------------|
| Axels per car | 10 |
| AW2 full weight | 103,548 kg per car |
| AW0 full weight | 80,028 kg per car |
| Rotational mass | 5,332 kg per car |
| Auxiliary power | 62.5 kW per car |
| Frontal area | 8.3 m ² |
| Wheel flange coefficient | 0.045 |
| Air drag coefficient, lead car | 0.0024 |
| Air drag coefficient, trailing car(s) | 0.00034 |
| Average curve resistance (lbs per ton per degree of curvature) | 0.8 |
| Acceleration Limit at AW2 (excluding rolling resistance effort) | 1.35 m/s ² |
| Deceleration for Station stops | 0.89 m/s ² |
| Regenerative braking | Not Used |

- (vii) Running Rails:
 - A. Two 115 lb RE rails per Track at 60 deg C, 10% worn.
- (viii) Leakage Resistance:
 - A. Direct fixation, rail-to-earth resistance 500 ohms*kft for single-Track, two rails.
- (ix) Cross Bonding:
 - A. 2000 V, 3-1/c 500 kcmil, copper conductor, 75 deg C, 30 ft length.
- (x) Positive Feeders:
 - A. 2000 V, 3-1/c 500 kcmil, copper conductor, 75 deg C, 300 ft length.
- (xi) Negative Feeders:
 - A. 2000 V, 3-1/c 500 kcmil, copper conductor, 75 deg C, 200 ft length.
- (xii) OCS:
 - A. 350 kcmil copper contact wire, 30% worn, and 500 kcmil copper messenger wire at 60 deg C
- (xiii) Acceptance Criteria:

| Parameter | Value |
|--|---|
| Maximum allowable equipment voltage | 1800 V dc |
| Nominal system voltage | 1500 V dc |
| Train tractive effort knee voltage (Beginning of performance reduction) | 1275 V dc |
| Minimum allowable train voltage during normal operations | 1275 V dc |
| Minimum allowable train voltage during contingency operations | Between 1275 V and 1050 V for less than 0.5% of complete train trip |
| Absolute minimum allowable train voltage | 1050 V dc |
| Maximum allowable running-rail to ground voltage under contingency operation | 75 V dc |
| Maximum allowable running-rail to ground voltage under normal operation | 50 V dc |

| Rectifier Size | Rating |
|--------------------|--|
| 1000 kW, 1500 V dc | 667 A continuous (100%) 3000 A peak (450%) |
| 3000 kW, 1500 V dc | 2000 A continuous (100%) 9000 A peak (450%) |

- A. Rectifier operation shall not exceed the continuous rating. DB Co shall provide a TPS that is a fully integrated system of TPSS that shall support normal and contingency operations with no degradation of performance, and no time limits are given for contingency operation.
- (f) The TPS shall be fully integrated into the Existing Confederation Line TPS including but not limited to incorporation into the SCADA head end, interface of SCADA functions including DC bypass switch status and transfer trips. TPSS protection and control system must be integrated with SCADA as per the Existing Confederation Line design.
 - (g) DB Co shall furnish, install, and commission DC switchgear in two existing end of line Phase 1 TPSS's to accommodate the expansion of the TPS in Phase 2. The DC switchgear shall include, but is not limited to, two DC feeder breakers including cubicles, bus detail, DC disconnect switches and tie switches, protective relays, duct banks, wires, cables, and appurtenances.
 - (h) The Traction Power system for the Moodie LMSF shall be electrically separate and isolated under normal operations from the remainder of the Traction Power System. This shall apply to both the positive and negative sides of the Traction Power Systems. The Moodie LMSF TPSS shall have a backup feed from a mainline TPSS, and the backup shall also be able to power the DC shop supply.
 - (i) The electrical limits of the Traction Power System (excluding OCS) shall be the System side of the [REDACTED]/[REDACTED] disconnect switch on the Utility side and up to and including the OCS disconnect switches on the OCS distribution side. The installation limits shall include the [REDACTED]/[REDACTED] switch foundation and Infrastructure in compliance with utility standards.
 - (j) All TPSS equipment shall be CSA or UL/ULC approved.
 - (k) The Traction Power System shall meet the requirements set out in IEEE 519 for harmonic disturbance and any requirement outlined by [REDACTED]/[REDACTED].
 - (l) DB Co shall develop a protective device coordination plan and relay settings for the Traction Power System.

- (m) The supply voltage selected by DB Co shall be supported by a complete computer simulation and engineering analysis.
- (n) Significant effort has been made during Preliminary Engineering in working with [REDACTED]/[REDACTED] and in capacity and planning delivery of power feeders to Supply Points (X – Y coordinates) across the alignment. DB Co shall make every effort to utilize these power Supply Points during design. Any changes in [REDACTED]/[REDACTED] Supply Points locations as a result of design shall be borne by DB Co.

13.4 Traction Power Substations

- (a) The TPSS shall be located as close to Passenger Stations and the Guideway as possible.
- (b) Negative rail voltage rise shall be limited to 50V under normal operation and 75V under outage conditions. Rail to ground sensing devices shall be implemented to monitor the negative voltage to ground and “clamp” the rails to ground upon exceeding preset limits.
- (c) Minimum Train voltage shall be coordinated with the Vehicle manufacturer.
- (d) All TPSS equipment with the exception of the medium voltage switchgear, shall be standardized, and allow for interchanging of equipment and spare parts. Medium voltage switchgear equipment and spare parts shall be standardized and interchangeable within their voltage class. Integration of TPSS equipment shall be the sole responsibility of a single manufacturer/supplier.
- (e) Each TPSS shall be furnished internally with emergency trip stations adjacent to each entrance. The emergency trip station shall, upon activation, de-energize the entire TPSS and its associated line sections and the DC sections at adjacent TPSS back feeding into the TPSS.
- (f) Mass trip function shall be provided through TPSS SCADA which shall remove power from the overhead catenary system for the entire alignment. The human machine interface shall be operated from the TOCC and BCC.
- (g) Building Structures and Foundations
 - (i) The TPSS shall be completely factory assembled, pre-wired, pre-tested, and installed in a compact, climate controlled, self-supporting, transportable enclosures or provided in Passenger Station rooms designed for the application. The TPSS shall be ready for connection to the Utility interface and outgoing DC feeders prior to shipment. The TPSS shall include all elements necessary to provide Traction Power including the following: the enclosure shall be flush mounted on the concrete foundation (and insulated) to prevent water leaking. All exterior screws/bolts must be vandal resistant and tamper proof. The TPSS

grounding cable must be completely protected and buried to prevent any tampering or vandalism.

- A. TPSS shall be designed to minimize their impact on the areas where they are installed. Architectural treatment, to provide an acceptable appearance, may be required for TPSS located in sensitive areas such as those located on or adjacent to Federal Lands.
 - B. The TPSS enclosure shall at a minimum consist of a structural steel frame, double sided walls and thermal /acoustic insulation; the TPSS shall have watertight insulation and be tested; the test report shall be provided to the City for review.
 - C. Removal of all large equipment (rectifier transformer, circuit breakers) shall be accommodated without structural modifications; all equipment removal doors shall have a minimum of 4m clearance to any outside obstruction.
 - D. Interior and exterior lighting shall be provided. Emergency backup power shall be provided for at least 2 interior and 2 exterior TPSS lighting fixtures.
 - E. Intrusion access control shall be provided to selectively limit access to the TPSS.
 - F. Fire detection system shall include separate fire alarm control panels and intrusion alarm panels. Activation of the fire alarm system shall trip and lockout the affected TPSS and transmit an alarm to the TOCC, BCC, MYCC and BYCC. Intrusion detection shall provide a remote alarm to the TOCC.
 - G. The TPSS enclosure shall include interior and exterior CCTV system cameras. Exterior CCTV cameras shall provide the TOCC, BCC, MYCC and BYCC views of all four sides of the TPSS.
- (ii) The TPSS enclosure Water Leakage Test: Pre-shipment of the enclosure, perform a water leakage test in the factory by applying a uniform spray of water from hoses for 15 minutes to surfaces to verify the enclosure is completely watertight.
 - (iii) TPSS located in Station facilities shall contain identical manufacturer switchgear to pre-fabricated TPSS. Performance, testing and environmental requirements for TPSS located in Station facilities or other areas shall match those indicated for pre-manufactured TPSS, indicated in Clause 13.4(g)(i) of this Part 3.
 - (iv) Foundations shall be designed and constructed based upon local, national and international standards and codes and the structural loading (live and dead loads)

of the TPSS during installation, normal operation, maintenance and faults. The foundation shall be coordinated with the TPSS and distribution elements.

- (v) TPSS sites shall have road access for both pedestrians and maintenance vehicles, a minimum of two vehicular parking spaces, and adequate space around each substation to permit the use of heavy maintenance vehicles to remove and deliver the largest pieces of Traction Power equipment. Adequate space shall be provided around the TPSS to allow removal of equipment onto an apron which has 6m clear between the TPSS wall and the nearest Track centre.
- (vi) A hard surfaced walkway between the TPSS and the closest Station shall be provided to enable technicians to access the TPSS without having to obtain a Track authority. The walkways shall be separated from the active Train envelope by fencing or other protective barrier.
- (h) DB Co shall conduct soil resistivity test at the TPSSs foundation locations. DB Co shall review the soil resistivity test results to confirm the soil meets the standard requirements. DB Co shall ensure that if the soil does not meet the standard requirements, the soil shall be replaced with the proper soil requirement according to IEEE 80. DB Co shall produce and supply the soil test results to the City once complete.

13.5 Traction Power Transformer

- (a) Design Tests for Rectifier Power Transformers
 - (i) Each Traction Power transformer design shall have design tests performed as per IEEE C57.12.01-1989, C57.12.91-2001 and C57.18.10-1998, and design tests indicated in this Article 13.
 - (ii) Temperature Rise Test: this test is defined as a test to determine the temperature rise above the ambient of one or more transformer windings as measured at the terminals. For conditions under which temperature limits apply, refer to IEEE C57.12.01 for dry type transformers, IEEE C57.12.00 for liquid filled transformers and IEEE 1653.1.

13.6 Traction Power Transformer-Rectifier Units

- (a) DB Co shall ensure that each Traction Power transformer and associated traction rectifier is designed as an integral unit. Each Traction Power transformer/rectifier unit shall be tested in accordance with ANSI Test Codes C57.12 and C34.2 and IEEE 1653.2. A complete design test sequence shall be performed on one transformer/rectifier unit of each design, each voltage class, and each rating. The design tests shall include a rated current test, loss measurement and short circuit test to verify the integrity of the mechanical system. For the rated current, loss measurement and short circuit test, test results on a transformer-rectifier unit of duplicate design and rating, and of recent date, can be submitted for review. Rectifier tests, unless otherwise herein specified, shall be

made in accordance with IEEE1653.2. Complete load-cycle test shall be conducted at the factory. Tests shall be conducted at reduced voltage sufficient to attain the load current ratings specified in IEEE1653.2 7.3.3 for Extra Heavy Traction Service. A surge test shall be made to test the effectiveness of the surge protection equipment. In this test an impulse voltage of 75Kv shall be applied to a simulated system from a source with a surge impedance comparable to that of the actual circuit. Routine production tests for rectifier transformers shall be performed by the manufacturer in accordance with IEEE Std. C57.18.10-1998 and IEEE P1653.1. The rectifier's manufacturer shall perform routine production tests on all rectifiers in accordance with IEEE 1653.2-2009.

- (i) DB Co shall design the transformer-rectifier units to conform to the following requirements:
 - A. Rectifier transformer Insulation Class: 220°C, UL or ULC Listed.
 - B. BIL for static discharge shall be as follows:
 - i. Insulator Class 15.0 Kv 95 BIL (Kv); and,
 - ii. Insulator Class 34,5 Kv 150 BIL(Kv).
 - C. Rectifier transformer maximum temperature rise by resistance of all individual windings at the end of the two hour extra-heavy traction service load cycle: 115°C.
 - D. Both high voltage and low voltage windings shall be copper conductor.
 - E. Diode bridge type 12 pulse double way rectifier.
 - F. Convection cooled with no forced cooling to meet the Extra Heavy Traction Service requirement per IEEE Std. 1653.2.
 - G. Rated full (100%) load of 3MW.
 - H. Rated primary input voltage shall be either 13.2 kV or 27.6kV.
 - I. Rated full (100%) load output voltage: 1500 Vdc.
- (ii) DB Co shall ensure that the TPSS locations have been coordinated with and made available to [REDACTED]/[REDACTED] in determining the power feed requirements based on a 3MW TPRU. DB Co shall evaluate and confirm through a load flow study that 3MW TPRU are suitable for this system expansion. DB Co shall coordinate with [REDACTED]/[REDACTED]. DB Co shall ensure that a displacement power factor of the TPRU shall be 95% or greater has been achieved.

- (iii) DB Co shall ensure that the TPRU is protected from damage due to surges and transients transmitted through the utility network with MV surge protection.
- (iv) DB Co shall ensure that the overall efficiency of the TPRU is greater than 97.5%.
- (v) DB Co shall design the TPRU to comply with ANSI C57.12.01.
- (vi) The noise generated by the TPRU shall not exceed 55dBA at full load inside the substation through the use of rectifier load balance, coupling, or interphase transformer, or other alternative method to reduce audible noise.
- (vii) DB Co shall design the rectifier transformer supplied from 13.2kV and 27.6kV [REDACTED]/[REDACTED] feeders to be dry type, vacuum pressure impregnation or cast coil construction, convection cooled with no forced cooling necessary to meet the IEEE 1653.2 extra-heavy traction operations requirement and two-stage temperature monitoring. DB Co. shall evaluate the need for protective snubber circuits on the TPRU's in substations serviced by 27.6kV feeders. Snubber circuits shall be monitored by TPSS SCADA for health.
- (viii) DB Co shall ensure that the High-voltage windings of each rectifier power transformer be wound for their rated voltage and be equipped with a total of five full capacity taps, at 2-1/2% and 5% below nominal and at 2-1/2% and 5% above nominal. DB Co shall ensure that the taps are connected to the high voltage coils so that unbalanced magnetic forces and short circuits will be reduced to a minimum. The tolerance on voltage difference between any pair of adjacent taps shall not exceed $\pm 1/4\%$.
- (ix) DB Co shall design the TPRU for extra-heavy traction service operation with no damage or degradation of performance. The Extra-heavy traction service is defined in IEEE 1653.2-2009: IEEE Standard for Uncontrolled Traction Power Rectifiers.
- (x) DB Co shall ensure that the imbalance in the rectifier caused by loss of one diode per phase not reduce the overload capability of the TPRU.
- (xi) DB Co shall ensure that the rectifier is furnished with a negative disconnect switch, two-stage temperature monitoring, two-stage diode monitoring, two-stage enclosure monitoring as a minimum.
- (xii) DB Co shall ensure that the each rectifier is furnished with a NGD which shall monitor the potential between the negative bus and the TPSS ground grid. For both above ground and below ground TPSS the NGD shall be connected between the TPSS ground grid and the TPSS negative bus.
- (xiii) DB Co shall ensure that the TPRU shall is furnished with digital metering for:

- A. DC rectifier current;
 - B. DC Voltage; and,
 - C. Winding and rectifier over-temperatures.
- (xiv) DB Co shall ensure that the rectifier enclosure energized/grounded protection be provided which shall detect when the enclosure has a positive to frame fault or when grounded. Upon detection of a positive to frame fault the substation shall be automatically shut down. DB Co shall ensure that there is local audio – visual warning which shall be communicated along the SCADA to the TOCC, BCC, MYCC and BYCC.
- (xv) DB Co shall produce and provide the traction transformer and traction rectifier test results reports according to standard requirements (IEEE C57.12.01 & C57.12.91 & C57.18.10).
- (xvi) DB Co shall provide the performance qualification test result report for each Traction Power transformer-rectifier integrated unit according to IEEE 1653.2. DB Co shall provide testing parameters for the integrated unit under the performance qualification test section in the Project Agreement.
- (b) Routine tests for rectifier power transformers:
- (i) DB Co shall ensure that the each rectifier power transformer l have routine tests performed as per IEEE Std. C57.12.01-1989, IEEE Std. C57.12.91-2001 and IEEE Std. C57.18.10-1998, plus the following additional tests shall be performed as routine tests. DB Co shall ensure that the impulse test precede all low frequency tests as part of the test sequence.
 - A. DB Co shall ensure that the impulse tests consisting of the following, are applied in the following order: one reduced full wave, two chopped waves and one full wave. DB Co shall ensure that the details of impulse wave shapes shall be as per IEEE Std. C57.98-1993 “Guide for Transformer Impulse Tests”;
 - B. Partial discharge test;
 - C. Load tests:
 - i. Rated voltage test;
 - ii. Rated current test; and,
 - iii. Rated load test.

- D. Loss Measurement tests:
 - i. Efficiency; and,
 - ii. Forward Current loss.
 - E. Waveshape tests:
 - i. Oscillographic tests; and,
 - ii. Harmonic tests.
 - F. Excitation loss test; and,
 - G. Load Loss Test.
- (c) DB Co shall ensure that the TPSS AC Switchgear meet the following requirements:
- (i) TPSS supplied from 13.2kV and 27.6kV [REDACTED]/[REDACTED] feeders shall be equipped with Drawout, metal clad (as defined by ANSI C37.20.2) switchgear which prevents the accidental contact of live parts by maintenance personnel;
 - (ii) Circuit interrupting devices which do not have load- break capabilities and doors equipped with interlocks to prevent unsafe operations;
 - (iii) Adequate space for removal and maintenance of both AC and DC circuit breakers;
 - (iv) Multifunction protective devices for phase imbalance, overcurrent, undervoltage, diagnostics, alarming, monitoring, data storage and power metering;
 - (v) Equipment to test the AC and DC breakers in the TPSS after it has been removed from its cubicle;
 - (vi) DB Co shall ensure that the AC switchgear be equipped with Digital metering capable of monitoring and transmitting the following analog functions to SCADA:
 - A. AC voltage;
 - B. AC current;
 - C. Power;
 - D. Power factor; and,

- E. AC Energy metering.
- (vii) DB Co shall ensure that the AC switchgear also contain the auxiliary power transformer supplying “house” power for the TPSS building, with appropriate protection and disconnect devices on the primary and secondary. DB Co shall ensure that the auxiliary transformer supply power to the AC distribution panel.
- (d) DB Co shall ensure that the DC Switchgear meet the following requirements:
 - (i) DC switchgear shall be metal enclosed single pole, draw-out type feeder breakers equipped with load measuring auto-reclosing systems, rated to interrupt maximum available fault current;
 - (ii) The major elements of the TPSS DC switchgear shall consist of a main cathode circuit breaker, high speed DC feeder circuit breakers, and PLC based controller with protection functions;
 - (iii) PLC based protection and data storage devices shall be provided for the DC circuit breakers. These devices shall perform all the functions of overcurrent protection, breaker control, breaker monitoring, data storage, transfer trip, alarm summary storage, event summary storage, ammeter, voltmeter, SCADA interface, HMI interface for establishing and adjusting breaker protective parameters and visual display of metering;
- A. Main cathode circuit breaker shall meet the following requirements:
 - i. Protect against reverse current;
 - ii. Include a DC enclosure device to detect enclosure faults;
 - iii. Provide an interlock to the AC breaker; and,
 - iv. Include a lockout device.
- B. Feeder circuit breakers shall meet the following requirements:
 - i. PLC based circuit breaker protection with instantaneous, long time and rate of rise overcurrent protection;
 - ii. A transfer trip scheme to ensure all feeder circuit breakers supplying power to a faulted section shall trip and de-energize the faulted section; , (including the existing feeder circuit breakers in the Existing Confederation Line substations); and,

- iii. Equipment shall be metal enclosed as defined by the C37 series of ANSI specifications and shall prevent the accidental contact of live parts by maintenance personnel.
 - (iv) Digital metering shall be provided for:
 - A. DC bus voltage; and,
 - B. On each feeder circuit breaker through the PLC based protective device and controller displaying DC feeder voltage, and feeder current.
 - (v) Each TPSS shall be furnished with a negative grounding device which shall monitor the potential between the negative bus and the substation ground grid. The NGD shall provide an open circuit when the potential is at an acceptable level. The NGD shall close if the pre-set potential is exceeded. Once the potential has decreased below the pre-set level the NGD shall automatically open. Status points shall be provided from the NGD to the SCADA system.
 - (vi) DC enclosure energized/grounded protection shall be provided which shall detect when the switchgear has a positive to frame fault or when grounded. Upon detection of a positive to frame fault the substation shall be automatically shut down. There shall be a local audio – visual warning which shall be communicated along the SCADA to the TOCC, BCC, MYCC and BYCC.
 - (vii) Equipment shall be metal clad as defined by the C37 series of ANSI specifications and shall prevent the accidental contact of live parts by maintenance personnel.
 - (viii) The main cathode circuit breaker and the negative disconnect switch shall be interlocked such that the cathode circuit breaker cannot be closed when the negative disconnect switch is open and the negative disconnect switch cannot be opened when the cathode circuit breaker is closed.
- (e) DB Co shall ensure that the Utility Power meet the following requirements:
- (i) [REDACTED]/[REDACTED] have identified Supply Points across the alignment to supply power, both traction and facility in accordance with Article 6 of Schedule 15-2, Part 4 – Stations, and in the Hydro supply strategy document titled “[REDACTED]” provided in the Background Information. [REDACTED]/[REDACTED] shall terminate MV power supply feed at the pad mounted switchgear.
 - (ii) Utility power needs, codes and requirements shall be coordinated with [REDACTED]/[REDACTED].

- (iii) DB Co shall provide a cubicle in the customer owned switchgear lineup for [REDACTED] to install revenue metering. For Trim Station, DB Co shall furnish a pole adjacent to the overhead [REDACTED] supply point where [REDACTED] will supply and install pole mount primary metering. Additional customer owned revenue class metering equipment shall be on the load side of medium voltage TPSS circuit breakers that supply station and or mechanical loads.
- (iv) All Infrastructure and cabling elements (duct banks, foundations, grounding, maintenance holes) to facilitate the [REDACTED]/[REDACTED] Supply Point switchgear, serving the TPSS and/or facilities shall be by DB Co and shall be constructed to meet [REDACTED]/[REDACTED] standards and require [REDACTED]/[REDACTED] approval.
- (v) Utility power from [REDACTED]/[REDACTED] Supply Point switchgear to the TPSS shall be configured such that no two electrically adjacent TPSS are supplied from a feeder sourced from the same bus at a [REDACTED]/[REDACTED] substation.
- (f) DB Co shall ensure that the Control Power meet the following requirements:
 - (i) Control power in the TPSS shall be used for TPSS controls, relaying, SCADA and other functions. The system shall consist of a step down transformer, battery bank, battery charger, DC distribution panels and all necessary equipment to provide a complete control power system.
 - A. The battery shall be capable of supplying TPSS demand to support control power for 8 hours and to support duration as identified in a failure mode analysis.
 - B. The battery shall be sized based upon a load calculation incorporating TPSS switching operations and all static TPSS loads during normal and contingency operation.
 - C. The battery charger shall include a ground detection system and alarm function reporting to the SCADA system.
- (g) DB Co shall ensure that the following control requirements are met:
 - (i) The TPSS shall be designed for unattended operation with remote supervision and control from all control centres through the SCADA system.
 - (ii) Local control shall be provided for all elements of the TPSS through a HMI and computer based TPSS control unit (PLC). Remote control shall be disabled when in local control. Local control shall be enabled by means of a “local/remote” switch. This switch shall enable and disable local control of the entire TPSS

excepting circuit breaker trip functions. All TPSS indication and alarms shall be provided to the HMI.

- (iii) HMI located in each TPSS shall be the local TPSS status screen annunciator. The HMI/PLC shall provide all information to SCADA at the TOCC, BCC, MYCC and BYCC. This includes alarms, equipment status and real-time metering values. The default screen shall be a representation of the TPSS single line indicating the current status.
- (h) DB Co shall ensure that the following SCADA requirements are met:
 - (i) TPSS shall be provided with a TPSS SCADA monitored and controlled reporting directly to TOCC, BCC, MYCC and BYCC.
 - (ii) DB Co shall provide a TPS system where all TPSS metering is monitored and logged by the SCADA system.
 - (iii) The TPSS shall be provided with a TPSS SCADA RTU that shall interface with the SCADA systems specified in Article 8 – SCADA System, of this Part 3 for the purposes of transmitting the information and control to TOCC, BCC, MYCC and BYCC.
 - (iv) The following status and control points, at a minimum, shall be incorporated into the TPSS SCADA system functionality:
 - A. AC switchgear – Status and control:
 - i. Protective devices – Status; and,
 - ii. Lockout device – Status;
 - B. Loss of utility power – Status;
 - C. Rectifier transformer:
 - i. Winding over temperature – Status;
 - D. Rectifier:
 - i. Over temperature – Status;
 - ii. Negative disconnect switch position – Status;
 - iii. Negative overvoltage – Status;
 - iv. Diode failure – Status;

- v. Surge suppressor failure – Status;
 - vi. Reverse current trip – Status;
 - vii. Enclosure energized alarm – Status; and,
 - viii. Enclosure grounded alarm – Status;
- E. DC Switchgear:
 - i. Cathode (main) breaker – Status and control;
 - ii. Feeder breakers – Status and control;
 - iii. Transfer trip trouble/failure – Status;
 - iv. Feeder breaker reclosure failure – Status;
 - v. Feeder breaker protective relay trouble/failure – Status;
 - vi. Lockout relay trip – Status;
 - vii. Enclosure energized alarm – Status;
 - viii. Enclosure grounded alarm – Status; and,
 - ix. OCS section energized – Status;
- F. Negative Grounding Device:
 - i. Closed – Status;
 - ii. High Current – Status; and,
 - iii. Failure – Status;
- G. TPSS Local Control Enabled – Status;
- H. Loss of Station auxiliary power – Status;
- I. Intrusion Detection – Status; and,
- J. Fire alarm:
 - i. Trouble – Status;
 - ii. Power Supply – Status; and,

- iii. Alarm – Status;
 - K. Loss of control power – Status;
 - L. Battery charger trouble/failure – Status;
 - M. Climate Control – Status;
 - N. TPSS air temperature – Status;
 - O. Emergency trip activated – Status; and,
 - P. Mass trip control – Status.
- (v) 25% additional status and control point spare capacity shall be provided at each TPSS.
- (vi) Communication between the local SCADA system, the TOCC, BCC, MYCC and BYCC shall be redundant via the CTS.
- (i) DB Co shall ensure that the following climate control requirement is met:
- (i) All TPSS shall include a climate control system which shall maintain indoor temperature and humidity to allow for PLC and SCADA equipment operational performance to be maintained throughout all expected external temperature variations. The climate control system shall be designed to continuously maintain the temperature within the TPSS and provide status to the TPSS SCADA system.
- (j) DB Co shall ensure that the following communications System requirements are met:
- (i) Connection panel to the CTS for redundant data and telecommunication shall be provided.
 - (ii) Telephone connection to TOCC and BCC shall be provided for local control and emergency functions.
- (k) DB Co shall ensure that the following intrusion detection requirement is met:
- (i) Each substation shall be equipped with an intrusion detection system which shall allow keyed and keyless access and upon unauthorized access provide a local audible and visual alarm as well as remote notification. The IAC System shall be compatible with the IAC System provided for in Article 9 – Intrusion Access Control System, of this Part 3.
- (l) DB Co shall ensure that the following fire/smoke detection System requirement is met

- (i) Each TPSS shall be equipped with a fire alarm system which shall detect and alarm upon detection of a smoke or fire event and report to TOCC, BCC, MYCC and BYCC through SCADA. Activation of the fire alarm system shall trip and lockout the TPSS. The fire/smoke detection System shall be designed in accordance with NEPA 72 Standard.
- (m) DB Co shall ensure that the following TPSS grounding requirements are met:
 - (i) A TPSS grounding system shall be provided for life safety and fault detection purposes. The grounding system shall be designed in accordance with IEEE Standard 80 and 81 or IEC equivalent specification for ground fault detection and touch and step potential for safety. Prior to installation of the grounding system, the grounding system calculation shall be submitted to the City in accordance with Schedule 10 – Review Procedure. All required data such as available short circuit current, available Z and X/R ratio shall be obtained prior to installation and implemented in the grounding system report. The grounding test report shall be submitted to the City in accordance with Schedule 10 – Review Procedure.
 - (ii) Any metallic structures exterior to the TPSS shall be connected to the ground grid.
 - (iii) Traction Power DC ground grid shall not be interconnected with any Passenger Station grounding grid. TPSS's that share a structure with Passenger Stations shall have a common ground grid.
 - (iv) Surge protection shall be provided for all cables entering and exiting the TPSS as follows:
 - A. All non-current carrying parts of 1500 DC TPSS equipment (traction rectifier and DC switchgear) shall be isolated from ground and connected to the ground grid through a ground fault detection system. The ground fault detection system shall, upon detection of a grounded condition, disconnect the substation from sources of power and annunciate an alarm locally and at the TOCC, BCC, MYCC and BYCC; and,
 - B. Security fencing, lamp stanchions shall be connected to the ground grid. This includes any conductive hardware where public can inadvertently come in contact with high voltages.

13.7 DC Feeder System

- (a) DB Co shall ensure that the DC feeder system be provided and consists of all raceways, cabling and switching equipment necessary to connect the TPSS to the OCS and rail returns.

- (b) The DC feeder system shall include positive cable and connections from the TPSS DC switchgear to the OCS and negative cable and connections between the TPSS negative bus and return rails. Where specified, impedance bonds shall be installed between the running rails. Positive cable connections shall include motor operated DC disconnect switches to provide a means to isolate the TPSS from the OCS. Motor operated load break switches shall be installed at TPSS locations to provide a means to bypass OCS insulated overlaps and equalize across Track OCS systems during contingency conditions when TPSS DC switchgear is out of service.
- (c) DB Co shall ensure that the following cable ampacity ratings be based upon the worst case maximum RMS currents indicated in the load flow studies with any necessary de-rating due to duct bank/raceway routing and appropriate temperature rise. DB Co shall ensure that the positive DC feeder system be designed to provide adequate ampacity and to maintain the electrification voltage within acceptable limits.
- (d) DB Co shall design the DC negative feeder system to include any necessary equipment to interface with the running rail traction return so as not to interfere with the Train control system.
- (e) DB Co shall design the negative feeder system to maintain a low rail to ground voltage and provide sufficient ampacity.
- (f) DB Co shall design the negative feeder system to be continuous through the four running rails including interlockings at all locations.
- (g) DB Co shall ensure that the Yard Tracks are supplied from a dedicated yard TPSS.
- (h) DB Co shall ensure that the Yard Tracks have the ability to connect to the mainline Tracks through normally open DC disconnect switches during yard TPSS outages.

13.8 Negative Return Path

- (a) DB Co shall ensure that the negative return current is carried through the running rails, which shall be insulated from the ground. DB Co shall ensure that locations requiring insulated joints, impedance bonds be used to maintain continuity. DB Co shall ensure that insulated joints be installed at the entrance to the yard and to the shop buildings to prevent any connection between the grounded rails in the shop and the ungrounded system in the yard and between the yard and mainline rails.
- (b) DB Co shall develop and submit to the City for review and approval a Stray Current Monitoring Plan.
- (c) Once the Stray Current Monitoring Plan has been approved by the City, DB Co shall implement a Stray Current Monitoring System.
- (d) Drainage Feeder System

- (i) DB Co shall ensure that the provisions be made for the monitoring and control of stray current through the use of drainage panels. DB Co shall design the drainage panels to provide a means of permitting metallic utilities to connect to the substation negative bus. DB Co shall ensure that provisions shall be made to provide a raceway system to a demarcation pull box for utility company drainage cables to be connected to the drainage system.
- (e) DB Co shall ensure that the following AC feeder system requirement is met:
 - (i) The medium voltage AC feeder system shall be provided and consist of all raceways, cabling maintenance holes, foundations, ground rods and switching equipment necessary to connect the TPSS to the [REDACTED]/[REDACTED] utility supply switchgear in accordance with utility requirements.
- (f) DB Co shall ensure that the following duct banks and raceways requirements are met:
 - (i) Duct banks shall be provided from the TPSS exiting point to the intersect point of the distribution system and constructed of non-conductive material encased in concrete.
 - (ii) All underground raceways shall have a utility marking tape (with magnetic tracer) installed 0.33 meters above the raceways.
 - (iii) Positive and negative feeders shall not be installed in the same raceway, pullbox or maintenance hole.
 - (iv) Ten percent (10%) spare duct shall be included in each duct run.
- (g) DB Co shall ensure that the following communication raceway system requirement is met:
 - (i) Duct banks shall be provided from the TPSS exiting point to the intersect point of the communication CTS system and constructed of non-conductive material encased in concrete.
- (h) DB Co shall ensure that the following sectionalization requirement is met:
 - (i) The Traction Power distribution system (OCS) shall be circuited into manageable electric sections. These sections shall be redundantly fed from two adjacent TPSS to maintain reliability, continuity of service, fault discrimination and distribution of loading.
- (i) DB Co shall ensure that the following Cabling Identification System requirement is met:
 - (i) All cable and wire terminations shall be labeled with tags indicating termination points of both ends and function.

13.9 Switch Heaters

- (a) DB Co shall design the TPS to supply power to the location of electric switch heaters, refer to Article 10 - Signalling and Train Control System, of this Part 3.

13.10 LRT Vehicle power requirement

- (a) TPS shall supply power to the Revenue Vehicles, Maintenance Vehicles, non-communicating Trains and non-equipped vehicles throughout the Confederation Line.

13.11 Testing

- (a) DB Co shall be responsible for all factory acceptance testing, field testing, and all testing and commissioning of the Traction Power System. DB Co shall be responsible for all installation tests (power, grounding, cabling, etc.) for all work installed.
- (b) All test reports shall be submitted to the City for review and approval to meet required performance qualifications of the City.

ARTICLE 14 OVERHEAD CONTACT SYSTEM

14.1 General Requirements

- (a) This section provides the criteria for the OCS, also referred to as the catenary system, including technical, operational, maintenance, local climatic and economic considerations.
- (b) The OCS consists of the catenary wires and their physical supporting structures. The OCS distributes DC electric power from TPSS to the Vehicles operating on the Mainline Tracks, yards and within the Moodie LMSF through the pantograph mounted on top of the vehicle.
- (c) On the mainline, a simple catenary system shall be employed, consisting of a single contact wire supported by a messenger wire via hangers (droppers). This configuration shall be auto-tensioned, consisting of balance weight assemblies mounted out of running, one span away from the overlap transition span and supported with standard anchorage assemblies. Spring tension assemblies are also permitted at crossovers and interlockings. The auto-tensioned operating range shall accommodate the designed tension length.
- (d) On the Connecting Track a simple catenary system shall be employed and on the LMSF a single contact wire system shall be employed. These configurations may be auto-tensioned utilizing a balance weight assembly or semi-compensated using a spring tension assembly. The tension compensated operating range shall accommodate the designed tension length.
- (e) For tunnel/ underground areas, an overhead conductor rail support system shall be used. This OCS configuration shall consist of contact wire inserted at the bottom of from an extruded aluminum profile rail section, which in turn shall be mounted to the underside of the Tunnel structure. Double insulation shall be provided between the OCS and Tunnel structure.
- (f) DB Co shall blend the appearance and style of the overhead catenary system into the adjacent communities and at visually sensitive areas including, but not limited to the following elements:
 - (i) Pole size, shape and color;
 - (ii) Location of the pole; and,
 - (iii) Special attention shall be paid to the design of the catenary system and supporting system in visually sensitive areas of the alignment corridor as follows:
 - A. Visually sensitive areas include:

- i. Within all Station Platform areas extending 15m to either side of Platform end;
 - ii. Within the existing BRT trench from Tunny's Pasture Station to Carleton Avenue; and,
 - iii. All SI located on Federal Lands.
 - B. In visually sensitive areas of the alignment corridor, closed or tapered sections shall be used. Multi-sided poles shall have a minimum of 16 sides.
- (iv) Pole base covers shall be provided in areas easily accessible to the public, and other historic or special designated locations identified by the City. The base cover shall match the color of the pole.
- (g) Design shall include components that:
 - (i) Are standard and off-the-shelf, available from multiple suppliers;
 - (ii) Match, or similar to that provided for the Existing Confederation Line;
 - (iii) Have a proven maintenance performance; and,
 - (iv) Maintain functionality even during extreme weather conditions and temperature changes as defined in this Article 14.
- (h) In addition, the design shall take into consideration existing overhead obstructions such as Bridges, overpasses, buildings and aerial Utilities that may impact the final layout.
- (i) As an extension of the existing system, wherever possible, the OCS design shall match or blend, function, and operate seamlessly with the existing OCS system.
- (j) DB Co shall design, supply, and install all components of the OCS, including poles, foundations, cantilevers, conductors, and associated hardware and assemblies.
- (k) In addition, DB Co shall provide all electrical feeding, grounding, and bonding arrangements required for proper system performance.

14.2 Codes, Standards and Manuals

- (a) The design, materials selected and construction of the Works shall comply with the criteria contained in this Article 14, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria,

commitments or requirements contained within one document when compared with another, the more stringent shall apply:

- (i) ANSI;
- (ii) NEMA;
- (iii) CSA;
 - A. CAN/CSA-C22.3 No. 1, Overhead Systems
 - B. CAN/CSA-C22.3 No.8, Railway Electrification Guidelines
 - C. CSA S6, Canadian Highway Bridge Design Code
- (iv) City of Ottawa Codes and By-Laws;
- (v) IEEE;
- (vi) IEC;
 - A. IEC 60913, Railway applications – Fixed installations – Electric traction overhead contact lines
 - B. IEC 62128-1, Protective provisions relating to electrical safety and earthing
- (vii) UL and ULC;
- (viii) ASTM; and,
- (ix) AREMA;
 - A. AREMA Chapter 33, Electrical Energy Utilization.

14.3 Operational Requirements

- (a) The OCS shall be comprised of the following major items:
 - (i) Catenary Wires: Messenger and Contact/Trolley;
 - (ii) Feeder Cables: Feeders from Substation to Catenary;
 - (iii) Supports: Cantilever, Headspan or Cross-Span, Pull-Off, Overhead Conductor Rail;
 - (iv) In-Span Materials: Hangers, Jumpers, Splices, etc.;

- (v) Midpoint Anchors: Tie Wire and Downguy Assemblies;
 - (vi) Poles: Poles both Center and Wayside;
 - (vii) Foundations: Drilled Shaft and Ground Connections;
 - (viii) Lightning Arresters: Surge Protection;
 - (ix) Structure Guying: Termination, Anchors;
 - (x) Tensioning Systems: Concentric Wheel or Pulley Type with balance weight assemblies and Spring Type tensioning systems;
 - (xi) Insulated Overlaps: Sectionalization;
 - (xii) Section Insulators: Isolation; and,
 - (xiii) Disconnect Switches: Isolation.
- (b) OCS Configuration and Tension Systems
- (i) DB Co shall design the OCS system to meet:
 - A. Line speed;
 - B. Clearance;
 - C. Mandatory national standards;
 - D. Climatic and environmental constraints;
 - E. Vehicle power consumption and ampacity determined by the operational performance requirements; and,
 - F. Traction Power load flow simulation.
 - (ii) Where there is a requirement for the transition between auto-tensioned and fixed termination catenary, it shall be accomplished by a catenary parallel wire overlap. The fixed termination overlap catenary shall be supported by an intermediate cantilever structure on the catenary at mid-span.

14.4 Design Parameters

- (a) The design parameters are outlined in Table 3-14.1.

Table 3-14.1

| | |
|-------------------------------|--|
| Ambient Temperature Range | In accordance with environmental conditions referenced in Schedule 15-2, Part 1, Article 4 – Design and Construction |
| Loading / Climatic Conditions | In accordance with environmental and loading conditions referenced in CAN/CSA 22.3 No.1 & 8 |
| Maximum Design Train Speed | 100km/hr, mainline 30km/hr, Connecting Tracks 15km/hr, Moodie LMSF |
| Elevation Above Sea Level | 60m |
| Durability | Reinforcing steel in substructure concrete within the splash zone of adjacent Roadways treated with de-icing salts shall be stainless steel. Splash zone shall be as defined in MTO Structural Manual. |

14.5 Electrical Clearances

- (a) Clearances shall be maintained between live conductors, including pantographs and any overhead structures, in accordance with Table 3-14.2.

Table 3-14.2

| Clearances | Static (1) | Passing (2) |
|------------------|------------|-------------|
| Normal Minimum | 155mm | 130mm |
| Absolute Minimum | 130mm | 80mm |

Where:

(1) Static clearance is the clearance between the catenary system and any overhead structure when not subject to pantograph pressure.

(2) Passing clearance is the clearance between the catenary system or pantograph and an overhead structure under actual vehicle operating conditions during the time it takes the Train to pass.

- (b) Clearance from the pantograph to any fixed item, excluding the steady arm or registration arm of a cantilever, shall not be less than 130mm. Pantograph clearance to steady arm shall not be less than 38mm.
- (c) For Vehicle related clearance, full allowances shall be included for dynamic displacement of the Vehicle under operating conditions, including tolerances for construction and maintenance of the Track.

- (d) Personnel clearances according to IEC 62128 for public and restricted areas as a minimum shall be incorporated into the DB Co design. Obstacles shall be appropriately designed and located to protect direct contact with live parts

14.6 Height, Depth and Gradient Requirements

- (a) The nominal contact wire height perpendicular to the TOR at super elevated Track centerline shall be in accordance with the requirements outlined in CAN/CSA C22.3 No. 1 & No. 8 as detailed in Table 3-14.3.

Table 3-14.3

| Route Description | Track Type | Type of OCS | Contact Wire Height (mm) |
|-----------------------------|--------------------|---|---|
| Tunnel/ Underground | Direct Fixation | Overhead Conductor Rail | 3940 minimum |
| Open Route Alignments | Ballast | Auto –Tension Simple Catenary | 4900 normal |
| Yard/ Moodie LMSF Tracks | Ballast | Auto-Tension Single Contact Wire | 6500 maximum 5700 minimum |
| Road Crossing | Embedded | Auto-Tension Simple Catenary | 5500 minimum |
| Overhead Bridges | Ballast | Auto-Tension Simple Catenary Overhead Conductor Rail | 4100 desirable minimum 3900 absolute minimum |

- (i) The contact wire height at supports shall take into consideration the effect of wire sag, due either to temperature rise or to ice loading, and construction tolerance, including Track construction and maintenance tolerances.
- (b) The system depth is defined as the height or vertical distance between the messenger and contact wires at the point of support. The nominal system depth is outlined in Table 3-14.4.

Table 3-14.4

| Locations | System Depth, Nominal |
|-----------------------------|-----------------------|
| Open Route Alignments | 1220mm |
| Underneath Overhead Bridges | 152mm |

- (i) These heights may vary at specific locations for the profile transitioning from Tunnel structures or underneath overhead structures.
- (c) The contact wire gradient is defined as the rate of change in elevation of the contact wire with respect to top of rail. Where possible, the contact wire grade shall match the grade of the Track for a contact wire gradient of zero.
 - (i) Table 3-14.5 presents the maximum gradient as per CAN/CSA C22.3 No. 8:

Table 3-14.5

| Train Speed | Maximum Contact Wire Gradient |
|------------------------|---|
| Yard / LMSF (15 km/hr) | 2.0% (1:50), Storage and Maintenance Tracks |
| 50 km/hr | 1.3% (1:77) |
| 75 km/hr | 0.8% (1:125) |
| 100 km/hr | 0.6% (1:167) |

- (ii) Except for Yard / LMSF conditions, the change of grade from one span to the next (between consecutive spans) shall not exceed one half the values shown above.
- (iii) The Moodie LMSF Lead Tracks shall be governed by the 50km/hr requirement.

14.7 Vertical Clearances

- (a) The vertical clearance requirements to Structures are provided in Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements. The values given in Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements represent the acceptable minimum for existing Structures, provided that the Track is tangent and a direct fixation type and the catenary can be suspended between poles spacing 18m maximum or supported from the existing Bridges and Structures. Additional clearance is required to account for Track superelevation.
- (b) DB Co shall ensure for those TPSS that are only accessible by rail that the OCS wire in front of the TPSS shall be no less than 5.5m in order to accommodate TPSS equipment removal operations. Additionally, DB Co shall ensure that no OCS poles shall be installed directly in front of the TPSS.
- (c) DB Co shall ensure all structures are clear of the clearance envelopes for the Vehicle and pantograph under all operating conditions. Clearance envelopes shall incorporate all relevant construction and maintenance tolerances.

14.8 Loading and Overload Factors

- (a) Loadings and overload factors shall be based on the most current CAN/CSA 22.3 No.1 & 8 requirements.
- (b) Canadian Highway Bridge Design Code CSA S6 with ice accretion (31mm) for bridge sections shall be employed for radial ice on the wires and associated equipment and treated as an additional loading condition. The 31mm Non-Operating ice loading condition is for the purposes of structural capacity of the OCS on bridge segments. The CSA CHBDC S6 31mm ice loading condition shall apply to all Bridges along the alignment where OCS is present. If any portion of an OCS span between supports runs along a Bridge section, that entire span shall be subject to this loading condition. The CSA CHBDC S6 31mm ice loading condition also shall apply to any OCS span where one of the supports is attached to an Overhead structure.
- (c) The following climatic conditions shall also be taken into consideration for the design of the system:
 - (i) Operating conditions (Vehicles in service and running):
 - A. 90km/hr wind speed at 8°C.
 - B. 65km/hr wind speed with 12.5mm radial ice thickness on messenger wire, 6.25mm thickness on contact wire at -20°C.
 - C. No ice or wind at -27°C.
 - D. No ice or wind at 55°C.
 - (ii) Non-Operating Conditions (Vehicles not in service):
 - A. 90km/hr wind speed with 12.5mm radial ice thickness at -20°C.
 - B. No ice or wind at -32°C.

14.9 Strength Requirements

- (a) DB Co shall design the OCS in accordance with the strength requirements specified in CAN/CSA 22.3 No.1 & 8, latest edition.

14.10 OCS Wires Tensions and Tension Lengths

- (a) The messenger wire shall be 500 kcmil stranded hard-drawn copper
- (b) The contact wire shall be 350 kcmil solid-grooved hard-drawn copper

- (c) The design shall take into account a maximum permissible wear of 30% cross-sectional area loss of contact wire
- (d) The following shall be the base wire tensions for the stated tensioned system with a base temperature of eight (8) degrees Celsius:
 - (i) Mainline/ Surface Alignment (Auto-Tension):
 - A. Messenger: 2700 kg.
 - B. Contact Wire: 1350 kg.
 - (ii) Tunnel/ Underground:
 - A. Overhead Conductor Rail.
 - (iii) Moodie LMSF Tracks (Auto-Tension, Spring Type):
 - A. Contact Wire: 1100 kg.
- (e) DB Co shall locate tension segments in the alignment according to sectionalizing requirements and to minimize the tension loss due to cantilever restraining forces. Tension lengths shall be limited by the allowable along-track movement and limits of the tensioning devices.

14.11 Mid-Point Anchor Assembly

- (a) The mid-point anchor assembly is used to anchor or hold the catenary and allow the catenary to expand and contract from that point. It is typically installed at or in the vicinity of the mid-point of the OCS tension length. The assembly is comprised of turnbuckles, in-line insulators, wire terminations, high strength steel cable, parallel clamps, steel links and pole bands.

14.12 Sectionalizing Requirements

- (a) The OCS shall be electrically sectionalized by means of insulated overlaps or section insulators near each substation. The OCS design shall adopt a combination of both insulated wire overlaps and section insulators (sleds). The OCS shall require sectioning at crossovers, the Moodie LMSF, and other Special Trackwork. Section insulators shall be used at crossovers, Pocket Tracks, turnout, and siding locations. Overlaps shall not be placed on sharp curves.
- (b) Additional sectioning may be required at specific sensitive areas of the alignment where EMI considerations are required to be mitigated.
- (c) Sectioning at Interlocking

- (i) The sectioning of the standard two Track “Universal” crossover arrangement, facing or trailing, shall be the standard arrangement of three (3) switched mainline insulated overlaps or section insulators, and two (2) section insulators in the crossover wires. The positioning of all sectioning assemblies shall be capable of allowing the ultimate (5+4 car consist) Train set to pass the Track switch and signal.
 - (ii) Diamond crossovers shall have switched insulated overlaps or section insulators on both Mainline Tracks, and section insulators in the crossovers wires. Sectioning of this crossover type shall consist of a minimum of four disconnect switches, and a combined total of six section insulators and/or insulated overlaps.
 - (iii) The electrical sectioning and isolation of OCS shall be arranged in a manner that prevents any “dead spots”, or un-energized portions of catenary, from occurring under normal Vehicle operating conditions.
- (d) Sectioning in the Moodie LMSF
 - (i) The Tracks in the Moodie LMSF area shall be divided into working groups of four Tracks or less. Exceptions may be granted for more Tracks of shorter lengths. Each group shall have a manually operated switch and section insulators to accomplish the section isolation. The catenary for the entrance to and exit from the Moodie LMSF shall not be fed from the same DC breaker.
- (e) Sectioning at the Maintenance and Storage Buildings
 - (i) Each Track inside the Moodie LMSF buildings shall have the capability of individual sectioning. A door mechanism shall be installed with insulation, which allows continuous pantograph passage when the door is in the “open” position. A switch shall be installed for de-energizing the contact wire. Manual OCS disconnect switches in Moodie LMSF Yard shall be monitored via the SCADA system. Insulated joints shall be installed at the apron of all Moodie LMSF Tracks.
 - (ii) Isolation Requirements
 - A. On the Mainline, the OCS shall be designed using motor-operated disconnect switches, including for isolating sections of wire at interlockings, and at Lead Tracks for isolating the Moodie LMSF from the mainline. Motorized disconnect switches shall have operating and monitoring capabilities via SCADA. Manual disconnects shall be used throughout the Moodie LMSF for isolating sections of Track, and in the shop for isolating each section of wire.

14.13 Switching and Feeding Assemblies

- (a) Manual or motorized switches shall be used as specified in Section 14.12 (e) (ii) A above. The switch assembly usually comprises of a blade style switch, mounted in a weatherproof box; full feeding jumpers positioned on either side of the switch, and insulated cables from the switch to the individual sets of catenary wires. For motor operated switches, an electrical interlock circuit shall be provided to prevent operation with voltage on either side of the contact. The interlock shall prevent local and remote electrical operation of the switch motor. Emergency manual operation shall not be prohibited.

14.14 Safety Assurance

- (a) As a minimum, the following items shall be provided by DB Co in the design, specification, construction, and functionality of the OCS:
 - (i) Double insulation from any type of grounded pole, structure, building, etc. shall be provided to eliminate the possibility of bridging or spanning from neutral or grounded parts to live wires.
 - (ii) Warning signs shall be attached to OCS or the supporting structures to warn personnel of the proximity of high voltage wires. Signs shall be attached to the OCS to denote the end of the electrified wires over the Tracks. The signs comprise of “High Voltage”, “Danger”, “Danger Live Wire” and “Electric Train Stop” in red and black with white background.

14.15 Pole Deflection

- (a) Pole deflection under all Vehicle operating conditions shall not exceed 50mm at contact wire height. Pole deflection at the top of the pole under CSA C22.3 heavy loading condition shall not exceed 3% of pole length. Overload factors shall not be applied in the calculation of pole deflection. All pole deflection values shall take into account the effects of foundation translation and rotation for the applied loading condition.

14.16 OCS Pole Grounding and Bonding

- (a) Each pole or structure shall be grounded by a 4/0 AWG copper stranded wire by exothermic weld connections to two reinforcing bars in the foundation and to a ground rod adjacent to the foundation if necessary. The use of an appropriately sized copper-weld ground wire shall be permitted at locations with public access or in areas susceptible to vandalism and wire theft. All OCS support structures shall be grounded to a total ground resistance not exceeding 25 ohms.
- (b) Ground connections to disconnect switches shall have a maximum ground resistance of 5 ohms. Ground rods shall be utilized to obtain the required ground resistance.

- (c) Touch potential overvoltage at each pole or structure shall be limited to 50 V under normal operation and 70 V under outage conditions.
- (d) Where the tested resistance exceeds the specified value, additional ground rods shall be driven and interconnected with a suitable conductor and the test repeated.
- (e) All test results shall be provided to the City for review and approval.

14.17 Bridge, Overhead and Roof Structure Attachments

- (a) Attachment to overhead Bridges and overhead structures shall be prohibited unless other methods are not available. In instances with clearance limitations or where Bridge spans are greater than the allowable OCS span, attachments may be required. Underneath roof structures, a soft suspension assembly shall be used to minimize pantograph bounce and loss of contact between the pantograph and contact wire.
 - (i) DB Co shall provide protection against arcing or ground from the OCS lines in other areas such as Stations, at grade Structures, etc.
 - (ii) In addition to OCS lines, where and if DB Co installs other medium voltage lines such as [REDACTED], DB Co shall protect metallic parts and Structures, including protecting [REDACTED] metallic infrastructure against arcing or ground from other medium voltage lines.
 - (iii) Near existing [REDACTED] infrastructure, DB Co shall protect metallic parts and Structures against arcing or ground from [REDACTED] infrastructure medium voltage lines.
 - (iv) When [REDACTED] is installing or maintaining medium voltage lines, [REDACTED] normal safety protocols apply to [REDACTED].
- (b) Overhead Bridge and Tunnel Portal Protection
 - (i) At locations where the catenary passes underneath overhead structures that are equipped with sidewalks or walkways without guard and there is less than 3m of clearance to the nearest wire, fencing shall be provided as specified in Schedule 15-2, Part 6, Article 2 – Design Criteria.
 - (ii) At locations where the OCS underpasses structures are susceptible to corrosive elements, such as salt spray on bridge, an insulated protection board(s) is to be provided directly above the catenary wires, shielding them from potential corrosion risk. Alternate protection measures shall be permitted only after review and approval of the City.
- (c) Overgrade Bridges

- (i) Where the catenary and Track are supported by overgrade Bridges, all metal materials attached to the Bridge shall also be attached to the electrical grounding system. Where poles are to be mounted, the pole ground shall be attached to the electrical grounding system.

14.18 Overhead Conductor Rail Support

- (a) In tunnel, underground areas, or other areas that warrant special consideration due to low clearances and spatial confinement, overhead conductor rail supports may be used. Support spacing shall typically range between 10m to 12m maximum, and shall be bolted together section by section.
- (b) The DB Co conductor rail design shall include provisions for a smooth transition between the flexible OCS and the overhead conductor rail system. The section lengths shall be properly size taking into account tangent and curved Track and shall include the use of mid-points with overlap sections where applicable. Supports shall be either sliding or pivoting type.
- (c) A grounding cable shall be provided the entire length of the Tunnel or underground area to which the conductor rail is attached. The cable shall be suspended near and bonded to the overhead conductor rail supports and bonded to the collector bar to provide a continuous grounding system.

14.19 OCS Span Length and Staggers

- (a) The span lengths (spacing between contact wire registration points) and stagger shall be designed to provide for pantograph security (i.e. no pantograph de-wirement). Pantograph security shall be established by maintaining a minimum contact wire edge distance from the tip of the pantograph of 75mm under worst-case Vehicle operating conditions. Maximum span lengths shall be determined so as to achieve this minimum pantograph security allowance at any point within the span.
- (b) For mainline OCS, the contact and messenger wires shall be staggered on both tangent and curved Tracks, relative to Track centerline. The amount of stagger is based on the various class of Track allowances, vehicle body and pantograph tilt, sway, and other dynamic movements; and construction tolerance.
- (c) For LMSF and yard areas, the OCS wires shall be staggered on curved Tracks, similar to mainline OCS. However, tangent Tracks do not require stagger in these areas.

14.20 OCS Assemblies, Equipment, and Hardware

- (a) All OCS materials and equipment shall be standard products of manufacturers regularly engaged in the production of such materials, shall be designed for use on electric railways, and shall be the manufacturer's latest proven design.

- (b) DB Co shall provide appropriately sized turnbuckles in all wire assemblies for maintenance purpose to adjust the registered messenger or contact wire position. Where applicable, the turnbuckle shall be located on the slack wire, such as headspan or cross-spans.
- (c) Splices shall not be permitted in the system without prior approval of the City.
- (d) DB Co shall provide section insulators suitable for use by new and worn pantograph carbons and shall be designed to remain stable dynamically and structurally under all Vehicle and operating conditions.
- (e) DB Co shall provide automatic tensioning systems that operate freely within the specified temperature range and shall not interfere with clearance envelopes if a breakage in the OCS wires occurs.
- (f) DB CO shall provide jumper clamps with two bolts.

14.21 Cathodic Protection

- (a) Each structure shall be designed with a passive protection system. For specific requirements, refer to Article 12 – Corrosion Control, of this Part 3.

14.22 OCS Structure Numbering and Chainage

- (a) DB Co shall coordinate the OCS pole numbering and system chainage with the Existing Confederation Line to produce a logical sequence between new and existing systems. Pole identification shall use the same numbering scheme implemented in the Existing Confederation Line.
- (b) The numbering system and chainage shall continue in Tunnels at reasonable spacing to support location identification by maintenance staff, EROs, and ESPs.

14.23 Construction Tolerances

- (a) DB Co shall specify allowable construction tolerances for safety and current collection quality related parameters according to standard industry practice, IEC 60913, and AREMA Ch 33 Part 4.
- (b) The following are minimum System-wide allowable construction tolerances:
 - (i) Contact wire height: -13mm to +25mm, open route; 0mm to +13mm, Tunnel
 - (ii) Messenger and contact wire stagger: +/- 25mm (Relative to centerline of pantograph)
 - (iii) System Depth: +/- 50mm, open route; +/- 25mm, Tunnel (if applicable)

14.24 Lightning Protection

- (a) A connection from the OCS to a lightning arrestor/surge arrester and to ground shall be provided at a minimum of each feeder pole. DB Co shall additionally place arresters at a regular spacing that has been determined by assessment of geographical location, environmental conditions, public safety, operational and maintenance risks and ground conditions. The lightning arrestors shall have a minimum energy discharge capability of 2.6 kJ at 1000 kV. The grounding connection from the lightning arrestor will be connected directly to a ground rod(s) or mat, with a total ground resistance of not more than 5 ohms. Lightning/ surge arrester connection may be combined with the pole/ structure ground connection.
- (b) The grounding connection from the arrester shall be connected directly to a ground rod(s) or mat, with a total ground resistance of not more than 5 ohms. Arrester connection may be combined with the pole ground connection.
- (c) For poles on aerial structures having an arrester, an independent ground wire and ground rod shall be utilized.
- (d) The arresters shall be appropriately chosen based on the expected peak system voltage including regenerative braking. The complete discharge voltage shall be sufficiently low enough to prevent damage to connected system elements. Surge arresters shall have a minimum thermal energy rating of 2.6 kJ per rated kV.

14.25 Performance Requirements

- (a) The Vehicles shall be equipped with ice removal device(s) for operations during snow and ice conditions.
- (b) All OCS equipment and installation shall undergo all complete factory and on-site inspections and testing. On-site inspection and testing shall, at a minimum, include the following:
 - (i) Acceptance Measurements: Stagger, Contact Wire Heights at support and mid-span, Pole Horizontal Offset, Mid-Span Offset, Span Lengths, Messenger Wire Heights or System Depths, Wire Stringing Tensions and corresponding installation temperature, Pole Stationing/ Structure Identification, and Contact Wire Gradient;
 - (ii) Visual Inspection: Visual inspection of the OCS equipment and installation shall consist of the following:
 - A. At contact wire level, checks shall be made for fit and tightness of components, ensure split pins, locknuts and other fastening components are secure, contact wire checks for kinks, roll, or other damage, messenger wire checks for damaged strands, correct steady arm fittings and heel

settings, checks that OCS jumpers are correct type, have adequate travel capability, are properly fitted, and well formed to avoid fatigue failure, and installation checks for locations of possible interference with passage of pantographs, including spots where pantographs could tangle with wires or suspension assemblies.

- B. At ground level, check that hangers are plumb and within tolerance of design position, and check cantilevers are in correct along-Track position under given temperature.
- (iii) Clearance Envelope Tests: Pantograph Clearance Envelope and Vehicle Clearance Envelope; and
- (iv) Electrical Tests: The following electrical tests shall be performed on the OCS once installation is complete and all components and related electrical equipment are in final locations:
 - A. OCS Section Proving
 - B. Circuit Continuity (or Loop Resistance) Test,
 - C. Hi-Pot Insulation Test,
 - D. OCS Pole Grounding,
 - E. Ground Resistance Measurement at Lightning Arrestors.
- (v) DB Co shall perform all static, or subsystem tests, involving individual or isolated components of the Overhead Contact System. DB Co shall perform the integration testing and commissioning of the system.

ARTICLE 15 CELLULAR SYSTEMS

15.1 General Requirements

- (a) DB Co shall coordinate with the City for the installation of public cellular and WiFi service at the Stations.
 - (i) At At-Grade Stations, Underground Stations and within the Tunnel, DB Co shall coordinate the installation of cellular service. DB Co shall provide the infrastructure that will support installation of antennas, cabling, amplifiers and associated equipment that will be designed and installed by the City.

15.2 Cellular System

- (a) DB Co shall incorporate into their design (design reviews, drawings, system integration) the radiating cable (and accessories) and ensure that all electrical, mechanical, physical interfaces are reviewed and approved. DB Co shall install and test a minimum 7/8" radiating cable in the Tunnel sections. DB Co shall provide the radiating cable, including mounting hardware.
- (b) DB Co shall provide power to the remote units required along the Tunnel or in any Station areas. A number of remote units shall be installed by the City throughout the Tunnel and/or Stations at various locations to be determined during design. Typical installation requires an RU at approximately every 500m, one RU at each Station entry or exit, and/or in the communications room and one RU at each Tunnel portal. Installation brackets hardware shall be the responsibility of the City.
- (c) DB Co shall provide a minimum 75mm conduit in the Tunnel(s) for installation of cellular required fibre.
- (d) DB Co shall provide all necessary conduits, junction boxes, pull boxes to cater for cellular fibre that will connect the various remote units within any Underground Stations.
- (e) DB Co shall provide appropriate conduits or pathways to cater for coax cabling from the radiating cable exiting the Tunnel to the Remote Units within the Stations or Station transition areas, or Tunnel.
- (f) DB Co shall provide power to RUs, and other telecom equipment as required, located in the Tunnel, and / or at Stations.
- (g) DB Co shall provide appropriate number of conduits (for fibre and coax) from the Tunnel to a location close to the Tunnel but external to the Tunnel, where a BTS site will be located. DB Co shall provide a manhole as the interface point where the conduits will terminate.

- (h) The Telecom provider shall coordinate with the electrical service provider and provide a connection to the BTS site electrical interface panel for the BTS site (the electrical panel shall be designed by the City. The City may require consolidation of Voice/Data Radio System and cellular BTS sites depending on the requirements of each provider – the City wants to minimize the footprint of a BTS hotel. The BTS site shall include fencing, foundation, access road, shelters, conduits, electrical panel, hydro incoming connection, drainage etc. This shall all be part of the City scope.
- (i) DB Co shall design antennae mounting locations throughout the Stations to cater for the antennas required for the cellular system. Antennas shall be located at the Platform level, concourse level, entrances, any Tunnel transition areas and will ensure that cellular coverage is provided in all public areas or on the Vehicle while entering the Platform or stationary at the Platform. Any interfacing hardware for the antennas shall be provided by the City.

ARTICLE 16 GUIDEWAY INTRUSION DETECTION SYSTEM

16.1 General Description

- (a) Confederation Line Trains are attended by Operators on a segregated Guideway that is protected by ROW fencing.
- (b) The system shall be equipped with a GIDS to detect when intruders attempt to enter the Guideway off the end of a Station Platform, at the LMSF access Track or at Tunnel portals.
- (c) The GIDS shall operate using laser based technology with programmable logic to distinguish between Trains, human beings, and other objects.
- (d) When there is a human intrusion detected by the GIDS, alarms shall be raised in the TOCC, BCC, MYCC, BYCC and automated responses shall be triggered by both the CBTC and SCADA systems. TOCC, BCC, MYCC, and BYCC staff shall then initiate procedural responses. For other observed or reported intrusions on the Guideway, investigation and follow-up response shall be strictly by procedure.
- (e) The GIDS shall detect when intruders proceed beyond the end of a Station Platform onto the Guideway.
- (f) The system shall also be installed at all Tunnel portals, including the Parkway Tunnel, Connaught Tunnel, Baseline Station and HWY 417 E-N/S Pinecrest Rd Ramp Tunnel to detect when persons enter the Guideway at a Tunnel portal location.
- (g) The system shall use laser scanners which produce 180 invisible beams with a scan arc of 180 degrees. The scanners shall be equipped with environmental hoods to facilitate all weather operation. The laser scanners shall measure the time it takes for a laser beam to project to an object and reflect back to the scanner. Using this time, the distance from the scanner to the object surface is calculated.
- (h) Laser data shall be transmitted to a PLC which combines the data from the individual lasers to determine the outline of an object. Using pre-defined permissible shapes and sizes the system shall be able to distinguish between various types of objects providing for intelligent object detection. Detected objects such as a Train or a bird shall not generate an alarm while other objects, such as a person, are programmed to meet the criteria of an intrusion. When an object fits the criteria of an intrusion, the PLC shall transmit alarm signals to both the SCADA and the CBTC systems.

16.2 Intrusion Detection Automated Responses

- (a) Upon detection of an intrusion, the following automated responses shall be triggered:

- (i) Upon detection of an intrusion, the CBTC behaviour shall be identical to that of the Existing Confederation Line.
 - (ii) Alarms shall be raised on the ATS workstations in the TOCC and BCC providing notification and warning of the GIDS detected intrusion.
 - (iii) An alarm shall be raised on the SCADA workstations annunciating a GIDS detected intrusion and CCTV video coverage of the intrusion location shall be presented on the monitors. The video presented can be in the form of live images or lagged images (for example 15 seconds prior to the intrusion).
- (b) In addition to these automated responses to an intrusion, the SCADA system shall monitor the ongoing health of the GIDS equipment and annunciate alarms when a malfunction or failure has occurred. Alarms shall also be raised when the system has been tampered with.

16.3 Guideway Intrusion Detection Equipment

- (a) DB Co shall design, procure, install, test and commission the GIDS equipment that includes the laser scanners along with IP 67 rated protective outdoor enclosures and protective shields; all associated mounting hardware and all of the required system cables to connect the laser scanners to the respective junction boxes.
- (b) DB Co shall install a PIU or junction box for each laser scanner to be installed in a NEMA 4X stainless steel enclosure including a tamper alarm door switch within close proximity to the laser scanner. The PIU provides the interface location between the laser scanner and the electrical cabling system. A 24VDC power supply shall be installed for each laser scanner. The PIU shall include a dry contact closure for intrusion detection/tamper alarms per unit. The PIU shall include a Local LED alarm display. The PIU shall include a serial and RJ45 for connections of data cables.
- (c) DB Co shall also install an alarm cabinet, known as a PAU to be located at each Station. The PAU is where the laser scanner output signals are received and processed. The main components of the PAU shall include the power supply, circuit breakers, PLC, Ethernet switch, alarm relays, and terminal blocks. The PAU shall be installed in a NEMA 4X stainless steel enclosure. The PAU enclosure shall include a tamper alarm door switch, a 24 VDC power supply, an Ethernet and a PLC for alarm handling.
- (d) DB Co shall procure and install a detection software package required for each laser scanner.
- (e) DB Co shall design and install the GIDS equipment such that individual laser scanners do not conflict with the location of other equipment such as OCS poles and radio antennas.
- (f) DB Co shall ensure that all installation, operation and maintenance manuals are procured and delivered along with the GIDS equipment.

ARTICLE 17 HIGH SPEED DATA RADIO SYSTEM

17.1 General Description

- (a) The HSDR is a wireless data network Train-to-Station based system between the Train-based data network and the base station units installed at Stations along the Guideway. The wireless network shall support standard Ethernet interfaces and IP protocols and operate within the 5GHz unlicensed band.
- (b) DB Co shall design and build the Confederation Line Extension wayside HSDR system such that it integrates with and forms a single complete system with the Existing Confederation Line system.

17.2 General Requirements

- (a) The HSDR shall support the following operations:
 - (i) High speed/high volume data transfer of Station Platform edge/Train door CCTV images from wayside to Train cab display;
 - (ii) Transfer of Passenger count information from Train to wayside and on to the Passenger counting server;
 - (iii) Transfer of Vehicle diagnostics information from Train to wayside and on to the Vehicle central maintenance server; and,
 - (iv) Transfer of Passenger information display messages from wayside to Train at the Moodie LMSF and at the Stations.
- (b) Data transfer Platform edge/Train door CCTV images to Train cab display
 - (i) The high speed/high volume radio shall transfer encoded video streams from the Platform edge cameras to\from the wayside to the Operators Train cab display.
 - (ii) The system shall start transmitting the images of four Platform edge cameras to the two displays on each side of the Train Operator display only when the Train is stopped at the Station.
 - (iii) The two sets of four Platform edge cameras shall be provided by DB Co as four independent IP UDP video streams in each Station. The CCTV images shall be streamed as live images using RTSP or approved equal from the wayside modem to the Vehicle modem.
 - (iv) The transmission of images shall continue for 10 seconds after the Train has started to move. Those images shall be shown for the same period of time on the existing cab CCTV display.

- (v) Once the time period is over (10 seconds) the screens in the Operator cab shall go blank.
 - (vi) The system shall display the correct set of CCTV cameras from the Station Platform the Train is stopped at, on the Vehicle. The location and direction of the Train shall be known by the system in order to display the proper camera images.
 - (vii) There shall be two sets of four CCTV cameras per Station. One set per Platform per direction.
 - (viii) The Platform edge/Train door CCTV cameras shall be accessible for viewing at any time from the TOCC, BCC, MYCC and BYCC. The images of those cameras shall be recorded via the same system as the rest of the CCTV cameras of the remaining part of the Station. However the images of those cameras shall be streamed simultaneously to the Vehicle, the storage location and the TOCC, BCC, MYCC and BYCC live on demand.
 - (ix) The HSDR shall be able to transfer a minimum of one live video data stream from the Train CCTV system to the wayside CTS network when the Train is in a Station. The video stream shall support the ONVIF standard and be streamed using RTSP streaming protocol. The minimum resolution and frame rate from the onboard video source being streamed over the HSDR shall be CIF resolution and 12FPS.
- (c) Transfer of Passenger count information
- (i) The system shall provide a high speed connection to transfer at each Station and at the Moodie LMSF the Passenger counting information. The transfer of the Passenger information shall be done two ways:
 - A. Once per day at the LMSF, and at every Station when the Train is stopped. Those transfers shall be done automatically without any command from the TOCC, BCC, MYCC and BYCC.
 - (ii) The data transmitted at the Station shall be “raw” with no post process to be viewed by the TOCC & BCC personnel only.
- (d) Transfer of Vehicle diagnostic information from Train to wayside
- (i) The transfer of Train health data from the Train to the wayside CTS network which passes data to the Vehicle central maintenance server shall be done at every Station. Information such as, but not limited to:
 - A. Low voltage power supply;
 - B. Door control system;

- C. HVAC system;
 - D. CBTC system;
 - E. Brake system;
 - F. Communications and Passenger information sub systems;
 - G. Propulsion system;
 - H. Auxiliary inverters; and,
 - I. Event recorder system.
- (ii) Shall be transferred to the SCADA system and shall be communicated to the Moodie LMSF at the same time. The data shall be transferred from the Train to the wayside wirelessly. Once on the wayside it shall be connected to the Station network to transmit the information to the relevant location.
 - (iii) The transmission of the data at every Station is aimed at identifying faults only. The status of the Train's health shall be used to prioritize the removal of unhealthy Trains to the Moodie LMSF during service reduction.
- (e) Transfer of PID messages from wayside to the Train
- (i) The HSDR system shall be able to transfer data from the PIS located in the Belfast MSF and controlled in TOCC & BCC to the PIDS located on the Train. The data transmitted from the PIS may be directed to a specific train, a group of Trains, or all Trains.
 - (ii) The PIDS determines which messages need to be displayed in the Trains, and when, to provide accurate and reliable information to Passengers.
 - (iii) The pre-recorded messages, both visual and audio shall reside in the PIDS system within the Vehicle. Those messages shall be in both English and French and shall have their individual ID that can be triggered by the PIS through the HSDR at any given time when the Vehicle is stopped at the Station or the Moodie LMSF.
 - (iv) The HSDR shall support the transfer of PIS system configuration data, pre-recorded audio files and visual messages to onboard PIDS wirelessly in the Stations or in the Moodie LMSF
 - (v) The HSDR shall provide data connection to allow new messages to be sent from the PIS system to the vehicle PIDS system to be displayed in a single Vehicle or fleet wide when the Vehicles are stopped at the Station.

- (vi) The transfer of any data messages between the PIS and the Train borne PID equipment over the HSDR should not affect the transmission of Platform edge camera video from a Station to the Train.
- (f) HSDR fault reporting
 - (i) The HSDR shall provide fault alarms and warning to the SCADA system using the SNMP standard protocol.
 - (ii) Alarm messages shall include but not be limited to;
 - A. Failure of HSDR in a station other operating parameters that are supported by the HSDR.
- (g) HSDR Subsystem
 - (i) The HSDR shall operate within the unlicensed 5GHz bands and meet Industry Canada and FCC regulations compliant. It shall transmit in the 5GHz unlicensed bands in order to provide radio frequency separation from any CBTC transmissions in the 2.4GHz ISM band,
 - (ii) There shall be AP or base station at each end of each Platform and it is expected that there shall be APs or subscriber units at the end of each Vehicle to ensure maximum coverage and redundancy for RAMS purposes.
 - (iii) Each AP shall be wired to the local network switch, either on the wayside or within the Vehicle to enable connectivity with other Ethernet devices as appropriate. The City shall procure and free-issue to DB Co, 60 Wi-Fi Access Points (four per Station). The City shall procure and free-issue to DB Co, 60 Transceiver SFPs for access points (four per Station).
 - (iv) All base station units or subscriber units, irrespective of location, shall be approved by Industry Canada for operation within the Ottawa environment.
 - (v) When coupled, the intermediate access points on the two Vehicles shall be disabled.
- (h) Wayside Network Connectivity
 - (i) The wayside (station AP's) shall be wired through an Ethernet switch at each Station. The Ethernet switches shall be connected to the main Confederation Line CTS through a dedicated wireless access. All high speed wireless data traffic traversing the CTS network shall be provided with a dedicated VLAN or similar protocol to segregate network traffic originating from the HSDR access points and route data traffic to the wayside servers.

- (i) Protocols
 - (i) Given the data that shall be passed across them, all base station units shall be able to support more than one multi-protocol session and all shall be able to support the protocols used for the services described above. The HSDR shall support remote management tools, SNMP V3 and NTP protocols.
- (j) Antennae
 - (i) The antenna shall be selected to support the selected radio frequency spectrum, signal strength and gain requirements to meet the system requirements. The antennas shall be selected and mounting locations shall be based on the required radio frequency coverage and minimum signal strength of the selected high speed radios. All base station units shall be connected to their antennae by low loss co-axial cable such as LDF-450 or LMR-400. All antennae ports shall be protected and suitable for the environment in Ottawa. The use of MIL style covers over 'N' style connectors is encouraged to provide weather protection.
 - (ii) The City shall procure and free-issue to DB Co, 240 Station directional antenna (16 per Station).
- (k) Environment
 - (i) All APs shall be rugged and suitable for service within the Ottawa environment, including temperature, condensing humidity, snow and ice accretion and seismic requirements, in which they are deployed. Refer to Schedule 15-2, Part 1, Clause 4.3 for details.
- (l) Latency
 - (i) The latency time of the end of Platform video for display to the driver screen shall be 100 ms or less measured from the data leaving the wayside AP to the data network port of the Vehicle video decoder.
- (m) CCTV Video Interface
 - (i) The Platform edge cameras video shall be provided to the high speed radio as four independent analog video feeds per Platform in the communication rooms in each Station. The CCTV analog feed shall be 1.0 Vp-p, NTSC/PAL composite, 75 ohms, BNC connector. Alternately an IP video feed for each camera can be provided. The IP video shall be H.264 or MJPEG compliant 30 FPS 4cif resolution and comply with ONVIF specification for streaming. The connection shall be through a RJ 1000baseT Ethernet connection supporting UDP streaming. IP addressing and network interface to be arranged with the CTS network manager.

Table Notes:

- ¹ On-street bus stops shall be provided with a standard 5’ x 10’ shelter. On arterial corridors, a curved roof shelter is required.
- ² Passenger Information Display infrastructure shall be moved by OC Transpo at no cost to DB Co, however DB Co shall provide the ducts/feeds to the bus stops at cost to DB Co
- ³ As per OC Transpo Transitway and Station Design Guidelines
- ⁴ Weather protection for customers at LRT Stations described in Schedule 15-2 Part 4
- ⁵ Provide power and communications for future PIDS
- ⁶ Existing condition, maintain existing facilities and functions
- ⁷ Note The flag shall be located 20m from the nearest crosswalk, or from the point at which the curb becomes tangent (whichever requires the stop to be further downstream)
- ⁸ These bus stops are only required if the walking distance from the left-in/right-out PPUDO to the entrance of Moodie Station is greater than 200m. In the event that the distance is less than 200m, the bus stop shall not be required.

**SCHEDULE 15-2
DESIGN AND CONSTRUCTION REQUIREMENTS**

**PART 4
STATIONS**

ARTICLE 1 INTRODUCTION

1.1 Introduction

- (a) The Project Stations shall be efficient, universally accessible, sustainable facilities that provide Passengers with an enjoyable, comfortable and safe transit experience.
- (b) Stations shall act as a catalyst for TOD and shall enhance connectivity to surrounding neighbourhoods while not precluding integration opportunities with future planned developments.
- (c) DB Co shall provide complete Stations and Ancillary Facilities to fully support the operational requirements of the Project while minimizing crowding, travel impedances and physical barriers.

1.2 Overview

- (a) The project consists of the design and construction of a total of seventeen Stations consisting of new Stations, renovated Stations, and/or the conversion of BRT Stations to LRT Stations.
- (b) DB Co shall design and construct the Stations and all Ancillary Facilities, and shall obtain necessary Permits, Licences and Approvals for the same. Station Structures and systems shall be designed and constructed to satisfy the Design Life requirements of Schedule 15-2, Part 1, Article 4 – Design and Construction. DB Co shall provide the Facilities including but not limited to the following:
 - (i) Stations including;
 - A. Types of Stations constructed or modified for the Confederation Line shall include the following (note classifications are not mutually exclusive):
 - i. Line Stations; Westboro, Dominion, Cleary, New Orchard, Lincoln Fields, Iris, Queensview, Pinecrest, Bayshore, Montreal, Jeanne d’Arc, Orléans Boulevard and Place d’Orléans.
 - ii. Terminal Stations; Baseline, Moodie, and Trim
 - iii. Transfer Stations; Tunney’s Pasture, Blair, Bayshore, Lincoln Fields, Moodie, and Place d’Orléans.

- iv. All Terminal Stations are also Transfer Stations. Where requirements are defined by Station types in this Schedule 15-2 – Design and Construction Requirements, the requirements for both Station types shall be applied.

(ii) Ancillary Facilities

- A. Bicycle Facilities
- B. Retail Facilities
- C. Bus Terminals
- D. On-street bus stops
- E. Bus Operator and Maintenance Buildings
- F. Plaza(s)
- G. PPUDO
- H. TPSS
- I. Tunnel Ventilation Shafts
- J. EEBs
- K. Off-street Non-Revenue Vehicle parking
- L. Maintenance Facilities: Refer to Schedule 15-2, Part 5 – LMSF.
- M. Bus supervisor office
- N. Public washrooms
- O. Pedestrian overpass or underpass structures;
- P. Passenger shelter structures;
- Q. Structures containing mechanical, electrical, communications or other service equipment;
- R. SER;
- S. Entrances; and,
- T. Bus lay-by areas.

(c) Emergency Planning:

- (i) DB Co shall be responsible for the preparation, and submission (including revisions as necessary) of fire safety plan(s), for approval by the authority having jurisdiction, pursuant to Ontario Fire Code, Section 2.8 Emergency Planning, where applicable.
- (d) Stations design shall consider pedestrian circulation as a critical element. Station designs shall facilitate the transfer of Passengers from one mode of transportation to another by minimizing transfer effort and to ensure safe exiting under Emergency conditions.
- (e) Station capacity shall be provided to serve the projected operations contained in Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements and the ridership forecast data provided in this Part 4.
- (f) DB Co shall provide calculations and Passenger modeling simulations to demonstrate that generous public spaces have been achieved in Station design and the level of service required by this Article 1 has been provided for Passenger circulation including calculations for entry and exit volumes. Modelling shall include all physical barriers, such as columns and Station furniture, and include surge spaces around Station equipment such as fare equipment and elevators. Station designs shall provide intuitive Passenger flow, minimizing obstacles and pinch-points.
- (g) Calculations and Passenger modeling shall be submitted in accordance with Schedule 10 – Review Procedure.
 - (i) Passenger modeling at Transfer Stations shall include the entire Facility and site, inclusive of bus and Train operations; and,
 - (ii) Passenger modeling for the Baseline Station site shall be expanded to be inclusive of the crossing of the Woodroffe and College Avenue intersection and bus operations.
- (h) Stations Platforms shall be constructed to satisfy the requirements of the operational performance requirements defined in Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements and the ridership forecast data provided in the Part 4 as follows:
 - (i) All At Grade Stations shall be constructed to satisfy the requirements of the operational requirements for design year 2031.
 - (ii) Baseline, New Orchard, and Cleary Stations shall be constructed to satisfy the operational requirements for design year 2048.
- (i) Stations shall be provided with space and utility services provisions for installation of a fare control system to be installed by the City.
 - (i) DB Co shall provide the required supporting infrastructure to allow power and communications connections, including walker ducts and conduits.

- (ii) DB Co shall design and construct the location of equipment as to ensure the year round operation of the fare equipment. DB Co shall ensure that all fare gate equipment is protected from the weather as required by Clause 2.5(b)(iii)Bi.
- (iii) All fare collection, vending, and control equipment shall be located within the Station Structure.
- (iv) DB Co shall provide a study of the building envelope with respect to the micro-climatic and geographical location of each Station to determine the extent of the weather protection required.
- (j) All Stations shall include weather protection including roof Structures and canopies in accordance with this Part 4. Stations shall not be required to be climate controlled, however provisions shall be made for radiant on-demand heating where specified elsewhere in this Part 4.
- (k) The Platform width of the Underground Stations shall be such as to protect for future installation of PEDs. Protection for PEDs shall include an electrical isolation membrane between the structure of the Platform and Platform finish material and the construction of a 3m x 4m dedicated PED equipment room.
- (l) Federally Mandated Stations (Lincoln Fields, Iris and Moodie) and the LMSF (refer to Schedule 15-2, Part 5 – LMSF) are subject to review by the NCC. DB Co shall be responsible for advancing the designs of Stations and the LMSF in accordance with the following:
 - (i) The National Capital Act makes the NCC responsible for coordinating and approving projects related to federally owned lands and buildings in Canada's National Capital Region. The NCC is a Crown Corporation and therefore functions at a distance from the federal government, reporting to Parliament through the Minister of Canadian Heritage.
 - (ii) All individuals and federal organizations need NCC approval before undertaking projects on Federal Lands and buildings in Canada's National Capital Region.
 - (iii) The NCC's mandate to approve federal land uses, transactions and designs is set out in sections 12 and 12.1 of the National Capital Act.
 - (iv) Three Stations (Lincoln Fields, Iris and Moodie) and the LMSF (refer to Schedule 15-2, Part 5 – LMSF) are subject to FLUDTA, and design approval by the NCC under Section 12 of the National Capital Act. DB Co's approach to the Stations are subject to review by the NCC and will be assessed in terms of compliance with the guiding principles contained within this Project Agreement:
 - A. DB Co shall be responsible to develop designs and Design Presentation documentation to support the City in obtaining the FLUDTA approval, including but limited to:

- i. Attending meetings with the City and NCC;
 - ii. Providing design documentation, reports, renderings specifications, etc. to be used in the FLUDTA process; and
 - iii. DB Co shall be responsible for the presentations of the Stations/Project to the Advisory Committee on Planning Design and Realty at the NCC.
- (m) All Stations shall be designed and constructed to permit Emergency vehicle access. If any new Works are required to ensure Emergency vehicle access, then these Works shall be the responsibility of DB Co.
 - (i) At the following Stations, Emergency vehicle access can be via the bus transfer area: Tunney's Pasture, Westboro, Lincoln Fields, Baseline, Moodie, Bayshore, Blair, Place d'Orléans, and Trim;
 - (ii) At the following Stations, Emergency vehicle access can be via the nearest City street: Dominion, Cleary, New Orchard, Iris, Montreal, Jeanne d'Arc, Place d'Orléans, and Orléans;
 - (iii) At Pinecrest Station, Emergency vehicle access can be from the off street bus stopl and,
 - (iv) At Queensview Station, Emergency vehicle access can be from the parking lot and loading dock facilities of 2600 Queensview Drive.

1.3 Design Principles and Guidelines

- (a) Accessibility
 - (i) DB Co shall ensure all Stations and all public spaces are designed for accessibility for persons with disabilities in accordance with Universal Design principles. This shall include satisfying the requirements of relevant federal, provincial and municipal accessibility legislation, standards, guidelines, practices and criteria, including but not limited to Transport Canada, Canadian Transportation Agency Code of Practice - Terminal Accessibility, AODA, OBC, COADS, as well as CSA Standards (including but not limited to CAN/CSA B651). The application of accessible design legislation, standards, guidelines, practices and criteria shall accommodate the needs of persons with different types of disabilities, including those with auditory, intellectual, physical, developmental, visual, learning, and mental health disabilities.
 - A. Adequate clearances shall be provided to accommodate Passengers with mobility devices, luggage, strollers, bicycles, service animals, and support persons, access to benches, and equipment at Stations, public facilities, and all TSA including Station Platforms and bus Platforms.

- (ii) DB Co shall ensure all accessible public spaces and interior routes are connected to accessible entrances and accessible exterior routes.
- (b) Crime Prevention Through Environment Design
 - (i) DB Co shall design all Station-related public accessible areas (Platforms, concourses, entrances and passageways, sidewalks, landscaping, PPUDO's, cycling facilities, MUPs, parking areas, plazas bus Platforms elevators, washrooms and Emergency access) using CPTED principles. An independently contracted CPTED review and report of the Project design shall be provided to the City by DB Co as part of each design submittal, in accordance with Schedule 10 – Review Procedure, and all of the CPTED report requirements shall be incorporated into the Project by DB Co. The independently contracted CPTED review provided by DB Co shall be performed by a qualified CPTED practitioner or practitioners, in good standing with a recognized CPTED national or international organization and who holds current CPTED certification(s).
- (c) DB Co shall implement bird friendly design as follows:
 - (i) All glazing utilized in the Facilities shall be non-reflective type glazing;
 - (ii) Expanses of glazing system in excess of 2 m² shall include pattern to create a visual maker to allow birds to identify the Facilities as solid objects. The pattern density shall be maximum 5cm by 5cm between each element; the pattern elements shall be at least 0.32cm wide; and the visible pattern shall be on the outside of the glass; the glazing shall have a low degree of external reflection (max. 15 %).
- (d) Snow Storage:
 - (i) DB Co shall include the capacity for snow storage in the design of all bus facilities, including bus Platform, bus loop and bus lay-by areas.
 - (ii) DB Co shall provide and install salt-tolerant plants, should landscape areas be used for snow storage.
- (e) DB Co shall design and construct all Stations with provision for maintenance including the following:
 - (i) Access to Station areas without passing through fare gates;
 - (ii) Access into and through Stations for maintenance equipment;
 - (iii) Consideration of roof and ceiling heights above finished floor elevation for maintenance or replacement of ceiling mounted or supported items;
 - (iv) Roof access and fall protection for roof mounted equipment; and,

- (v) Other requirements listed elsewhere in this Part 4.

1.4 Key Individuals

(a) Design Architect

- (i) Project Co shall assign a Design Architect with the qualifications identified in Schedule 9 – Key Individuals, to lead the design of the Project including the following:
 - A. Responsible for development of the overall architectural language and overseeing the design of the Project is executed throughout all phases of design and construction;
 - B. Responsible for overseeing that public art is coordinated with the architectural design;
 - C. Responsible for review and approval of all Level One Structures in accordance with Schedule 15-2 Part 2, Clause 4.4 m (iii);
 - D. Responsible for the presentations of the Stations/Project to the Advisory Committee on Planning Design and Realty at the NCC; and,
 - E. Responsible to ensure all Stations and Facilities submissions for architectural drawing and rendering deliverables (Schedule 10 – Review Procedure) reflect the architectural design intent.

(b) Lead Architect

- (i) Project Co shall assign a Lead Architect with the qualifications identified in Schedule 9 – Key Individuals, to lead all aspects of the Stations and Ancillary Facilities, design planning and execution of the same for the Project including the following:
 - A. Responsible for the ensuring the execution of the architectural design of all facilities is consistent across the Project, including compliance with Federally Mandated Station requirements and compatibility of all other Stations with the Existing Confederation Line Stations;
 - B. Responsible for coordination and integration of all signage and wayfinding, mechanical, structural, electrical, communications, public art and systems, to ensure the integrity of the architectural design;
 - C. Responsible for Stations and Ancillary Facilities interface and coordination with the City and third parties;
 - D. Responsible for the interface with all Governmental Authorities; and,

- E. Responsible for the content and completion of all Stations and Facilities
Schedule 10 – Review Procedures deliverables.

ARTICLE 2 ARCHITECTURAL DESIGN CRITERIA

2.1 Introduction

- (a) This Article 2 presents the specific general criteria that are necessary for DB Co to carry out the design and construction of the components and elements of Stations and other building-type Structures on the system.
- (b) Where Design Criteria related to site specific requirements differs from general requirements, site specific Design Criteria take precedence over general Design Criteria.
- (c) The Confederation Line Stations are an extension of the Existing Confederation Line Stations.
 - (i) For Federally Mandated Stations, DB Co shall design the Stations using the same architectural vocabulary, materials and overall architectural design approach as the existing Confederation Line Stations;
 - (ii) For all Stations not identified as Federally Mandated Stations, DB Co shall develop a single architectural language for the Stations, to be implemented during design and construction. The architectural language shall be aesthetically compatible with the Confederation Line Station designs, and where indicated in Table 4-2.1 Station Elements of Continuity (C)/Variability (V), specific elements of DB Co's design shall be consistent with the Existing Confederation Line Stations utilizing the same materials configuration; and,
 - (iii) Refer to Appendix B of this Part 4 for exemplary drawings and renderings of the Existing Confederation Line Stations.

2.2 Codes and Standards

- (a) DB Co shall design and construct all Facilities in accordance with applicable laws, codes, standards, regulations, guidelines and Governmental Authority.
- (b) Where the requirements stipulated in this document or any referenced sources are in conflict, refer to Schedule 15-2, Part 1, Article 1 – Reference Documents and Submittals for order of precedence.
- (c) The following codes, standards and regulations shall apply to the Works:
 - (i) OBC;
 - (ii) AODA;
 - (iii) COADS;
 - (iv) OFC;

- (v) NFPA 130;
- (vi) OC Transpo Transitway and Station Design Guidelines;
- (vii) The Ontario Heritage Act;
- (viii) CSA including:
 - A. CAN/CSA B44 Safety Code for Elevators and escalators (latest edition including Appendix E);
 - B. CAN/CSA-B651 Accessible Design for the Built Environment;
- (ix) MNECB;
- (x) CPTED as defined on the CPTED website: cptedontario.ca;
- (xi) OHSA;
- (xii) MTO; OPSD, OPSS
- (xiii) NBC, applicable to Federally Mandated Stations;
- (d) Code Analysis
 - (i) DB Co shall perform a code analysis with respect to the OBC and NFPA 130: Standard for Fixed Guideway Transit and Passenger Rail Systems. For Federally Mandated Systems, a code analysis for NBC shall also be performed. The code analysis for each Station shall address the following minimum requirements:
 - A. Building Size, Use and Occupancy;
 - i. Building area and number of storeys;
 - ii. Mezzanines; and
 - iii. Description of Stations as either open or enclosed;
 - B. Structural Design:
 - i. Including where the existing Transitway retaining walls that form part of a Station;
 - C. Occupant load;
 - D. Construction requirements;
 - E. Interconnected floor spaces;

- F. Spatial separation;
- G. Fire department access;
- H. Fire separations and compartmentalization;
- I. Egress and exiting;
- J. Fire protection systems, Emergency power and communication systems;
- K. Emergency Ventilation;
- L. Washrooms;
- M. Barrier free design; and
- N. Alternative Solutions:
 - i. Description of performance; and
 - ii. Proposed method of compliance.

2.3 Elements of Continuity and Variability:

- (a) The design of each Station shall utilize a common vocabulary of elements and features that unifies and identifies the system as a whole maintaining an equal quality of design.
- (b) Station design elements are divided into two classifications: Elements of Continuity and Elements of Variability.
 - (i) Elements of Continuity are standard designs established for the purpose of overall system identity, functional consistency, and a reduction in capital, operations, and maintenance costs. They shall include system-wide components such as signage, elevators, and escalators; systems equipment; handrail and guardrail, and Ancillary Facilities. Where identified as Existing Confederation Line (ECL), DB Co shall utilize same designs as implemented in the Existing Confederation Line Station design and construction.
 - (ii) Elements of Variability shall not be required to be consistent between Stations.

Table 4-2.1

| Station Elements of Continuity (C)/Variability (V) | | |
|--|--------|--------------------|
| Element | C or V | ECL ⁽¹⁾ |
| Information devices, all signs/graphics, including accessibility signs/graphics | | |

Table Notes:

- (1) All items listed as ECL are applicable to Federally Mandated Stations.
- (2) Indicates consistency with ECL required at all Stations.
- (3) Enclosure includes the formed perforated metal shroud.

2.4 Station Sizing and Capacity

- (a) DB Co shall provide Stations sized to meet the following general requirements:
 - (i) DB Co shall provide Station designs sized to accommodate the ridership forecast data provided in this Part 4, and the operational performance requirements as outlined Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements utilizing the Passenger demand forecast for 2031AM peak with the exception of the Underground Stations which shall be designed to accommodate the Passenger demand forecast for 2048 AM peak.
 - (ii) DB Co shall provide bus transfer Stations and Platforms to accommodate the peak hour bus transfer operations, including Passenger flows and bus volumes for 2031.
 - (iii) DB Co shall ensure Stations, Platforms and circulation elements, both horizontal and vertical, are sized to meet the following minimum requirements:
 - A. Minimum Emergency egress provision shall satisfy the requirements of the OBC.
 - B. A Platform clearance time of no more than 0.8 times the shortest Headway anticipated under normal operations for the design capacity.

- i. Two Trains arriving at the same time shall be considered as the base case for modeling purposes for centre Station Platforms.
 - ii. Two Trains arriving at the same time shall be considered as the base case for modeling purposes for side Station Platforms with a shared mezzanine level.
 - C. The maximum calculated Train load utilized for code compliance and Station planning and design shall be calculated by DB Co in accordance with the OBC based on the following Train configurations:
 - i. For design years 2023-2031, the crush load, as defined in the OBC shall be calculated for the maximum capacity of a two-car Train;
 - ii. For Design year 2048, and beyond, the crush load shall be calculated for the maximum capacity of a two-car Train plus an additional module added in one car.
- (b) DB Co shall provide Platforms sized to meet the following general requirements:
 - (i) Platform length shall be as follows:
 - A. The minimum finished Platform length at all Stations shall be as follows:
 - i. All Station Platforms, with the exception of Cleary, New Orchard, and Baseline Stations shall be constructed to an initial length of 90m and protected and planned for an ultimate length of 100m. Protection shall involve ensuring that the future extension of the Platforms can be performed without requiring Track realignment, additional property acquisition, and/or demolition or relocation of any SI or public and private utilities services; and
 - ii. Cleary, New Orchard and Baseline Stations shall have an initial Platform length of 100m. The below grade portion of the Station structure shall be constructed to allow for Platform extensions to 120m in the future without disruption to Revenue Service.
 - (ii) Platform width shall be as follows:
 - A. Platform width shall be calculated in accordance with the requirements of the OBC, NFPA, Passenger data and the level of service for the Platform space as required in this Article 2.
 - B. The final width of the Platform shall be the greater of the following: the minimum required by OBC; the minimum required by NFPA 130; or the minimum width to satisfy the LOS requirements

- i. Calculation of Platform width shall be based upon this Part 4 and Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements, and operational Headways described in Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements.
 - ii. Platform width minimums for Stations shall be as follows:
 1. The calculated width of all Station Platforms, with the exception of Cleary, New Orchard, and Baseline Stations shall be for 2031 operations; and,
 2. The calculated width of Cleary, New Orchard and Baseline Stations shall be for 2048 operations.
 - iii. Both Platforms in a side Platform configuration shall be equal in size based upon the greater of the calculated required width per direction.
 - iv. Shelters, equipment and amenities shall be placed in the centre of the Platform, for centre Platform configuration, to maximize the clearance from shelters, equipment and amenities to edge of Platform for circulation.
 - v. Shelters, equipment and amenities are to be placed adjacent to the side walls, for side Platform configurations
- (c) DB Co shall provide Station elements that meet the Levels of Service as follows:
- (i) The LOS indicated below shall be provided in the design of public spaces as referenced in other parts of this Article 2:
- | Location | LOS | Measure |
|------------------------|-----|------------------------------|
| Platforms (Normal)* | C | 0.8m ² per person |
| Platforms (Emergency)* | D | 0.4m ² per person |
| Waiting Areas | C | 0.8m ² per person |
| Passageways – 1 way | D | 50 ppm per metre |
| Passageways – 2 way | C | 40 ppm per metre |
| Stairways – 1 way | E | 55 ppm per metre |
| Stairways – 2 way | D | 35 ppm per metre |
- *Note: Normal Platform refers to the LOS during the daily peak 15 minutes. Emergency Platform refers to the level of service provided during an Emergency in accordance with OBC.*
- (d) DB Co shall utilize Passenger modeling software to develop and verify the design of all aspects of the Station circulation including but not limited to the interior circulation, vertical circulation, site circulation and bus Platform operations based upon the 2031 and 2048 ridership forecast data provided in this Part 4 and the 2031 and 2048 Operational

requirements as outlined in Schedule 15-2, Part 1, Article 3 – Operational Performance Requirements as applicable at each Station.

- (i) The software utilized by DB Co shall be a proven and widely used product in the design and analysis of rapid transit and intermodal transit facilities.
 - (ii) DB Co shall provide modeling simulations for each Underground Station utilizing Passenger data reflecting Passenger carrying capacities for 2048 as outlined in this Part 4.
 - (iii) Passenger modelling shall to include all physical barriers, such as columns and Station furniture, and include surge spaces around Station equipment such as fare equipment and elevators.
 - (iv) The design of the Station Facilities shall be adjusted based upon the results of the simulation.
 - (v) The Passenger simulation analysis shall be submitted in accordance with Schedule 10 – Review Procedure.
 - (vi) Assumptions used in modelling simulations shall be confirmed and agreed upon between DB Co and the City.
 - (vii) Data and assumptions related to bus activities at Transfer Stations required for the modeling of bus terminal shall be reviewed with the City prior to commencement of any modeling.
- (e) Surge spaces, queuing and runoff
- (i) DB Co shall be responsible for determining the amount of queuing space required at each element within the design to meet the LOS required in each area. The calculated requirements shall be equal to or greater than the requirements below for the following items;
 - A. Runoff provided at the top and bottom of escalators shall be a minimum of 5000mm.
 - B. Surge space provided at the top and bottom of public stairs shall be a minimum of 5000mm.
 - C. Runoff provided space in front of an elevator shall be a minimum of 3000mm.
 - D. Queuing distance provided at fare gates, entry and exit sides shall be a minimum of 5000mm measured from the leading and trailing limits of the gate pedestal.

- i. The coiling door shall not be located as such to reduce the required 5m surge space from the fare gates where coiling doors, are provided at a Station entrance.
 - ii. Queuing distances conforming with the above shall be provided at all fare gates including future gates.
 - E. Queuing space provided at a Ticket Machine or automatic teller shall be a minimum 3000mm when facing a wall or obstruction.
 - F. Queuing space provided at a Ticket Machine or automatic teller shall be a minimum 2000mm when adjoining another queue space.
 - G. Queuing space provided at doors for use by the public to and within Stations within the flow path of Passengers to and from entries, Platforms and vertical circulation, exclusive of coiling doors and grills, shall be a minimum of 3000mm.
 - H. Where two or more elements listed above converge, the surge or runoff spaces shall be cumulative.
- (f) Vertical Circulation shall be sized as follows:
- (i) Vertical circulation for all stations shall be sized to meet the Passenger carrying capacity of the 2048 operations.
- (g) Ridership Forecast Data
- (i) DB Co shall be responsible for ensuring that the SI supports the Passenger demand in Table 4-2.2 and Table 4-2.3 below, and in accordance with this Part 4 and Schedule 15-2, Part 1, Article 3.3 – Operational Design and Construction Requirements.
 - (ii) DB Co shall utilize a ratio of 82.5% to convert the AM peak hour ridership forecast to a PM peak hour ridership forecast.

Table 4-2.2: 2031 AM Peak Hour Ridership Forecast

| Stations | 2031 AM Peak Hour Ridership Forecast | | | | | |
|------------|--------------------------------------|---------------|---------|--------------|---------------|---------|

2.5 Circulation and Egress

- (a) DB Co shall provide vertical circulation in accordance with the following:
 - (i) DB Co Shall provide elevators in accordance with the following:

- A. Where Station design requires elevators, except where noted in this Article 2, each Station Platform, concourse, and entrance shall be serviced by redundant elevators or other alternative route as described in this Part 4.
 - i. The crossing of City or private streets to satisfy the redundancy requirements shall not be permitted.
 - ii. An alternative accessible means of vertical transportation, such as a ramp, shall be permitted, provided the alternative means is within 50m, lit, winter maintained and comply with CAN-CSA B-651,
 - iii. Passengers shall not be required to exit the Fare Paid Zone to access the redundant elevator or alternative route.
- B. Where Station design requires elevators, a minimum of one elevator serving each Platform, and all levels of the Station, shall be sized to allow for an ambulance stretcher in the prone position and customers with bicycles. The other elevator shall provide redundancy for accessibility purposes.
- C. All elevators shall meet the following general requirements:
 - i. Conform to all applicable Acts and codes, including the CAN/CSA B44 Safety Code for Elevators and Escalators (latest edition including Appendix E), OBC, NFPA, NBC, AODA, CSA Accessible Design for the Built Environment CAN/CSA B651, and City of Ottawa Accessibility Design Standards;
 - ii. Be of heavy duty components and construction designed specifically for transportation system usage;
 - iii. All elevator doors including existing refurbished elevators shall be constructed utilizing glass with stainless steel frames to maintain sightlines into the elevator cab.
 - iv. Traction elevators shall be provided where they serve more than 14m of travel; and
 - v. Running time, cycle counters or trip counters that would cause the elevators to shut down or alter their operation in any way, shall not be permitted.
- D. In addition, all new elevators shall have the following:
 - i. The elevator car walls and hoistway walls shall be constructed utilizing glass to maintain sightlines inside and outside of elevator. Both elevator cab and hoistway enclosure shall be constructed of glass.

- ii. Where all glass cab and hoistway is not feasible, a minimum, of 50% of the total elevator cab and hoist way's vertical enclosure surface area shall be constructed of glass;
 - 1 Glass surfaces of the elevator and elevator hoistway shall be aligned.
 - 2 Panels within the elevator shaft required to meet TSSA requirements shall not be opaque.
 - 3 All glass used in the construction of the elevator cab, hoistway, and panels used to meet TSSA requirements where door opening in the hoistway shaft are not present, to reduce gaps between cab and hoistway, etc. shall be transparent vision glass.
 - 4 In lieu of panels located where door openings in the hoistway do not exist, DB Co may substitute, with TSSA approval, a positive door interlock to prevent doors from opening at no door opening locations.
- iii. CCTV camera coverage shall be provided within the cab and at each landing;
- iv. Access locations to elevators shall be weather protected so as to prevent the infiltration of precipitation into the elevator shafts and or cabs;
- v. Elevator cab flooring shall be aluminum, rubber, or other durable, non-absorbent material with a non-slip surface with coefficient of friction of not less than 0.60;
- vi. Elevators shall accommodate a minimum capacity of 1815kg, or the heaviest piece of equipment to be transported between levels for replacement or maintenance of the equipment, whichever is greater;
- vii. The minimum inside cab dimensions shall be 1526mm wide x 2413mm deep with 1200mm wide (clear opening) x 2135mm high doors.
- viii. Minimum car operating speeds shall be 0.5m per second for elevators with a travel distance of less than or equal to 20m and 1m per second for elevators with a travel distance of more than 20m;

- ix. Elevator machine rooms shall be located as near as possible to hoistways with a maximum distance of 20m clear of public walking and landing areas;
- x. Oil heaters shall be installed in the hydraulic elevator storage tank if the elevator is not in a heated area;
- xi. Elevators shall be equipped with a self-recharging battery pack which shall maintain lighting, return the elevator to level of fire department access, open the doors, and render the elevator inoperative in the event of a power failure;
- xii. All elevator keying shall match the keying of the existing elevators within the Existing Confederation Line;
- xiii. Elevators shall be equipped with a hands-free telephone connected with TOCC;
- xiv. Elevators shall contain graffiti-resistant finish material in the cab interior;
- xv. Elevators shall be equipped with a urine detection system;
- xvi. Lighting in elevator cabs shall be LED fixtures. Lighting shall be covered with a protective transparent shield to prevent vandalism;
- xvii. The operating status of the elevator shall be monitored by the BMS system and the TOCC;
- xviii. Elevators shall be controlled at the Station only;
- xix. Elevators intended for use in moving equipment to and from locations within the facility shall be sized to accommodate the intended equipment;
- xx. Elevator pit walls shall be lined with a non-porous material and shall be drained and waterproofed; and
- xxi. Existing elevators within Station Facilities shall be refurbished to meet at a minimum the following:
 - 1 Existing cab and shaft doors shall be replaced with full glass doors;
 - 2 Existing control equipment shall be compatible with the BMS and TOCC monitoring requirements and shall be upgraded, if required;

- 3 DB Co shall ensure existing elevator cabs are provided with CCTV cameras; and,
 - 4 DB Co shall be responsible to make all upgrades to existing elevators in order to obtain certification of the equipment.
 - 5 DB Co shall upgrade the existing elevator, cabs, controls, signage, etc. to meet the current accessibility requirements, excluding any modifications to the cab size.
- (ii) DB Co shall provide escalators in accordance with the following:
- A. Where escalators are required to serve the Train Platform level, DB Co. shall provide a minimum of one escalator serving each Train Platform.
 - B. Escalators shall be provided to serve Baseline Station.
 - i. DB Co shall provide a minimum of one escalator serving each entrance and each level inclusive of the Train Platform, Entrance level and pedestrian Bridge level;
 - C. Escalators shall be provided to serve Lincoln Fields Station.
 - i. DB Co shall provide a minimum of one escalator serving each Train Platform to the Carling Avenue entrance level; and,
 - ii. DB Co shall provide an escalator serving the bus terminal level to the Carling Avenue entrance level.
 - D. Escalators shall be provided to serve Moodie Station.
 - i. DB Co shall provide a minimum of one escalator serving each Train Platform to the pedestrian Bridge level.
 - E. Escalators shall be provided to serve Place d'Orléans Station.
 - i. DB Co shall provide a minimum of one escalator serving the Train Platform to the new pedestrian Bridge level to the bus terminal within the Fare Paid Zone.
 - F. Escalators shall be provided to serve Trim Station.
 - i. DB Co shall provide a minimum of one escalator serving the Train Platform to the pedestrian Bridge level connecting to the Fare Paid entrance adjacent to the bus terminal; and,
 - ii. DB Co shall provide a minimum of one escalator serving the fare paid entrance and bus terminal to the pedestrian Bridge level;

- G. Escalators shall meet the following requirements:
- i. Conform to all Applicable Codes and acts including the CAN/CSA B44 Safety Code for Elevators and Escalators OBC, NFPA, NBC, AODA, CSA Accessible Design for the Built Environment CAN/CSA B651, and City of Ottawa Accessibility Standards;
 - ii. Shall be of components and construction that meet or exceed the requirements for the “Heavy Duty Transportation System Escalator Design Guidelines,” published by the APTA; and
 - iii. Running time, cycle counters or trip counters that would cause the escalators to shut down or alter their operation in any way, shall not be permitted.
- H. In addition, the escalators shall meet the following requirements:
- i. Shall have a minimum step width of 1000mm;
 - ii. Shall have a running headroom of not less than 2200mm;
 - iii. Shall have reversing capabilities. A keying device shall be required to change direction;
 - iv. Shall be capable of operating with a full passenger load at a speed of 0.5m per second in both directions;
 - v. Shall be designed for continuous operation, 24 hours a day, 365 days a year;
 - vi. Shall be capable of operating with full specified performance capability while exposed to the following climatic and environmental conditions:
 - 1 Natural elements of weather and other man made environmental conditions, including sunlight, rain, slush, snow and ice, all conditions of relative humidity while exposed to road salt, airborne dust and debris; and in dry bulb temperature -40°C to 40°C;
 - vii. Step chain rollers shall be mounted outside the chain link;
 - viii. Shall have 3 flat steps at each of the top and bottom landings;
 - ix. Shall have brushes along the skirt panels;
 - x. The sides and bottom of the escalators shall be clad in Type 304 alloy stainless steel conforming to ASTM A167, where exposed;

- xi. Escalators forming part of the required egress route shall be capable of being interlocked with the fire alarm system and shut down in the event of an alarm;
- xii. Shall have a high deck with angled stainless steel balustrades;
- xiii. Status shall be monitored by the BAS in the Station and at the TOCC; and,
- xiv. Shall be able to be controlled at the escalator in the Station.
- xv. Shall have provisions to be controlled remotely at the TOCC.
- xvi. The use of wood, inclusive of fire treated, non-combustible wood shall be prohibited from use in any portion of the escalator or escalator cladding.

(b) DB Co shall provide stairs and ramps in accordance with the following:

(i) Stairs

- A. New stairs shall be constructed of precast or cast in place concrete with precast concrete treads with cast in nosings. Tactile warning strips shall be provided as required by OBC, CAN-CSA B-651, AODA and COADS.
- B. Exterior stairwells within the Station, Emergency egress stairs from the Station, and stairs providing access to the Station shall be fully weather protected or heat-traced to ensure safe usage during the winter;
- C. Sizing shall be per code minimum requirements and per LOS requirements as defined in this Part 4.
- D. DB Co shall design and construct all stairways in compliance with the following criteria.
 - i. Open risers shall not be permitted;
 - ii. Continuous railings shall be provided on both sides of the stairs;
 - iii. Stairs rise and run shall be 30 degrees.
 - iv. Exterior stairway landing levels shall include a grated drainable catchment basin to trap grit, water and snow.
 - v. All public stairs, interior and exterior, shall include a bicycle wheel trough on one side of each flight of stairs.

- 1 For new construction, the bicycle trough shall be integral with the stair construction.
 - 2 For existing stair construction, the trough is permitted to be surface applied, provided the trough, fasteners and accessories to do not reduce the required egress width.
 - 3 All bicycle wheel troughs shall include textured, non-slip surfaces to provide traction for bicycle wheels.
- E. Existing stairs shall be refurbished or replaced to satisfy the Design Life requirements outlined in Schedule 15-2, Part 1, Article 4 – Design and Construction.
- (ii) DB Co shall provide railings in accordance with the following:
- A. Guardrails and handrails shall be provided where required by code and CAN-CSA B-651 as follows:
- i. The design and construction of guardrails for all Stations shall be consistent and an element of Continuity.
 - 1 Guardrails for Federally Mandated Stations shall be consistent with the Existing Confederation Line per drawings contained in Appendix B of this Part 4: STAIR RAILING / GUARD DETAILS; and,
 - 2 For Stations other than Federally Mandated Stations, Guard Materials and detailing shall be of any material and detailing conforming with the requirements of the OBC and satisfying the Design Life requirements per Schedule 15-2, Part 1, Article 4 – Design and Construction.
 - ii. All handrails associated with public stairs and ramps within the Station Fare Paid Zone, on the Station site and providing access to the Station site, shall be stainless steel pipe sections Type 304 alloy conforming to ASTM A167, with smooth brushed finish, supported by cast aluminum or stainless steel bracket supported from wall or guard rail system;
- (iii) DB CO shall provide ramps in accordance with the following:
- A. All interior and exterior ramps shall be universally accessible, including satisfying the requirements of OBC, AODA COADS and applicable CSA Standards, including but not limited to CAN/CSA B651; and,

- B. All interior ramps and exterior ramps providing access to the Station shall be fully weather protected or heat-traced to ensure safe usage during the winter.
 - C. For Station designs that rely only on ramps in lieu of elevators as the accessible route, DB Co shall design the vertical circulation in accordance with the following:
 - i. Each level served by ramps only shall also be served by a stair;
 - ii. The landings of the stairs in the direction of travel from the Station entry to the Platform shall be directly adjacent to each other; and,
 - iii. The landings of the stair and ramp at Platform level shall be separated by a maximum distance of 15.0m.
- (c) DB Co shall provide doors in accordance with the following:
- (i) Power door operators shall be provided for at least one public door into each publicly accessible space and room.
 - (ii) All doors shall have a 980 mm minimum clear width.
 - (iii) Exposed edges of frameless transparent glass public doors and panels shall be framed with a 70% colour contrast material compared to surrounding wall surfaces.
 - (iv) Framed glass public doors shall be finished with a 70% colour contrast material compared to surrounding wall surfaces.
 - (v) Opaque door and frame assemblies shall be finished with a 70% colour contrast compared to surrounding wall surfaces
 - (vi) All doors and gates securing the perimeter of the Station, inclusive of service doors shall be provided with electronic key card access and shall be monitored at the TOCC.
 - (vii) All Emergency egress doors and gates shall be provided with an exterior light that remains on during all hours of darkness and shall be signed for restricted access.
- (d) DB Co shall provide circulation in accordance with the following:
- (i) Public Passageways
 - A. The width of public passageways:
 - i. Shall meet or exceed exiting requirements set forth in the OBC;

- ii. Shall be a minimum of 4000mm; and
 - iii. Shall be sized in order to satisfy the LOS indicated in this Article 2.
 - B. Corridors and passageways shall have a minimum clear height of 3500mm, excluding space required for mechanical and electric services.
 - C. The main accessible path of travel for public passageways in an open area from entrances to the Platform level and all Passenger amenities shall be identified by tactile floor wayfinding.
- (ii) Non public
 - A. The minimal acceptable width of passageways for non-public use shall be the greater of the following: code calculated minimum, 1200mm, as required by accessibility requirements or sized as required to move equipment for maintenance.
- (iii) Public-use pedways within Fare Paid Zone (Overpass / Underpass)
 - A. The minimum clear width shall be 4000mm, unless existing to remain.
 - B. The minimum clear height shall be 3500mm, unless existing to remain.
- (e) DB Co shall provide Emergency egress in accordance with the following:
 - (i) Egress to Track level from the Platform along the length of the Platform for purposes of satisfying code exiting requirements shall be prohibited.
 - (ii) Where required, exiting from the end of the Platform into the Guideway area is acceptable for At Grade Stations in accordance with the following:
 - A. Doors/gates at Platform ends shall be sized appropriately to satisfy code requirements. The door/gate assembly overall height shall be 2450mm;
 - i. For Federally Mandated Stations door/gate design shall be consistent with the Existing Confederation Line per drawings contained in Appendix B of this Part 4: END OF PLATFORM DOOR DETAILS; and,
 - ii. For Station other than Federally Mandated Stations door/gate design shall be similar to the Existing Confederation Line per drawings contained in Appendix B of this Part 4: END OF PLATFORM DOOR DETAILS utilizing a glazing and support system as selected by DB Co.

- B. Doors/gates at Platform ends shall be equipped with panic device hardware;
 - C. The position of doors/gates shall be monitored at the TOCC. Unauthorized opening of the door/gate shall sound an audible signal in the Station and notify the TOCC;
 - D. Beyond the Platform end, the egress path shall be segregated from Track level with a fence or railing system to prevent public access to the Tracks and or crossing the Tracks;
 - i. Railing system shall be designed to meet the OBC requirements for a guardrail including but not limited to structural capacity and balustrade spacing.
 - E. The path of travel shall lead to a public way;
 - F. The path of travel must be designed and constructed to allow winter maintenance; and,
 - G. Crossing of the Tracks to access the public way shall be prohibited.
- (iii) Pathways connecting a Station Platform to a MUP, roadway, or sidewalk, to satisfy Emergency egress requirements from the Stations, shall include the following requirements:
- A. Egress lighting;
 - i. The lighting level shall at a minimum meet the requirements of OBC for Emergency egress lighting; and
 - ii. Lighting shall be interconnected with the fire alarm system and be activated only in the event of an Emergency situation.
- (f) DB Co shall provide Station entrances in accordance with the following::
- (i) Entrances to Stations for use by the public shall be equipped with doors, coiling grilles or ornamental gates or other means to secure the Station buildings during hours of non-operation.
 - A. All doors, inclusive of coiling grills shall be capable of being remotely opened, closed and locked from the TOCC;
 - B. All doors shall be equipped with IAC and card access; and,
 - C. The status of all doors shall be remotely monitored by the TOCC.

- (ii) Each mode of transportation at Transfer Stations shall be capable of being secured separately when hours of operations differ.
 - A. Public access to/from the bus terminal at Transfer Stations shall be maintained 24 hours per day.
 - B. Bus Passengers shall have access to Ticket Machines during bus operating hours.
- (iii) All doors, coiling grills, etc. used to secure the Stations shall be equipped with electric operators, and controlled both locally and remotely from the TOCC.
- (iv) Each Station entrance shall have a maintenance access in accordance with the following:
 - A. Maintenance door shall have a clear width of at least 1200 mm;
 - i. Use of fare gate for maintenance access shall be prohibited; and
 - B. Maintenance door shall be accessible when the Station is closed to public use.
- (v) DB Co shall provide recessed floor grilles at all Station entrances located directly adjacent to the fare gates:
 - A. The floor grills shall extend the full width of the fare gate array, inclusive of the future fare gate allowances, and a minimum distance of 2.5m from the leading and trailing face of the fare gate pedestal.
 - B. Each floor grille shall be equipped with a floor drain.
 - C. Each floor grille drain and drainage pan shall be heat traced.
- (g) DB Co shall provide wayfinding in accordance with the following:
 - (i) Provide tactile floor wayfinding throughout all Stations inclusive of bus Facilities including bus boarding locations within the Fare Paid Zone, and on street bus stops in compliance with OBC, COADS and CAN/CSA B651: Accessible Design for the Built Environment.

2.6 Functional Requirements

- (a) DB Co shall design and construct the Stations to meet the functional requirements as indicated in Appendix A of this Part 4:
- (b) Where bus services are provided, the DB Co shall provide all surface facilities including bus Platforms, drives, slips, etc. to accommodate all buses including articulated and double decker buses and in accordance with the following:

- (i) All OC Transpo facilities, (bus operator rooms, washrooms, multipurpose room, lunchrooms, etc.), shall be designed to be universally accessible.
- (ii) All OC Transpo facilities, (eg: bus operator rooms, washrooms, multipurpose room, lunchrooms, etc.), shall be access controlled by key card.
- (iii) All washrooms for use by OC Transpo shall be designed and constructed to meet the requirements of OBC and COADS.
- (iv) Where required in Appendix A of this Part 4, bus operator Facilities shall be provided as follows:
 - A. All bus operator Facilities at all Stations, with the exception of Place d'Orléans and Bayshore Stations, shall be standalone Facilities.
 - B. All bus operator Facilities, with the exception of Place d'Orléans and Bayshore Stations, shall be located as to separate OC Transpo bus operators from Passenger areas and bus Platforms.
 - C. New Facilities shall be constructed to meet the requirements of the City's standard bus operator building.
 - D. All bus terminals shall be provided with a designated walking area for bus operators to safely walk between the bus lay-up and bus operator facility.
 - E. DB Co shall register each new Facility with the GBC and provide documentation for all credits necessary for "Certified" status.
 - F. Program elements within the facility shall include the following:
 - i. Multiple occupancy male washroom with ceiling mounted embossed stainless steel partitions with the following plumbing fixture count;
 - 1 Two lavatories;
 - 2 Two water closets; and,
 - 3 One urinal.
 - ii. Multiple occupancy female washroom with ceiling mounted embossed stainless steel partitions with the following plumbing fixture count;
 - 1 Two lavatories; and,
 - 2 Two water closets.

- iii. Universal washroom satisfying the requirements of COADS and CAN-CSA B-651;
- iv. Washroom fixtures and accessories shall meet OC Transpo requirements, including but not limited to mirror, toilet tissue dispenser, soap dispenser, paper towel dispenser, and trash receptacle.
- v. Janitor closet with mop sink, accessible from within the Facility;
- vi. Breakroom with kitchenette and casework for concurrent use by four people;
- vii. General power requirements, including dedicated power circuits for each of the following: microwave oven, refrigerator, and toaster oven; and vending machines;
- viii. Space for a refrigerator, vending machine, and microwave;
- ix. Water cooler with bottle filler;
- x. Staff work areas;
- xi. Maintenance room with slop sink, accessed from the exterior and interior from the staff area;
 - 1 Shall be a minimum of 60m², with no side less than 6m in length;
 - 2 Shall be equipped with a personnel door and a 4m wide overhead door to the exterior.
 - 3 Shall be equipped with a personnel door and a 4m wide overhead door to the staff area;
 - 4 Shall have at a minimum of one floor drain.
- xii. Building entry and maintenance room shall have electronic access control;
- xiii. Mechanical and electrical support rooms;
 - 1 DB Co shall provide a building automation system per Article 5 - Mechanical Design Criteria of this Part 4, which is compatible with existing OC Transpo BMS.
- xiv. Communication room to support City equipment;

- xv. New buildings shall be designed and constructed with materials compatible with the adjacent Station; and,
- xvi. New buildings at Federally Mandated Stations shall be consistent with the Existing Confederation Line bus operators' buildings.
- G. Buildings shall provide illumination level of 25fc to be achieved via natural daylighting over 75% of all floor spaces. Windows shall conform to City's standard bus operator building requirements; and
- H. Building shall be equipped with telephone and data services.
 - i. All staff spaces shall be equipped with data and communications outlets.
- I. The flooring in all spaces, excluding building service support spaces and the maintenance space, shall be finished with Stonehard flooring system or other similar resinous flooring system as approved by the City.
- (v) All Transfer Station bus drives, Platforms, and lay-by areas shall have a vertical clearance of no less than 5m.
- (c) DB Co shall design and construct LRT Operator rooms per the following:
 - (i) Shall be provided as indicated in Appendix A of this Part 4;
 - (ii) Shall at a minimum include the following:
 - A. Breakroom with kitchenette and casework designed for concurrent use by four people;
 - B. General power requirements, including dedicated power circuits for each of the following: microwave oven, refrigerator, vending machine, and toaster oven;
 - C. Data/communication outlets;
 - D. Phone line;
 - E. Space for a refrigerator, vending machine, and microwave;
 - F. Two small work stations, one with a computer;
 - G. Water cooler with bottle filler;
 - H. Double tier lockers
 - i. 16 unit, 300mm w x 300mm d x 900mm h each

- I. Universal single occupancy male washroom;
 - J. Universal single occupancy female washroom;
 - K. Stonehard flooring system or other similar resinous flooring system as approved by the City; and,
 - L. DB Co shall provide space for and provide one 900mm wall mounted electronic display with power and data connection.
- (iii) Shall be located at Platform level with direct access to a Platform without using vertical circulation; and,
- (iv) DB Co shall provide one 32" wall mounted electronic display with power and data connection for the HASTUS.
- (d) DB Co shall provide public washrooms within the Fare Paid Zone in accordance with the OBC at Terminal Stations, Moodie, Trim and Baseline.
- (i) In addition to the Terminal Stations, DB Co shall provide public washrooms within the Fare Paid Zone, complying with OBC Terminal Station requirements at Lincoln Fields Station and Place d'Orléans Station.
- (e) Bus supervisor's office
- (i) DB Co shall provide bus supervisor's office at the Transfer Stations as indicated in Appendix A of this Part 4. The bus supervisor's office shall have the following requirements:
- A. Shall be located at bus Platform level, within the Station;
 - B. Shall be located adjacent to the bus transfer Platform and contain a line of site to monitor bus operations;
 - C. Shall be have a minimum area of 12m² with no side less than 3m;
 - D. Shall be conditioned;
 - E. Shall be accessed from the bus Platform area; and
 - F. Shall be equipped with a minimum of two data and two telephone connections.
- (f) Retail spaces
- (i) DB Co shall provide retail spaces as indicated in Appendix A of this Part 4.
- (ii) DB Co shall design and construct Third Party retail spaces as follows:

- A. Shall be a minimum of a 20m² accessible from within the Fare Paid Zone;
 - B. Shall be protected from exposure to precipitation;
 - C. Shall have electrical, mechanical, and communications services roughed in for the protection of future development;
 - D. Shall provide power provisions and sufficient space for a third party distribution panel with 100amp service;
 - E. Shall Provide sufficient power provision for HVAC (min 100 amp service); and,
 - F. Shall have domestic water, fire suppression water, and sanitary services roughed in for the protection of future development.
- (iii) Once developed and occupied by a tenant, control of retail spaces and revenue generated from the retail space shall belong to the City.
- (g) OC Transpo Multi-purpose Rooms
- (i) DB Co shall provide OC Transpo Multi-purpose Rooms as indicated in Appendix A of this Part 4.
 - (ii) DB Co shall design and construct OC Transpo Multi-purpose Rooms as follows:
 - A. Shall be a minimum of 16m²;
 - B. Accessible from within the Fare Paid Zone;
 - C. Provided with one workstation;
 - D. Provided with electrical, City data outlets and communications;
 - E. Table and chairs designed for concurrent use by up to three people;
 - F. Space for storage of printed materials;
 - G. Space for displaying fares and service information/posters; and,
 - H. Shall be secured with electronic access control.
- (h) Automatic teller machines:
- (i) DB Co shall provide all required infrastructure to support the installation of ATM and coordinate their location with the City in the following Stations:
 - A. Lincoln Fields, Baseline, Bayshore, and Place d'Orléans.

- (i) DB Co shall design and construct public parking as follows:
 - (i) Park and Ride Facilities shall be provided at the Stations indicated in Appendix A to this Part 4.
 - (ii) All Park and Ride Facilities shall be designed and constructed as follows:
 - A. Vehicle parking spaces:
 - i. Shall be between 2.6m to 2.75m wide; universal accessible parking spaces shall be compliant to CAN-CSA B-651, COADS and;
 - 1 Surface lot parking spaces shall be 90 degree;
 - 2 A maximum of 5% of parking spaces located in each Park and Ride Facility are permitted to be reduced a width of 2.4m and length of 4.6m provided the spaces are clearly signed for compact cars only; and,
 - 3 The reduction in parking space width permitted in the City of Ottawa Zoning By-law, Parking Space Provisions (Sec. 106) subsection (3) shall not apply to this Project.
 - ii. Shall be 5.2m in length;
 - iii. DB Co shall provide each Park and Ride Facility with charging stations for plug in electric vehicles in accordance with the following:
 - 1 0.5% of the spaces in each Park and Ride shall have charging stations. Each space shall be served by one unit, or two spaces can be shared by a unit with two independently functioning dispensers;
 - 2 Each charging station shall be Level 2 charging stations with credit card payment;
 - 3 Each charging station shall have power conduits, handholes etc. for electric supply;
 - 4 Each charging station shall have conduits, handholes etc. for data and communications;
 - 5 Each charging station shall have foundation and concrete slab per manufacture's requirements; and,
 - 6 Each charging station shall have identification and operating signage for each charging station.

- B. Drive aisles:
 - i. Drive aisles within the parking areas shall be a minimum of 6.7m wide.
- C. Snow Storage
 - i. DB Co shall design and construct the Park and Ride Facilities accommodate snow storage with no reduction to the minimum number of required parking spaces.
 - ii. Vegetation located in areas identified for snow storage or within the drainage area of the snow storage area shall be salt resistant.
- (j) DB CO shall design and construct support spaces required for the operation of Stations and Facilities consistent with the Existing Confederation Line Stations including but not limited to the following:
 - (i) Support spaces shall not be accessible to the public and shall be access controlled by key card system compatible with the Existing Confederation Line access control system.
 - (ii) DB Co shall design and construct access to all areas of the Station that require maintenance with personnel doors. Access hatches to rooms or areas such as TVS rooms and vent shafts, which would be considered confined spaces, shall not be permitted.
 - (iii) DB Co shall design and construct Stations with provisions for the removal and installation of all fixed equipment including:
 - A. Equipment install/removal routes for TVS fans, transformers, rectifiers and all other large equipment including pathway through open space, corridors and openings;
 - B. The Structure within all equipment removal/installation routes shall be designed and constructed to support the live load of the equipment; and,
 - C. DB Co shall provide all fixed equipment to facilitate the installation/removal including lifting beams.
 - (iv) Support spaces and area requirements listed below are minimums only, and may not represent all spaces required to support a fully functioning Station. DB Co shall be responsible to determine the final space requirements to support the system and required sizes to house all equipment and maintain clear working space clearances.
 - A. Maintenance staff washrooms:

- i. Each Station shall have 1 maintenance staff unisex washroom, in addition to OCT washrooms and public washrooms, for the exclusive use by maintenance staff;
 - ii. Maintenance staff washrooms are not required to meet COADS; and
 - iii. Washroom accessories shall include mirror, toilet tissue dispenser, soap dispenser, paper towel dispenser and trash receptacle.
- B. OC Transpo Washrooms
 - i. Westboro and Pinecrest Stations shall have one OC Transpo staff unisex washroom, in addition to maintenance washroom, for the exclusive use by OC Transpo staff;
 - ii. OC Transpo staff washrooms shall meet COADS; and,
 - iii. Washroom fixtures and accessories shall meet OC Transpo specifications, including but not limited to mirror, toilet tissue dispenser, soap dispenser, paper towel dispenser and trash receptacle.
- C. SER
 - i. A dedicated SER shall be located in Baseline, Moodie, Lincoln Fields, Dominion, Montreal, Orleans Blvd, and Trim Stations;
 - ii. Minimum room size shall be 60m².
- D. Communications room:
 - i. A dedicated communications room shall be located in all Stations;
 - ii. Minimum room size shall be 60m².
- E. Electrical room:
 - i. A dedicated electrical room shall be located in all Stations;
 - ii. Minimum room size shall be 45m².
- F. Telephone room:
 - i. A dedicated telephone room shall be located in all Stations;
 - ii. Minimum room size shall be 2m².

- G. Mechanical room:
 - i. A dedicated mechanical room housing equipment to heat and cool support spaces shall be located in all Stations;
 - ii. Minimum room size shall be 40m².
- H. Janitor room:
 - i. A minimum of 1 janitor room shall be located in all Stations;
 - ii. Shall have a mop sink, 48"x12"x75" 5 shelf stainless steel shelving unit;
 - iii. Minimum room size shall be 20m²;
 - i. In addition to the janitor room identified in Clause i above, DB Co. shall provide an additional janitor closet within 5.0m of all public washroom facilities; and,
 - ii. DB Co shall provide at a minimum one janitor room at the LRT Platform location at Trim Station and Place d'Orléans Station.
- I. Snow removal equipment room:
 - i. A minimum of 1 snow equipment removal room shall be located in all Stations;
 - 1 Minimum room size shall be 20m²;
 - 2 DB Co shall design and construct all snow removal equipment rooms to allow the storage of up to 2, 25L containers of gasoline, including ventilation and fire rating as required by all applicable Codes and Standards; and,
 - 3 Snow room shall be shared with Emergency Services.
 - ii. In addition to the above, Westboro, and Baseline Stations shall have one additional snow removal room located adjacent to the bus terminal for use by the City.
- J. Elevator machine room:
 - i. This section applies only to Stations where elevator equipment requires a machine room;
 - ii. Each Station equipped with elevators shall have elevator machine room(s);

- iii. Elevator machine room minimum size shall be as required by equipment manufacturer; and,
 - iv. Elevator machine room shall contain only elevator equipment and equipment to support the same.
- K. TPSS rooms within Stations:
- i. TPSS rooms shall be located within Stations at Lincoln Fields and Cleary Stations;
 - ii. Minimum size of TPSS room shall be 120 m²;
 - iii. Minimum clear height shall be 4m;
 - iv. Room shall be equipped with pair of doors or overhead door with a nominal clear opening of 3.2 m x 3.2 m; and,
 - v. DB Co shall design and construct the Station for the removal and replacement of equipment.
- L. TPSS package units adjacent to Stations:
- i. DB Co shall design and construct all TPSS packaged units located within the Guideway and adjacent to a Station as follows:
 - 1 A hard surface walkway with a minimum width of 1200mm shall be provided for personnel access to the TPSS;
 - 2 Access to the walkway shall be restricted from all public areas of the Station including the Platform by an access controlled gate or door;
 - 3 Access walkway shall be segregated from the guideway by protective fencing with a minimum height of 1.0 m;
 - 4 Access to Track level of the Guideway from the access walkway shall be restricted by an access controlled gate; and,
 - 5 DB Co shall design and construct the Station, and systems for the removal and replacement of equipment.
- M. Fan room:
- i. Fan rooms shall be provided as required in Underground Stations;
 - ii. Fan room shall be sized to house required equipment; and,

- iii. Fan room and pathway shall be sized for the replacement of largest piece of equipment within the room.

N. Mobile generator

- i. Where required in Article 6 – Electrical Design Criteria of this Part 4, DB Co shall provide parking for a vehicle and trailer mounted generator within 6m of the generator connection point to the Station electrical system; and,
- ii. Where dedicated parking area is not available within the vicinity of the Station, DB Co shall request permission from the City to allow vehicle and trailer parking on the public roadway, prior to submission of the Final Design Development submittal.

O. Refuse room:

- i. A minimum of one refuse storage room shall be located in all Stations;
 - 1 Minimum room size shall be 8 m²; and,
 - 2 At Moodie, Trim and Place d'Orléans, DB Co shall locate one refuse room in the LRT Platform area of the site.

P. Rail operations storage room:

- i. DB Co shall provide a storage room for the exclusive use of the City rail operations in each Station;
 - 1 Minimum room size shall be 8 m² with no side less than 2.5m.

(k) Rail supervisor's office

- (i) DB Co shall provide rail supervisor's office at Baseline Station and Trim Station. The rail supervisor's office shall have the following requirements:
 - A. Shall be located at Platform level within the Station;
 - B. Shall be located adjacent to LRT Operator's room;
 - C. Shall be have a minimum area of 12m² with no side less than 3m;
 - D. Shall be conditioned;
 - E. Shall be accessed from the Platform area; and,

- F. Shall be equipped with a minimum of two data and two telephone connections.
- (l) Maintenance crew room
 - (i) DB Co shall provide a maintenance crew room as indicated in Appendix A of this Part 4. The maintenance crew room shall have the following requirements:
 - A. Shall be a minimum of 16m²;
 - B. Accessible from within the Fare Paid Zone;
 - C. Shall be conditioned;
 - D. Provided with one workstation; and,
 - E. Provided with general use electrical, data outlets, and communications.

2.7 Project Elements

- (a) DB Co shall provide Train Platforms in accordance with the following:
 - (i) Platform Vehicle interface
 - A. The finished level of the Platform at Platform edge shall be level with finished floor height of the Revenue Vehicle, 356mm above TOR.
 - B. The finished edge of the Platform shall be located 1440mm from the centerline of Track.
 - (ii) Platform Drainage
 - A. The cross slopes of the Platforms shall not exceed 2% with a minimum of 1% toward the Track or away from the Track.
 - B. The longitudinal slope of the Platform surface shall not exceed 1.5%.
 - C. The path of travel lanes on the Platform shall comply with OBC, NFPA and all accessibility requirements.
 - (iii) Platform floor finish
 - A. The finished floor material shall have an integral non-slip surface with a wet static coefficient of friction of at least 0.60 or higher by ASTM C 1028.

- B. A detectable tactile warning strip, comprised of a non-slip, colour contrasting surface consistent with the Existing Confederation Line Stations shall be placed along the trackside edge of the Platform.
- C. Floor colour and texture shall be different from the flooring in the areas approaching the Platform.
- D. The floor finish in all Stations, except Underground Stations and Federally Mandated Stations, shall be cast in place concrete with consistent colour, pattern, Platform edge tile treatment, etc. applied through all Stations.
- E. The floor finish in Federally Mandated Stations shall be consistent with the Existing Confederation Line Stations, including material, colour, pattern, Platform edge tile treatment, etc.
- F. The floor finish for Underground Station Platforms shall be porcelain tile having a non-slip surface with a coefficient of friction of at least 0.60.
- G. Wall finishes for all Station Platforms shall be as follows:
 - i. Station Platform walls at Cleary, New Orchard and Baseline, inclusive of the existing CMU walls separating the Revenue Service Tracks from the future Storage Tracks, shall be finished with a unique colour accent and/or tiled design or pattern to be selected by the City during the design phase of the Project to provide each Station with a unique, distinctive look and feel to aid with customer navigation, identification, and enjoyment of the system.
 - ii. For Federally Mandated Stations wall finishes shall be consistent with Existing Confederation Line Stations, including but not limited to large format porcelain panel system and glazing.
 - iii. For Stations other than Federally Mandated Stations, wall finishes shall be nonporous, durable materials meeting the Design Life requirements of Schedule 15-2, Part 1, Article 4 – Design and Construction, and shall be impact resistant to a height of 2.5m above the adjacent walking surface. Acceptable materials shall include, glass, precast concrete, porcelain tile, cast in place concrete, and natural stone and composite metal panels. Exposed or paint CMU is prohibited from use in public areas, with the exception of the CMU at Baseline separating the Revenue Service Tracks from the future Storage Tracks, which shall be sealed and painted.

- H. Lighting fixtures shall be installed at the ceiling, signage band or underside of the roof Structure to provide continuous light on the Platform edge warning strip.
- I. Floor hatches and or floor access doors shall not be placed within the Platforms.
- (iv) Clearances from Platform
 - A. Vertical Clearances above Platform Surface
 - i. Any Station element that could be targeted for theft or vandalism (e.g. light fixtures, speakers, CCTV cameras, etc.) shall be located a minimum of 3050mm above the finished Platform surface. DB Co shall consider the possible use of benches, waste receptacles and other items by vandals to stand on to reach these elements; the placement of all items in DB Co's design shall reduce this potential.
- (v) Service Outlets
 - A. Service outlets required for power and water shall be as follows:
 - i. Electrical – provide 15 A/120 V split receptacles at 20m intervals along the Platform area in addition each TSA shall have one 15A/120 V split receptacle.
 - ii. Water Hose Bibs – provide a minimum of 1 tamper proof hose bib on each Platform.
 - 1 Water hose bibs shall be designed, located, and selected as to be protected from freezing.
- (vi) Service/Maintenance Personnel Access Requirements
 - A. DB Co shall provide access from the Platform to Track level at each end of each Station Platform. Access off of the end of the Platform shall be restricted by and end of Platform door. Door shall be signed and alarmed to prevent unauthorized access. Door status shall be monitored by the TOCC. Door design shall be as per Clause 2.5 (e) of this Part 4.
 - B. DB Co shall provide an access path with a minimum clearance of 1200mm throughout all areas of the Station for the movement of maintenance equipment.
- (vii) DB Co shall provide inner-car barrier protection on all Train Platforms as follows:
 - A. Inner-car barrier shall be consistent with the Existing Confederation Line;

- B. Comprised of flexible bollards spaced as required to provide a clear distance between bollards of not greater than 200mm;
 - C. Shall be located on the Platform edge, centered on a coupled Train;
 - D. Minimum length of 6m;
 - E. Located within the detectable Platform edge warning tile;
 - F. No less than 900mm above the Platform finished floor level; and,
 - G. Color shall be safety yellow.
- (viii) Inter-Track barriers:
- A. All side Platform configured Stations shall be provided with a continuous barrier fence between Tracks.
 - i. The barrier shall be 1960mm high from TOR and extend a minimum of 15m beyond the end of the Station Platform at each end of the Station.
 - ii. Inter-Track barrier shall be as per Appendix B of this Part 4.
 - iii. A gap of no more than 100mm between the bottom of the barrier and the surface below, (ballast, concrete, etc) shall be permitted; and,
 - iv. The barrier shall be non-climbable and designed to allow visibility from Platform to Platform.
- (ix) Platform snow melting
- A. All Platforms, with the exception of Underground Stations, shall be provided with in slab electrical heating elements to remove snow and ice;
 - B. Platform heating shall include the area of the Platform edge warning tile; and
 - C. Platform heating electrical supply shall be sub metered.
- (b) DB Co shall provide weather protection for the Stations in accordance with the following:
- (i) DB Co shall provide a micro climate study of the building envelope and its configuration with respect to the micro-climatic and geographical location of each Station to determine the extent of the weather protection required. DB Co shall reflect the requirements of the micro climate in the design of the Stations.

- (ii) The micro climate study shall be submitted in accordance with Schedule 10 – Review Procedure.
- (iii) Roof requirements:
 - A. DB Co shall provide roof structures covering the Platform area at all Stations, with the exception of the Baseline Station, as per the following:
 - i. DB Co shall determine the extent of roof coverage required utilizing the Passenger forecast data and the results of the micro climate study for each Station identified in (i) above;
 - ii. Roof structures shall cover the entire width of the Platform with the exception of “Type C” roof canopy design contained in Appendix B;
 - iii. DB Co shall be responsible to determine the applicability of extending the roof coverage beyond the edge of the Platform based upon the results of the micro-climate study for each Station identified in Clause 2.7(b)(i) of this Part 4 above;
 - iv. DB Co shall determine the appropriate height of the roof structure above the Platform surface based upon the results of the micro-climate study for each Station identified in Clause 2.7(b)(i) of this Part 4 above;
 - v. DB Co shall design all roofs including Station roofs and pedestrian Bridges to prevent snow and ice from falling on to adjacent pedestrian or vehicular areas including roadways, sidewalks, MUPs, and plazas; and,
 - vi. The use of fritted glazing with up to 20% opaque surface shall be permitted in the “Type C” roof canopy design contained in Appendix B. Fritting shall be integral with glazing panel composition. The use of surface applied fritting on exposed surfaces of the glazing system shall not be permitted.
 - B. Roof structures shall cover all vertical circulation elements (stairs and ramps within the Stations, stairs providing access to the Stations outside of the Fare Paid Zone, escalators and elevators) and Fare Control equipment.
 - i. All fare gates shall be weather protected from rain infiltration and snow accumulation at fare gates in accordance with the following:
 - 1 DB Co shall design the Station entries to limit exposure of the fare gates to direct precipitation in the form of rain and wind blown rain to 1.1% (95 hours) of the hours in a year;

- 2 DB Co shall design the Station entries to limit exposure of the fare gates to direct precipitation in the form of snow to 6.1% (265 hours) of the total hours between October 15 to April 15 months; and,
 - 3 DB Co shall validate the values above for each entrance of each Station by computer simulation and shall submit the findings of the micro climate simulation in accordance with Schedule 10 – Review Procedure, as part of the Works Submittal for each Station.
- ii. DB Co shall be responsible to implement any required design changes as a result of the microclimate studies for each required submission.
- 1 In the event that DB Co makes modifications to any entry design following the submission of the final micro climate study, DB Co, at no cost to the City and without schedule impact, shall resubmit the microclimate study for the affected Station to ensure conformance with the requirements of Clause 2.7(b)(iii)B,i of this Part 4. Should the study indicate nonconformance with the requirements, DB Co shall redesign and repeat the process until conformance with Clause 2.7(b)(iii)B,i of this Part 4, is confirmed.
- C. DB Co shall be responsible for all interfaces and implications of the Platform roof structures, where applicable, and all Platform elements, including but not limited to the following:
- i. Interface of roof structure with Train;
 - ii. Protection of OCS from falling ice and debris;
 - iii. Protection/isolation of any roof structure from stray current;
 - iv. Support of OCS;
 - v. Integration of lighting and signage requirements; and
 - vi. Integration of any other Station or systems element.
- D. Any and all roof top equipment shall be completely screened from all public areas, inclusive of views from within the Lands and all surrounding areas.

- E. DB Co shall design all roofs including Station roofs and pedestrian Bridges to prevent snow and ice from falling on to adjacent pedestrian or vehicular areas including roadways, sidewalks, MUPs, and plazas.
- (c) Windscreens:
- (i) DB Co shall provide wind screens for Passenger protection from the elements. Windscreens shall be predominately glass walls.
 - A. The use of wood windscreens shall only be permitted in locations not accessible to the public.
 - B. The design of windscreens for Federally Mandated Stations shall be consistent with the Existing Confederation Line designs: and,
 - C. The design of windscreens for Stations other than Federally Mandated Stations shall be of glazing and support system as selected by DB Co.
 - (ii) At a minimum, windscreens shall be provided at the perimeter edge of the Platform (side Platform) or outside edge of the Guideway (centre Platform).
 - A. Wood windscreens shall not be permitted for use in this application.
 - B. For Stations located within the median of a highway, windscreens shall be constructed of an MTO approved precast concrete sound barrier.
 - (iii) In addition to the above, the micro climatic and geographical location study of each Station shall determine the extent of the windscreen, including: where windscreens are required, extent of windscreen required, and required height of windscreen.
- (d) Fare collection and control:
- (i) DB Co shall plan, design, and construct all Stations with provisions for installation of a fare control system including but not limited to fare control gates and Ticket Machines to be installed by the City.
 - A. Fare control equipment provisions and requirements shall not apply to existing Stations (Blair and Tunney's Pasture) with existing equipment previously installed if not modified by DB Co.
 - B. Each entry shall be provided with a minimum of two standard fare gates, two wide gates, and two Ticket Machines. The designated accessible gate shall always be placed furthest to the left when entering the Fare Paid Zone with the second wide gate at the other end of the array.
 - i. The fare paid entrance serving the pedestrian Bridge at Baseline Station to the [REDACTED] does not require Ticket Machines.

- C. Each fare gate array shall be contiguous and not broken or obstructed by any other elements, including structural supports within the fare array or surge space.
- D. DB Co shall provide the minimum clear working distances from the fare gate pedestals as follows:
- i. When approaching the fare array from the non-fare paid side provide a minimum of 130 mm on the left side of the fare array to a wall, barrier or obstruction of any kind.
 - ii. When approaching the fare array from the non-fare paid side provide a minimum of 475mm on the right side of the fare array to a wall, barrier, or obstruction of any kind.
 - iii. Barriers to delimit the Fare Paid Zone at the gate array shall be located in the center of the length of a gate array and installed perpendicular to the gate arrays.
 - iv. In addition to the clearance requirements above, DB Co shall provide space in the array for the addition of one 1 fare gate in the future to the right of the gate array. This space shall be protected for by providing a 1.5m high glass barrier centred on the fare gate pedestal.
- E. The following Tables indicate the minimum quantities of fare collection and control equipment required at each Station subject to revision based on DB Co's Station designs and Passenger modelling and approved by the City:

| Confederation Line West | | | | | |
|-------------------------|--------------------------|----------------|----------------------------|-----------|------------------|
| Station | No. of Station Entries * | Ticket Machine | Smartcard Enable Fare Gate | | |
| | | | Standard Gate | Wide Gate | Total Fare Gates |
| Westboro | 2 | 4 | 6 | 4 | 10 |
| Dominion | 1 | 2 | 3 | 2 | 5 |
| Cleary | 1 | 2 | 3 | 2 | 5 |
| New Orchard | 1 | 2 | 3 | 2 | 5 |
| Lincoln Fields | 3 | 6 | 6 | 6 | 12 |
| Iris | 2 | 4 | 4 | 4 | 8 |
| Baseline | 3 | 4 | 9 | 7 | 16 |
| Queensview | 1 | 2 | 2 | 2 | 4 |

| | | | | | |
|----------|---|---|---|---|---|
| Pincrest | 1 | 2 | 2 | 2 | 4 |
| Bayshore | 2 | 4 | 4 | 4 | 8 |
| Moodie | 1 | 2 | 2 | 2 | 4 |

* In the event that DB Co's Station design varies the number of entrances from the quantity indicated in the table above, the quantities of fare control equipment shall be modified and approved by the City.

| Confederation Line East | | | | | |
|--------------------------------|--------------------------|----------------|----------------------------|-----------|------------------|
| Station | No. of Station Entries * | Ticket Machine | Smartcard Enable Fare Gate | | |
| | | | Standard Gate | Wide Gate | Total Fare Gates |
| Montreal | 2 | 4 | 4 | 4 | 8 |
| Jeanne d'Arc | 2 | 4 | 4 | 4 | 8 |
| Orléans | 2 | 4 | 4 | 4 | 8 |
| Place d'Orléans | 4 | 8 | 8 | 8 | 16 |
| Trim | 1 | 2 | 4 | 2 | 6 |

* In the event that DB Co's Station design varies the number of entrances from the quantity indicated in the table above, the quantity of fare control equipment shall be modified and approved by the City.

- (ii) DB Co shall ensure that all building services and feeds are sized appropriately to accommodate the fare collection equipment.
- (iii) DB Co shall provide a 1.5m-high minimum glass barrier adjacent to the fare gate equipment and extending to a wall or other building element to provide protection of the Fare Paid Zone.
- (iv) DB Co shall plan and design the location of equipment so as to ensure the year round operation of the fare equipment, by ensuring protection of the fare collection equipment from direct precipitation, including but not limited to wind-driven rain, snow, and sleet, and drifting snow, in accordance with Clause 2.7(b)(iii)B,i Fare vending equipment placement shall mitigate glare from sunlight on the screen.
- (v) DB Co shall ensure the integrity of the Fare Paid Zone at all Transfer Stations.
- (vi) DB Co shall ensure consistent location of fare collection devices at Stations and in keeping with Existing Confederation Line Stations and weather protection requirements.
- (vii) All Ticket Machines located in public spaces shall be recessed, with overhead canopies extending to the required queuing space. Ticket Machine placement shall also mitigate glare from sunlight on the screen.

- (viii) DB Co shall design Stations' fare collection equipment to be flush, fixed, and integrated with Station infrastructure, unless otherwise noted, to avoid removal by unauthorized persons.
 - A. DB Co shall construct all surfaces for design and installation of the fare collection equipment and system elements by the City's fare collection system provider.
 - B. Ticket Machines shall be located and installed to allow Ticket Machine doors to open 180 degrees for servicing. While in the open position the Ticket Machine door shall not preclude customers from using the adjacent machines.
 - C. Free standing equipment shall be permitted provided DB Co provides sufficient queuing and circulation space as well as space required for maintenance and re-stocking activities, without compromising Passenger movement through the Station.
 - D. All conduit and cable ducts shall be concealed within walls, under slabs, within chases, etc., the use of exposed conduit and cable duct shall not be permitted in public spaces.
 - E. Within existing City structures, if the use of exposed conduit is required in public spaces for the installation of fare equipment, DB Co shall conceal conduits, and other surface mounted items by painting, enclosing in chases or otherwise treating the conduits, junction boxes, cable ducts, blend in with the surface to which the item is attached.
- (ix) DB Co shall provide CCTV coverage of the fare control equipment as follows:
 - A. Full CCTV coverage for inbound and outbound Passenger flows at the fare control line.
 - B. Full CCTV coverage of Ticket Machines with view of interaction with machine, without compromising privacy.
- (x) DB Co shall work in coordination with the City to ensure all supporting infrastructure and systems have been accommodated and to ensure schedule coordination for equipment installation, testing and Commissioning.
- (xi) Exposed conduit and cable duct shall be avoided within public spaces.
- (xii) DB Co shall paint or otherwise treat the conduit to blend in with the surface to which the conduit is attached where the use of exposed conduit cannot be avoided in public spaces.
- (xiii) Fare gates and ticket machines post installed anchor system require concrete embedment of 150mm. DB Co shall ensure location and or depth of concrete

reinforcing is coordinated with the mounting requirements of the equipment avoiding the possibility of a conflict between the anchor and reinforcing steel.

- (xiv) DB Co shall provide concrete mounting and walking surface at the fare control line between the floor grille assemblies, level with surrounding floor finish.
- (e) DB Co shall provide Fare Paid Zone of Stations in accordance with the following:
 - (i) DB Co shall plan, design and construct all Stations with segregated Fare Paid Zones and non-Fare Paid Zones.
 - (ii) The Fare Paid Zone of the Station and all fare paid transfer areas shall be segregated from non-Fare Paid Zones by continuous 1.8m fencing or barrier.
 - (iii) Fare Paid Zones at Lincoln Fields, Bayshore, Moodie, Baseline, Place d'Orléans, and Trim Stations shall be planned, designed and constructed to allow Passengers to transfer between bus and Train within the Fare Paid Zone of the Station.
 - A. DB Co shall maintain the integrity of the Fare Paid Zones in the design and construction of bus terminal modifications at existing Tunney's Pasture and Blair Stations.
 - (iv) The following additional requirements shall apply for bus Transfer Stations:
 - A. Fare paid transfer area of Stations shall be designed to prohibit transferring Passengers from crossing bus traffic with the exception of Place d'Orléans.
 - B. All islands provided within a bus transfer area shall contain a combination of barriers including fencing, landscaping, or other physical barrier elements to prevent Passengers from traversing bus traffic to access the Station and bus Platforms or other Passenger destinations.
 - C. Where a dedicated fare controlled entrance to a bus terminal is not required, DB Co shall provide an entrance to allow Passenger access to the bus Station area when the Train Station is secure during non-operational hours, including CCTV and lighting.
 - i. The entrance shall be designed and constructed to be consistent with the architectural design requirements of the adjacent Train Station;
 - ii. DB Co shall provide signage and wayfinding for the entrance within the bus Station and from the public side;
 - iii. The entrance shall be secured with an overhead coiling grill or other means, and monitored outside Train operational hours; and,

- iv. Notwithstanding requirements to secure the Train operations, Passengers shall have access to Ticket Machines outside Train operational hours.
 - D. DB Co shall provide a minimum of three bicycle racks within the Paid Fare Zone of all Transfer Stations. As per Schedule 15-2, Part 6, Clause 2.7(b)(v), there shall be sufficient space to double the quantity of bicycle racks without modification to the built design.
- (f) Weather protection:
 - (i) Roof design features shall include the following:
 - A. The roof and Station design shall allow an illumination level of 25fc to be achieved via natural daylighting to reach over 75% of the entire Platform surface by incorporation of skylights or other design features. This requirement shall not be applicable to Underground Stations.
 - B. Roof accessibility systems such as hatches and retractable ladders, for cleaning and maintenance if required.
 - C. Fall protection measures that form a permanent part of the roof Structure.
 - D. Heat traced gutters and downspouts for roof drainage tied directly into a SWM system.
 - E. Snow guards shall be provided on all roofs where roof design contributes to possibility of falling snow and ice.
 - i. Particular attention shall be paid to the design and placement of snow guards on areas of roof above Station entrances and areas of roof adjacent to spaces of public circulation or gathering such as sidewalks and bus Platforms and adjacent Roadways to ensure the protection of the public from falling snow and ice.
 - A. The underside of all roofs within public spaces shall have soffits to conceal all mechanical, electrical, and communications equipment, conduits, etc. in accordance with the following:
 - i. For Federally Mandated Stations, BD Co shall provide soffit materials consistent with the Existing Confederation Line Stations, including composite metal panels and wood slats; and,
 - ii. For Stations other than Federally Mandated Stations DB Co shall provide soffit materials/systems that provide access to concealed building systems and equipment satisfying the Design Life requirements per Schedule 15-2, Part 1, Article 4 – Design and Construction.

- (g) Transecure Areas:
- (i) DB Co shall provide one TSA at all individual Station Platforms.
 - (ii) On LRT Platforms, the TSA shall be located close to the centre of the Platform length to align with the door of the first car in a two consist Train operation.
 - (iii) DB Co shall provide one TSA per Direction for center Platform configuration.
 - (iv) DB Co shall provide one TSA within in the bus Facility at Transfer Stations.
 - (v) The design of the TSA shall be consistent with the design of the Existing Confederation Line TSA/designated waiting area, including but not limited to:
 - i. Configuration & Material usage;
 - ii. For Stations other than Federally Mandated Stations, glazing and glazing support systems shall be consistent with glazing system for the Station as selected by DB Co in accordance with other requirements of this Part 4.
 - iii. Seating design;
 - iv. Size & Location of features;
 - v. Provide clear sightline of oncoming buses or Trains; and,
 - vi. Design of utility cabinet.
 - (vi) TSA's shall be provided with the following features:
 - A. Signage indicating location of TSAs and indicating the amenities available in the TSA, which shall be consistent at all Stations;
 - B. Fixed CCTV security coverage, PTZ cameras shall not be used for TSA;
 - i. Each TSA shall have a minimum of two CCTV cameras.
 - C. Enhanced lighting level of 220 lux;
 - D. Transit information panels that show scheduled times, maps, and other relevant information shall be included;
 - E. A clock integrated with the TIPs shall be viewable from the TSA;
 - F. Companion seating;
 - G. Emergency phones at accessible height with handles, braille, and user-friendly directions;

- H. Emergency cabinet with fire extinguisher for Train TSA only;
- I. Infrastructure to support a pay phone;
- J. Accessible seating for four including seating with handles and backs;
- K. Tinted glass or anything that compromises Safety or sightlines shall be prohibited from use in the TSAs;
- L. Garbage and recycling receptacles shall be provided adjacent to the TSA;
- M. All TSAs located on Platforms, with the exception of Underground Stations, shall be equipped with timed, Passenger activated heating;
- N. An electrical outlet to provide ability for customers to charge cell phones at Train TSA only;
- O. Timed, Passenger activated heating at TSA on bus Platform all bus Transfer Stations; and,
- P. Indication of location of TSA on the Platform floor surface and directional TWSI. Platform markings for all TSAs shall extend to the Platform edge at Train TSA only.

(h) Advertising:

- (i) DB Co shall provide all Infrastructure to support advertising in the Stations, including power data and communications to support digital advertising;
 - (ii) Each advertising location shall be provided with lighting in accordance with IESNA standards to illuminate static advertising;
 - (iii) Each Station shall have a minimum of three locations for advertising within the Fare Paid Zone, with dedicated wall areas of 1.5m x 2.5m minimum; and
 - (iv) Location and type of advertising shall be coordinated with the City during design;
 - A. For Federally Mandated Stations, advertising shall not be visible from the exterior of the Station.
 - (v) DB Co shall comply with MTO signage and advertisement requirements for all stations adjacent to Highway 417, and obtain MTO approvals.
- (i) Public washroom features shall be provided as follows:
- (i) Fixed CCTV coverage of the exterior of the washroom entrance doorway of each washroom.

- (ii) Infant changing facilities.
 - (iii) Toilet partitioning shall be ceiling hung embossed stainless steel panels.
 - (iv) Toilet stall latch shall be surface mounted dead bolt type.
 - (v) Coat hooks on the stall door above head level.
 - (vi) Graffiti resistant mirrors at each wash basin.
 - (vii) Soap dispensers, toilet tissue dispensers, towel dispensers and disposal units.
 - (viii) Wash basins shall be built into a counter or vanity.
 - (ix) Washrooms shall be heated and ventilated.
 - A. DB Co shall heat and ventilate public washrooms in accordance with Good Industry Practice, without doors or with doors in the open position during operating hours and winter conditions.
 - (x) All fixtures shall be vandal-proof and be equipped with automatic water controls.
 - (xi) Toilet compartment, cubicles door and partition thickness shall be a minimum of 25mm. Pilaster thickness shall be a minimum of 32mm.
 - A. No system shall contain material capable of supporting growth of bacteria, fungi, mould, etc. or encourage the harbourage of insects or mites. No system shall develop or shed electrostatic charges.
 - B. All fasteners shall be concealed or tamper proof.
 - C. Partition shall be ceiling mounted embossed stainless steel.
 - (xii) Entrances to washrooms shall be designed and constructed according to CPTED principles with a labyrinth style access.
- (j) CCTV
- (i) DB Co shall provide 100% CCTV camera coverage for Stations and Facilities as follows:
 - A. As indicated elsewhere in this Part 4;
 - B. All public spaces shall have CCTV coverage, excluding washrooms;
 - C. Entrances to maintenance access areas;
 - D. All stair runs with full coverage from landing to landing;

- E. All Escalators with full coverage from landing to landing;
 - F. Station Plazas and Station sites;
 - G. Bus Facilities at Transfer Stations;
 - H. Park and Rides;
- (k) Emergency phones:
- (i) DB Co shall provide Emergency phones providing direct audio connection to the TOCC as follows.
 - A. One Emergency phone at each entrance on the non-fare paid side, concourses and in general passenger circulation areas;
 - B. Two Emergency phones on each Train Platform spaced no more than 30m apart;
 - C. In addition to the Emergency phones required on Platforms, each TSA shall have an Emergency phone;
 - D. Provide Emergency phones spaced not more than 100m in any direction in surface Park and Ride facilities;
 - E. Provide Emergency phones with no more than 30 m in between at each bus Platform in addition to the Emergency phone at the TSA; and
 - F. Provide Emergency phones at new PPUDO's;
 - (ii) Emergency phones at outdoor locations shall be identified with a blue light.
- (l) Payphones:
- (i) DB Co shall provide provisions for public pay phones (Type TTY) in accordance with the following:
 - A. Provide conduit and space for 1 pay phone at every bus and Train Platform;
 - B. Provide conduit and space for 1 payphone in each TSA.
 - C. Provide conduit and space for pay phones at new PPDUO's;
 - D. All designated space and public pay phones shall be fully accessible; and
 - E. The City will arrange with a Third Party Contractor for payphone installation and maintenance of public payphones.

- (m) Transit Information Panels:
 - (i) DB Co shall provide TIPs as follows:
 - A. Provide 2 TIPs on each Train Platform for side Platform configurations, excluding TIPs located within the TSAs;
 - B. Provide 4 TIPs on each Train Platform for centre Platform configurations, excluding TIPs located within the TSAs;
 - C. Provide 2 TIPs at each Station entry prior to the fare barrier, located outside of the fare paid area;
 - i. TIPs shall be accessible 24/7 when Station is closed.
 - D. Provide a minimum of 1 TIP, located after the fare barrier, inside the Fare Paid Zone, in addition to TIPs located on Platforms and at the TSAs. Where a Station has two or more entrances, and where Passenger traffic does not converge before accessing the Platform Level, provide TIPs inside the Fare Paid Zone at each entry;
 - E. Provide a minimum of 1 TIP in each bus shelter located on bus Platforms within Transfer Stations;
 - F. Provide 1 TIP in each TSA located on bus and Train Platforms;
 - G. TIP panel size (1.2m x 1.3m) shall be confirmed during design phase; and,
 - H. All TIPS shall be backlit.
- (n) DB Co shall provide clocks connected to the NTP server displaying time of day, with a minimum of one clock per Platform, including bus Platforms at Terminal/Transfer Stations.
 - (i) DB Co shall provide clocks meeting the following minimum requirements:
 - A. Including digital LED display;
 - B. Capable of full operation in an outdoor environment, exposed to the elements in a dry bulb temperature range of -40°C to 40°C;
 - C. Capable of displaying both time and date simultaneously as follows:
 - i. Shall be capable of displaying 12:00 or 24:00 hour time in hours minutes and seconds, with the option to configure with or without seconds being displayed;

- ii. Shall be capable of displaying date in varying formats and sizes. Maximum character height shall be no greater than that of the time display;
 - iii. Shall have the ability to display time independently with or without date being displayed;
 - D. Minimum cap character height for time display of 150mm;
 - E. Have amber character colour and background with a minimum colour contrast of 70%. Amber colour shall be consistent with amber colour utilized in the PIDS; and,
 - F. Clock display shall meet or exceed all accessibility requirements referenced in this Part.
- (o) Trash and recycling receptacles:
 - (i) DB Co shall provide trash and recycling receptacles in the following locations and minimum quantities:
 - A. three on each Platform including one located at the TSA;
 - B. one located on each mezzanine or Concourse Level of the Station;
 - C. Receptacles shall be integrated into cabinets with other customer amenities such as TIPS or emergency phones;
 - D. All receptacles provided in public spaces shall be transparent to allow visual identification of their contents;
 - E. All receptacles shall be 4 stream receptacles to separate at source; organics, paper, glass, metal and other refuse; and,
 - F. All receptacles shall have hard containers to support removal bag.
- (p) DB Co shall design and construct Platform seating in accordance with the following:
 - (i) DB Co shall provide three benches that can accommodate three Passengers per bench seating on each Train Platform per direction in addition to seating within the TSA;
 - (ii) DB Co shall provide seating for three on each bus Platform for every two bus bays at Terminal/Transfer Stations. Bench locations to be coordinated with the City, and must not impede snow removal equipment movement/pedestrian flow;
 - (iii) Armrests and backrests shall be provided on all benches in accordance with AODA and COADS;

- (iv) The location of Platform seating shall not interfere with access to overhead lighting and equipment.
- (q) Outdoor shelters:
 - (i) DB Co shall provide one bus shelter for each bus stop located within the Fare Paid Zone at Transfer Stations and each stop located in an off-street non Fare Paid Zone;
 - A. Shelters shall be sized according to accommodate passenger activity and be approved by the City.
 - B. All shelters design and capacity shall be consistent with shelters at Existing Confederation Line Stations;
 - C. DB Co shall provide power and communications to all shelters in accordance with OC Transpo Transitway and Station Design Guidelines;
 - D. Requirements of shelters within the fare Paid Zone of Transfer Stations:
 - i. All shelters located within the bus Fare Paid Zone of Transfer Stations shall be fitted with a minimum of 2 doors with power door actuators;
 - ii. On demand Passenger heating shall be provided in the TSA shelters within the bus Fare Paid Zone of Transfer Stations. Provision for on-demand heating shall be included for all remaining shelters within the Fare Paid Zone;
 - iii. Lighting according the Transitway and Stations Design Manual;
 - iv. AODA compliant benches;
 - v. Transit Information Panel;
 - vi. DB Co shall provide power and Communications for PIDS; and,
 - vii. All shelters shall not be required to have radiant heaters installed but shall be provided with rough in and provisions for future installation of radiant heaters.
 - (ii) DB Co shall provide on street bus Facilities in accordance with Appendix E to this Part 4.
- (r) **[REDACTED]** wayfinding wheel
 - (i) At each Station, directional signage shall be installed at either the entry, concourse, Platform or Station entry Plaza;

- A. The City will be responsible for the production of the wayfinding wheel for each Station;
 - B. DB Co shall incorporate the wayfinding wheel into the design and shall be responsible for the installation and placement of this element in accordance with guidelines and standards provided by the City;
 - C. The location of the wayfinding wheel at each Station shall be co-ordinated with the City through the design review process; and,
 - D. The City will undertake consultation with the appropriate Aboriginal representatives, (including the [REDACTED]) during the design stage to ensure cultural appropriateness of the location of the [REDACTED] wayfinding wheel and provide this input to DB Co for incorporation into DB Co's design.
- (s) DB Co shall provide PIDS in accordance with the following:
- (i) DB Co shall provide Train Platform/Concourse PIDS in accordance with the following:
 - A. DB Co shall design and construct architectural, electrical, mechanical and structural infrastructure to support PID installation.
 - B. Each Station shall be equipped with PIDS signs to provide up-to-date, specific, real time, location-based, visual operational, and Safety-related messages for customer awareness.
 - C. DB Co shall provide PIDS at new Stations consistent with the locations of Existing Confederation Line, including, but not limited to:
 - i. Three PIDS at Underground Station Platforms, and two PIDS at all other Station Platforms;
 - ii. One PID at each fare line. PIDS shall be visible and readable from both paid and unpaid side of the fare line and as required at end of Line Stations; and,
 - iii. At Terminal Stations with a side Platform configuration, DB Co shall provide additional PIDS at key decision points in order to direct Passengers to the correct Platform.
 - iv. All PIDS shall be double sided except where mounted on a wall parallel with the same.
 - D. PIDS shall be individually addressable and shall be accessed from the existing PA/PIDS console located in the TOCC. Under normal operating conditions, information presented on the PIDS shall include, but not be

limited to: date, time, minimum next three arrival time and destination of the next Train (one arrival time per line), Safety messages, Train delays, holiday schedules, and other ad-hoc messaging. In an Emergency condition, the PIDS shall display both pre-programmed Emergency announcements and simultaneous visual display of the PA system Emergency announcements. Refer to Schedule 15-2, Part 3, Article 4 - PA System/Passenger Information Display System, for additional requirements.

- (ii) DB Co shall coordinate and install the City supplied Nexus/directory/entrance PIDS in accordance with the following:
 - A. DB Co shall coordinate, design, construct and equip each Station with the structural, mechanical, electrical, and communications infrastructure provisions to support the installation of City supplied PIDS and enclosures. DB Co shall identify designated locations including; but not limited to: one PID at the concourse level of each Underground Station, at the nexus points between modes at Transfer Stations, outside each fare gate, each bus Platform entrance, and one PID at each after hours entrance.
 - B. The locations shall be incorporated into the Station designs considering: mounting surfaces, sightlines, wayfinding, accessibility, vandalism, to allow viewing from either side of PIDS and security.
 - C. DB Co shall coordinate and supply required infrastructure at these locations including: power and communications requirements, blocking within walls, ceiling structure, or posts as required and identified by the City.
 - D. The City will provide and install the required PID components including enclosures and mounting hardware.
 - E. PIDS at these locations will be operated using a City supplied application and software controlled through the City network.
 - F. PIDS at these locations will be maintained by the City.
- (iii) DB Co shall coordinate and install the City supplied bus terminal PIDS in accordance with the following:
 - A. DB Co shall equip each bus terminal with provisions to support the installation of City supplied PIDS and enclosures. DB Co shall identify designated locations including; one PID for each shelter, one PID at each bus stop Platform, one PID on each bus Platform centrally located at the entrance to the Train portion of the Station and shall allow for viewing from either side of PID.

- B. Locations shall be incorporated into the Station designs considering: mounting surfaces, sightlines, wayfinding, accessibility, vandalism, and security.
- C. DB Co shall coordinate and supply required infrastructure at these locations including: power and communications requirements, blocking within walls, ceiling structure, or posts as required and identified by the City.
- D. The City will provide and install the required PID components including enclosures and mounting hardware.
- E. PIDs at these locations will be operated using a City supplied application and software through the City network.
- F. PIDS at these locations will be maintained by the City.

(t) Enclosed pedestrian Bridges

- (i) Enclosed pedestrian Bridges, where included as a requirement in this Part 4 shall be designed and constructed in accordance with the following;
 - A. DB Co shall provide enclosed pedestrian Bridge designs to limit snow and ice from falling onto surfaces below the Structure;
 - B. DB Co shall provide a system that allows for glazing to be replaced from the inside of the Bridge; and,
 - C. DB Co shall ventilate enclosed pedestrian Bridges in accordance with OBC where applicable. Where OBC is not applicable, DB Co shall provide ventilation in accordance with ASHRAE 62.1.

(u) Traction Power Substation Locations:

- (i) DB Co shall locate TPSS and associated electrical service in accordance with the following:
 - A. DB Co shall be permitted to install a TPSS within any Station Structure, provided the TPSS is fully enclosed within the Station Structure, constructed with the same materials and detailing utilized for the Station design and is constructed within the Lands.
 - B. Specific requirements of Confederation Line East Extension;
 - i. TPSS shall be at each Station or in the vicinity of each Station located within the Lands in accordance with Schedule 20 - Lands.
 - C. Specific requirements of Confederation Line West Extension:

- i. From Tunney's Pasture Station to the east end of Dominion Station Platform, DB Co shall be permitted to locate a TPSS at Track level only within the Lands. Access to the TPSS shall be via Track level from a Station as described in Schedule 15-2, Part 3, Clause 13.4. [REDACTED] owned transformers and switchgear supporting the TPSS shall be located at street level within the Lands;
- ii. DB Co shall be permitted to locate a TPSS at Track level on the north side of the alignment at Dominion Station within the Lands, provided the western end of the TPSS is located no further the 35m from the western face of the Station entrance plaza crossing the alignment. Access to the TPSS shall be via Track level from Dominion Station as described in Schedule 15-2, Part 3, Clause 13.4. [REDACTED] owned transformers and switchgear serving the TPSS shall be located at grade;
- iii. DB Co shall be permitted to locate a TPSS at Track level within the Parkway Tunnel from Cleary Station to New Orchard Station provided the structure is entirely below the level of Byron Linear Park. At this location, electrical service entry, transformers and switchgear shall be permitted to be located at grade level provided the equipment is housed within the Station Structure, constructed of materials consistent with the Station design and combined with Station Emergency egress facilities;
- iv. TPSS located at Lincoln Fields Station shall be constructed within the Station Structure;
- v. TPSS located at Baseline Station shall be constructed within the Station Structure or within the Baseline Tunnel;
- vi. DB Co shall be prohibited from constructing TPSS in the following locations:
 - 1 From the Dominion Station location identified above to the East Portal of the Parkway Tunnel;
 - 2 Within the Parkway Tunnel from the East Portal to the crossing of the Tunnel under Richmond Road;
 - 3 From New Orchard Station to Lincoln Fields Station;
 - 4 From Lincoln Fields Station to the portal of Baseline Tunnel; and,

5 From Lincoln Fields Station to the west portal of the Connaught Tunnel.

- vii. The TPSS at Moodie Station shall be constructed within the Station Structure, or constructed as a standalone Ancillary Facility. If constructed as a standalone Ancillary Facility, DB Co shall construct the TPSS to be aesthetically compatible with the architecture and materials of the LRT Station.

2.8 Materials

- (a) Materials used for the construction of Stations shall be low VOC and contain recycled content to the maximum extent possible where not specified below:
- (i) Cast in Place Concrete:
 - A. Provide steel materials with postconsumer recycled content of not less than 60%.
 - (ii) Precast Concrete:
 - A. Provide steel materials with postconsumer recycled content of not less than 60%.
 - (iii) Architecturally exposed structural steel:
 - A. Provide steel materials with postconsumer recycled content of not less than 25%.
 - (iv) Painted metal fabrications:
 - A. Provide steel materials with postconsumer recycled content of not less than 25%.
 - (v) Stainless steel fabrications:
 - A. Provide steel materials with postconsumer recycled content of not less than 25%.
 - B. Provide materials with the maximum postconsumer recycled content recommended by the selected manufacturer, where finish quality may be compromised by the percentage of postconsumer recycled content.
 - (vi) Aluminum materials:
 - A. Aluminum curtainwall and skylights systems:

- i. Provide aluminum materials with postconsumer recycled content of not less than 50%.
 - B. Aluminum extrusions fabrications, etc.:
 - i. Provide aluminum materials with postconsumer recycled content of not less than 25%.
- (vii) Glazing:
 - i. Provide glass products with postconsumer recycled content of not less than 25%.
 - ii. Sealants used inside of the weatherproofing system protecting interior spaces shall have a VOC content of not more than 100 g/L.
- (b) Architectural cast in place concrete (applicable to all Stations)
 - (i) Where concrete is left exposed as the final finish outside and within Stations, exposed concrete in the public realm shall be architectural cast in place concrete. DB Co shall provide architectural concrete as per the following:
 - A. Provide architectural cast in place concrete in accordance with CSA-A23.1/A23.2, 8.3 Architectural Concrete and ACI 347.3 Guide to Formed Concrete Surfaces, including proposed reference samples and mock-up field samples.
 - B. Architectural Cast in Place Concrete Finishes:
 - i. Finish : Smooth
 - ii. Formed Concrete Surface: CSC3 as defined in ACI 347.3R, Table 3.1a – Description of formed concrete surfaces
 - iii. Colour: Light grey.
 - C. Limit of Concrete Surface Irregularities:
 - i. Consistent with CSC3 concrete surfaces per ACI 347.3R.
 - D. Tie Holes: Uniform profile and diameter, in symmetrical layout, filled with plugs matching appearance of adjacent concrete.
 - (ii) Related Unformed Surfaces: Strike off smooth and finish with a texture matching adjacent formed surfaces, at tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces.

- (iii) Mock-up field samples: Preconstruction mock-up field samples shall be made for each finish or shall incorporate all finishes proposed to be utilized, using equipment, materials, and procedures planned for the actual construction. The City shall examine the mock-up field samples and compare them with the reference samples prepared in accordance with CSA-A23.1/A23.2, Clause 8.3.2 for approval prior to ordering formwork. The panels should be full-size to match the actual work as closely as possible. Additional samples shall be cast by DB Co to the satisfaction of the Design Architect and the City to achieve the required matching. Mock-up panels shall be standalone elements and are prohibited from forming permanent construction of any facility. The sample(s) shall serve as the standard for acceptance of the finished construction.
 - A. Construct field mock-ups using same procedures, equipment, and materials that will be used for production of architectural concrete. Accepted field mock-up shall serve as the reference to which architectural concrete will be compared for periodic and final acceptance. Construct field mock-ups at an acceptable location on Site.
 - B. Provide a simulated repair area to demonstrate an acceptable repair procedure. Repair procedure shall provide an acceptable color and texture match. Protect from physical damage and retain mock-ups until final acceptance of architectural concrete.
 - C. Construct a minimum 3m x 3m mock-up for Platforms, for review and acceptance using procedures detailed.
 - D. All mock-up panels shall be reviewed and approved by the Design Architect.
- (iv) Periodic acceptance
 - A. DB Co's Lead Architect shall periodically observe completed portions of architectural concrete for conformance with accepted field mock-up. The frequency of periodic acceptance and acceptance criteria shall include at a minimum, including but not limited to:
 - i. At a minimum, the Lead Architect shall conduct 1 review of in place formwork prior to first placement of architectural concrete for a Station;
 - ii. At a minimum the Lead Architect shall witness the first placement of architectural concrete in a Station; and
 - iii. At a minimum, the Lead Architect shall be present for the removal of the formwork of the first architectural concrete pour and assessment of finish for a Station.

- (v) Patching and repair procedures:
 - A. Surface sacking or abrasive blasting to conceal surface imperfections shall not be permitted without prior approval from the Lead Architect.
 - B. Patching and repair procedures shall be prepared and submitted to the Lead Architect for review and approval, prior to submission to the City for the same.
- (c) Precast concrete (applicable to all Stations)
 - (i) Where precast concrete is proposed, provide precast concrete in accordance with CSA-A23.4, Precast concrete - Materials and construction Surfaces.
 - (ii) Where precast concrete is left exposed as the final finish outside and within Stations, exposed precast concrete in the public realm shall be architecturally finished. DB Co shall provide architectural precast concrete per the following:
 - A. Category for precast forming part of the Stations shall be:
 - i. Group A1;
 - ii. Group BA1 – BA4;
 - iii. Group CA1 – CA4.
 - B. All precast shall be finish grade A.
 - C. Acceptance criteria;
 - i. Precast located between floor level to 2.8m above floor level or walking surface shall be viewed at a distance of 2m for acceptability defects such as chips, bug holes, and forming defects. Precast installed in other locations shall be viewed at a distance of 6m for acceptability defects.
 - ii. Finishes on vertical surfaces compared to finishes on horizontal surfaces such as returns shall be similar.
 - iii. Panel colour shall be uniform.
 - iv. Textures shall be uniform.
 - v. Prior to commencement of construction, DB Co shall provide 300mm x 300mm samples of each type of precast to be used on the Project. Samples shall be used to demonstrate the mix, colour and type of finish.

- vi. DB Co shall provide a 1200mm x 1200mm mock-up panel of each type of precast concrete to be used on the Project, located on site to be used as the model to judge acceptance.
- (d) Architecturally exposed structural steel (applicable to all Stations):
- (i) Where left exposed to public view, all structural steel shall be AESS conforming to CISC Code of Standard Practice for Structural Steel, APPENDIX I, as supplemented by CISC Guide for Specifying Architecturally Exposed Structural Steel.
 - (ii) All structural steel exposed to public view shall be AESS as follows:
 - A. Exposed structural steel that is 6m or greater measured vertically or horizontally from a walking surface and is visible to a person standing on that walking surface shall be Category 2 AESS; and
 - B. Exposed structural steel that is less than 6m measured vertically or horizontally from a walking surface and is visible to a person standing on that walking surface shall be Category 3 AESS.
 - (iii) All Exposed structural steel shall be finished with a high performance coating.
- (e) Overhead coiling grilles (applicable to all Stations):
- (i) Where used to secure Station entrances and to secure bus Platforms from Train Platforms, coiling grills shall be as follows:
 - A. Curtain Material: Stainless steel, ASTM A666, Type 316.
 - B. Curtain consisting of a network of minimum, 8mm diameter horizontal rods, or rods covered with tube spacers.
 - C. Bottom Bar: Stainless Steel tube, finished to match grille.
 - D. Grille Curtain Jamb Guides: Stainless steel angles with stainless steel mounting brackets.
 - E. Equipped with an electric operator.
 - i. Operator shall be controlled both locally and remotely from the TOCC.
 - F. Shall have manual operation device for use in the event of motor failure or power outage.
 - G. Connection for off-site remote control by the TOCC.

- H. Overhead coiling doors shall be equipped with IAC.
 - I. Safety Edge: Located at grille bottom bar, full width, electro mechanical pneumatic sensitized type, wired to immediately stop grille upon striking object, and reverse downward grille travel; hollow covered seal.
- (f) Graffiti-resistant Coating (applicable to all Stations)
- (i) Graffiti-Resistant Coating shall be applied to all porous opaque surfaces including but not limited to concrete masonry and stone up to a minimum of 2.5 m above adjacent floor/ ground or where surfaces are reachable to tag.
- (g) Bird protection devices (applicable to all Stations)
- (i) Provide a system of bird control using devices to prevent pest birds from landing, roosting, nesting, or climbing on horizontal surfaces at Stations, except for the roof exterior, tops of windscreens, light fixtures, security fences, handrails, guardrails, stone, and architectural concrete.
- (h) Wood soffit (applicable to Federally Mandated Stations)
- (i) Wood soffits shall be a suspended wood slat ceiling system with eight blades per foot and four blades per foot with scrim above consistent with the material and design utilized in the Existing Confederation Line Stations as follows:
 - A. Material shall be:
 - i. Manufactured for exterior use, with ACGI WeatherResist Cores, or equal;
 - ii. System shall be ACGI Backer Series 1, or equal; and,
 - iii. Mixed grain Douglas Fir, pressure treated and stained to match Existing Confederation Line Station material.
- (i) Floor grilles (applicable to all Stations)
- (i) Provide floor grilles consistent with those provided for the Existing Confederation Line Stations.
 - (ii) Provide manufacturer's aluminum floor-grille assemblies modified to comply with heavy load product line, consisting of treads joined together by cross members, and with support legs and other components needed to produce a complete installation. Include locking device for each panel and lifting hooks.
 - (iii) Floor grille:
 - A. Tread Rails: 4.7mm wide x 50mm deep 'T' profile, 3mm thickness.

- B. Maximum Span: 610mm, or as recommended by the manufacturer.
 - C. Maximum Individual Panel Size: 1200 x 1200mm.
 - D. Finish: Mill finish.
 - E. Frames: Manufacturer's standard frames, including perimeter frames, of size and style for grille type, for permanent recessed installation in floor, complete with installation anchorages and accessories, same material and finish as grilles. Provide concealed frameless supports except at perimeter frame.
- (iv) Support system:
- A. Manufacturer's special deep-pit frame and support system with intermediate support beams, sized and spaced as recommended by manufacturer and equipped with vinyl support cushions.
- (v) Drain pan:
- A. Aluminum sheet, 1.5mm minimum thickness, welded construction, bottom surface with positive slope to drain; holes cut for drain and equipped with adaptors for connection to drain lines; bottom of pan with protective coating as recommended by manufacturer; provision for heat-traced drainage.
- (j) Refer to Appendix C to this Part 4 for additional material and equipment specification requirements applicable to Federally Mandated Stations and where applicable to all Stations where consistency is required by this Part 4.

ARTICLE 3 STATION SPECIFIC ARCHITECTURAL DESIGN CRITERIA

3.1 Tunney's Pasture Station

- (a) Tunney's Pasture is an existing Station serving as the interim western terminus of the Existing Confederation Line. DB Co shall modify the existing bus terminal to satisfy the reduced bus terminal requirements.
- (b) The Station is a Federally Mandated Station.
- (c) DB Co scope within the existing Station is limited to modifications required to services related to the site modifications.

3.2 Westboro Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Westboro Station is an existing Transitway station. The new Westboro Station shall be located on Scott Street between Tweedsmuir and Athlone Avenues.
- (c) The Station Platform shall be located within the existing Transitway trench.
- (d) There shall be a minimum of two fare controlled entrances. One entrance shall be located on Scott Street and one entrance shall be located on the north side of the existing Transitway trench to facilitate the transfer of Passengers from the bus drop off area to the LRT Platform through fare gates.
- (e) Bus access to the Station shall be via the existing bus access drives to the east and west of the Station. Curb to curb dimension of the bus driveways on the east and west Bridges shall not be reduced from existing. The bus boarding Platform shall be located on the north side of the existing Transitway trench. A dedicated bus drop off Platform with a minimum of 4.0m shall be provided on the west bus access drive to allow buses to unload all customers before entering the layby facility located to the west of the Station. DB Co shall provide a fare paid entrance to the Station from the north bus Platform. Bus lay-by area shall be located to the west of the Station on the north side of the existing Transitway trench.
- (f) Public access across the Guideway to destinations north of the Station shall be provided on the east and west bus access drives.
- (g) DB Co shall be responsible to determine the extent of reuse of existing structure, and selective or complete demolition of the existing structures, based on required Design Life outlined in Schedule 15-2, Part 1, Article 4 – Design and Construction.

3.3 Dominion Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:

- (b) Dominion Station is an existing Transitway station. The new Dominion Station shall be located within the existing Transitway trench between Dominion and Berkley Avenues.
- (c) There shall be a minimum of one fare controlled entrance between Dominion Avenue and Berkley Avenue. The Station public entrance plaza shall be designed to provide a public access across the Guideway linking pedestrians and cyclists from Dominion Avenue to Workman Avenue.
- (d) Passengers shall have direct visual and physical access to the existing and new cycling and pedestrian pathways along the Guideway.
- (e) DB Co shall be responsible for the complete demolition and removal of foundations, and all elements of the existing Dominion station.

3.4 Cleary Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) The new Cleary Station shall be located within Byron Linear Park at Sherbourne Road.
- (c) A minimum of one fare paid Station entrance shall be provided. DB Co shall locate one Station entrance east of the intersection of Bryon Avenue and Sherbourne Road and no less than 25m east of the east curb line of Sherbourne Road.
- (d) The above grade portions of this Station shall be minimized to reduce visual impact on Byron Park, and be configured as such to maintain sidewalks and MUPs as required by Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements.
- (e) All Station Facilities and system support spaces, shall be completely below grade with the exception of the fare paid entrance building.
 - (i) DB shall be permitted to construct a hydro room(s) to house [REDACTED] transformer and switch gear above grade, provided the utility spaces are housed with the Station emergency egress facilities as “one” structure.
- (f) The Station shall have three PPUDO spaces in each direction of travel on Byron Avenue.
- (g) The Station Platform shall be located below the level of existing grade, and DB Co shall design and construct the Station so that it shall be an open Station as defined by OBC and NFPA.
- (h) DB Co shall provide a 2m x 3m storage room located at Platform Level for the exclusive use of ESP.

3.5 New Orchard Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:

- (b) New Orchard Station shall be located between Richmond Road and Byron Avenue, immediately east of New Orchard Ave within Byron Park.
- (c) The eastern end of Station Platform shall be no less than 700m from the western end of the Cleary Station Platforms.
- (d) A minimum of one fare paid entrance shall be provided. The entrance shall be located no further east than the western curb line of Woodland Avenue.
- (e) The above grade portions of this Station shall be minimized to reduce visual impact on Byron Park. And be configured as such to maintain sidewalks and MUPs as required by Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements.
- (f) The Station Platform shall be located below the level of existing grade, and DB Co shall design and construct the Station so that it shall be an open Station as defined by OBC and NFPA.
- (g) DB Co shall design and construct the bus stop with shelter adjacent to New Orchard Station and provide the bus shelter and other customer amenities as required by the City.
- (h) DB Co shall provide a 2m x 3m storage room located at Platform Level for the exclusive use of ESP.
- (i) All Station Facilities and system support spaces, shall be completely below grade with the exception of the fare paid entrance.
 - (i) DB shall be permitted to construct a hydro room(s) to house [REDACTED] transformer and switch gear above grade, provided the utility spaces are housed with the Station Emergency egress facilities as “one” Structure.

3.6 Lincoln Fields Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Lincoln Fields Station is an existing Transitway Station. The new Transfer Station shall be in the location of the existing Transitway Facility.
- (c) The Transfer Station shall be a three Track Station with 2 centre Platforms or one centre Platform and one side Platform and an integrated fare paid bus terminal. All three Tracks shall be utilized for the loading and unloading of Passengers.
- (d) Station is a Federally Mandated Station and shall be subject to FLUDTA.
- (e) The Station Train Platform shall be located north of Carling Avenue and east of the existing Transitway.

- (f) There shall be a minimum of three fare controlled entrances. A Station entrance shall be provided from Carling Avenue; an entrance shall provide access from the west side of the Guideway at grade, and an entrance shall be provided at the bus loop to allow 24/7 access to the bus loop and access to and from the PPUDO.
- (g) DB Co shall provide an entrance to the Train Platform via the fare paid bus terminal. Bus Platforms, lay-by area, and bus operator facility shall be located of the east of the Guideway. Buses shall access the terminal from the existing access from Carling Avenue.
- (h) The PPUDO shall be outside of the Fare Paid Zone separated by fencing accessible by vehicles from the existing Carling Avenue access drive.
- (i) DB Co shall be responsible for the complete demolition and removal of foundations, and all elements of the existing Transitway Structures including existing pedestrian Bridges.

3.7 Iris Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Iris Station is an existing Transitway station.
- (c) Station is a Federally Mandated Station and shall be subject to FLUDTA.
- (d) DB Co shall provide a grade separation between the Guideway and Iris Street.
- (e) DB Co shall design and construct two bus stops with shelters on Iris Street, one in each direction of travel.
- (f) The Station Platform shall be located below the level of Iris Street. DB Co shall provide vertical circulation elements for Passengers to access the Station from the sidewalk, PPUDO and bus stops located on Iris Street.
- (g) DB Co shall design and construct on street bus Facilities to support transfer of customers.
- (h) Station entrance plazas on the east and west side of the Guideway shall be large and generous to safely accommodate both pedestrian and cycling traffic.

3.8 Baseline Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Baseline Station is an existing Transitway Station. The current on street surface bus facilities shall be decommissioned and relocated as part of this Project. Baseline Station will serve as the southernmost terminus of the Confederation Line.
- (c) The new Terminal/ Station shall be located between College Avenue and Navaho Drive beneath the landscaped plaza just west of [REDACTED].

- (d) The Station shall be centre Platform configuration, with the Platform being located within the center cell of the existing below grade Structure.
- (e) The Station shall have three fare controlled entrances. One entrance building shall front the south side of College Avenue, a second entrance building shall be provided at the north end of the Platform, within the existing plaza and a third entry from the pedestrian Bridge connecting to the [REDACTED].
- (f) The south entrance building fronting the south side of College Avenue, shall be designed and constructed to permit Passengers to transfer between bus service and Train service without passing through fare control gates and/or revalidating fare payment.
- (g) DB Co shall design and construct the bus access from Woodroffe Avenue so that it is restricted to College Avenue and the current transit vehicle only access south of Parkglen Drive. A secondary bus access shall be provided from the west terminus of College Avenue via the future Baseline bus facility with interim access via the current Transitway road,
- (h) DB Co's design and construction of the Station shall maximize the number of parking spaces located in the Park and Ride Facility between the Station Facilities and Woodroffe Avenue.
 - (i) DB Co shall provide at a minimum 202 parking spaces within the existing Park and Ride Facility, with 5% being for compact vehicles.
 - A. A minimum of 182 of the parking spaces shall be dedicated to Park and Ride spaces; and
 - B. A minimum of 20 parking spaces shall be designated for system operational staff and signed appropriately.
- (i) The Train Platform shall be underground within an existing Structure. DB Co shall utilize the existing structural design and framed openings where possible within the elevated floor slab in the Station design.
- (j) The center cell(s) of the existing underground structure shall be utilized for the Train Platform, operations, support spaces and vertical circulation.
- (k) The north entrance building shall be designed and constructed to accommodate future overhead connections to adjacent developments: east to [REDACTED], and to future development to the west including:
 - (i) Protecting for a second floor level;
 - (ii) Elevators designed for extension to second floor level;
 - (iii) Design for additional stairs and escalator to access second floor level; and,

- (iv) Finished floor elevation of the future second floor of the north entrance shall be at elevation 92.00m.
- (l) The south entrance building shall be designed and constructed with an overhead connection to [REDACTED], and to future developments as follows:
 - (i) DB Co shall design and construct the south entry to allow 24 hour access between the bus terminal, the College Avenue entry and the pedestrian Bridge access, while securing the Station Platform at grade level during Train non-Operating hours.
 - A. The second floor shall be served by elevators, stairs and escalators;
 - B. The second floor shall allow for a future pedestrian Bridge connection to the west; and,
 - C. Finished floor elevation of the second floor of the south entrance shall have a minimum floor elevation 92.65m.
 - (ii) DB Co shall design and construct the new pedestrian Bridge as follows:
 - A. The Bridge shall be fully enclosed with floor to ceiling glazed walls;
 - B. The Bridge shall be mechanically ventilated;
 - C. The Bridge shall have a minimum clear width between Structure or handrails of 4.0m;
 - D. DB Co shall provide fire separations as required by the OBC;
 - E. DB Co shall include provisions to maintain the integrity of the existing building's HVAC systems;
 - F. DB Co shall design and construct the Bridge to allow for connection to future development along Woodroffe at College Ave;
 - G. DB Co shall be responsible for the integration of fire alarm systems between the Station, pedestrian Bridge and the [REDACTED] as required by applicable codes and standards;
 - H. The Bridge shall have full CCTV coverage from fare gates to the [REDACTED] connection. The CCTV system shall have the ability to be controlled and transmit images to multiple locations including the TOCC and the [REDACTED] security centre; and,
 - I. The roof of the Bridge shall be equipped with electric snow melting system to prevent the accumulation of snow and ice.

- (m) Storage of Revenue Vehicles:
 - (i) The Facility and Trackwork design and construction of the centre cell shall accommodate a total of four Tracks (inclusive of the Revenue Service Tracks) and Revenue Vehicle storage for eight Trains during non-revenue service hours.
 - (ii) The outer cells shall be protected for the future installation of one Track to accommodate an additional three Trains on each Track.
- (n) DB Co shall provide a 2m x 3m storage room located at Platform Level for the exclusive use of ESP.
- (o) DB Co shall design and construct the Platform level to be visually distinct from all other Underground Stations to be easily identified by customers.
- (p) DB Co shall design and construct the Station so as to not preclude the extension of the Confederation Line to points further south as outlined in Schedule 15-2, Part 1, Article 2 – Physical Layout.

3.9 Queensview Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Queensview Station is a new Station located to the north of Highway 417.
- (c) The western end of the Station Platform(s) shall be no less than 650m from the eastern end of Pinecrest Station Platform(s).
- (d) The Station is to be served by a minimum of one fare controlled entrance.
- (e) DB Co shall design and construct a north entrance building and entry plaza which shall also serve a new pedestrian Bridge spanning Highway 417. The Station and Bridge shall be accessed via a combination of sloped pathway, stairs and elevators on the north side of Highway 417 and by stairs and two elevators on the south side of Highway 417 north of Baxter Road.
- (f) The north elevator and stairs outside of the Fare Paid Zone shall extend to a Station access point at grade.
 - (i) The north elevators shall extend to the plaza bordering the parking lot, providing direct access the adjacent business and sidewalk to Queensview Drive.
- (g) The new fully enclosed glazed pedestrian Bridge shall be naturally ventilated. Where natural ventilation is inadequate, mechanical ventilation shall be provided. Adequacy of natural ventilation shall be confirmed by calculation or simulation modeling.
 - (i) Access to the pedestrian overpass shall be outside of the Fare Paid Zone of the Station.

- (ii) Pedestrian access to the Bridge overpass at the north and south sides of Highway 417 shall be accessible. Redundant elevators shall be provided at both access points.
- (iii) The pedestrian Bridge and supporting Structure shall be located to accommodate the future expansion of Highway 417.
- (iv) Pedestrian Bridge shall be designed and constructed with minimal camber to provide a line of sight from end to end.
- (v) Pedestrian Bridge shall be designed to allow the Bridge to remain accessible to the public while securing the Train Station during Train non-Operating hours.

3.10 Pinecrest Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3.
- (b) Pinecrest Station is an existing Transitway Station. DB Co shall be responsible for the complete demolition and removal of foundations, and all elements of the existing Station, and shall make good the finished grades and landscaping. The new Pinecrest Station shall be located on the north side Highway 417 west of Pinecrest Road.
- (c) The eastern end of the Station Platform(s) shall be no less than 650m from the western end of Queensview Station Platform(s).
- (d) Pedestrian access shall be via MUPs, from the southbound lanes of Pinecrest Road and a MUP from Dumaui Avenue.
- (e) DB Co shall design and construct off street bus Facilities to support transfer of customers from bus stops located adjacent to the Station. DB Co shall provide a bidirectional route from Pinecrest Road to the Station bus stop location and a bus turnaround after the bus stop to return buses to Pinecrest Road. The transfer of customers at this Station shall not be required to be within a Fare Paid Zone.
- (f) The Station shall be served by a minimum of one fare controlled entrance.
- (g) ESP access shall be via the existing Transitway access roadway.

3.11 Bayshore Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Bayshore Station is an existing Transitway Station that is currently located adjacent to Bayshore Shopping Centre and Highway 417. The Station shall be converted to serve as a Transfer Station of the Confederation Line.
- (c) The Station Platform shall be located to provide convenient access to Bayshore Shopping Centre at the southwest corner of the existing shopping centre building.

- (d) The Station shall facilitate direct and rapid movement of Passengers between local buses, Trains, and the adjacent commercial development.
- (e) The Station shall be served by a minimum of two fare controlled entrances. One shall be an at grade entrance from the MUP and shopping centre driveway and one serving the existing connecting Bridge entrance.
- (f) Entrances allowing Passengers to transfer between bus service and Train service without passing through fare control gates and/or revalidating fare payment shall be provided from all bus Platforms.
- (g) The Station shall be designed to allow the bus terminal to remain accessible to the public while securing the Train Station during Train non-Operating hours.
- (h) DB Co shall design and construct the Station so Passengers are not permitted to cross bus lanes within the Station to exit or transfer between bus services to Train service.
- (i) DB Shall provide knockout panels as follows:
 - (i) A total of two knockout panels shall be provided at the new entrance building serving the future development to the north of the bus terminal;
 - (ii) DB Co shall provide one knockout panel on each level of the new entrance building: one at bus terminal entrance level and one at the pedestrian bridge level;
 - (iii) Knockout panels shall be 4.0m wide x 3.0m high clear opening; and,
 - (iv) The final location of knockout panels shall be determined during the design phase in consultation with the City and developer.
- (j) Existing bus Platform widths are considered acceptable provided DB Co's design solution does not reduce the current width.
- (k) Existing bus layby configuration is acceptable provided turning radii for all design vehicles are accommodated.

3.12 Moodie Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3.
- (b) Moodie Station is an existing Transitway Station that is currently located southeast of the intersection of Moodie Drive and Corkstown Road. The existing Station shall be converted to a Terminal Station serving as the western terminus of the Confederation Line.
- (c) The Station Platform shall be located between Corkstown Road and the eastbound off ramp of Highway 417, east of Moodie Drive.

- (d) The Station shall facilitate direct and rapid movement of Passengers between local buses, Trains, and the adjacent development.
- (e) The Station shall be served by a minimum of one fare controlled entrance.
- (f) Entrances allowing Passengers to transfer between bus service and Train service without passing through fare control gates and/or revalidating fare payment shall be provided from all bus Platforms.
- (g) Two PPUDOs shall be provided. One PPUDO with four paces shall be accessed from Corkstown Road at the west end of the site and one PPUDO with two spaces shall be located on Corkstown Road at the east end of the site.
- (h) The Station shall be designed to allow the bus terminal to remain accessible to the public while securing the Train Station during Train non-Operating hours.
- (i) The bus terminal shall have a secondary entrance from the existing Moodie Drive free flow bus ramp as follows:
 - (i) The access shall be secured with a lockable manual gate forming part of the fare paid zone perimeter; and,
 - (ii) The access shall be permitted to cross a bus Platform, provided DB Co's design includes a depressed area of the Platform; the Platform is free and clear of lighting fixtures, shelters etc., and the Platform is designed to accommodate the vehicular load of the buses.

3.13 Blair Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Blair Station is an Existing Confederation Line Station serving as the interim eastern terminus of the Existing Confederation Line. DB Co shall modify the existing bus terminal to satisfy the bus Facility requirements.
- (c) DB Co scope within the existing Station and Bus Operator building shall be limited to modifications required for the site modifications, unless required elsewhere in this Schedule 15-2 – Design and Construction Requirements.
- (d) The extension of the Trackwork to the east shall maintain protection for the future Platform extension to the east.

3.14 Montreal Road Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Montreal Road Station shall be a new Line Station located at the crossing of OR 174 and Montreal Road.

- (c) The Station shall be served by two fare controlled entrances located on Montreal Road. One entrance shall serve the eastbound lane and one shall serve the westbound lane.
- (d) The Platform shall be located in the median of OR174, above Montreal Road and shall be located so that the Platform spans Montreal Road.
- (e) Bus stops and shelters shall be provided in each direction of travel on Montreal Road.
- (f) Sidewalks and Station entry plazas shall be sized appropriately to serve movement of and the volume of pedestrians and cyclist along Montreal Road, bus stops, and Passengers transferring from bus to Train.
- (g) DB Co shall provide off street parking for two service vehicles within the highway interchange, north of the Station with access from Montreal Road.

3.15 Jeanne d’Arc Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Jeanne d’Arc Station shall be a new Station located at the crossing of OR 174 and Jeanne d’Arc Boulevard.
- (c) The Station shall be served by two fare controlled entrances located on Jeanne d’Arc Boulevard. One entrance shall serve the north-bound lane and one shall serve the southbound lane.
- (d) The Platform shall be located below Jeanne d’Arc Boulevard in the median of OR 174.
- (e) The Station Structure, vertical circulation elements, Station entry and Station entry plaza shall be designed and constructed to permit the widening of Jeanne d’Arc Boulevard to an ultimate ROW width of 37.5m without the relocation of fare gates, vertical circulation elements, etc. and without modifications to the main roof of the Station. The future widening of the roadway shall not reduce the entrance plaza to a size where it is of an insufficient size to accommodate the number of pedestrians and cyclist, or their movement, as required.
 - (i) The Station design inclusive of the main roof structure shall protect the fare gates from precipitation in accordance with this Part 4 in both the initial construction and with the future widening of Jeanne d’Arc Boulevard.
- (f) In addition to the plaza space identified in Clause (e) above, DB Co shall provide a plaza space of a minimum of 200 m² at the entrance serving the southbound lanes of Jeanne d’Arc Boulevard. A minimum of 40% of the plaza shall have weather protection for waiting bus Passengers outside of the Fare Paid Zone.
- (g) In addition to the plaza space identified in Clause (e) above, DB Co shall provide a plaza space of a minimum of 60 m² at the entrance serving the northbound lanes of Jeanne

d'Arc Boulevard. A minimum of 20% of the plaza shall have weather protection for waiting Passengers bus Passengers outside of the Fare Paid Zone.

- (h) Plaza spaces required in Clauses (f) and (g) above shall not be required when the ultimate ROW width of 37.5m, is achieved in the future.
- (i) DB Co shall provide parking for two service vehicles on the vacated portion of the existing bridge/ramp access or within the within the highway interchange, north or south of the Station.

3.16 Orléans Boulevard Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Orléans Boulevard Station is a new Line Station located at the crossing of OR 174 and Orléans Boulevard.
- (c) The Station shall be served by two fare controlled entrances located on Orléans Boulevard. One entrance shall serve the northbound lane and one shall serve the southbound lane.
- (d) The Platform shall be located below Orléans Boulevard in the median of OR 174.
- (e) Sidewalks and Station entry plazas shall be sized to accommodate the number of pedestrians and cyclists, and their movement as required to serve the general public along Orléans Boulevard, the bus stops, and the Passengers transferring from bus to Train.
 - (i) DB Co shall provide a plaza space of a minimum of 60 m² at each entrance. A minimum of 20% of the plaza shall have weather protection for waiting bus Passengers outside of the Fare Paid Zone.

3.17 Place d'Orléans Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Place d'Orléans Station is an existing Transitway Station that is currently located adjacent to Place d'Orléans Shopping Centre and OR 174. The Station shall be converted to serve as a Transfer Station.
- (c) DB Co shall ensure that a pedestrian Bridge spanning OR 174, connecting the Park and Ride Facility, the bus terminal and Place d'Orléans Shopping Center is included as a non-fare paid connection in the final configuration.
- (d) The Station shall be served by four fare controlled entrances.
 - (i) An entrance shall provide access from the existing pedestrian Bridge to the Train Platform located in the median of OR 174.

- (ii) An entrance shall provide access from the existing pedestrian Bridge to the existing bus terminal.
- (iii) An entrance shall provide access from grade in the existing Place d'Orléans Shopping Centre parking lot to the bus terminal.
 - A. Passengers using this entrance shall be permitted to cross the bus traffic lanes.
- (iv) An entrance shall provide access from the existing Champlain Street Bridge to the Train Platform located in the median of OR 174.
- (e) A connection to the LRT Station, allowing Passengers to transfer between bus service and Train service without passing through fare control gates and/or revalidating fare payment shall be provided from the bus Platform area.
 - (i) DB Co shall provide a new, fully enclosed, ventilated, glazed Bridge corridor.
- (f) The Station shall be designed to allow the bus terminal to remain accessible to the public while securing the Train Station during Train non-operating hours.

3.18 Trim Station

- (a) DB Co shall design and construct the Station in accordance with this Article 3:
- (b) Trim Road Station is an existing Transitway Station that is currently located southeast of the intersection of Trim Road and OR 174. The existing Station shall be converted to a Terminal Station serving as the eastern terminus of the Confederation Line.
 - (i) DB Co shall redesign, reconfigure, and construct the existing bus terminal and Park and Ride Facility to satisfy the bus terminal and parking capacity requirements of the Project, including:
 - A. The Station bus terminal, PPUDO and Park and Ride facilities shall be designed and constructed to satisfy the requirements of the relocated Trim Road and also with the future Trim Road overpass constructed;
 - B. The bus terminal and Park and Ride facility shall be designed to allow segregated access for public parking and bus service in both the initial configuration and in the future reconfiguration when Trim Road overpass is constructed. DB Co shall provide conceptual design illustrating both conditions in accordance with Schedule 10 – Review Procedure;
 - C. Bus access to the bus terminal shall be from the truncated portion of Trim Road north of the relocated E-S OR 174 ramp terminal. The truncated Trim Road, north of the ramp terminal shall be restricted access for buses and authorized vehicles only;

- D. In addition to the bus access from the truncated portion of Trim Road, the bus terminal shall have a manually operated gated secondary access and exit point at the east end;
 - i. The secondary exit point may be routed through the Park and Ride facility provided drive widths, turning radii, etc. are adequate for all buses utilized by the City.
 - E. The bus terminal configuration shall be as required to accommodate the facilities in the initial and future Trim Road configurations without relocating the fencing/barrier segregating the Fare Paid Zone from the Park and Ride facility, modifying utilities and SWM features, or acquiring property to the north of the existing City property limit;
 - F. The bus terminal configuration shall allow Passengers transferring from bus service to have unimpeded access to the Station entry without crossing bus drive access roads, bus terminal lanes, laybys, etc.;
 - G. PPUDO and Park and Ride customers shall have direct access to the Station entry without crossing the bus access drive;
 - H. The Park and Ride facility shall have a minimum of two vehicular access points segregated from the normal bus operational access route;
 - I. The Park and Ride facility main drive lanes shall be designed and constructed to accommodate both the initial and future Trim Road configurations; and,
 - J. The Park and Ride facility shall be designed to allow for the Trim Road overpass and associated road modifications to be constructed without relocation of parking spaces or drive lanes;
- (c) The Train Platform shall be in the median of OR 174. The bus terminal and Park and Ride Facilities shall be located south of OR 174 and east of existing Trim Road.
 - (d) The Station shall be a centre Platform configuration.
 - (e) The Station shall be served by one fare controlled entrance providing access from the Park and Ride area and PPUDO to the Station.
 - (f) An entrance allowing Passengers to transfer between bus service and Train service without passing through fare control gates and/or revalidating fare payment shall be provided from the bus Platform area.
 - (g) The Station shall be designed to allow the bus terminal to remain accessible to the public while securing the Train Station during Train non-Operating hours.

- (h) DB Co shall design and construct the Station to accommodate the future works described below:
 - (i) Construction of new Trim Road overpass with a fare paid entrance from the Trim Road southbound sidewalk; and,
 - (ii) Construction of an entrance located north of OR 174 and east of Trim Road connected to the Station Platform with and overhead pedestrian Bridge.
- (i) DB Co shall provide a total of 1,111 Park and Ride spaces on the site. Parking spaces shall be surface parking.
- (j) DB Co shall provide a formal PPUDO.
- (k) DB Co shall provide a new fully enclosed glazed Bridge corridor within the Fare Paid Zone, linking the bus terminal and the LRT Platform. The enclosed Bridge corridor shall be naturally ventilated. Where natural ventilation is inadequate, mechanical ventilation shall be provided. Adequacy of natural ventilation shall be confirmed by calculation or a computer program.

ARTICLE 4 STRUCTURAL DESIGN CRITERIA

4.1 Introduction

- (a) DB Co shall design and construct Stations and Facilities in accordance with this Article 4. The structural design shall include design of new members, inspection and documentation of existing Structures impacted by the Station construction and corresponding rehabilitation design.
- (b) In addition to the submittals required elsewhere, the structural engineering services shall include the preparation of complete calculations (appropriately indexed), coordination with other disciplines and general review of construction. Structural calculations shall be submitted in accordance with Schedule 10 – Review Procedure.
- (c) In addition to the requirements set forth in this Article 4, refer to Schedule 15-2, Part 8 – Underground Structures for Underground Structure requirements and Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements, for pedestrian Bridges not forming part of the Station Structure.

4.2 Reference Documents

- (a) The structural design shall comply with the criteria contained in this Article 4, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a structural component conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - (i) OBC;
 - (ii) NBC; where applicable
 - (iii) User's Guide – NBC: Structural Commentaries (Part 4); where applicable
 - (iv) CAN/CSA S6 - CHBDC*;
 - A. *Note: Portions of the Station that support Vehicle loads shall be considered Train Structures. Train Structures shall be designed to satisfy the requirements of this Article 4 and the remainder of Schedule 15-2 – Design and Construction Requirements and shall meet or exceed the applicable building code(s) and the CHBDC.
 - (v) CAN/CSA A23.1/A23.2 - Concrete Materials and Methods of Concrete Construction/Test Methods and Standard Practices for Concrete;
 - (vi) CAN/CSA A23.3 - Design of Concrete Structures;
 - (vii) CAN/CSA O86 - Engineering Design in Wood;

- (viii) CAN/CSA S16 - Design of Steel Structures;
- (ix) CAN/CSA S304.1 - Design of Masonry Structures;
- (x) CAN/CSA S136 – North American Specification for the Design of Cold-Formed Steel Structural Members;
- (xi) Canadian Foundation Engineering Manual;
- (xii) CAN/CSA S478 – Guideline on Durability in Buildings;
- (xiii) ACI 201.2R – Guide to Durable Concrete;
- (xiv) AREMA Manual for Railway Engineering hereinafter referred to as the AREMA Manual
- (xv) ACI 360R – Design of Slabs on Grade;
- (xvi) CSA S448.1 – Repair of Reinforced Concrete in Buildings and Parking Structures;
- (xvii) AISC/CISC Steel Design Guide Series 11 – Floor Vibrations Due to Human Activity;
- (xviii) Ontario Occupational Health and Safety Act;
- (xix) PEO Professional Engineers Providing Services for Demolition of Buildings and Other Structures;
- (xx) MTO Structure Rehabilitation Manual;
- (xxi) MTO Ontario Structure Inspection Manual;
- (xxii) MTO Structural Manual;
- (xxiii) MTO Structural Steel Coating Manual;
- (xxiv) Ontario Provincial Standards (<http://www.raqsb.mto.gov.on.ca/techpubs/>);
- (xxv) ASTM E2018 Standard Guide for Property Condition Assessments: Baseline Property Condition Assessment Process;
- (xxvi) ASCE Structural Condition Assessment of Existing Structures;
- (xxvii) AASHTO LRFD Guide Specifications for the Design of Pedestrian Bridges;
- (xxviii) OC Transpo Transitway and Station Design Guidelines; and,

(xxix) ISO 12944-5 Paints and varnishes - Corrosion protection of steel structures by protective paint systems - Part 5: Protective paint systems.

4.3 Federally Mandated Stations

- (a) Federally Mandated Stations shall be subject to the regulations of the NCC shall meet the requirements of both the OBC and the NBC.

4.4 Durability

- (a) Provide materials, details and protection systems to meet or exceed the specified requirements for Project durability.
- (b) Time-dependent design calculations, including corrosion, fatigue and creep shall be based on the required Design Life as outlined in Schedule 15-2, Part 1, Article 4 – Design and Construction.
- (c) At a minimum, DB Co shall provide concrete meeting exposure Class C-1 per CSA 23.1, for all concrete at or above grade.
 - (i) DB Co shall provide testing report for chloride penetrability for concrete of exposure class C-1 and C-XL in accordance with Schedule 10 – Review Procedure.
- (d) Reinforcing steel in substructure concrete within the splash zone of adjacent roadways treated with de-icing salts shall be stainless steel. Splash zone shall be as defined in MTO Structural Manual.
- (e) All structure members not within the heated space shall be capable of withstanding freeze-thaw effects without negatively impacting the design objectives.
- (f) DB Co shall detail members to minimize exposed surface area and avoid pockets, crevices, recesses, re-entrant corners, and locations that collect and retain water, debris, and moisture.
- (g) DB Co shall coat or galvanize all permanent iron and steel utility supports, fittings, and accessories. Design utility supports to prevent stray electrical currents between the Structure and the utility supports.
- (h) DB Co shall use weldable reinforcement and suitable welding procedure where electrical continuity is required for managing stray currents.
- (i) DB Co shall provide access for maintenance and inspection with conventional techniques included in MTO's Ontario Structure Inspection Manual, Structure Rehabilitation Manual and Structural Manual for all components of the Structure. Inspection and maintenance access and maintainability shall meet the requirements in Clause 1.8.3 in CSA S6-14.

4.5 Station Structural Loads

(a) Dead Loads

- (i) Dead loads or permanent loads shall be as specified in OBC, NBC and CAN/CSA S6, as applicable.
- (ii) Mass densities for materials shall be standard unless analysis or testing indicates that other criteria shall be used. Perform a sensitivity analysis for the actual weight where a variation might affect the adequacy of the design or in cases where the construction may vary from normal practice.

(b) Live Loads

- (i) Live loads include the Revenue Vehicle design loads and highway vehicular loads specified in Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements as well as all floor and roof live loads as described in the design codes and standards specified earlier in this Article 4.
- (ii) Vehicle Live Load:
 - A. Refer to Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements for Train loads.
 - B. Design Platforms and ramp slabs wider than 3m and accessible to Maintenance Vehicles for a concentrated vehicle load as per OBC, or the Maintenance Vehicle load as defined in CHBDC, whichever produces the more critical structural responses.
 - C. Design the structures supporting Sidewalks, Plazas, and other open areas wider than 3m, adjacent to road way and without permanent barrier to separate the roadway from the area for CL-625-ONT truck load as defined in CHBDC, or fire truck load as per OBC, whichever produces the more critical structural responses. Design structural members within this area for collision force defined below.
- (iii) DB Co shall design and provide electrical equipment rooms, pump rooms, machinery rooms, storage rooms, service rooms, battery rooms and fan equipment rooms containing fire ventilation equipment for a specified live load of 12kPa, or the actual equipment load where greater than 12 kPa, applied uniformly over the entire area, or on any portion of the area, whichever produces the most critical effects in each member.

(c) Environmental Loads

- (i) Snow, rain, ice, ice accretion, wind and earthquake loads shall be as described in the design codes outlined earlier in this Article 4 using the OBC Importance Category of “Normal”.

- (ii) Include allowance for the build-up of ice on Track slabs and the build-up of compacted snow on vertical faces of barrier walls and Platform support walls adjacent to Track slabs at exposed parts of above grade Stations where the potential for such build-up exists.
 - (iii) Design Station Structures, partitions and affected non-structural elements to resist the piston effect wind pressures from Revenue Vehicles. DB Co shall be responsible to determine the required pressures to be resisted by all elements of the Station. DB Co shall provide data and reports supporting the determination of the design pressure based on SES modeling of the underground system. The minimum uniform design pressure for these elements shall be 1kPa in either the positive or negative direction.
- (d) Fatigue Loading
 - (i) DB Co shall assess operational requirement in Schedule 15-2, Part 1 Article 3 – Operational Performance Requirements to determine the expected number of Trains the Structure will support during its Design Life. A service load analysis for fatigue shall be applied to affected structural elements and is generally based on the number of full loading cycles that are applied to the Structure. The loading cycles applied to each member and connection shall include the number of Revenue Vehicles, trucks or wheel load passes, whichever produces the most critical effect.
- (e) Earth Loading
 - (i) Vertical and horizontal earth pressures acting on retaining walls and Underground Station Structures: refer to Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements and Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements.
 - (ii) Design Structures which retain earth for horizontal earth pressure due to earth against the Structure and load surcharges resting on the soil above or beside the Structure.
 - (iii) Vertical pressure from superimposed earth load shall be based on a mass density of 22 kN/m³ for compacted granular materials. Consider a minimum earth load assuming that 1m of fill may be removed for road or utility construction.
- (f) Water/Buoyancy/Flood Loading
 - (i) DB Co shall consider the effects of water pressure and buoyancy whenever groundwater is present. DB Co shall establish high and low water tables for the life of the Structure with due consideration given to the possibility of future changes in groundwater elevation.

- (ii) The design shall take into account the effect of water pressures during the construction sequence.
 - (iii) DB Co shall observe and control the elevation of the groundwater during construction and backfill operations, so that the calculated total mass of Structure and backfill shall always exceed the calculated uplift due to buoyancy by a safe margin. The backfill shall be considered as the volume contained within vertical planes defined by the outside limits of the Structure.
 - (iv) Design of the Structure shall make allowance for flood elevations based on 100 year flood data where it may add load to Structures.
- (g) Adjacent Structure/Additional Surcharge Loading
 - (i) DB Co shall determine horizontal and vertical distribution of loads from foundations of existing buildings.
 - (ii) DB Co shall determine the minimum and maximum loads which can be transferred to the underground Structure. These loads shall be based on the actual design loads for the Adjacent Structure where this information is available. In the absence of this information, DB Co shall use the methods in the Reference Documents in Clause 4.2 of this Part 4 to evaluate probable loading of the existing Structure. The loading shall have at least the minimum level of performance on the objectives and functional statements stated or implied in Reference Documents in Clause 4.2 of this Part 4.
 - (iii) DB Co shall determine the need for all permanent underpinning of buildings or Structures when performing the above analyses.
- (h) Thermal, Shrinkage, and Creep Loading
 - (i) The secondary effects due to the stresses and movements resulting from temperature changes, thermal gradients, creep and shrinkage shall be considered in the design. DB Co shall determine these loads and the appropriate design solution in accordance with the requirements of OBC, NBC, CAN/CSA S6 and AREMA, as applicable.
- (i) Other Loads and Effects:
 - (i) as applicable to the use and occupancy for the Structure or element under consideration;
 - (ii) as required by the design codes, standards and references listed in this Article 4;
 - (iii) refer to Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements for Revenue Vehicle and Vehicle loads;
 - (iv) Construction loads, construction staging loads and maintenance loads;

- (v) loads due to fan induced airflows during operation of fire ventilation fans;
- (vi) loads induced on the Structures by tolerable differential settlement;
- (vii) loads to protect for future expansion where applicable; and
- (viii) other loads and effects specified in Schedule 15-2, Part 2, Article 9 – Protection of Existing Adjacent Structures and Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements where applicable.

4.6 Load Combinations

- (a) Load factors, resistance factors and load combinations shall be in accordance with the applicable building and Bridge codes for the particular Station and structural element under consideration.
- (b) Refer to Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements for load factors, resistance factors and load combinations for Station Structures supporting Revenue Vehicles.
- (c) Where the Station structure is subject to Revenue Vehicle load, the structure shall be designed for OBC and CHBDC.
- (d) For Structures carrying more than one Track, determine the combination of Revenue Vehicle axle loads on one or more Tracks which produces the most critical effect.

4.7 Design Considerations for Retaining Walls

- (a) Design considerations and factors influencing the behaviour of retaining walls shall be as per CAN/CSA S6 and OBC. The design of any retaining wall is site specific, necessitating the need for specific geotechnical input and an understanding of wall construction methods. Provide architectural enhancement of walls where specified in the architectural design.
- (b) DB Co shall design retaining walls to resist the following loads:
 - (i) Superimposed surface and subsurface loads (adjacent vehicles and Structures);
 - (ii) System imposed forces (trackway vicinity);
 - (iii) Earth or rock pressures and hydrostatic pressures;
 - (iv) Earthquake lateral pressures;
 - (v) Wind Loads, where required;
 - (vi) Self-weight;

- (vii) Loads during construction;
 - (viii) Thermal, shrinkage, and creep loads; and,
 - (ix) Other retaining wall loads specified in Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements, and Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements.
- (c) Retaining Walls shall be analyzed for:
- (i) Stability against sliding;
 - (ii) Stability against bearing failure and overturning;
 - (iii) Settlement;
 - (iv) Overall stability;
 - (v) Structural strength;
 - (vi) Protect for future wall repair when locating retaining walls;
 - (vii) Provide Compensating Construction where existing retaining walls are impacted by the Station renovations as required by OBC and NBC, as applicable; and
 - (viii) Other requirements specified in Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements, and Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements.

4.8 Other Design Considerations

- (a) DB Co shall design the structural foundations, superstructures, systems, elements and connections to meet all of the requirements stipulated in the codes, standards and references listed in this Article 4.
- (b) DB Co shall slope structural members to provide drainage where required.
- (c) DB Co shall incorporate into their pedestrian Bridge design MTO design requirements to address snow and ice from falling on vehicles.
- (d) Deflection and Vibration Control
 - (i) All structural members shall have adequate stiffness to limit deflections which may adversely affect the strength and serviceability of the Station Structure.
 - (ii) Deflections due to live load, including dynamic factors, in members supporting Train loads, shall not exceed 1/1000 of the span for interior spans and 1/300 for cantilever arm length.

- (iii) The maximum total (dead and live load) long term total deflection considering creep and cracking for members supporting Train loads shall be limited to 1/500 of the interior spans and 1/180 of cantilever arm length.
 - (iv) Members not supporting rail loads, such as roofs, concourse and Platform slabs, shall be designed to standard acceptable engineering practices for serviceability taking into consideration the flexibility, or lack of flexibility, of the materials supported by the Structure.
 - (v) Members and systems supporting the system shall be proportioned so that the natural frequency of the first mode of vertical vibration is greater than 2.5 Hz.
 - (vi) Design floor systems susceptible to vibration in accordance with AISC/CISC Steel Design Guide Series 11 – Floor Vibrations Due to Human Activity, to meet the acceptance criteria for indoor footbridges.
- (e) Foundation
 - (i) Settlements
 - A. Design foundations so that total and differential settlements do not adversely affect the strength or serviceability of the Station Structures.
 - B. Design structural members and systems supporting Revenue Vehicles so that total and differential settlements do not adversely affect the operation and serviceability of the Revenue Vehicles.
 - (ii) Pile design and detailing shall meet requirements in OBC, MTO Structural Manual, CHBDC. DB Co. shall follow the requirements in AASHTO LRFD Section 10 if requirements are not specific in the above documents.
 - (iii) Provide measures to prevent frost heave. The acceptable measures shall be taken from Reference Documents in Section 4.2.
- (f) Seismic Design for Elements of Station Structures, Non-Structural Components and Equipment
 - (i) Seismic Importance Category shall be “Normal” as per OBC.
 - (ii) DB Co shall design elements and components of buildings, non-structural components and equipment for earthquake loads and effects as required by OBC and NBC.
 - (iii) The load factor for earthquake effect on Revenue Vehicle shall be in accordance with Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements.
- (g) Waterproofing

- (i) The following areas shall be sealed to prevent water ingress:
 - A. Underground pits, shafts and rooms.
 - B. Platforms, walkways, Track structure and roadways over rooms or spaces
 - C. Walls and floors of buildings subject to hydrostatic pressure.
 - (ii) For the locations identified above, DB Co shall provide full impervious membrane protection.
 - A. For walls, a backup hidden drainage system within the wall shall be provided.
 - (iii) The material and construction of waterproofing shall follow requirements in ASTM, OPSS, and CAN/CGSB.
- (h) Fire Protection
- (i) Structural elements and load bearing assemblies shall be of the required type of construction and shall have fire resistance ratings as required by the code analysis and the architectural design.
 - (ii) DB Co shall provide concrete cover to reinforcing steel in reinforced concrete elements as required to provide the required fire resistance rating for the element or assembly.
 - (iii) DB Co shall provide intumescent paint where the architectural design utilizes exposed structural steel assemblies that require a fire resistance rating.
 - (iv) Adhesive anchors shall not be used for connections for structural assemblies required to have a fire resistance rating.
- (i) DB Co shall protect for the future replacement of elevators, escalators, transformers, ventilation fans and other large/heavy equipment without strengthening and/or temporary removal and replacement of structural members.
 - (j) DB Co shall not locate columns in public circulation areas. When unavoidable, the column cladding and size be minimized so as to maximize sightlines and customer circulation.

4.9 Considerations of Existing Structure

- (a) Conditions of existing Structures affected by new construction
 - (i) An existing structure is considered modified under one or more of the following situations.

- A. geometries are modified,
 - B. material properties are modified,
 - C. support condition are modified,
 - D. loads are changed,
 - E. environmental condition is changed,
 - F. a new member is attached to an existing structural member resulting in load sharing between the new and existing members, or
 - G. it is within the ZOI, which shall be defined by DB Co's Geotechnical Engineer in accordance with *User 's Guide - NBC 2015, Structural Commentaries (Part 4 of Division B), Commentary on CSA S6 (C6), and CFEM.*
- (ii) DB Co shall demonstrate that the performance of the modified existing Structure meets all the applicable standards and requirements in this Article 4, regardless of the deficiencies in the existing Structures at the time of Contract Award, where deficiencies could result from construction, material, design, normal course of deterioration, or damage prior to the Commercial Close.
 - (iii) DB Co shall investigate the structural soundness of the existing member affected by the construction and ensure it is capable of supporting the new member for the Design Life of the new member.
 - (iv) DB Co shall inspect and document the conditions of the existing structures affected by the construction. The content and the documentation of the inspection should follow the requirements in MTO Ontario Structure Inspection Manual, MTO Structure Rehabilitation Manual, ASTM E2018, or ASCE Structural Condition Assessment of Existing Structures. The requirements in the above references apply only when appropriate. Necessary additional or alternative criteria are subject to approval by the City.
 - (v) Refer to Schedule 15-2, Part 2, Clause 4.4 (v) (ii) for requirements for Structures within ZOI.
- (b) DB Co shall perform and comply with the following for the renovation of existing Structures:
 - (i) OBC and NBC as applicable.
 - (ii) The Heritage Act as applicable.
 - (iii) MTO Structure Rehabilitation Manual if the structural member is exposed.

- (iv) DB Co shall obtain background drawings, specifications and construction records for the affected Structures.
 - (v) Perform as built surveys to verify the accuracy of the background drawings.
 - (vi) Excavate test pits to verify the size and depth of existing foundations.
 - (vii) Conduct destructive investigations to verify existing conditions.
 - (viii) Conduct materials testing to determine and verify existing material properties.
 - (ix) The requirements for Basic Renovation or Extensive Renovation as determined by the code analysis at each location.
 - (x) Provide Compensating Construction as required by OBC and NBC, as applicable.
 - (xi) Perform selective demolition in accordance with OBC and NBC as applicable,
 - (xii) Perform Repairs on any damage caused by the Work to the satisfaction of the property owner.
- (c) Interface between existing and new deck Structures supporting pedestrian and vehicular traffic:
- (i) At locations where new framed floors are built adjacent to existing floor/Bridge Structures, design and construct the new Structure in a manner that minimizes the vertical differential movement at the interface between Structures so that normal serviceability of the Station is maintained under permanent and transient loads. Joints between new and existing slabs shall be flush with no vertical offsets that could create pedestrian tripping hazards or bumps under wheel loading. The design shall address: long term deflection (creep) of concrete; differential live loading; total and differential footing settlement; beam and slab camber; expansion joint cover design; and other effects where applicable.
 - (ii) DB Co shall pre-consult the City on any modification needed to all existing Bridge Structures.
- (d) Where existing Structures are incorporated into or form part of the Station Structures, DB Co shall rehabilitate the existing Structures as required to meet the required Design Life as per Schedule 15-2, Part 1, Article 4 – Design and Construction.
- (i) Estimate the remaining life of the existing structure using a method and parameters recommended in peer-reviewed publications. Submit the documents supporting the estimated remaining life to the City for review and approval.

4.10 Reinforced Concrete

- (a) This Subsection applies to reinforced, prestressed, and precast concrete Structures.

- (b) DB Co shall provide a nonslip surface finish in accordance with CAN/CSA A23.1 at exterior slabs subject to pedestrian traffic and at other locations as required in this Part 4.
- (c) DB Co shall apply hardener at exposed concrete floors.
- (d) Joints in Structures
 - (i) DB Co shall provide expansion joints, contraction joints and construction joints: in accordance with the all Applicable Codes and standards and in accordance with good industry practice; to control shrinkage stresses and minimize shrinkage cracking; and to meet or exceed the requirements for durability specified in Clause 4.4 of this Article 4.
 - (ii) DB Co shall provide waterstops in all joints below grade.
 - (iii) Plan construction joint locations in advance in order to minimize the number of joints while still keeping the length of individual concrete pours within standard acceptable maximum lengths. The shape of the pour as well as the amount of reinforcement in the section shall be taken into consideration when determining joint location and spacing.
- (e) Field sampling and testing of concrete and acceptance criteria for quality assurance shall follow the requirements in OPSS 1350.
- (f) DB Co shall design all concrete on or above grade for exposure to chlorides.

4.11 Structural Steel

- (a) The Code of Standard Practice for Structural Steel published by the CISC shall govern the furnishing of structural steel.
- (b) Design of structural steel Structures shall be in accordance with CAN/CSA S16 Design of Steel Structures and CAN/CSA S6 Canadian Highway Bridge Design Code, where they are applicable.
- (c) Design of cold formed steel Structures shall be in accordance with CAN/CSA-S136 North American Specification for the Design of Cold-Formed Steel Structural Members.
- (d) All structural steel left exposed and viewable by the public shall be architecturally exposed structural steel.
 - (i) DB Co shall provide architecturally exposed structural steel conforming to CISC Code of Standard Practice for Structural Steel, APPENDIX I, as supplemented by CISC Guide for Specifying Architecturally Exposed Structural as required by Clause 2.8 of this Part 4.
- (e) DB Co shall provide concealed connections where required by the architectural design.

- (f) Protection of Steelwork
 - (i) DB Co shall make all parts of a Structure accessible for inspection, cleaning, and maintenance. Where this is not possible, DB Co shall use concrete encasement of steelwork, and use of special protective coatings or the use of atmospheric corrosion resistant steel.
- (g) Protective Coatings
 - (i) DB Co shall protect structural steel members and connections exposed to weather, high humidity or water spray against corrosion in accordance with MTO Coating Structural Manual. Minimize localized corrosion likely to occur from entrapped water, excessive condensation, or from other factors by suitable design and detail. Provide positive means of drainage to prevent standing water on steel surfaces.
 - (ii) Painting of interior structural steel shall meet the requirements of ISO 12944-5 for the applicable corrosive environment and desired Design Life of the coating system.
 - (iii) Co-ordinate the protective coating systems with the architectural design.
 - (iv) The minimum protection system shall be painting with a high performance coating system.
 - (v) The following shall apply where hot dip galvanized protection system is utilized:
 - A. Protection shall be restored when damage to the galvanized coating has occurred during welding or as a result of rough handling or abrasion.
 - B. All galvanized surfaces shall be finish painted where exposed to public view.
- (h) DB Co shall not use steel deck for Structures exposed to the exterior or to deicing salts.

4.12 Masonry

- (a) Design of masonry Structures shall be in accordance with CAN/CSA S304.1
- (b) Horizontal joint reinforcing shall be galvanized.
- (c) DB Co shall design masonry Structures to resist all applied vertical and lateral loads as required by the OBC (and the NBC where applicable). This requirement applies to load-bearing and non load-bearing masonry.

4.13 Concrete Slabs on Grade

- (a) DB Co shall design Track slabs in accordance with AREMA, CAN/CSA S6 and ACI 201.2R.

- (i) Refer to Schedule 15-2, Part 2, Article 3 - Trackwork for Track slab design requirements.
 - (ii) Transition areas such as behind end of Station end wall (or Bridge abutment) where Train transitions from at grade Track Structure to over the Station structure require special design and construction solutions. An approach slab shall be used in these areas.
- (b) DB Co shall design Platform and other slabs on grade in accordance with CAN/CSA A23.3 and ACI 360R.
- (c) DB Co shall remove existing fill material below slabs on grade and replace with engineered fill to a depth and extent as required to meet the limitations for settlement specified in Clause 4.8 of this Article 4. Reuse of existing excavated fill material is subject to Geotechnical Engineer's confirmation that the existing fill is suitable for re-use.
- (d) DB Co shall design and construct the interface between Track slabs and Platform slabs to maintain the vertical distance between TOR elevation and finished Platform elevation as required by the Revenue Vehicle with short and long term differential settlements not to exceed the tolerance specified by the Revenue Vehicle manufacturer for vertical offset between the Track and finished Platform elevations. Refer to Schedule 15-2, Part 2, Figure 2-2.1 for vehicle dynamic envelope and Platform construction tolerance.
- (e) DB Co shall provide control joints or other measures to prevent uncontrolled shrinkage cracking.
- (f) DB Co shall provide connection design and detailing at the interface between slabs to address differential concrete shrinkage, where the location and spacing of transverse joints in Track slabs does not match the location and spacing of joints in the adjacent Platform slabs.
- (g) DB Co shall design joints to prevent vertical differential movement between slab panels.
- (h) DB Co shall provide slopes to drain slabs and prevent ponding.
- (i) DB Co shall provide subdrainage systems below slabs at locations where the potential exists for the groundwater elevation to reach the underside of the slab subbase.

ARTICLE 5 MECHANICAL DESIGN CRITERIA

5.1 Introduction

- (a) This Article 5 outlines mechanical systems requirements to be developed for the Stations and Ancillary Facilities of the Project.
- (b) These requirements govern the functional, operational and control requirements of the HVAC, Plumbing & Drainage Systems, Fire Protection Systems, and BAS.

5.2 Reference Documents

- (a) The provision of mechanical components shall comply with the criteria contained in this Article 5, and all Applicable Codes, standards, regulations, policies, applicable laws, guidelines or practices applicable to the Project requirements, including but not limited to the latest version of each of the following Documents. In the event of a conflict between criteria, commitments or requirements contained within the document and this Article 5 when compared with another, the most stringent shall apply.
 - (i) OBC;
 - (ii) OFC;
 - (iii) OESC;
 - (iv) CEC;
 - (v) CSA;
 - (vi) OHSA;
 - (vii) AHRI;
 - (viii) AMCA Standards;
 - (ix) ANSI Standards;
 - (x) ASHRAE Standards and Handbooks;
 - (xi) MNECB;
 - (xii) Green Energy Act;
 - (xiii) ASPE;
 - (xiv) ASME;
 - (xv) ASTM;

- (xvi) NEMA;
- (xvii) SMACNA;
- (xviii) TIAC;
- (xix) UL;
- (xx) ULC;
- (xxi) OC Transpo Transitway and Station Design Guidelines;
- (xxii) NFPA Standards;
- (xxiii) Relevant Authorities

5.3 General Requirements

- (a) All mechanical systems including but not limited to equipment, ductwork, pipes, supports, accessories, and their connections to the structure, shall be designed to resist seismic force and to accommodate building seismic deflection in accordance with the OBC. Piping, ducts etc. shall be attached in a manner that accommodates the differential movement where mechanical infrastructure crosses expansion joints, or other places where differential lateral displacement may occur.
- (b) DB Co shall install floor-mounted equipment on concrete housekeeping pads designed to facilitate the weight and inertia of the equipment.
- (c) DB Co shall install roof-mounted equipment on supports/roof curbs provided by the equipment manufacturer.
- (d) DB Co shall coordinate associated architectural and structural requirements for mechanical systems.
- (e) DB Co shall provide adequate service spaces around all equipment. As a minimum, such spaces shall not be less than that indicated in the equipment specification and installation instructions.
- (f) Mechanical equipment and systems shall be designed so that the maximum noise transmitted by the systems does not exceed OHSA and Regulations and ASHRAE Standards.
- (g) Where new mechanical systems are connected to existing mechanical systems, the existing mechanical systems shall be modified to suit the requirements of new systems. The modifications shall be in compliance with OBC, codes, standards, and meet requirements set forth in this Article 5.

- (h) DB Co shall provide technical calculations for review in accordance with Schedule 10 – Review Procedure.
- (i) TAB and Commissioning shall be performed for all mechanical systems.
- (j) Requirements set forth in this Article 5 for Stations shall also apply to service facilities located in Tunnels.
- (k) Electric motors shall be NEMA premium efficiency. Fractional horsepower motors shall be electronically commutated motors.
- (l) All mechanical systems and equipment shall be designed and installed to eliminate the transmission of vibration and noise to other part of the building and to applicable standards, regulations and codes. Provide vibration isolators for mechanical equipment and components.

5.4 HVAC

- (a) DB Co shall design and construct HVAC in accordance with the following design parameters for Stations and Ancillary Facilities:
 - (i) System concepts shall be based on the energy conservation guideline of the MNECB, OBC, and ASHRAE 90.1.
 - (ii) Service equipment rooms, that require reliability, such as communication rooms, telephone rooms, signal rooms, elevator machine rooms shall be positively pressurized to mitigate infiltration of brake dust from Train movements.
 - (iii) Rooms containing equipment that requires condition control shall be designed to suit the equipment as per the manufacturer's recommendations or the occupancy requirements, whichever are the most stringent.
 - (iv) Rooms that are occupied shall be provided with outside air requirements per person as defined in ASHRAE, and, if found to be applicable, air-conditioning, and heating based on the number of occupants.
 - (v) Rooms that are infrequently occupied and do not require condition control for equipment shall have a minimum air change rate as determined to suit the room functions.
 - (vi) Rooms that contain equipment and systems that give off airborne particles, odours, or chemicals shall be exhausted to outside at grade level.
 - (vii) Washrooms and janitor rooms shall be exhausted to outside at grade level.
 - (viii) Battery rooms shall be exhausted to outside at grade level via duty and standby exhaust fans.

- (ix) Air-conditioning systems serving elevator machine rooms shall be designed such that elevator equipment shall be operational during Station fire Emergency.
 - (x) HVAC systems serving critical rooms such as but not limited to communication rooms, signal rooms, control rooms, telephone rooms shall be designed such that those equipment shall be operational during Station fire Emergency.
 - (xi) Elevator shafts shall be provided with HVAC to meet requirements CSA B44 and elevator manufacturer.
 - (xii) Maximum room design temperatures shall be selected to suit the room function and occupancy.
 - (xiii) Spaces requiring heating only shall have ventilation systems (as a separate system or a combined heating and ventilating system if deemed size appropriate) that provides cooling by introducing ambient (outside) air at a rate to limit the maximum space temperature to 5.5°C above ambient (outside) temperature unless otherwise required in this Article 5.
 - (xiv) Systems shall be designed to be capable of providing free cooling by introducing 100% ambient (outside) air. Where the use of outside air results in unacceptable air change and flow rates, provide mechanical air conditioning.
 - (xv) Outside air intakes shall be located at grade level to avoid the introduction of dirt, debris, fumes, odours, noise, irritants and biological agents from traffic and other external sources.
 - (xvi) All occupied spaces or rooms that contain critical equipment shall have individual temperature control.
 - (xvii) Natural gas-fired equipment shall not be permitted inside Underground Stations.
 - (xviii) All equipment, dampers, fittings installed in ductwork shall have flange duct connections.
 - (xix) The analytical design of the ventilation systems serving the public area of the Stations shall be performed by the use of a certified applicable computer modeling program.
 - (xx) Where piston effect is inadequate for ventilation of the Station public areas, mechanical ventilation systems shall be provided for these areas. Adequacy of the piston effect shall be confirmed by the CFD analysis.
 - (xxi) Roughed in ductwork for ventilation exhaust to grade for the retail spaces.
- (b) DB Co shall design and construct HVAC to the following design conditions

- (i) The HVAC outdoor design conditions for both Underground Stations and At-Grade Stations shall be as per OBC.
- (ii) The HVAC indoor design conditions for Station spaces shall be as detailed in Table 4-5.1 below
- (iii) DB Co shall determine the indoor environmental requirements for all support spaces not included in Table 4-5.1 in accordance with Applicable Law, and within the manufacturer's operating range of equipment housed within the space.

Table 4-5.1 - HVAC Indoor Design Conditions

| Space/Room | Minimum Temperature (°C) | Maximum Temperature (°C) | Outside Air per Occupant(l/s) | Air Filtration (MERV) | Humidity Summer / Winter (%RH) |
|--------------------------|--------------------------|--------------------------|-------------------------------|-----------------------|--------------------------------|
| Fare Equipment Room | 22 | 26 | 12 | 12 | 50/30 |
| Staff room/Lunch Room | 22 | 24 | 17 | 8 | 50/10 |
| Bus supervisor's office | 22 | 24 | 17 | 8 | 50/10 |
| Rail Supervisor's Office | 22 | 24 | 17 | 8 | 50/10 |
| Multi-purpose Room | 22 | 24 | 17 | 8 | 50/10 |
| Public Washrooms | 22 | 5.5 (See Note ii) | (See Note iii) | 8 | - |

Notes:

- i. *Ventilation design shall maintain space temperature design for 5.5°above outside ambient summer design temperature. Space may be included in central air handling system that provides heating and cooling as add-on to space(s) that require mechanical cooling.*
 - ii. *Provide mechanical exhaust system at exhaust rate as required by the OBC. Provide outside air for exhaust air make-up. Recirculation of supply air to this space is not permitted.*
- (c) DB Co shall design and construct HVAC equipment and systems as per the following:
- (i) Select equipment to provide the highest operating efficiencies.
 - (ii) Mechanical equipment shall be commercial or industrial grade.
 - (iii) Condensing units shall be located at grade or heat from condensing units shall be rejected to outside at grade.

- (iv) Condensing units shall not be located in Tunnels, shafts, or any other areas subject to brake dust and debris.
- (v) Condensing air for ducted condensing units shall be taken from a location at grade, free from brake dust and debris.
- (vi) Heat recovery systems as well as free cooling shall be utilized to facilitate energy conservation as per ASHRAE 90.1, OBC and local standards.
- (vii) The level of fresh air supplied to occupied space shall be automatically controlled for energy conservation.
- (viii) Gas-fired unit heaters shall be high efficiency with stainless steel burner.
- (ix) Heating systems shall be integral with cooling systems. Heated spaces shall be heated with electric heaters where heating and cooling air-handling units are not provided for the space.
- (x) For above grade buildings only, indirect high efficiency gas-fired heating equipment shall be permitted.
- (xi) Provide electrical radiant heaters for each new and existing warming shelter and TSAs.
 - A. Heaters shall be monitored and controlled by the BAS.
 - B. Each unit(s) serving a shelter shall be independently controlled by a customer activated switch, controlling a rated contactor with a maximum run time of 15 minutes. Contactor shall have a hand-off-auto selector switch with pilot light.
 - C. The BAS shall prevent the operation of the heaters when the ambient temperature is greater the 5 degrees Celsius.
 - D. Heaters shall be UL/ULC listed for horizontal outdoor surface and suspended mounting.
 - E. Enclosures shall be a minimum 20 gauge cold rolled steel finished with powered coated paint.
 - F. Reflectors shall be one-piece construction and a minimum 0.030 gold anodized aluminum with the proper angle to reflect infrared heat.
 - G. Elements shall be double tubular infrared quartz tube with high thermal shock characteristics.
 - H. Each individual unit shall be rated at 4,200W minimum; and

- I. Heaters shall nominally extend the full length of the shelters and TSAs.
- (xii) Electric duct heaters shall be provided with SCR control.
- (xiii) Electric unit heaters shall be provided with remote wired wall mounted thermostat.
- (xiv) Electric force flow heater shall be provided with remote wired wall mounted thermostat.
- (d) DB Co shall design and construct ductwork as per the following
 - (i) Ductwork shall be galvanized steel unless otherwise specified. Construction, joints, fittings and accessories shall be in accordance with the latest SMACNA standards and the OBC.
 - (ii) Ductwork serving shower exhaust, battery exhaust, humidifiers (two meters downstream), and other corrosive gas or high moisture air shall be stainless steel.
 - (iii) Flexible ducts shall be manufacturer pre-insulated.
 - (iv) Flexible ducts shall not be used in Stations.
- (e) DB Co shall design and construct supply diffusers, registers and grilles as per the following:
 - (i) Diffusers shall be extruded aluminum construction with manufacturer applied finish, and opposed-blade adjustable-volume dampers.
 - (ii) Registers and grilles shall be extruded aluminum construction with manufacture applied finish.
 - (iii) Registers and grilles shall be equipped with opposed-blade, adjustable-volume dampers.
- (f) DB Co shall design and construct intake and exhaust wall louvers as per the following:
 - (i) Wall louvers shall be weather resistant, extruded aluminum construction with insect/bird screen.
 - (ii) Wall louvers located in public areas shall be located at minimum 2500mm high level above floor and out of reach of Passengers.
- (g) DB Co shall design and construct volume dampers in branch ducts as per the following:
 - (i) Adjustable volume dampers shall be provided for all branch ducts serving more than one outlet.

- (h) DB Co shall design and construct backdraft dampers as per the following:
 - (i) Dampers shall be counter balancing type for assisted damper operation.
 - (ii) Silencers shall be made of not less than 22 gauge Type G90 galvanized steel or stainless steel to match material of connecting ducts.
- (i) DB Co shall design and construct access doors as per the following:
 - (i) Duct access doors shall be provided at each damper, duct heater, and any other accessories and equipment that require maintenance.
 - (ii) Access doors installed in insulated ducts shall be pre-insulated.
 - (iii) Access doors shall be made of same material as ducts they serve.
- (j) DB Co shall design and construct fire dampers as per the following:
 - (i) Fire dampers shall be Type B or C dynamic dampers.
- (k) DB Co shall design and construct thermal insulation as per the following:
 - (i) Externally applied thermal insulation shall be provided for the ductwork as per ASHRAE 90.1 and OBC, and as indicated below.
 - (ii) Insulate exhaust air ducts and plenums 3m from the exhaust louver.
 - (iii) Insulate outside air ducts and plenums to air handling equipment.
 - (iv) Exhaust air duct from a shower area where duct is in unheated space.
 - (v) Insulate all supply or return air duct transporting air that is above or below the conditioned space design temperature or in an unconditioned space.
 - (vi) Insulation jacketing in public areas or to public view shall be minimum 0.5 mm thick rigid aluminum sheet.
- (l) DB Co shall design and construct acoustic lining as per the following:
 - (i) Acoustic lining shall be permitted at supply and suction ducts of air handling equipment only when installation of silencer is unfeasible.
 - (ii) Interconnecting ductwork between men's and women's washrooms shall be acoustically lined to prevent cross-talk.
- (m) DB Co shall design and construct humidifier as per the following:
 - (i) Humidifier shall be in-duct type.

- (n) DB Co shall design and construct air filtration as per the following:
 - (i) All return air and make-up air shall be filtered.
 - (ii) Filters shall be standardized in type and sizes.
 - (iii) Differential pressure gauge shall be provided across each filter bank and monitored by BAS.
- (o) DB Co shall design and construct HVAC piping as per the following:
 - (i) Non-metallic piping shall not be used in the Facilities.
 - (ii) Steel pipe shall be ASTM A53 Grade B, minimum Schedule 40; natural gas pipe shall be ASTM A53 Grade B, minimum Schedule 40, seamless.
- (p) DB Co shall design and construct instrument test ports as per the following:
 - (i) Provide instrument test ports to recommendations of SMACNA/HVAC and in accordance with manufacturer's instructions.
- (q) DB Co shall design and construct HVAC systems controls as per the following:
 - (i) Each item of equipment shall have an independent control panel to control the operation of the equipment.
 - (ii) Where interface between systems (e.g. heating/cooling) is required, a local control panel shall provide control of the equipment. Controls shall be such that simultaneous cooling & heating of the same space is not possible.
 - (iii) All control panels shall incorporate the ability to send a trouble alarms via the BAS or SCADA to the TOCC.
 - (iv) Equipment in public spaces shall have vandal/tamper resistant housing and mounting.

5.5 Plumbing and Drainage

- (a) DB Co shall follow the general design requirements below:
 - (i) Each Station shall be serviced by one municipal water connection split prior to the property line for two service connections. Each service shall be provided with an isolation valve at the property line. One connection shall be metered for potable water and one un-metered to serve the fire protection systems.
 - (ii) Each Station shall be serviced by a minimum of one sanitary and one storm connection to the property line.

- (iii) Piping shall not be embedded in concrete structure.
- (iv) Piping shall not be routed through critical equipment rooms.
- (v) Equipment requiring drainage shall not be located directly over critical equipment rooms.
- (vi) All domestic cold water and domestic hot water pipes shall be insulated as per ASHRAE 90.1 and OBC with a minimum of 25mm thickness insulation.
- (vii) All horizontal sanitary pipes and pipes subject to exterior surface condensation shall be insulated with 25mm thickness insulation.
- (viii) All storm pipes shall be insulated with 25mm thick insulation.
- (ix) Insulation jacketing in public areas or to public view shall be 0.5 mm thick rigid aluminum sheet.
- (x) The incoming domestic water pipes, main sanitary and storm pipes shall be one nominal size oversized to accommodate future expansion. Where new plumbing and drainage systems are connected to existing systems of the existing Station, the existing incoming domestic water pipe, main sanitary and storm pipes shall be replaced with new.
- (xi) Domestic cold and hot water pipes, hot water recirculation pipes within the Stations or Facilities shall be copper as per OBC.
- (xii) Isolation valve shall be provided at each domestic cold water and domestic hot water main branches and branches that service a group of fixtures, area, floor, and equipment.
- (xiii) Storm, sanitary and vent pipes within the Stations or Facilities shall be copper (less than 100 mm in diameter) or cast iron (100 mm or greater in diameter).
- (xiv) Non-metallic pipes shall not be permitted within the Stations or Facilities, with the exception of buried pipes that are permitted by codes and Relevant Authorities.
- (xv) Buried non-metallic pipes shall be provided with tracer wires.
- (xvi) Metered cold water shall be provided for the retail area.
- (xvii) Sanitary and vent pipes rough-in shall be provided for the retail area.
- (b) DB Co shall design and construct piping systems as per the following:
 - (i) Pipes and fittings

- A. Pipes and fittings shall be selected to suit the fluids they are to convey.
- B. Corrosion control measures shall be provided for buried pipes where required.
- C. Piping exposed to freezing temperatures shall be heat traced and insulated.
- (ii) Cold water service
 - A. The domestic cold water shall be metered per the City of Ottawa requirements.
 - B. Each service shall have a main shut-off valve immediately inside the structure wall.
 - C. Pressure reducing valve assemblies shall be provided where service water pressure is above the recommended.
 - D. Provide pressure gauge at water incoming pipes.
 - E. Provide pressure gauges at pump suction and discharge pipes.
 - F. Provide pressure gauges at inlet and outlet pipes of pressure reducing valves, backflow preventers, and strainers.
 - G. Minimum fixture service requirements shall be calculated in accordance with the OBC.
- (iii) Hot water service
 - A. Water heaters shall be commercial grade electric (or alternatively natural gas-fired for above grade buildings) meeting the requirements of ASHRAE 90.1 / OBC SB-10 and MNECB.
 - B. DB Co shall avoid runs of hot water supply piping that exceed 15m, if runs exceed this distance, hot water recirculation pump shall be provided.
- (c) DB Co shall design and construct plumbing fixtures and specialties as per the following:
 - (i) Plumbing fixtures shall be water conserving type and shall meet the consumption outlined in the OBC, ASHRAE 90.1.
 - (ii) Shock-absorbing devices shall be provided at each pipe riser, branch, group of plumbing fixtures and other locations in accordance with standard PDI-WH201.
 - (iii) Emergency eye / face wash and shower stations

- A. Emergency eyewash station with tempered water shall be provided as required by Applicable Law and as follows:
 - i. Janitorial Rooms; and,
 - ii. HVAC equipment rooms.
 - B. Emergency showers and or shower eyewash stations with tempered water shall be provided as required by Applicable Law.
- (iv) Hose bibs and wall hydrants
- A. Provide hose bibs or wall hydrants in HVAC rooms, pump rooms, washrooms, janitor rooms, refuse rooms, and open areas such that all open areas of the buildings and the concourses, Platforms shall be reached with a 30 m hose.
 - B. Provide non-freeze hose bibs or wall hydrants in locations subject to freezing.
 - C. Wall hydrants in public areas shall be wall recessed and lockable.
 - D. Shall be equipped with integral backflow preventers.
- (v) Drinking Fountains
- A. Drinking fountains shall be accessible, and protected from freezing.
 - B. Drinking fountains shall be provided in Operator's Facilities.
 - C. Drinking fountains shall feature bottle refill and built-in cooler.
 - D. Drinking fountains shall not be provided on the Platform level.
- (vi) Floor drains
- A. Provide floor drains in all areas, shafts or rooms where any source of water can be expected, including but not limited to: public areas, mechanical rooms, HVAC rooms, pump rooms, janitor rooms, washrooms, valve rooms, ventilation rooms, elevator/escalator rooms, electrical rooms, elevator and escalator pits, storage rooms, supervisor's rooms, ticket/information rooms, Operator Facilities, and service trenches.
 - B. Floor drains in elevator and escalator pits shall be equipped with backwater valves.
 - C. Provide floor drain at floor grilles at Station entrances.

- D. Provide funnel floor drains for condensate and water disposal.
 - E. Floor drains, funnel floor drains and floor cleanouts shall be heavy duty.
 - F. Floor drains shall be provided with trap seal primers.
- (vii) Trench drains
- A. Provide trench drains at top and bottom of stairs at Station entrances and outdoor stairs.
 - B. Provide trench drains at bottom of other stairs.
 - C. Provide trench drains at Track level within Stations.
 - D. Provide trench drains at pedestrian underpasses.
 - E. Trench drains shall be heavy duty.
 - F. Trench drains shall be provided with trap seal primers.
- (viii) Sump pumps & sewage ejectors
- A. Sump pumps and sewage ejectors shall be duplex configuration with 100% redundancy.
 - B. Submersible sump pumps shall be equipped with stainless steel quick connection, installation guide bars.
 - C. Sump pits shall be equipped with stainless steel ladder and stainless steel gas-tight cover.
 - D. Large pumps weighing greater than 22kg shall be provided with permanent monorail lifting devices.
 - E. Provide pressure gauges at sump pump discharge pipes.
 - F. Sanitary pumps servicing elevator pits shall not be located in the elevator shaft.
 - G. Storm sump pits shall be provided with a sediment trap section.
 - H. Where oil or grease may be present in the sanitary waste, oil sensors shall be provided.
 - I. Pump control panels shall be stainless steel construction and facilitate fault or trouble signals back to TOCC via the SCADA system.

- J. All pumping stations shall incorporate level controls with high level alarms that shall be sent to TOCC via the SCADA system

5.6 Fire Protection:

- (a) DB Co shall design and construct fire protection as per the following:

- (i) General design requirements

- A. Fire protection systems shall meet the requirements of all codes.
- B. Fire water service shall be provided with double check detector assembly, and installed as per requirements of the City.
- C. Provide fire pumps as required to meet code requirements.
- D. Provide complete automatic sprinkler system for areas of each Station including the Storage Tracks, Tail Tracks, and Ancillary Facility as required by the OBC, NFPA-130, NFPA-13, and Relevant Authorities.
- E. Provide complete standpipe system for all Stations and Ancillary Facilities, and portions of Tunnels within 20m of the Platform. The standpipe system shall meet the requirements of, but not limited to, the OBC, NFPA-130, NFPA-14 and Relevant Authorities.
- F. Provide NOVEC 1230 clean agent fire suppression systems for all communications, telephone equipment rooms and any other rooms of similar function, in compliance with NFPA-2001.
- G. Provide portable fire extinguishers as required by the OBC, OFC, NFPA-10, and Relevant Authorities.
- H. Non-metallic pipes shall not be permitted for fire protection systems unless for buried pipes and where permitted by codes.
- I. Flexible pipes shall not be permitted for fire protection systems.
- J. Drum drips in unheated areas for dry systems shall be heat traced and insulated.

- (ii) Sprinkler systems

- A. Sprinkler systems shall be wet type if not subject to freezing weather conditions; otherwise dry-pipe systems are acceptable upon approval by City authorities.
- B. Pipes shall be steel pipe of minimum Schedule 40 meeting ASTM A795/A795M or ASTM A53/A53M Grade B and NFPA 13.

- (iii) Standpipe systems
 - A. Standpipe systems shall be Class I or III, as required by the local fire department.
 - B. Provide standpipe systems for the Storage Tracks and Tail Tracks in the Stations.
 - C. Fire protection cabinets in public areas shall be wall recessed stainless steel.
 - D. Fire protection cabinet shall contain a portable fire extinguisher.
 - E. Pipes shall be steel pipe of minimum Schedule 40 meeting ASTM A795/A795M or ASTM A53A/53M Grade B and NFPA 13.
- (iv) Clean agent fire suppression systems
 - A. Where rooms are protected by clean agent fire suppression systems, raised floor and ceiling spaces in these rooms shall be provided with fire suppression systems.
 - B. Audible and visual alarms shall be provided within the room as well as outside for occupied and occasionally occupied (staffed) rooms.
 - C. Pipes shall be seamless steel pipe of minimum Schedule 80 and as required in NFPA-2001.
- (v) Portable fire extinguishers
 - A. Station rooms containing electrical, electronic, and signal equipment shall be provided with CO₂ fire extinguishers, in addition to dry chemical fire extinguishers.
 - B. A Class A fire rated water pump tank extinguisher shall be provided within all Stations.
 - C. Extinguishers in public areas shall be installed in wall recessed stainless steel cabinets.
- (vi) Fire department connections
 - A. DB Co shall provide and install free standing or wall mounted connections and signage constructed of polished bronze, which shall be verified by City Authorities.

5.7 Building Automation System

- (a) DB Co shall provide an open-protocol BACnet Ethernet LAN BAS system for each Station and each Ancillary Facility to control and monitor all systems, components, and equipment in this Article 5.
 - (i) System shall be compatible with the BAS of the Existing Confederation Line.
 - (ii) All Ancillary Facilities supporting bus operations shall be compatible with the existing OC Transpo BAS.
- (b) DB Co shall provide an OWS at each Station and each ancillary facility, complete with a graphical user interface, printer, all computer hardware and software.
- (c) DB Co shall design and construct systems, components, and equipment that are controlled by BAS and that shall also have their own local standalone controllers and monitoring.
- (d) DB CO shall provide each workstation to be connected to the TOCC, BCC, BYCC and MYCC, and communicate with other control systems.
- (e) DB Co shall design and construct the system to have minimum 25% spare points and be expandable for future system expansion without hardware upgrade.

ARTICLE 6 ELECTRICAL DESIGN CRITERIA

6.1 Introduction

- (a) This Article 6 presents the basic electrical design guidelines, codes, and standard references that DB Co shall follow throughout the electrical design process of the Stations.
- (b) DB Co shall design and construct electrical spaces that are properly located and sized to facilitate the installation and maintenance of equipment.
- (c) DB Co shall design the Station electrical systems shall provide for safe, reliable, and continuous operation.
- (d) DB Co shall provide accessibility to permit removal and replacement of major equipment. These requirements are intended to promote uniformity in the design approach and to standardize the type of equipment and its location throughout the system.
- (e) DB Co shall provide electrical power distribution equipment to be heavy duty construction and shall provide arc flash hazard mitigation features to limit personal protective equipment to level 2 or lower.
- (f) For the design of all electrical systems, sustainable design elements shall be utilized where applicable and practical as recommended by CAN/CSA 802, EnergyStar®, RoHS.
- (g) DB Co shall design and construct the electrical distribution system to distribute power for Passenger Station lighting, heating, ventilation and other equipment and systems. Power and circuit requirements for signal and communication systems are subject to Schedule 15-2, Part 3 - Systems.
- (h) DB Co shall ensure that all electrical equipment shall be individually identified by unique number matching equipment schedule designation. The label shape, letter size, color coding and background color shall be standardized for the Project. Project identifying labels shall be designated for: cable trays, conduits, junction boxes, cables/wires and all electrical and electronic equipment. In addition to the identification labels approval labels shall be provided as required per CSA, ULC, [REDACTED], or [REDACTED].
- (i) Reuse of existing Station infrastructure shall be permitted in accordance with the following:
 - (i) DB Co shall replace all major distribution equipment with a remaining life expectancy of less than 15 years as identified in the Station Condition Audit Reports. In addition, DB Co shall replace all existing communication, security, life safety equipment that has less than 5 years of remaining life expectancy at Substantial Completion that is compatible with the new systems;

- (ii) DB Co shall perform all rehabilitation, refurbishment etc., as identified in the Background Information for all existing equipment retained for use in DB Co's design.
- (iii) DB Co shall limit the loading (KVA, Amps) on existing services and power distribution equipment where used for the purposes of expanding existing distribution to meet new load demand such as not to exceed 80% of existing distribution equipment rating. Where the loading of the existing distribution equipment exceeds 80% of its rating with the addition of new loads to meet Station expansion, DB Co shall replace such equipment with new equipment that shall meet the new load demand and include a minimum of 25% capacity for future expansion.

6.2 Reference Documents

- (a) DB Co's design and construction shall comply with the criteria contained in this Article 6, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - (i) OBC*;
 - (ii) NBC*;
 - (iii) Ontario Electrical Safety Code,;
 - (iv) Canadian Electrical Code, Part I: Safety Standard for Electrical Installations;
 - (v) ANSI;
 - (vi) UL/ULC;
 - (vii) NEMA;
 - (viii) CSA;
 - (ix) IESNA Lighting Handbook;
 - (x) IESNA, IES RP-20 – Lighting for Parking Facilities
 - (xi) ASHRAE 90.1;
 - (xii) City of Ottawa Standards;
 - (xiii) NFPA 130: Standard for Fixed Guideway Transit and Passenger Rail Systems;

- (xiv) NFPA 110: Standard for Emergency and Standby Power Systems;
- (xv) ASME A17.1: Safety Code for Elevators and Escalators;
- (xvi) IEEE;
- (xvii) IEC; and
- (xviii) [REDACTED] Specifications.
- (xix) [REDACTED] Specification
- (xx) IDA-IES
- (xxi) EEMAC
- (xxii) OC Transpo Transitway & Station Design Guidelines

**Note: Federally Mandated Stations shall meet the requirements of both the OBC and the NBC.*

6.3 Basis for Design

- (a) DB Co shall utilize the following electrical load classification:
 - (i) Normal systems include loads which, if de-energized, would have no effect on Passenger Safety or adverse effect to Facility systems. This load classification includes all non-essential Station loads and the majority of Station lighting. These loads can tolerate occasional prolonged power outages and do not require a backup power source.
 - (ii) Emergency systems classed per NFPA 130 and NFPA 110
 - A. Level 1 systems include loads such as Emergency egress lighting, communication systems (if used in Emergency response procedures) and fire alarm systems that cannot tolerate normal electrical supply outages and require an Emergency power supply.
 - B. Level 2 systems include loads such as fire pumps, Emergency ventilation and smoke removal systems, sewage pumps, and elevators that require a reliable power source, feeders from two separate and distinct utility substations or combination of sources as approved by the AHJ.

**Note: DB Co shall perform FMEA and vulnerability/system assurance/reliability analysis in order to determine any other Safety Critical loads that require Emergency power.*

- (b) Calculations

- (i) DB Co shall perform short-circuit calculations to determine the AIC rating of the electrical distribution system based upon the actual available short-circuit value or per-unit impedance values obtained from the [REDACTED] at the electric service entrance or point of connection.
- (ii) DB Co shall base system device coordination and selectivity on calculated short-circuit values and used for selection of ratings and settings of protection devices.
- (iii) DB Co shall complete voltage drop calculations for maximum loads, long run circuits and feeders, and under motor starting conditions. Motor circuit calculations shall be based on an 85% lagging power factor. Branch circuit voltage drop from service entrance distribution equipment to point of utilization shall not exceed 5%.
- (iv) DB Co shall complete lighting-level calculations for all interior and exterior spaces in conjunction with architectural and/or landscaping design. The point-by-point method utilizing computer generated calculations shall be used to validate adequate illumination levels and boundaries. The software used shall be industry recognized and the calculations shall follow IESNA procedures. Calculation results shall include maximum, minimum, and average illumination levels along with the appropriate uniformity ratios. Calculations shall also include luminaire locations, mounting heights, manufacture's catalog data sheet with product selections and options indicated, lamp data sheet, wattage, lumens, color rendering index, color temperature, room surface reflectance values, light loss factors, and photometric file used. Lamp or LED fixture color rendering temperature shall be consistent throughout the Station and the Station site, complement architectural finishes and have CRI of 80 or more within the Station and a CRI of 70 or more throughout the Station site and other areas.
- (v) DB Co shall complete arc flash hazard calculations for equipment that is required to be field marked for arc flash warning per CAN/CSA Z462. DB Co shall provide and perform calculations based on actual distribution system installed, actual minimum and maximum available utility short circuit current and according to IEEE 1584 and CAN/CSA Z462. Values to be calculated shall include, but not be limited to: (a) flash protection boundary in units of centimeter from equipment; (b) incident energy at 45.72cm working distance from equipment in units of calories per square centimeter (cal/cm²). The calculated values shall be permanently displayed on equipment arc flash hazard warning labels.
- (vi) DB Co shall complete computations for service, feeder and branch circuit loads based on the nominal system voltage used and applicable demand factors in accordance with the Canadian Electrical Code.
- (vii) DB Co shall provide protection for future growth for all major electrical equipment and [REDACTED] service feeders as identified by the City plus an additional allowance of at least 25% of the total loading, rounded upwards to the

next standard rating (KVA or A). Before determining the size of service an economic analysis shall be made to determine the most feasible way of protecting for the future growth. Special consideration shall be given to requirements for load growth, for anticipated usage and life expectancy with particular attention to the possibility of adding heavy loads such as elevators and escalators, electric heating etc.

- (c) DB Co shall include the following electrical safety provisions in the design:
- (i) EGFP shall be provided as required by the latest Applicable Codes. Ground fault “annunciation only” shall be provided where EGFP is required by code for equipment or feeders serving Level 2 Emergency Systems.
 - (ii) PGFP shall be provided on branch circuits that have equipment or outlets for which personnel protection is required by either the latest Applicable Codes or Good Industry Practice.
 - (iii) Arc flash hazard warning labels shall be provided on the equipment as per required code. Flash boundary and incident energy values shall be displayed.

6.4 Functional Requirements

- (a) Identification of Stations for TPSS and ventilation requirements:
- (i) At Grade Stations with no TPSS, no ventilation loads, no provision for backup of ventilation loads of adjacent Station: Westboro, Iris.
 - (ii) At Grade Stations with no TPSS, no ventilation loads, provision for backup of ventilation loads of adjacent Station: Pinecrest.
 - (iii) At Grade Stations with TPSS, no ventilation loads, no provision for backup of ventilation loads of adjacent Station: Bayshore, Lincoln Fields, Dominion, Moodie, Montreal, Orleans Boulevard, Place d’Orleans, Jeanne D’Arc, Trim.
 - (iv) Underground or Below Grade Stations with TPSS, ventilation loads, no provision for backup of ventilation loads of adjacent Station: Baseline, Queensview
 - (v) Underground or Below Grade Stations with TPSS, ventilation loads, provision for backup of ventilation loads of adjacent Station: Cleary.
 - (vi) Below Grade Stations with no TPSS, ventilation loads, provision for backup of ventilation loads of adjacent Station: New Orchard.
- (b) DB Co shall design and construct the electrical service as per the following:
- (i) The secondary voltages described herein are the basis of the Reference Concept electrical distribution design. DB Co may select alternative voltages for secondary distribution system.

- (ii) The [REDACTED] supply strategy for Stations including supply points, responsibilities and associated costs is discussed in “[REDACTED]” report.
- (iii) At At-Grade Stations not served by TPSS, and not providing backup for ventilation loads of an adjacent Station, the primary switchgear and transformers shall be owned by [REDACTED].
- (iv) At At-grade, Underground or Below-grade Stations with a TPSS and/or level 2 (including ventilation) loads and/or provision for backup of level 2 (including ventilation) loads of an adjacent Station, the Primary switchgear will be owned by [REDACTED] and the downstream distribution including two metal clad MV switchgears (except where the Station has no ventilation loads, DB Co shall provide one metal clad MV switchgear), transformers and associated cabling shall be customer owned. DB Co shall provide separate and dedicated breaker for the TPSS, level 2 Emergency and non-level 2 loads (normal and level 1 Emergency) with customer owned revenue class metering. [REDACTED] metering shall be required immediately downstream of the primary service main breaker. Downstream 0.6KV distribution for At-Grade Stations with a TPSS and/or provision for backup of level 2 (including ventilation) loads of an adjacent Station shall follow Clauses 6.4(c)(i), (ii) and (iii) of this Part 4.
 - A. Additionally, at Moodie LMSF, the main substation including but not limited to the 44KV switchgear, 44KV/13.2KV transformers and all associated cabling shall be provided by DB Co and owned by the City. The demarcation point and metering requirement shall be coordinated and confirmed with [REDACTED]. DB Co shall provide cubicles in the customer owned switchgear for [REDACTED] revenue metering. DB Co shall provide 13.2 KV switchgears to feed the LMSF, Station and associated TPSS’s. Moodie Station shall receive a single 13.2KV feed that shall have customer owned revenue class metering on the load side of the feeder breaker in the TPSS supplying the Station loads. DB Co shall provide 13.2/0.6KV transformer and associated cabling to the 600V AC main switchboard at Moodie Station.
 - B. At Trim Station, the primary MV switchgear, transformers and all associated cabling shall be provided by DB Co and owned by the City. The demarcation point and metering requirement shall be coordinated and confirmed with [REDACTED].
- (v) Electrical protection devices shall be automatically coordinated with upstream/downstream distribution system in order to minimize disruption to the operations.
- (vi) Provide electric heat tracing where required by the mechanical and architectural design.

- (vii) All Emergency service raceways/feeders shall be fire rated in accordance with Applicable Codes requirements. Main feeder raceways shall be embedded in concrete slabs/walls and shall be rated for at least two hours.
 - (viii) The superstructure and substructure shall accommodate all required embedded ducts for interior and exterior electrical services as applicable.
- (c) At-Grade Stations without a TPSS or no requirement for ventilation loads, where redundancy supplies are not required by NFPA requirements, shall be provided with a single underground service feeder from [REDACTED] at 600VAC, 3phase, 60Hz with the exception of Moodie Station where the feeder will originate from the LMSF. DB Co shall coordinate with [REDACTED], as referenced in the [REDACTED] Planning Reports, all requirements related to the installation of the on-site transformer and underground duct-banks.
 - (i) At-Grade Stations shall be provided with 600VAC main switchboard, [REDACTED] metering immediately after the main service breaker, customer owned revenue class metering, associated downstream power distribution panels, feeders to 600VAC and 208/120VAC equipment and (if applicable) transfer switch for the Emergency power distribution, and UPS, batteries, etc. Main electrical room will contain, in addition LV transformers, UPS (if applicable), LV lighting control cabinet, heating controls, etc.
 - (ii) Emergency lighting, fire alarm and other Emergency equipment loads shall be connected to UPS or batteries and with capacity as required by applicable code and AHJ requirement.
 - (iii) Connection for a mobile generator shall be provided in all At-Grade Stations. The portable generator system shall be used only for stand-by operation during prolonged Utility outages and is independent of the required Emergency (UPS or battery) power supply systems.
- (d) At Underground and At-Grade Stations, where pad-mounted primary equipment cannot be installed at grade, DB Co shall provide a primary switching room for incoming service and shall be:
 - (i) Designed in accordance to [REDACTED] Specification GCS0002: Primary Voltage Service Specification and coordinated with [REDACTED];
 - (ii) at grade or within 5m below grade with two walls on the outside to allow ease of access for [REDACTED] incoming feeders and designed for a three (3) hour fire envelope;
 - (iii) dimensions as outlined in the [REDACTED] or as specified by [REDACTED]; and,

- (iv) coordinated with [REDACTED] in terms of room locations, switchgear location and placement within the rooms.
- (e) At Underground or Below Grade Stations with requirements for level 2 loads, where redundant supplies are required by NFPA requirements, DB Co shall utilize an ATS and reserve capacity for only level 2 loads from adjacent Stations (except at Baseline Station where two redundant radial feeds shall be provided) as per the [REDACTED] planning report. DB Co shall coordinate the design for the ATS with [REDACTED] and shall provide remote monitoring and blocking of transfer switches for [REDACTED].
 - (i) Provide feeders from two separate and distinct Utility substations or combination of sources as approved by the AHJ to serve Emergency systems only classified as “Level 2” and used for Emergency ventilation or fire suppression equipment. Provide two incoming service feeders at a supply voltage no less than specified in the [REDACTED] planning report, 3-Phase, 60 Hz from the Utility. Circuit each incoming service feeder from a separate and independent Utility source or TPSS that is electrically and physically isolated from each other. All power sources shall be as approved by the AHJ and in conformance with the Applicable Code. [REDACTED] metering shall be immediately downstream of the Station’s main primary service breaker.
 - (ii) The service feeders shall be electrically and physically separated and approved by the AHJ for use as an Emergency power source.
 - (iii) At New Orchard, Cleary and Queensview Stations:
 - A. Upstream distribution will comprise of a single underground service feeder from [REDACTED] owned switchgear at 13.2KVAC, 3phase, 60Hz to be terminated in a customer owned primary 13.2KVAC switchgear. The demarcation point between [REDACTED] and DB Co responsibility shall be the customer termination point of the [REDACTED] switchgear. Provide feeders and customer owned revenue class metering from the customer owned primary MV switchgear to downstream station normal and Emergency (non-level 2) loads, a second MV switchgear as noted in Clause 6.4 (b)(iv) of this Part 4, feeding downstream Station level 2 loads, TPSS and where applicable, adjacent Station’s level 2 loads.
 - B. DB Co shall provide a second 13.2KVAC switchgear that shall be double ended with main/tie/tie/main breakers in the MV electrical room at each Station feeding only level 2 loads where redundant supplies for level 2 systems are required per code. This switchgear shall be interconnected to the customer owned primary 13.2KVAC switchgear of the adjacent Station with 13.2 KV or 27.6 KV tie cables running between these stations designated for providing backup power for level 2 loads. Provide tie cables, complete with routing, between the pad mounted switchgears at these stations. Routing shall be coordinated with and approved by the AHJ

and in conformance with the Applicable Code. Provide interlocks between these switchgears to close the redundant feeder breaker in the adjacent Station in the event the primary source for the level 2 loads in the station fails

- C. An ATS connected to both bus “A” and bus “B” of the second MV switchgear shall provide power to the Station downstream distribution system for all level 2 loads at each Station.
- D. Downstream distribution for each Station’s level 2 loads shall also include two 13.2kV/600VAC or 27.6kV/600VAC redundant dry type transformers feeding double ended 600VAC switchgear located in 600VAC electrical room that shall feed all 600/347V level 2 loads including additional two 600/208/120VAC redundant dry type transformers that shall feed double ended 208VAC switchgear located in the 208VAC Room that shall feed all 208/120V level 2 loads. Redundant circuit feeders shall be in physically separated raceways. ATSS connected to both buses shall be provided in the double ended 600VAC and 208VAC switchgears.
- E. Downstream distribution for each Station’s normal and Emergency (non-level 2) (excluding TPSS) loads shall include a single 13.2kV/600VAC or 27.6kV/600VAC dry type transformer feeding a 600VAC main switchboard that shall feed all 600V loads including but not limited to 600-208/120V dry type transformers, power distribution panels, feeders to 600VAC and 208/120VAC equipment and transfer switch for the Emergency power distribution, UPS, batteries, etc.
- F. Emergency lighting, fire alarm and other Emergency loads (non-level 2) shall be connected to UPS or batteries and with capacity as required by applicable code and AHJ.

(iv) At Baseline station:

- A. Upstream distribution shall comprise of two underground service feeders from separate [REDACTED] owned switchgears at 13.2KVAC, 3phase, 60Hz to be terminated in a customer owned double ended 13.2KVAC switchgear with main/tie/tie/main arrangement in the MV electrical room. The demarcation point between [REDACTED] and DB Co responsibility shall be the customer termination point of the [REDACTED] switchgear. Provide feeders and customer owned revenue class metering from the customer owned primary MV switchgear to downstream Station normal and Emergency loads, and TPSS.
- B. An ATS connected to bus “A” and bus “B” shall provide power to the Station downstream distribution system for all loads.

- C. Downstream distribution shall also include two 13.2kV/600VAC redundant dry type transformers feeding double ended 600VAC switchgear located in 600VAC electrical room that shall feed all 600/347V loads including but not limited to 600VAC distribution panels and, additional two 600/208/120VAC redundant dry type transformers that shall feed double ended 208VAC switchgear that shall feed all 208/120V loads including but not limited to distribution panels, UPS, batteries, etc. located in the 208VAC Room. Redundant circuit feeders shall be in physically separated raceways. ATSS connected to both buses shall be provided in the double ended 600VAC and 208VAC switchgears.
 - D. Emergency lighting, fire alarm and other Emergency equipment loads shall be connected to UPS or batteries and with capacity as required by applicable code and AHJ requirement.
- (f) The electrical service for Moodie Station and associated TPSS (located at Moodie Station) shall be provided by DB Co. Refer to Schedule 15-2, Part 5 –LMSF for additional information related to the incoming service. The feeders shall originate from the customer demarcation point at the LMSF. DB Co shall be responsible for the design, construction and supply of service feeders, all ductbanks, cabling, equipment, etc. from the customer demarcation point at the LMSF to the Moodie Station site main step down transformer.
- (g) Metering and Monitoring
- (i) Utility revenue metering shall be provided as required by [REDACTED] as per [REDACTED] standard GCS0008.
 - A. For 600V services from an [REDACTED] owned transformer, provisions shall be made at the main 600V switchboard as required by [REDACTED].
 - B. For a primary service (13.2kV, 27.6kV or 44kV), provisions shall be made in the customer owned metalclad switchgear in the MV electrical room as required by [REDACTED].
 - (ii) DB Co shall provide remote monitoring system for:
 - A. Station main switchboard breakers position;
 - B. Voltage availability at the main buses; and,
 - C. Fire alarm per CAN/ULC S561.
- (h) DB Co shall design and construct duct banks, manholes and handholes as per the following:

- (i) Duct banks and manholes shall be designed in accordance with the seismic criteria defined for the Project. Duct banks shall be designed to include at least 25% spare capacity to protect for future growth and expansion. Requirements for the installation of additional fibre along the Confederation Line for the use of the City is included in Schedule 15-2, Part 3 – Systems.
 - (ii) Underground ducts shall be sloped to manholes to provide adequate drainage. Provide concrete encasement where required by Applicable Code.
 - (iii) Manholes and/or handholes shall be designed as per City Standards.
- (i) Electrical rooms
 - (i) DB Co shall size electrical rooms to have sufficient space to house all required equipment. Adequate space shall achieve minimum working clearances, conduit entry points and routing, equipment removal / replacement, building repair, and ventilation requirements.
 - (ii) DB Co shall size with additional 20% space for future growth.
- (j) DB Co shall design and construct grounding and bonding as per the following:
 - (i) The Station grounding system shall be designed to meet applicable codes and standards.
 - (ii) The grounding electrode system shall be supplemented and bonded together with an embedded ground grid on each side of the Tracks for side Station Platforms. The Station grounding grid shall not be interconnected with any Traction Power (DC) grounding system. DB Co shall coordinate interconnection grounding points with signal and communication systems to avoid noise propagation.
 - (iii) A separate grounding system for signalling and communication shall be provided. All signal and communication equipment including cables shall be properly grounded.
 - (iv) All non-current-carrying metal enclosures and all alternating current equipment shall be securely connected/bonded to the Station grounding system.
 - (v) Each metallic equipment housing shall provide a welded boss for attaching a protective ground connection and shall be sized for expected trip currents.
 - (vi) Grounding of the future Platform edge doors for Underground Stations and other metal surfaces within 2 m of the Revenue Vehicle stopped at the Platform shall be coordinated with Traction Power design in order to prevent or limit possible excessive touch potential in tolerable values as specified in OESC.
 - (vii) Avoid natural gas piping and pipe connected to an active cathodic protection system with the exception where required by the corrosion protection

- (k) DB Co shall design and construct emergency and standby power sources as per the following:
- (i) Power sources shall be selected based on efficiency, reliability and most economic life cycle cost as per CAN/CSA and NFPA requirements.
 - (ii) Emergency and standby power sources are identified as follows:
 - A. Standby on-site internal combustion engine generator;
 - B. *Mobile generator;
 - C. UPS system;
 - D. Central battery system or battery packs for unit equipment; and
 - E. **Second utility power source – Dual/redundant utility power source for loads classified emergency Level 2.

***Note: Provisions for quick connection for a mobile generator shall be provided in At-Grade Stations and where practical for underground Stations. The mobile generator system will be used only for stand-by operation during prolonged utility outages and is independent of the required Emergency power supply systems.*

***Note: AHJ shall review the design and approve the dual redundant utility service feeders as Emergency power supply source.*
 - (iii) When standby fixed mounted engine generators are to be installed outdoors, a completely enclosed weatherproof/sound attenuated housing to protect the generator from adverse weather conditions and reduce sound levels for surrounding residential neighbourhoods shall be provided. Enclosure shall have critical grade silencing suitable for residential installation. DB Co design shall follow NEMA/IEC/EEMAC enclosure/environmental protection standards.
 - (iv) When second Utility power source is selected, Emergency lighting, fire alarm and other Emergency equipment loads shall be connected to a UPS or battery system as required for loads classified as “emergency level 1”. Automatic transfer switches serving life safety loads shall be equipped with means of bypass to both sources.
 - (v) DB Co shall design and construct all UPS systems with bypass switches to allow the UPS to be taken off line for maintenance without disruption to downstream loads.
- (l) DB Co shall design and construct general purpose receptacles as per the following:

- (i) In public areas, general purpose receptacles shall be GFI and provided at 20m distance, and shall have lockable covers. No more than six outlets shall be connected to a branch circuit.
 - (ii) GFI receptacles shall be provided also for Station sign boxes and art elements where required.
 - (iii) In non-public areas general purpose receptacles shall be provided at 7m apart and shall be supplemented where needed for fixed equipment. No more than five outlets shall be connected to a branch circuit.
 - (iv) A flush-mounted duplex ground fault type receptacle with weatherproof lockable cover shall be provided close to hose bibs.
- (m) DB Co shall design and construct lighting as per the following:
- (i) The lighting systems for Stations, Park and Ride areas, Pedestrian Walkways, trackway, Tunnels and portals shall be coordinated with architectural/landscaping and signage/wayfinding design objectives. Lighting design shall be consistent across all Stations. Standardization of lighting system components is required for perceptual unity and to simplify maintenance. Lighting design shall be consistent with the principals, philosophy and frame work for lighting design as contained in The Lighting Handbook, Tenth Edition as published by the Illuminating Engineering Society. The required illumination targets for items not listed in Table 4-6.1 and Table 4-6.2 shall be based on visual observers group 25-65 for all public spaces as recommended by IESNA, unless otherwise dictated by the building code or accessibility standards. The lighting design shall meet the illumination levels and uniformity requirements for both day and night time operations.
 - (ii) Lighting levels shall define and differentiate between task areas, decision and transition points, Platform edges and areas of potential hazard. In addition to quantity of light, it is essential that lighting be designed to minimize glare and provide uniform distribution. Luminaires shall be selected, located, and/or aimed to accomplish their primary purpose while producing a minimum of objectionable glare and/or interference with task accuracy, vehicular traffic, and neighbouring areas.
 - (iii) Luminaires that emit light above the horizontal plane shall be avoided in the exterior design, unless luminaires are located under overhangs or other architectural features shielding the sky from upward light. Luminaires shall be provided with full cut-off optics and if necessary external shielding to minimize light spill-over onto adjacent properties. L. Refer to IESNA TM-11-2000, Light Trespass for Roadway Lighting, and to IDA-IESNA MLO 2011 and addendum A for IESNA TM-07-15 for all other exterior lighting.

- (iv) The lighting system shall be LED light sources and auxiliary equipment. Lighting equipment shall be vandal-resistant where accessible to the general public.
- (v) The lighting system shall be designed to satisfy OBC, AODA, CPTED, IESNACAN/CSA B651, UL/ULC, CE, FCC, CB requirements.
- (vi) Minimum illumination levels shall meet the criteria listed in Table 4-6.1 below:

Table 4-6.1: Facility Interior

| Illuminated Area | Illumination levels Targets | | |
|-------------------------------------|----------------------------------|--------------------|------------------------|
| | E_h lux | E_v lux | Uniformity Ave: Min |
| Platform Edge | 200 @ floor | 60 @ 5'AFF | 2:1 |
| Station Rail Platform | 100 @ floor | 30 @ 5'AFF | 2:1 |
| Fare Vending | 200 @ 3'AFF | 100 @ 4'AFF | 3:1 |
| Information Kiosk | 300 @ 3'-6" AFF | 150 @ 5'AFF | 3:1 |
| Stair, Ramps and Escalator Landings | 100 @ floor | 50 @ 5'AFF | 2:1 |
| Pedestrian Tunnels and Concourse | 50 @ floor | 20 @ 5'AFF | 3:1 |
| Transecure Area | 220 @ floor | 100 @ 5'AFF | 2:1 |
| Public Washrooms (General) | 150 @ 3'-5" AFF | 50 @ 5'AFF | 2:1 |
| Plumbing Fixtures | 300 @ Top of Plumbing Fixture | 100 @ 3'- 6"AFF | |

| | | | |
|---|-----------------|-----------------|-----|
| Lavatory | 150 @ 3'-0" AFF | 200 @ 3'-5" AFF | |
| Building Entries Vestibules Indoor /High Activity | | | 2:1 |
| Day | 150 @ floor | 75 @ 5' AFF | |
| Night | 100 @ floor | 50 @ 5' AFF | |

**Note: 1.) All lighting, including, but not limited to Normal and Emergency lighting illumination levels, shall be designed to meet or exceed OBC, accessibility requirements, and security requirements including but not limited to, AODA, COADS, CPTED, CCTV and CAN/CSA B651 requirements. 2.) Illuminated areas and values not listed in this table shall be per IESNA- Illumination Handbook, 10th Edition. 3.) Table 4-6.1: Facility Interior is applicable to all areas within the Fare Paid Zone of the Station utilized for Train operations and service; and interior spaces of enclosed Ancillary Facilities.*

- (vii) Provision of Emergency lighting systems is required by code. Emergency power shall be available at stable system voltage within 10 seconds or less. All batteries shall be sized to continuously carry the rated illumination for a minimum time required for evacuation and as required by Applicable Code.
- (viii) Emergency lighting fixtures shall be the same model and type as the rest of the lighting fixtures with the addition of Emergency battery pack.
- (ix) Lighting system shall be designed so that the failure of any single luminaire or lighting circuit in areas accessible to the public does not leave an area in total darkness.
- (x) Lighting layout shall be coordinated with other building elements so as not to affect the illumination.
- (xi) BAS system shall monitor and control Station lighting system. Where Facility remote control system is not provided, the following controls shall be provided:
 - A. Station central key / timer control system including override switches for service areas;
 - B. Exterior luminaries, including luminaries in signage, shall be group controlled by photo-cell and/or the facility BAS system. Exterior light control shall include a maintenance bypass switch (Hand-Off Auto) located on external wall of the facility for night services such as snow plow and cleaning;
- (xii) Exterior Lighting areas as required for Safety and comfort shall meet requirement of City Standards, IDA-IESNA MLO 2011, IESNA RP-33 and addendum A for TM-07-15, and ANSI/ASHRAE/IESNA Standards 90.1 Exterior Lighting Section;

- (xiii) Adopt site lighting criteria to maintain safe light levels while avoiding off-site lighting and night sky pollution. Use computer software to model the site lighting. Technologies to reduce light pollution include full cutoff luminaires, low-reflectance surfaces and low-angle spotlights; and
- (xiv) Minimum illumination levels shall meet the criteria listed below:

Table 4-6.2: Exterior Areas

| Illuminated Area | Illumination Targets | | |
|---|--|--|---------------------|
| | E_h lux | E_v lux | Uniformity Ave: Min |
| Building Entries Canopied Outdoor-High Activity | 10 to 40 @ grade according to location/ Lighting Zone | 6 to 20 @ 5'AFF according to location/ Lighting Zone | 2:1 |
| At-Grade Pedestrian Crossing | 20 to 10 @ grade | 10 to 5 @ 5'AFF | 4:1 |
| Bicycle Parking Area (Covered) | 40 to 10 @ grade | 20 to 6 @ 5'AFF | 2 to 4:1 |
| Bicycle Parking Area (Uncovered) | 20 to 10 @ grade | 8 to 1 @ 5'AFF | 2 to 4:1 |
| Shelter and Ticket Information Area | 20 to 6 @ grade | 10 to 2 @ 5'AFF | 3 to 6:1 |
| Bus Platforms | 100 @ grade | 40 @ 5'AFF | 2:1 |
| Exterior Station Building (Public Area) | 20 to 10 @ grade | 4 to 0 @ 5'AFF | 3 to 6:1 |
| Stairwell | 50 @ grade | | 4:1 |
| PPUDO | 20 to 10 @ grade | 4 to 0 @ 5'AFF | 3 to 6:1 |
| Pedestrian Underpasses and Overpasses | Night 40 @ grade | Night 20 @ 5'AFF | 3:1 |
| Pathways in the vicinity of Busways | 20 to 10 @ grade | 4 to 0 @ 5'AFF | 6 to 4:1 |
| Pathways/MUPs in the vicinity Stations, as required in Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements | 20 to 10 @ grade | 4 to 0 @ 5'AFF | 6 to 4:1 |

**Note: 1.) All lighting, including but not limited to Normal and Emergency lighting illumination levels, shall be designed to meet or exceed OBC requirements, accessibility requirements, and security requirements including but not limited to, AODA, COADS, CPTED, CCTV and CAN/CSA B651 requirements. 2.) Illuminated areas and values not listed in this table shall be per IESNA- Illumination Handbook, 10th Edition.*

- (n) With the exception of items listed in Table 6-5.2 above, DB Co shall design and construct lighting levels for Park and Ride surface lots in accordance with IES RP-20 in conjunction with the requirements contained in the OC Transpo Transitway and Station design guidelines.
- (o) DB Co shall design and construct fire detection and alarm system as per the following:
 - (i) All Stations shall be provided with a fire detection and alarm system in accordance with the Applicable Codes and ULC S561 Fire Alarm monitoring.
 - (ii) The fire detection and alarm system shall be a zoned, non-coded, addressable, microprocessor-based system with automatic alarm initiation, addressable smoke detectors, and automatic multi-detector algorithm for alarms initiated by smoke detectors.
 - (iii) Fire panels shall include the ability to verify alarms (2 stages) prior to evacuation. The fire alarm wiring system shall be electrically supervised. The system shall be designed such that the TOCC is notified and monitored via CCTV, to validate the event and determine if the fire department is to be dispatched when an alarm signal takes place.
 - (iv) The fire detection and alarm system shall be provided with an Emergency power supply, consisting of either a generator and/or battery source. The Emergency power supply shall power the supervisory function of the fire alarm system for no less than 24 hours and full function for no less than 30 minutes. Upon failure of the normal power source, immediate transfer to the Emergency power supply shall take place with no loss of information in the process.
 - (v) The fire detection and alarm system shall be connected to the TOCC, BCC, BYCC and MYCC, and monitored through the City's ULC listed monitoring company.
 - (vi) A fire alarm annunciator panel with a flush mounted vandal resistant polycarbonate shield when accessible to the public shall be provided at every Confederation Line Station in a readily accessible location to fire fighters upon entering the Station. A second annunciator shall be located where required by the City and connected to TOCC. The annunciator panels shall be monitored simultaneously through the City's ULC listed monitoring company.
 - (vii) Manual pull stations need not be installed in areas accessible to the public. Exceptions are doors to be released in the event of fire alarm by TOCC.
 - (viii) Visual signal devices shall be installed such that the signal from one device is visible throughout the floor area in which they are installed.
- (p) DB Co shall design and construct power for systems and communication equipment as per the following:

- (i) Provide power or conduit complete with pull wire as required.
- (q) DB Co shall design and construct conduits and raceway in accordance with the following:
 - (i) Conduits installed in finished areas of new construction shall be concealed in walls, below or in slabs, or above suspended ceilings. Exposed conduits shall not be run on the exterior surface of buildings. Conduits shall not be run through structural members across pipe shafts or ventilation duct openings.
 - (ii) Conduits in concrete slabs shall be placed between the bottom and top reinforcing steel. Separate conduits to ensure proper concrete bond.
 - (iii) Conduits shall not be embedded in waterproofed or waterbearing walls.
 - (iv) Conduits penetrating exterior walls of any Structure (other than handholes, manholes, or pullboxes) below grade, at grade floors, or below grade floors shall be sealed to prevent moisture migration.
 - (v) Grounding-type expansion fittings shall be installed in raceways every 60m or less of linear run or wherever structural joints are crossed to allow for expansion and contraction.
 - (vi) DB Co shall provide the raceway system and cable pulling for equipment described and identified by facility/systems and the City. Raceways shall be designed to include at least 25% spare capacity to protect for future growth and expansion. Refer to Clause 6.3 (b) (vii) above for direction.

6.5 Incident Control Panel

- (a) DB Co shall provide an ICP at each Confederation Line Station.
 - (i) Each ICP shall house the following equipment as a minimum:
 - A. A FTEL to allow for firefighters to talk with the TOCC/BCC as well as other FTELs along the alignment;
 - B. Activate/Silence Fire Alarm Horn/Strobes including an LED indicator; and,
 - C. Station/Tunnel lighting control switch.
 - D. A PA microphone for making public announcements at respective Stations.
 - (ii) In Underground Stations, and at Baseline Station, each ICP shall house the following equipment, in addition to the equipment listed in Clause 6.5 (a)(i), of this Part 4:

- A. A video feed from the Station's CCTV system to allow ESP to view Station areas on a local video screen within the ICP;
 - B. A second telephone handset to serve as the local handset and dial pad for calls within the Station or to the area of refuge.
- (iii) At each Station that has an active controllable Tunnel ventilation system, a ventilation control panel shall be provided as per Schedule 15-2, Part 8, Clause 7.3.
- (b) Fire Life Safety Protocols
 - (i) The role of the ICPs in Stations as described in this Part 4 shall be coordinated with the overall FLS System.
- (c) General
 - (i) All environmental performance characteristics for the ICPs including EMC are as set out in this Project Agreement. These shall be coordinated with the other systems and equipment and shall meet all other requirements of the Project Agreement.
- (d) Codes, Standards and Manuals
 - (i) In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent specification shall apply:
- (e) Functional Requirements
 - (i) Physical equipment housing:
 - A. The ICP shall be located in a protective and locked cabinet.
 - B. The ICP shall permit a minimum of two people ease of access to its internal equipment.
 - C. The ICP shall provide a localized operating environment which supports the functioning of the internal equipment when the access panel is opened and exposed to external ambient temperatures specified.
 - D. The location of the ICP within a Station shall be as agreed with ESP and shall be easily accessible but out of the way of evacuating Passengers.
 - E. Access to the ICP shall be through the front only, unless space restrictions require double sided access.

- F. The ICP shall be grounded and bonded in accordance with electrical code and CSA standards. Grounding continuity of front panels shall be maintained when opened.
- G. A means of protection for the user from rain, sun, snow and ice shall be included in the design (if location is exposed to the elements) and the solution may be stowable in the unit. If permanently connected it shall not present a hazard to Passengers walking in close proximity.
- H. Access to the interior shall be through a key which will be contained within an Ottawa Fire Services compliant lock box provided by DB Co.
- I. When the ICP is open, all equipment shall be resistant against the ingress of climatic elements.
- J. The ICP shall provide a minimum of seven 'Legal size' rigid pockets to assist with the management of maps and safety data within the ICP.
- K. Space shall be provided within the ICP to permit the display of instructions and key contact telephone numbers at a viewable level for the user.

(ii) Communications

A. Telephone Access

- i. The ICP shall provide a telephone handset in all Stations. This is the FTEL connected through FDAS and shall be hardwired and monitored.
- ii. The second telephone handset in Underground Stations and Baseline Station shall be VOIP based.

B. PA

- i. The PA microphone in Station ICPs shall permit the user of the ICP to gain access to the local PA system and broadcast voice messages through the PA microphone.

C. ICP Alarm

- i. The ICP shall provide an alarm contact on the front panel access door which shall be connected to the SCADA system and displayed as an alarm to the operator at the TOCC, BCC, MYCC and BYCC when the front panel is opened.

D. Fire Alarm Annunciator Panel

- i. The ICP shall contain the fire alarm annunciator panel.

E. Power Requirements

- i. The ICP shall provide a duplex 110VAC 60Hz GFCI protected 15A socket for connections of ancillary AC equipment.
- ii. The ICP shall be connected to the 4 hour Emergency UPS system to maintain operation during an Emergency.
- iii. The addition of a supplementary 15A AC load and the ICP electrical load shall be accommodated by the UPS to provide the required 4 hour operational performance.

F. CCTV video feed in Underground Stations

- i. The local video screen for viewing CCTV video feeds in the ICP shall be located at standing eye level for the user.
- ii. The local video screen shall be a minimum of 19" diagonal.
- iii. The video screen shall be able to view the details of a single view or a view of four camera images.
- iv. CCTV camera images shall be transmitted to the ICP by the TOCC & BCC personnel when requested via radio or telephone communication
- v. The TOCC & BCC personnel shall be able to select the CCTV camera image and the ICP to which the image will be transmitted.
- vi. No local storage or recording of the video at the ICP shall be required.

6.6 Incident Control Location

- (a) DB Co shall provide signage at each Tunnel portal in a location as agreed with ESP to indicate the meeting point for incident control.

ARTICLE 7 WAYFINDING AND SIGNAGE

7.1 Introduction

- (a) This Article 7 describes wayfinding and signage performance requirements for the Project including performance criteria for wayfinding and signage design.
- (b) The performance specifications will provide brand neutral examples for the application and integration of a comprehensive wayfinding and signage system with the specific architectural and art finishes and features of the Project.

7.2 Goals & Objectives

- (a) The overall goal of this Article 7 is to provide a standard signage and wayfinding system that makes transit Facilities easy to identify and navigate system wide, that utilize language and visual techniques that people understand, comply with accessibility guidelines, integrate with the design approach of other design disciplines and assist in delivering a successful journey for Passengers.
- (b) The objectives for the wayfinding and signage program are as follows:
 - (i) To improve the overall function and aesthetics of the Project by providing accessible, attractive, identifiable and understandable signage;
 - (ii) To improve wayfinding for Passengers by providing map, text and or pictograph signage for important Station destinations and features;
 - (iii) To provide plain language signage and not 'over sign' Stations;
 - (iv) To develop Project outcomes that inform and meet the timing of the design requirements for Station pre-engineering and final designs; and
 - (v) To achieve the above goals sustainably.

7.3 Scope

- (a) This Article 7 includes requirements for the design, manufacture, supply, delivery, storage, assembly, installation, protection, inspection and testing of all components as described herein, necessary to achieve and deliver a successful, comprehensive and integrated wayfinding and signage system for the Project.
- (b) The wayfinding and signage system shall be consistent with the Existing Confederation Line signage and wayfinding system. Refer to Appendix D to this Part 4 for exemplary Station signage and way finding drawings.
 - (i) Appendix D represents the signage and wayfinding system for the Stage 1 Confederation Line Project

- (ii) DB Co shall apply the design principles, materials, details colors, location etc. contained in Appendix D to inform the design of the signage and way finding systems for the Project;
 - (iii) Appendix D does not relieve DB Co of any requirements of the Project agreement; and
 - (iv) DB Co shall retain all professional and design responsibilities for the signage and way finding system.
- (c) The wayfinding and signage system includes but is not limited to providing signage that addresses the following areas and uses:
 - (i) Station identification signage - Signage that identifies a Station and is visible whether approaching a Station by foot, bicycle, transit vehicle, taxi or private vehicle;
 - (ii) Community orientated wayfinding signage - Signage that identifies and provides a link to other modes of transport, public services, landmarks, pedestrian and bicycle routes or significant destinations in the general vicinity of each Station;
 - (iii) Station located wayfinding signage - Signage that assists the movement of Passengers through a Station or to facilities located within the Station. This includes signage that identifies and or directs users to and from Platforms, exits, ticketing and fare payment facilities, information services, elevators, escalators, accessible pathways, bicycle routes through each Station, taxi and connecting bus services;
 - (iv) Navigation signage - Signage that works in conjunction with (iii) and provides wayfinding through the available multi modal forms of transportation by identifying directions, major destinations, adjacent Stations and confirms the appropriate transport service.
 - (v) Schedule and service status signage - Signage that displays real time information on the status of transport services communicated through the use of dynamic visual displays, panels, electronic updates and audio announcements when a service is operating, due to arrive, delayed or cancelled and provides information and notices for hours of operation, trip schedules and timetables; and
 - (vi) Regulatory and utility signs - Signage used within a Station that provides users and staff with regulatory notifications such as no smoking, hazards, no littering, Emergency exit, Emergency phones, fire alarms, elevator buttons, rules of use, disclaimers, etc. Standard traffic signage is also required for private vehicles and for buses circulating through or around a Station.

7.4 General Responsibilities

- (a) DB Co shall design, fabricate, install, and maintain all wayfinding equipment.
- (b) The City will confirm content of all wayfinding including signage (directional, orientation, information, regulatory, commemorative), electronic displays, transit information panels, and maps, and will provide such content to DB Co at the appropriate stage of design.
- (c) Proposed wayfinding equipment shall be coordinated and compatible with existing wayfinding equipment as per Existing Confederation Line.
- (d) Wayfinding equipment shall support and contribute to the transit customer experience on the system and overall transit network as per Existing Confederation Line, in Appendix D.

7.5 General Requirements

- (a) Reference Documents
 - (i) The design and construction of wayfinding and signage shall comply with the criteria contained in this Article 7, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - A. OBC;
 - B. AODA;
 - C. COADS;
 - D. OC Transpo Transitway and Station Design Guidelines;
 - E. OC Transpo Signage and Wayfinding Manual;
 - F. Appendix D Exemplary Station Signage and Wayfinding Drawings – Existing Confederation Line, of this Part 4.
 - G. Canadian Transportation Agency, Code of Practice, Passenger Terminal Accessibility
 - H. Canadian Transportation Agency, Code of Practice, Removing Communication Barriers for Travelers with Disabilities
 - I. City of Ottawa Construction Specifications and Details; and

J. Ontario Traffic Manual.

(b) Signage System Design

(i) Design for the wayfinding and signage system for the Project is comprised of identification, directional, information, operational, regulatory, and temporary signage.

(ii) The City shall determine Station names for all Stations.

(iii) Identification Signage

A. The key functions of the identification signage are to identify:

- i. Stations within the built environment;
- ii. Station entries;
- iii. Station facilities;
- iv. Passenger services and amenities;
- v. Elevator access; and
- vi. Accessible entries.

(iv) Directional Signage

A. The key functions of the directional signage are to direct:

- i. Passengers from the Station entries to fare equipment and on to the Platform and to the exits;
- ii. Passengers to connecting modes and Infrastructure;
- iii. Passengers to facilities within the Station; and
- iv. Passengers to accessible access points.

(v) Information Signage

A. The key functions of the information signage are:

- i. Provide transit network information;
- ii. Notify Passengers of available services; and
- iii. Notify Passengers of delays or changes to scheduled services.

- (vi) Operational Signage
 - A. The main purposes of the operational signage are:
 - i. Identify doors, areas and access points for staff and facilities management; and
 - ii. Identify ancillary room functions.
 - iii. Notify Passengers of video surveillance.
- (vii) Regulatory Signage
 - A. The key functions of the regulatory signage are:
 - i. Identify potential hazards to Passengers and the public; and
 - ii. Identify potential hazards to staff and Third Party Contractors.
- (viii) Temporary Signage
 - A. The key function of temporary signage is to:
 - i. Temporarily identify changes to services, Station facilities, Station closures or hours of operations;
 - ii. Temporarily identify hazards to Passengers and the public; and
 - iii. Temporarily identify hazards to staff and Third Party Contractors.
- (ix) Sign Types shall be consistent with Existing Confederation Line signage.
- (x) Sign Dimensions shall be consistent with Existing Confederation Line signage.
- (xi) DB Co shall use the Existing Confederation Line signage packages provided in Appendix D of this Part 4 which includes expectations for sign dimensions, sign and information hierarchy, sign types, sign content, visibility, contrast, layout, sign mass and sophistication.
- (xii) Sign Quantities
 - A. DB Co shall be responsible for designing the wayfinding program including providing sufficient quantities of signs as deemed necessary to design and supply a clear, concise and consistent wayfinding sign system in order to meet the Project requirements.
- (xiii) Sign Information

- A. DB Co shall be responsible for updating and maintaining sign information content and messages to ensure that all signage is relevant and reflects relevant changes to the City transit system.
- (xiv) For Stations subject to FLUDTA, the following requirements apply:
 - A. Signage design shall comply with the NCC commercial signage guidelines.
 - B. All text shall to appear in both official languages.
 - C. Exterior signage shall not be permitted above the ground floor level.
 - D. Backlit signage, with the exception of Station entrance lanterns, billboard signage and digital signage shall not be permitted outside of the Station.
- (c) Design Elements and Considerations
 - (i) The design and implementation of the Project wayfinding and signage system requires DB Co to incorporate the following key considerations and elements into the designs.
 - (ii) Line & Letter Spacing
 - A. Line spacing where a set of messages is displayed shall be at least 75% of the cap height so messages can be quickly scanned and destinations identified.
 - (iii) Language
 - A. All signage for the Project shall feature messages in both English and French.
 - B. Where both languages appear on a single sign, DB Co shall follow one of the following two options:
 - i. English text on the left side and French text on the right; or
 - ii. English text on the upper portion of the sign with French text below.
 - C. Where pairs of signs are used the sign displaying English text shall be placed at the beginning of the viewing sequence with the second sign in French located beyond it.
 - D. Where the two signs are required they shall be far enough apart to ensure the messages are differentiated and not read as a single message and close enough to one another allowing users to recognize that they represent the

same message displayed in the two languages. A minimum gap of four character strokes shall be maintained between English and French messages. A minimum of two character strokes shall be permitted where a graphic device such as a vertical line or hyphen is used to visually separate the two messages.

- E. Bilingual or unilingual paired signs shall employ the same size, fonts, letter heights, colours and general design principles for each language.

(iv) Pictograms

- A. Pictograms shall be used to reinforce sign messages, aid quick recognition and clearly communicate information to all languages and cultures.
- B. Pictograms shall be based on Existing Confederation Line standards approved by the City. Any additional pictograms proposed by DB Co that are not based on the existing standards shall be presented to the City for acceptance.

(v) Legibility & Viewing Distance

- A. All signage shall be legible and feature letters and graphic elements of the appropriate size for the identified viewing distances. The chart below provides the viewing distances for text of a particular height. These values are based on the viewer having good vision and reading the signs in daylight whilst stationary.

- B. It shall be noted that many factors negatively impact the legibility of sign text. These include angular distortion, speed of travel and low light levels. Factors such as these shall be considered when determining the height of text appearing on signs. DB Co shall increase text heights from those described in the chart as required to maintain sign legibility based on the impact of the above conditions.
- (vi) Mock ups of all sign types shall be provided by DB Co to assess the legibility of the proposed design and text heights. Mock ups shall be reviewed by user groups comprised of a cross section of the community and representing people with diverse abilities.
- (vii) Sign Placement

- A. Signage shall be placed in visible locations, free from obstructions. Special care shall be taken to ensure that signs are not obstructed by other signs, design elements or items such as security cameras.
- B. DB Co shall place signs within the accepted standard for a viewers' cone of vision, being 15° above and below the viewers' horizontal line of sight. Signs viewed outside a viewers' cone of vision are read peripherally and with much less detail. DB Co shall consider the viewers' cone of vision when selecting the height of the sign from floor level and the height of the typeface.
- C. The average persons' eye level when standing is 1500mm from floor level. When seated it is approximately 1000mm from floor level and when driving eye level is approximately 1200mm from floor level. Signage shall be placed depending on how it shall be viewed and taking into account differences in eye level and a sign's audience.
- D. Placement of signage shall be coordinated with the landscaping, architecture, interior design lighting and other equipment in order to standardize locations within a Station and across the system. Signage shall be applied consistently, assist users to know where to expect sign information and aid navigation.

(viii) Contrast and Colour

- A. DB Co shall ensure contrast between sign backgrounds and messages are at a level considered acceptable to maintain sign legibility and deliver a successful signage system.
- B. For environments with light levels between 10-70 foot candles DB Co shall provide signs with a contrast of 75% or higher between the background and message.
- C. For environments with higher light levels (70 foot candles and above) DB Co shall provide signs with a lower contrast level of 65-75%. A dark background shall be used to absorb light and prevent glare.

(ix) Halation

- A. When signs are backlit care shall be taken to reduce flare or halation. Halation makes backlit or reversed lettering difficult to read especially when travelling at speed or at night. DB Co shall ensure that signs are designed to minimize the effects of halation. Directional signage shall not feature designs which purposely use the effect of halation as a feature. This includes signage with halo lighting effects.

- B. Internally illuminated signage shall have reversed opaque or translucent backgrounds to reduce halation and increase legibility.
 - C. Internally illuminated signs shall not feature light coloured illuminated backgrounds.
- (x) Lighting
- A. Design and implementation of internal or external signage illumination shall be coordinated by DB Co with the City to ensure compatibility with the design intent for the overall lighting scheme.
- (xi) Universal Design
- A. The principles of Universal Design shall be applied to designs for the wayfinding and signage system by DB Co. The signage system shall whenever possible seek to integrate accessible design features with the design as a whole. The goal is to deliver a wayfinding signage system that assists in providing an environment accessible to people with all levels of abilities. As a minimum, signage for the Stations shall be designed in accordance with the relevant accessibility codes referenced in this document. All directional signage shall be located in compliance with the stated codes.
 - B. The application of tactile indicators shall be coordinated with key sign locations to assist with the recognition of tactile signage locations and aid navigation by the visually impaired.
- (xii) CPTED
- A. The principles of CPTED shall be applied in order to ensure the design and placement of the wayfinding and signage system does not compromise the Safety of Passengers or the general public. In general, signage shall enhance public Safety by providing uninterrupted site lines in critical areas, reduce areas where people or devices may be concealed and provide sufficient information to users to instil confidence and minimize confusion. All Station, security facilities and supporting transport services shall be easily differentiated and identified whilst being recognisable as part of an organised system.
- (xiii) Vandalism
- A. All signage elements shall be designed and fabricated to dissuade and provide protection against vandalism and graffiti.
 - B. Tough, scratch and impact resistant materials shall to be utilized to resist damage, maintain appearance, increase product life spans and reduce

operational costs. Sacrificial and non-sacrificial anti-graffiti coatings are to be applied to signs where the risk of graffiti is deemed to be high.

- C. All accessible mechanical fixings shall be 'security fixings' with nonstandard drives. All accessible fixings shall be tamper proof.
- D. Damaged signs shall be repaired or replaced by DB Co in a timely manner and without negatively impacting Passengers, staff or the general public.

(xiv) Local Conditions

- A. All signage components designed and supplied by DB Co shall be fit for purpose, able to perform in the climatic conditions outlined in Schedule 15-2, Part 1, Article 4 – Design and Construction.
- B. The effects of snow, ice and the effects of methods of snow dispersal on signage shall be addressed in the design.

(d) Fabrication Materials & Finishes

- (i) Sign material selections and colours are subject to final brand review by the City.

(ii) Metalwork

- A. All work shall be accurately and neatly constructed and securely fitted and fixed.
- B. DB Co shall use types and grades of metals suited to their required function, finish and method of fabrication, in sections of adequate strength and stiffness for their purpose.
- C. Where appropriate, prefabricate and preassemble items in the workshop before delivering items to Site.
- D. Care shall be taken to ensure all visible metal surfaces are free from damage, scratching or other surface degradation.
- E. Fabrication techniques, surface detailing and application of finishes shall be closely controlled to ensure continuity of appearance between individual items.
- F. All visible metal edges shall be cut with machine tools. No visible edges of metal shall be cut with a guillotine or break press. No radius to edges unless specified.

(iii) Stainless Steel

- A. All stainless steel used externally; in basement levels and non-air conditioned areas shall be marine alloy, AISI grade 316. In internal areas all stainless steel shall be grade AISI grade 304 unless otherwise specified.
- B. All stainless steel surface finishes shall be factory or machine finishes. Stainless steel products with a standard mill or 2B finish shall not be hand finished or polished, by the contractor to match factory finishes.
- C. All brushed or finish stainless steel shall be No.4 finish unless otherwise specified. Grain of finish is to run with long dimension of each sign unless otherwise specified.
- D. All polished or mirror stainless steel shall be No.8 mirror finish, unless otherwise specified.
- E. All surfaces shall be ground and polished to produce uniform, directionally textured, polished finishes free of cross scratches.
- F. All corners shall be 90° and mitred, with a hairline joint and with surface finishes meeting at mitre. No visible welds.

(iv) Aluminium

- A. All aluminium shall be of an alloy suitable for purpose. For signage applications where sheet and plate is required, alloy 5005 shall be used.
- B. All welding shall be carried out in accordance with international standards, using techniques to avoid buckling and discolouration.
- C. All exposed welds shall be ground smooth and where aluminium is to be painted all surfaces shall be suitably sanded, primed, filled and smoothed prior to final paint treatment.

(v) Mild Steel

- A. Steel components shall be of quality mild steel of a gauge and alloy appropriate for location and use.
- B. Method of welding used shall provide the maximum strength along joints, fill all gaps and run to a clean and regular finish. All welds shall be continuous along joints with no raw or exposed edges.
- C. Irregular welds shall be ground smooth with particular attention to visible areas.
- D. After fabrication and prior to pre-treatment and finishing processes, all rust, scale, burrs, weld slag and splatter shall be removed from the weld and surrounding areas.

- E. Steel work shall be free of grind and machine marks by way of finishing or sandblasting without causing damage to the designed form or creating surface irregularities.
 - F. All mild steel framing and signage support Structure, located in external areas shall be hot dipped galvanised regardless of the application of paint finishes unless otherwise specified.
- (vi) Glass
- A. All glass used in the fabrication of signage shall be toughened safety glass.
 - B. Where glass is used in conjunction with applied graphics for the purposes of visual display, all glass shall be low iron toughened safety glass.
 - C. All edges are to be ground and polished smooth. All edges shall be square without chamfered or sharp edges.
 - D. All glass installations located in direct contact with Passengers and staff shall be certified by a Professional Engineer.
- (vii) Acrylic & Polycarbonate
- A. All acrylic used shall contain 90% or more polymethyl methacrylate.
 - B. Where possible cast acrylic shall be used instead of extruded acrylic or polycarbonate products.
 - C. Cut edges shall be finished smooth and polished. No flame polished edges shall be provided.
- (viii) Fastenings
- A. Fastenings, including anchors, lugs, screws, rivets, and the like shall be fit for purpose and capable of transmitting the loads and stresses imposed. All fastenings shall be sufficient to ensure the assembly is secure and rigid.
 - B. All fastenings and associated components such as sleeves shall be finished to match the sign body treatment and colour, unless otherwise approved.
 - C. All exposed screw heads shall be countersunk. All screw heads shall finish flush with the adjacent exposed surface.
 - D. DB Co shall ensure that all fixings are protected against corrosion and will not mark or stain existing finishes.
 - E. Fixings shall be compatible with the types of metal they are used to secure.

(ix) Welding

- A. Welded, brazed or soldered joints on exposed surfaces shall be ground, buffed or polished as applicable to the material and specified finishes. There shall be no buckling or visible surface colour variations in exposed metal finishes.
- B. Welds and brazes on finished surfaces shall be indistinguishable from the parent metal.

(x) Precision Cutting

- A. All cut edges shall be smooth, ground and polished. No visible cut marks, burn marks, splatter or discolouration shall be accepted.
- B. All start and end cuts for laser and waterjet cutting and shall be located outside the form to be cut. All cut edges shall be de-burred. All edges shall be square. No sharp edges.

(xi) Metal Separation

- A. Incompatible metals shall be separated to prevent galvanic reactions. Separation materials shall not be visible on exposed surfaces or cause discolouration to the surrounding finishes over time.

(xii) Graphic Films

- A. All corners and edges of finished letterforms, numerals, arrows, pictograms, logotypes and other graphic elements shall be sharp and true to the selected typeface or artwork, with accurate even curves and serifs where applicable.

(xiii) Screen Printing

- A. All screen printed graphics shall be applied according using a screen of 120 threads per inch. Registration shall be accurate.
- B. Screen printing ink shall be Sericol Polyscreen 2 pac system or similar.

(xiv) Anti-Graffiti Coatings

- A. All applied coatings shall be compliant with the sustainability goals for the Project and be applied to the manufacturers' instructions by qualified personnel trained in the correct use and application and/or removal of these types of products.

(e) Electrical

- (i) Internal Lighting
 - A. DB Co shall ensure that all illumination is fit for purpose and provides even illumination. No shadows, visible wiring or hotspots shall be permitted.
 - B. DB Co shall fabricate all signs with internal lighting in such a way as to prevent all light leaks
 - C. All lighting shall be LED Type.
 - D. All control gear shall be compatible with the lamps used and shall be located within the sign or concealed in a remote location. In all cases DB Co shall ensure that all control gear including transformers, drivers and ballasts are installed in an accessible and safe location which does not interfere with the functioning of the lighting or the sign itself.
 - E. All wiring shall be encased in non-conductive, insulated, electrical conduit, fit for purpose.
 - F. All ballasts and control gear shall be electronic. No solid core transformers or ballasts shall be used.
 - G. All interior lighting fixtures located underneath skylights shall be full cutoff.
- (ii) External Lighting
 - A. Where additional illumination is required for the purposes signage illumination, light fixtures shall match in colour temperature, lumen output and intent.
 - B. All exterior lighting fixtures shall be full cutoff, light trespass on to adjacent properties shall not be permitted.
 - C. All lighting shall be LED Type.
- (iii) Activation of Signage Illumination
 - A. Activation for sign illumination shall be controlled by the station BAS.
- (iv) LED Displays
 - A. DB Co shall be responsible for the design and placement for all LED displays. DB Co shall be responsible for the design and supply of all shrouds and fixing systems required to maintain a consistent design language and integrate the displays with the designs for the wayfinding

and signage system. design of the shrouds and or fixing systems shall not negatively impact the performance of the base LED displays in any way.

- B. Placement of LED displays as part of the Passenger information systems shall be the responsibility of DB Co. Placement of Passenger information displays shall not obscure or interfere with the operational performance of the wayfinding and signage system.

(v) LCD Displays

- A. DB Co shall be responsible for the design and placement for all LCD displays. DB Co shall be responsible for the design and supply and of all shrouds and fixing systems required to maintain a consistent design language and integrate the displays with the designs for the wayfinding and signage system. design of the shrouds and or fixing systems must not negatively impact the performance of the base LCD displays in any way.
- B. Placement of LCD displays as part of the Passenger information systems shall be the responsibility of DB Co. Placement of Passenger information displays shall not obscure or interfere with the operational performance of the wayfinding and signage system.

7.6 Conditions

(a) Site

(i) Site Conditions

- A. No signage shall be fabricated or finished on-site.

APPENDICES

APPENDIX A Room Data Sheets

**SCHEDULE 15-2
DESIGN AND CONSTRUCTION REQUIREMENTS**

**PART 5
LMSF**

ARTICLE 1 INTRODUCTION

1.1 Introduction

- (a) This article outlines the guidelines and performance criteria that are necessary for DB Co to carry out the final design and construction for the various components and elements of the Moodie LMSF for the Project. The LMSF shall serve as the maintenance and storage facility for the City and shall house the Vehicles for the initial Confederation Line Extension of the Vehicle fleet. This Work requires coordination and interaction with other work by DB Co, including but not limited to the Mainline Track. DB Co shall design the LMSF to meet the Vehicle peak daily service requirements.
- (i) Features of the Work shall include,
- A. Construct all Track;
 - i. Furnish and install new turnouts, crossties, ballast, and necessary appurtenances.
 - ii. Install new rail throughout.
 - B. Retaining walls and miscellaneous concrete Structures;
 - C. Buildings as further defined below.
- (b) This section summarizes the requirements that are otherwise detailed in the remaining Articles of this Part 5.
- (i) Site Summary
- A. The site is located on a parcel of land located between Highway 417 and Corkstown Road. The western site boundary is the ROW for the [REDACTED] and the eastern site boundary is the Moodie Drive/Highway 417 interchange. The development of the facility for Phase 1 shall not disturb the Trans Canada Trail, also located at the western boundary of the site.
 - B. This site currently is a greenfield site.
 - C. A neighbouring development to the north of LMSF Corkstown Road is Wesley Clover Parks recreational facility.
- (c) Facility Summary

- (i) The LMSF (Phase 1) shall be designed to maintain and store 24 Vehicles required by the City and shall protect for the future interim Vehicle storage capacity of 64 Vehicles (Phase 2) within the confines of the Lands and the ultimate build-out for storage capacity of 90 Vehicles (Phase 3) in the yard area. The specific timeline for the future expansion is unknown.
- (ii) Phase 2 shall add capacity to the storage yard, augment the Phase 1 Vehicle Service & Maintenance Shop with two additional light maintenance shop Tracks, offices, welfare spaces, back shops, and storage; provide for MOW functions as described for Phase 1, and include a new Office Building as detailed below. Phase 2 shall be contained within the existing Land.
- (iii) Phase 3 shall add capacity to the storage yard, augment the Phase 2 Vehicle Service & Maintenance Shop with one additional, stub-ended heavy maintenance shop Track, as detailed below. MOW functions as described for Phase 1 shall be provided
- (iv) The LMSF will serve as the service center and light maintenance center for the portion of the Vehicle fleet prescribed above. Any design for the initial build out shall take into consideration, be compatible with and protect for any future expansion or build-out requirements.
 - A. DB Co shall plan, design and construct facilities as required to perform all necessary operations and maintenance activities required by the Project Agreement.
 - B. Buildings may be designed to take advantage of the pre-engineered delivery method.
 - C. DB Co shall design the site to protect for Phase 2 including future interim Storage Tracks within the Lands provided in Schedule 20 – Lands.
 - D. DB Co shall protect for Phase 3 inclusive of the additional final build-out of Storage Tracks an expanded administrative office and operator welfare building (LMSF Office Building) with associated parking.
 - i. The City acknowledges for implementation, Phase 3 may require the realignment of Corkstown Road and additional property not identified in Schedule 20.
 - E. The design shall incorporate space for snow storage for current and interim site development for Phase 2.
 - F. The site shall be secured at the perimeter with a minimum 2.4m high fence and gate system. Gates shall be motorized and shall be operable through the facility access control system. The fence along Corkstown Road shall be architectural and shall comprise of powder coated weld wire mesh or steel pickets. Other fenced areas, not readily visible to the public, may be

chain link. The security fence between the yard and Highway 417 shall be provided with a glare screen, where required, so that Vehicle headlights will not shine on Highway 417. The yard shall be designed so that snow cleared by Highway 417 does not fall into the yard. Intrusion detection shall be contiguous with the perimeter fence.

- G. All structures crossing Stillwater Creek shall be designed and constructed to minimize the reduction of daylight at the creek level and along its banks. Crossing Track structures shall be open design. Only a single crossing shall be permitted for pedestrians and motorized service carts and this shall be limited to 3m in width. The pedestrian and motorized service cart Structure will be permitted to have a closed deck. The only other crossings permitted shall be for Tracks. DB Co shall design the crossing structures with particular attention given to the requirement that the creek shall receive the maximum amount of daylight. DB Co shall demonstrate that its design solution minimizes the impact of the development on the creek.
- (v) DB Co shall design the site so that there shall be six or less parallel sets of Tracks for the initial site development.
- (vi) LEED:
 - A. The Office Building shall be designed for LEED® “Certified” status.
 - B. DB Co shall register the LMSF with the GBC and provide documentation for all credits necessary for “Certified” status.
- (vii) Accessibility:
 - A. Where applicable, DB Co shall ensure the project site and facilities are designed to be universally accessible including satisfying the requirements of Transport Canada, AODA and applicable City Guidelines and CSA Standards. The application of design guidelines and criteria, standards and practices shall accommodate the needs of persons with physical, sensory, and mental disabilities.
- (viii) The LMSF shall be designed in accordance with CPTED. For further clarity, the design of the LMSF shall be included in DB Co’s independently contracted CPTED review and report, required under Schedule 15-2, Part 4, Clause 1.3(b).
- (d) General Maintenance Philosophy: The LMSF design shall allow for flexibility in Vehicle maintenance procedures.
 - (i) The design and operation of the LMSF, shall be based on the following concepts:
 - A. To ensure that the required number of Vehicles needed for specified levels of service are available for revenue service, clean, sanded and in good

mechanical order and that they are paired as two car Trains within the storage yard;

- B. The goal of the maintenance building is to return the Vehicles to “ready for revenue service” status as quickly as possible. Therefore, maintenance procedures shall focus on exchanging good components (from shop stores) for defective components; and,
- C. Heavy maintenance shall be performed at the MSF on Belfast Road.

(e) General LMSF Operations Philosophy

- (i) The LMSF shall provide for maximum safety and flexibility in Train movements. Direct access from the mainline to the LMSF Tracks shall be provided. Track shall be designed free of single points of failure and shall limit the number of turnouts and other special Trackwork for the most heavily used portions of the yard (i.e. those associated with daily routines). Designs shall be free of single point of failures for each phase of the construction. However, in Phase 1, a failure at the east end of the storage yard that will allow access to the Mainline for half of the storage Tracks is not desirable, but is acceptable.
- (ii) Double leads shall be provided off of the Mainline Track extending to the Yard Track ladder, and shall be accessible from either Mainline Track via a double or universal crossover arrangement that precedes the yard limits. One of the leads may pass through the S&I building and then through to the storage yard.
- (iii) Positive mechanical protection shall be provided to ensure no stray Trains escape onto the Mainline and shall be under the control of the TOCC and interlocked with the Train Control System and signals governing movement across those Track segments. Runaway or stub-end Track shall be provided to ensure stray Trains safely traverse off the Yard Lead Tracks, through the diverging route of a turnout, preventing access to the Mainline. Positive mechanical control shall ensure stray Trains safely traverse onto runaway or stub-end Track from any proposed or future handover Track. Runaway or stub-end Track shall be equipped with a bumping post to ensure Vehicles are undamaged and able to return to service in the event of a stray Train escaping.
- (iv) DB Co shall design and construct a parking facility (minimum 40 spaces) for the City within logical proximity of the Vehicle handoff platform and no fewer than 10 additional parking spaces at Vehicle maintenance building.
- (v) At the location within the LMSF, where the Operator will take control of Trains, DB Co shall provide the following facilities:
 - A. An enclosed/heated office for the City supervisor who will be responsible for the handoff; and,

- B. DB Co shall work with the City to define the specific functional requirements for the spaces outlined above.
 - C. One handoff platform shall be provided. The staging area for the handoff platform shall be a conditioned vestibule integrated into the LMSF Office Building, which provides a clear view and direct access to the Operator handoff platform.
 - D. MYCC windows shall have a full view of the Operator handoff platform, plus as wide a view of the yard as possible. Optimized and logical flow of the yard (handoff, daily servicing and storage) shall take precedence over this latter criterion.
 - E. Ancillary spaces such as fire sprinkler, mechanical, electrical rooms, equipment, etc. shall be provided as required to support the facility by DB Co. They may be placed as needed for functionality and as permitted by Code. Designs shall exhibit that they are not environmentally detrimental (visually intrusive or causing noise and vibration) to the community or to work areas.
- (f) LMSF Operations Criteria
- (i) Maximum LMSF design speed shall be 15km/hr.

1.2 LMSF Functions and Requirements

- (a) At a minimum, DB Co shall design and construct the LMSF to accommodate the following:
- (i) To satisfy all Operational scenarios of the Agreement;
 - (ii) All necessary functions to support the initial LRT line network while protecting for the future expansion of the facility. DB Co shall present designs that show how the future expansion will be accommodated without interruption of normal facility function;
 - (iii) Rooms and spaces within the facility as identified in the room Data sheets, in Appendix A of this Part 5, for use and occupation by City staff and Project Co;
 - (iv) Phase 2 and 3 level of design development shall be sufficient to illustrate the future build out can occur and how it would meet functional requirements (e.g. Operator access to handoff platform during construction or truck access to parts storage, expansion of Shop and Storage Yard/Building). DB Co shall clearly demonstrate its approach to phased build out throughout the submittal process. DB Co shall demonstrate that Phase 2 facilities will fit within the Lands identified for the LMSF, and that it can be constructed without interruption of transit operations. DB Co shall indicate the impact of the proposed Phase 3 concept on Corkstown Road, the Trans Canada Trail, and [REDACTED] mainline.

- (v) Roadways and other paved areas, Utilities, signaling, communications, access control and other security features, and other miscellaneous features for a complete and operational facility; and,
 - (vi) Delivery and warehousing of parts, equipment and materials. Roadway circulation shall accommodate tractor-trailers with 16m trailers. Vehicles delivering parts and materials shall not foul Tracks when on or off loading.
 - (vii) The City recognizes that some demolition may be required to permit the Phase 2 and 3 expansions in order to optimize ultimate functionality. DB Co shall present designs that minimize impacts to operations during construction.
 - (viii) With the exception of persons performing maintenance of Vehicles on shop Tracks or cleaning Vehicles in the storage shed, at no time shall any staff be required to cross facility Tracks to access any area of any LMSF building or parking area.
 - (ix) S&I, light maintenance, and heavy repair Tracks shall be adjacent to one another. Movement between Tracks shall not be interfered with or blocked by storage, office, or other ancillary space.
- (b) The LMSF is subject FLUDTA and design approval by the NCC under Section 12 of the National Capital Act.
- (i) Refer to Schedule 15-2, Part 4, Clause 1.2 (l) for general requirements.

1.3 Administrative, Welfare and Training Functions

- (a) The administrative and training functions for the LMSF facility shall be at the LMSF Office Building, providing easy and direct access from Corkstown Road to the public, employees, and visitors. It shall include the following areas and features:
- (i) Access: entrance to/exit from the site shall be easily recognizable and shall not require passing through “industrial” areas of the site;
 - (ii) These areas of the LMSF shall be conceived and designed to permit ready expansion to accommodate the staffing and functional requirements of interim and final LMSF build-out. The Phase 1 building shall not be required to be conceived as an integrated part of the interim and final building. Should DB Co opt to show the expansion of the LMSF Office Building as an addition to the initial building, it shall demonstrate how the spaces in the initial build out will be repurposed or expanded;
 - (iii) Public access shall be through a secure vestibule on the first floor. Direct public access to the shop, warehouse, and any other industrial areas shall not be permitted;

- (iv) Administrative, training and welfare areas shall be isolated from the transmission of sound and vibration;
 - (v) Administrative and management shall be provided with offices or open office cubicles in accordance with the standards established by Interior Planning Standards, City of Ottawa, Real Property and Assets Management. Finishes shall also be consistent with these standards;
 - (vi) Dispatcher shall, to the fullest extent possible, be positioned with a view of Operator staff;
 - (vii) The LMSF Office Building shall be sufficient to house the specified program for the initial LMSF build-out. It shall be positioned to be fully operational and not impinge upon the construction of a new LMSF Office Building size to house the Operator for subsequent interim and final build-out stages of the LMSF development.
 - (viii) DB Co shall submit designs that clearly indicate the future welfare expansion of the site can be constructed without impact or compromise to the operations of the LMSF as initially constructed and operated.
- (b) Design shall protect for:
- (i) A Phase 2 Office Building which shall be 934m² minimum area.
 - (ii) Handoff platforms shall be expanded to two during the Phase 2 expansion. Operators shall not be required to cross any Track to access a handoff platform.

1.4 Vehicle Storage and Future Expansion of LMSF

- (a) The Vehicle Storage Tracks shall be provided with storage capacity of sufficient size to accommodate the operational performance requirements.
- (b) Vehicle Storage Tracks shall be under roof, illuminated, and have full fire sprinkler coverage. Side walls shall be incorporated to the full extent possible without triggering the requirement for mechanical ventilation. The location of wall openings shall be subject to a microclimate analysis in order to reduce the impact of extreme weather conditions on the parked Vehicles. The storage shed shall be designed to accommodate storage of two-Vehicle Trains, but space for up to 4 single uncoupled Vehicles shall be accommodated (within the total shed Vehicle capacity).
- (c) Initial yard storage capacity shall be 24 Vehicles
- (d) Design shall protect for:
 - (i) Interim yard storage capacity of 64 Vehicles within the confines of the property;

- (ii) Full build-out yard storage capacity of 90 Vehicles which may require the realignment of Corkstown Road northward. Other development shall be within the Lands;
 - (iii) System expansion to Kanata from the LMSF yard via a grade separated, two-Track expansion across the [REDACTED] with Storage Track geometry designed to be completely double ended at the completion of this expansion. The elevation of the [REDACTED] alignment shall remain as currently fixed. DB Co shall design and demonstrate that its design complies with this requirement for all phases, although it is not presently anticipated that this crossing will be completed before Phase 2 is constructed;
 - (iv) Phase 2: Two light maintenance (progressive maintenance) Tracks in a shop building expansion. See Clause 1.7 (f) and (g) of this Part 5. Phase 3: An additional third heavy repair Track in a shop building expansion. See Clause 1.7 (i) of this Part 5.
 - (v) DB Co shall present staged designs that show how these requirements will be accomplished; and,
 - (vi) Future expansion of Highway 417 to the north of the existing travelled lane limit of pavement including a 3.75m travel lane, 3m shoulder and provisions for required barriers between Highway 417 and the future system expansion to Kanata.
- (e) At least one side of each Vehicle parked in the shed shall be accessible from a paved surface of adequate width and structural capacity to permit the passage of a 1255mm wide, 3,000mm long, 1,000 kg, motorized utility cart. Walkways shall permit turnaround of cart at each end. Pedestrian and road vehicle access to the Vehicle storage shed is required.
- (f) CBTC sectionalization in the shed shall allow for all Tracks adjacent to an asphalt walkway to be closed to automatic Trains when a worker is on the walkway. The system shall allow for this to be done from the MYCC and locally using keyed CBTC Emergency stop switches. The number of zones may vary based on the DB Co design
- (g) OCS shall also be sectionalized with separate feeders, one for the two north most Tracks, and one for the two south most Tracks.
- (h) A heated and ventilated building shall be provided of approximately 15m² and shall be constructed immediately adjacent or as a part of the Vehicle storage shed to provide convenient access for car cleaners for cleaning supplies and storage of materials. Provide standard office lighting levels, double, lockable swinging doors, a floor mounted janitorial sink with minimum 7.5L/min instantaneous hot water heater. Heavy duty industrial shelving, min 500 kg/m²; 600mm deep, min. 75L/min; brace at floor and floor deck above.

1.5 Moodie Yard Operational Control Functions

- (a) Facility shall provide for the day to day operations of the yard via UTO which shall be the primary method of positioning Vehicles for maintenance, inspection, storage, and revenue service handoff to the Operator.
- (b) All routes within the Moodie LMSF yard limits shall be under operational control of the MYCC.
- (c) All routes exiting the Moodie LMSF limits onto the Mainline Tracks shall be under operational control of the TOCC/BCC.
- (d) The transfer of operational control between the MYCC and the TOCC/BCC for Trains entering and exiting the Moodie LMSF to/from the Mainline Tracks is to integrate an S&TCS to address the following:
 - (i) All switches located on the Mainline Tracks that provide access to the Moodie LMSF shall be under separate control by the TOCC/BCC through means of a signalized interlocking with wayside signals in addition to the on board cab signaling system.
 - (ii) All switches located within the Moodie LMSF shall be under separate control by the MYCC through means of signalized interlockings with wayside signals in addition to the on board cab signaling system.
 - (iii) Routing of all Vehicles between the mainline interlockings and the Moodie LMSF interlockings shall be established by direct data communications shared between the S&TCS GUI of the TOCC/BCC and the S&TCS GUI of the MYCC.
 - (iv) A Train Control transition zone shall be established to hold Vehicles entering or exiting the Moodie LMSF until the appropriate route is established. The signals of either interlocking shall be used to govern the Train movement through the entire route until the Train is fully under control of the TOCC/BCC or the MYCC.
 - (v) The length of the transition zone shall ideally be sufficient to accommodate the maximum anticipated length of a Train without having any part of the Train stopped over a switch. However, in the event that Track geometry design and available spacing cannot prevent the Train from sitting over a switch while stopped in the transition zone, a Train may be stopped over a yard switch provided that the following is adhered to:
 - A. The position indications of the yard switch(s), for both normal and reverse, are shared from the MYCC to the TOCC/BCC.
 - B. The position indications of the interlocking switch(s), for both normal and reverse, are shared from the TOCC/BCC to the MYCC.

- C. The Track occupancy of the transitions zone area is shared with both the TOCC/BCC and the MYCC.
 - D. Safety precautions shall be taken to ensure that any switch cannot be thrown underneath the Train due to loss of shunting.
 - E. The Train shall never be stopped over a mainline switch under any circumstances.
- (e) The overall design concept involving a Train stopped over a switch in the transition zone shall be submitted to the City prior to procurement and installation.
- (f) The interface design for route establishments between the S&TCS of the mainline interlockings and the S&TCS of the Moodie LMSF interlockings shall be compliant with the operational procedures established between the City and Project Co.
- (g) All elements of the S&TCS of the Moodie LMSF and the mainline interlocking, that require design adjustments for the operational control functions noted above, shall remain in compliance with the S&TCS as described under Schedule 15-2, Part 3 – Systems.

1.6 Crew Dispatch

- (a) Crew dispatch areas shall be under control of the Operator and shall be independently controllable from Project Co areas.
- (b) Crew dispatch areas shall be located proximate to and provide convenient access to Vehicle handoff platform. The handoff platform shall be a part of the Operator building. The Open Offices and the Operators' Day Room (aka Break Room) shall be immediately adjacent. One of the work stations in the Open Office area shall have an operable (sliding) window into the Operators' Day Room to facilitate dispatch of Operators. Additionally a stainless steel cabinet with doors on either side of the wall, measuring in area approximately 0.42m² and 200mm deep, shall be provided for storage and charging of Operator radios. Access control shall be provided on the Day Room side; locking shall not be required on the Open Office side. Stainless steel shelving and charging connections shall be provided for 24 radios.
- (c) Functional areas include:
 - (i) Lobby;
 - (ii) Data and communications room;
 - (iii) MYCC;
 - (iv) Day room for the Operator;
 - (v) Welfare facilities for the Operator;

- (vi) Management offices for the Operator;
- (vii) Storage areas for the Operator; and,
- (viii) Visitor's office area.

1.7 LMSF Vehicle Maintenance Service & Inspection Building

- (a) It is of paramount importance that the LMSF in general shall be designed with safety as the preeminent design factor. In particular, because of the use of UTO within the Service & Inspection Building, industrial workflows and process shall consider that this can be a noisy environment and that optimizing sight lines and minimizing blind corners and safe crossing of potentially live Tracks is essential to the safety and wellbeing of facility employees. DB Co shall present designs that clearly indicate how potential work place hazards have been eliminated or mitigated;
- (b) The LMSF S&I Facility shall comprise a single, double-ended S&I Track, welfare and office facilities for Project Co, materials storage and ancillary spaces to support the maintenance and daily servicing of the Vehicle fleet housed at the LMSF
- (c) The S&I Facility shall include any and all light progressive maintenance (that does not require lifting Vehicles), including seat repairs, window replacement, flooring replacement, door repair, electronic component replacement, replacement of pantographs and AC units, and systems testing.
- (d) The S&I Track shall be fully capable of and designed for UTO operation.
- (e) High bay parts storage of not less than 7600mm vertically clear shall be provided for the activities performed on this Track and shall include a full inventory of the parts, supplies, and materials required to maintain the Vehicles. Mezzanine storage is not required for Phase 1. Areas by Phase shall be as follows:
 - (i) Phase 1: 90m².
 - (ii) Phases 2 & 3: 200m² on ground floor and 100m² on mezzanine (areas are not expanded in Phase 3).
- (f) S&I Track shall provide ample space for the daily service and inspection of Trains which shall be conducted on a single Track of sufficient length to enclose the Train in a conditioned S&I space per the mechanical requirements specified herein.
 - (i) Inspection Track shall be direct fixation on a slab that slopes at 2% to a continuous floor drain centered on the gage of the Track, running the full length of the space. Bottom of rail shall be 40mm above finish floor to allow water and detritus to move freely to a gage centered trench drain. Crossing aisles, flush with TOR not less than 3.5m wide shall be provided at each end of the S&I Track. At least one side and both ends of the Vehicle shall be accessible by a forklift without repositioning the Vehicle.

- (ii) Platforms at rooftop elevation shall be provided along one side of the Track for the length of the consist to provide access to and visual inspection of the Train rooftop and pantograph. Platform shall provide access to the Vehicle roof for the specified maintenance activities. Platform shall have guardrails that prohibit access to the Vehicle and OCS without the OCS being deenergized first. Fall protection shall be provided for the length of the consist.
- (iii) A fail safe system (e.g. Kirk key) shall be employed to integrate OCS deenergization with locked vestibules that prohibit entering the platform if the OCS is not deenergized. This system shall be operable in a failsafe mode from both ends of the platform.
- (iv) Lighting shall be provided as specified for Maintenance Facility occupancy and additional low level lighting shall be provided for undercarriage inspection.
- (v) Compressed air hose and trouble light with duplex outlet shall be on 4 reel sets at 4m centres along each consist side and on each side of the Track. Length of hoses and cords shall be sufficient to reach all areas of potential service for a given level of shop floor.
- (vi) The S&I Track shall be on and precede an automatic, drive-through trainwasher. It shall be isolated from the trainwasher by a high-speed bi-fold door and have positive pressure mechanically in comparison to the train washer space.
- (vii) An automatic, drive-through trainwasher shall be positioned in a conditioned space on the same Track and immediately adjacent to and contiguous with the S&I space. The Train washer shall employ equipment that is designed for the specific purpose of washing Vehicles and which is capable of providing a spot free wash that does not damage the Vehicle, applied graphics including advertising, or components. Washer shall clean all sides of the Vehicle including the under carriage and trucks, rooftops and interstitial space between Vehicles.
- (viii) A water reclamation system shall be employed that is compatible with the sustainability goals of the project. Final rinse water shall be stripped from the vehicle surface using high pressure air blowers or other acceptable means prior to exiting the wash enclosure. All effluent discharged from the system to the sanitary sewer shall be pretreated to comply with applicable codes and effluent quality standards. See Article 8 for additional requirements.
- (ix) Provide level Track crossings (embedded Track) at both ends of the S&I bay to allow equipment movements from one side of the bay to the other.
- (x) Shop doors shall be bi-fold due to OCS. Note that all maintenance shop Train doors shall be bi-fold as there shall be OCS on all Tracks.
- (xi) DB Co shall work with the car washer manufacturer to determine the specific requirements for a car washer that meets the requirements of this Part 5 inclusive

of, but not limited to: room sizes, clearances, wash and drying equipment, utility connections, effluent discharge, and storage, for a fully functioning system.

- (xii) A hot water pressure washing system shall be provided in the S&I bay and shall provide full Vehicle coverage for a Train. Pressure washing: three stations at each Vehicle; minimum overlap of coverage shall be 3m, at Vehicle ends, hose shall be capable of extending to the far corner of the Vehicle on opposite rail. Stations shall be located at 8.15m, 24.445m, and 40.74m.
- (xiii) A 2-ton monorail crane shall be configured to facilitate movements of parts and equipment from the Vehicles and rooftop platform to the main floor at each end of the consist. The crane shall be interlocked with the OCS, such that the OCS cannot be energized unless the crane trolley is in the home position and the hook is fully retracted. The crane shall run the entire length of the S&I Track and shall be centred on the rail gage. The monorail crane shall extend fully over the crossing aisles at both ends of the S&I Track.
- (xiv) Distribution of sand and windshield washer fluid and pressure washing wands shall be as follows (zero point for dimensions is coupler face of Vehicle when parked):
 - A. Pneumatic sanding with storage capacity of 45000kg/28000L of sand. Sand distribution shall be provided with dispensers aligned with all sand fill ports on a 2-Vehicle consist; 5.23m from either end and at the midpoint of the Vehicle; minimum 4m reach shall be possible as measured from the midpoint along the face of the Vehicle;
 - B. Washer fluid: 1m from each end of Vehicle. Washer fluid tank shall hold 2200L and shall be located in the Train wash equipment room providing same access as the wash chemical tanks. All tanks shall be accessible by facility roadway; and,
 - C. Road access to the sanding system silo and the Train washer chemical rooms shall be provided with sufficient width, design section and clearances to permit tractor and 12m trailers combos to access equipment.
- (g) The design shall protect for the future Phase 2 construction of two light maintenance shop Tracks. They shall be double ended and have the capacity for two uncoupled Vehicles on each Track. Tracks shall each have independent stinger power. These Tracks shall have the following characteristics:
 - (i) Sufficient space shall be provided for maintenance and materials movement activities at all ends and sides of all Vehicles. Tracks shall have 5m of clear floor area, measured parallel with the Track.
 - (ii) The general arrangement of Track shall be on pedestal Track with a main pit elevation of 950mm below finished floor/TOR and gage pits with elevation an additional 800mm below that. Gage pits shall be long enough to permit access to

ends of vehicles for coupler work including meeting couplers between vehicles. Main pit shall be minimum 14,350mm wide. Tracks shall be on minimum 7,700mm centers. Provide forklift accessible ramps to all sides of Tracks. Forklift access shall also be provided at grade for the entire length of the pit area, providing access to the cross aisles at the far ends of the shop.

- (iii) All pit floors shall be slabs that slope at 2% to a continuous floor drain centered on the gage of each Track, running the full length of the space.
- (iv) Continuous rooftop maintenance platforms shall be provided at 2954mm above finished floor and shall run the full length of the shop on both sides of each car. Stair access shall be provided at each end and mid-points of all platforms (4); Kirk key or other failsafe means of deenergizing the OCS shall be provided and shall control all access points to individual upper platforms. Track upper platforms shall be fully segregated from each other (as one can remain energized while the other is not), and have a gate at the midpoint to isolate half of the platform.
- (v) Code compliant fall protection shall be provided at all elevated platforms. Removable guardrail sections shall be provided as required, as well as gates dividing platforms east-west at midpoints required to mitigate fall hazard if a single Vehicle is in the bay. They shall be fabricated from aluminium of a grade suitable to withstand loading and the industrial environment.
- (vi) Hotel power stingers shall be provided at the midpoint of each Vehicle. Jibs shall be a minimum of 2.5m clear over the walking surface of the platform and shall extend to the centerline of the Track. Stinger cable shall be capable of reaching the connection point on the Vehicle regardless of from what direction it enters the shop from. Stingers shall be interlocked with the OCS such that the OCS cannot be energized unless the stinger is disconnected and the jib is secured in the home position.
- (vii) Monorail crane service shall be provided for the full length of the shop. The crane immediately adjacent to the mezzanine associated with the upper parts storage and equipment shops shall directly access back shops and storage at a second floor mezzanine long one side of the shop. The cranes shall be 2-ton and one shall be configured to facilitate movements of parts and equipment from the upper platform and to the mezzanine as noted above. The intention for the monorail crane accessing the mezzanine is to create horizontal work processes, i.e. storage of AC units and pantographs on mezzanine adjacent to Vehicle rooftop on light maintenance Track. Both shall also be capable of accessing parts and equipment from the main floor and service pit. All monorail cranes shall be interlocked with the OCS, such that the OCS cannot be energized unless the crane trolley is in the home position and the hook is fully retracted.
- (viii) Compressed air and trouble light with duplex outlet shall be distributed via hose reel sets at each Vehicle truck. Hose reel sets on pit wall sides shall be recessed in

alcoves in the pit walls. Centre reel sets shall be supported from the overhead catwalk. Similarly compressed air and trouble light with duplex outlet shall be on reel sets at the quarter points of each Vehicle and on each sides of the Vehicles.

- (ix) Pit lighting and other fixtures shall be recessed where possible or in plane with structural columns so that the available working width of the pits is maximized.
- (x) Specific utilities shall be placed as follows (zero point for dimensions is nose of vehicle when parked):
 - A. At floor level:
 - i. 120V 20A every 20m, both sides, mounted to rail posts;
 - ii. Compressed air, every 25m, both sides, mounted to rail posts; and,
 - iii. Water, every 50m.
 - B. At upper platform level:
 - i. 120V 20A on both sides of platforms, every 20m;
 - ii. Compressed air paired with 120V (every 20m); and,
 - iii. Stinger power, two per Track, positioned as noted above.
- (xi) Road access to the sanding system silo and the Train wash chemical rooms shall be provided with sufficient width, design section and clearances to permit tractor and 12m trailers combos to access equipment.
- (h) Phase 1 non-shop functional areas shall include:
 - (i) Secure lobby;
 - (ii) Conference room;
 - (iii) First aid/safety equipment room;
 - (iv) Break room;
 - (v) Women's locker room, shower and washroom;
 - (vi) Men's locker room, shower and washroom;
 - (vii) Janitor's closet;
 - (viii) Data and Communications (server) room;
 - (ix) Open office;

- (x) Copy/office supply room; and,
- (xi) Supervisors' offices (2).
- (i) The design shall protect for the future Phase 3 construction of a dedicated heavy repair Track in a shop building expansion. The Track shall have capacity to work on two, decoupled Vehicles and provide enough separation between Vehicles to allow simultaneous work on the facing ends of the Vehicles. The provision for this LMSF Track shall be adjacent to, and in the same space, as the two light maintenance Tracks. Track shall be flat floor, may be stub ended, and shall be in close proximity to and directly accessible to parts storage without crossing other Tracks. Forklift access shall be provided to each side of the Track. Track shall be fitted with a 10-tonne overhead crane. The addition shall not impact major utility installation nor block access to them. It shall be located so as to have virtually no impact to ongoing LMSF operations during construction.
- (j) Parking shall be provided for future phases as follows:
 - (i) 96 parking spaces for Phase 2; and,
 - (ii) 144 parking spaces for Phase 3.

1.8 Service and Inspection

- (a) A Vehicle or Vehicle consist coming out of service shall be routed to the S&I Track constructed as described herein.
- (b) Daily Activities:
 - (i) The operator will spot the consist at the appropriate point. The Train will generally remain energized during the daily activities. The primary daily activities shall consist of the following:
 - A. Walk-through of the consist to identify any issues related to damage or vandalism;
 - B. Adding sand to the sand boxes (as required based on consumption) – pneumatic sanding system with a filling hose at each sandbox fill point;
 - C. Checking window washer fluid and topping off as necessary; and,
 - D. Visual inspection of the Vehicle exterior and couplers.
- (c) Additional Activities:
 - (i) The S&I Track shall be configured such that minor repairs and component change-outs can also be completed on the Track. At roof level, visual inspection of the Vehicle roof, including pantograph wear strip, by means of the roof-level platform

(key interlock system requires the OCS catenary to be de-energized before accessing the platform). The carbon wear strip on the pantograph can be replaced. The 2-ton monorail hoist and OCS shall be configured to enable [REDACTED] to perform change-out of an HVAC unit, the entire pantograph or remove other rooftop elements. Enabling fall protection system(s) shall be provided for rooftop work activities.

- (ii) Basic car cleaning, and vandalism repairs, will occur later when the Vehicle is on a Storage Track.
- (iii) Phase 1 undercar inspections, especially of the brakes, will require the Vehicle to be placed over a pit at another offsite facility, typically on a weekly basis.
- (iv) For Phase 1 scheduled / preventive maintenance will occur at another offsite facility equipped for that work.
- (v) Vehicle wash:
 - A. After S&I activities are complete, the Vehicle proceeds forward into the automatic washer.
 - B. Vehicle presence detectors shall sense the leading and trailing edges of the Vehicle, and automatically activate and deactivate the detergent application arch, brushes and rinse arches, and blowers, in the correct sequence. The Vehicle normally will pass through the washer at a low constant speed (approximately 3 km/hr). Excessive speed or stopping shall trigger an alert and eventually an automatic shutdown of the machine. Colored lights and digital speed display shall assist maintenance personnel in maintaining the optimum speed for detergent “dwell time” and brushing action.
 - C. There shall also be a “no wash” option that can be selected by the maintenance personnel.
 - D. After being washed, the Vehicle will typically be routed to the storage Tracks for cleaning and overnight storage, or into the shop for scheduled or unplanned repairs.

1.9 Room Data Sheets

- (a) DB Co shall include within the LMSF, the rooms identified in the room data sheets provided in Appendix A. These sheets contain additional requirements for the design and construction of required rooms within the LMSF. All rooms included in Appendix A shall be included in Phase 1, unless otherwise noted.

1.10 LMSF Maintenance of Way Facility

- (a) The LMSF MOW facility shall be at a minimum 435m² (minimum clear width of 10m measured perpendicular to Tracks) with an embedded Track of not less than 45m in length and shall be suitable for materials storage of all components associated with the maintenance of the Confederation Line East or West Extensions that must be stored in a weatherized, heated and ventilated enclosure. The MOW facility shall be designed and constructed as follows:
- (i) Facility shall allow the passage of rail and hi-rail vehicles commonly used for MOW activities.
 - (ii) Rail shall be embedded type and shall be designed to 26 kPa minimum in areas of rail vehicle influence and minimum 12 kPa loading elsewhere.
 - (iii) Electrical, lighting and mechanical systems shall be as specified for LMSF facility except that the space shall only be heated and ventilated. Air conditioning shall not be required. Fire suppression system shall be as per Code.
 - (iv) A diesel fuel storage tank adjacent to the MOW Storage Track and accessible to delivery trucks, with a capacity no less than 2400L, shall be provided in order to fuel rail borne MOW equipment. Fuel dispensing and spill protection shall be provided.
 - (v) A suitable exhaust extraction system shall be provided to permit diesel equipment to be operated inside the MOW.
 - (vi) Provide single occupancy, universal washroom if location of MOW facility on property so dictates.
 - (vii) Provide cold and hot water source and enameled cast iron wall or floor mounted janitorial sink. Faucet shall be industrial grade and able to accept a water hose fitting.
 - (viii) Provide continuous grated trench drain 1.675m from centerline of the MOW Track on the shop/storage side of the Track.
 - (ix) Provide 120V 20A duplex outlets every 10m on walls parallel to Tracks. Provide 2x 240V connection evenly spaced on one wall parallel to track, and 1x 575V 3-phase connection along the same wall.
 - (x) Provide compressed air: two on each wall parallel to Track, evenly spaced, wall mounted. Hose reels shall be provided and have sufficient length and capacity to service all point of Vehicles stored on enclosed MOW Track.
- (b) MOW facility is required in all phases (Phases 1 – 3).

- (c) Provide an exterior laydown area for Track, bulk materials, other Track material, etc. of not less than 1,000m². Area shall be accessible by road and rail, shall have a compacted gravel surface and shall be secure (fenced) from public access.

1.11 LMSF Operation

- (a) The LMSF shall be able to operate as either CBTC or non-CBTC territory.
- (b) DB Co shall design and implement a solution for S&TCS in the LMSF that provides:
 - (i) Control of power switches and interlockings from the MYCC control panel.
 - (ii) A display on the MYCC panel of all Trains on all Tracks and the order of the Vehicles in them.
 - A. The level of detail shall be selectable.
 - (iii) Standard signal system interlocking protection such as route locking, approach locking, detector locking, etc.
 - (iv) Signals at all interlockings to allow safe movement of Trains without functioning onboard CBTC systems.
 - (v) Yard speed limit enforcement for CBTC equipped Trains.
 - (vi) The Design of the yard S&TCS shall allow for coupling and uncoupling of Trains on any Tracks between interlockings.
- (c) The design of the LMSF shall be based on UTO
 - (i) The MYCC shall not control the signals and switches in the interlockings entering or leaving the yard. These shall be controlled by the TOCC, BCC and the CBTC system.
 - A. CBTC transponders and wireless APs shall be installed throughout the yard including Yard Track leads approaching the interlockings interfacing with the mainline.
 - B. Trains which are not registered and initialized with the CBTC system shall not be permitted to leave the LMSF yard without a manual override.
 - C. Track design shall provide adequate clearances for UTO operation. Geometry shall not require Vehicles to stop or be stored on turnouts as part of the normal operational scenario.
- (d) Moodie Yard TPSS(s)
 - (i) TPSS(s) shall be provided in the LMSF yard to provide DC power to support the operation of the yard. The TPSS(s) shall be sized to satisfy all traction loading for

- Train movements to Storage Tracks, storage, Yard Lead operation and Train movements into and out of the shop.
- (ii) Yard TPSS and TPSS Equipment shall be of the same arrangement and design and manufacturer as the mainline TPSS.
 - (iii) Yard Traction Power positive circuits and negative rail returns shall be electrically isolated from the mainline Traction Power positive circuits and mainline negative rail returns.
 - (iv) Yard Traction Power positive circuits and negative rail returns shall be electrically isolated from the shop Traction Power positive circuits and shop negative rail returns.
 - (v) Yard Traction Power ductwork and cabling shall be installed to the respective demark maintenance hole system provided.
 - (vi) Yard TPSS shall have sufficient quantity and size DC circuit breakers to service the sectionalizing requirements and provide sufficient quantity and size circuit breakers for growth of the yard to the ultimate build out.
 - (vii) Yard TPSS shall be controlled and monitored through TPSS SCADA by TOCC, BCC and MYCC.
 - (viii) Yard negative rail system shall be electrically continuous through and be directly connected to the Yard TPSS negative return.
- (e) Moodie Shop TPSS
- (i) TPSS shall be provided in the LMSF shop to provide DC power to support the operation and sectionalization of the shop Tracks. The TPSS(s) shall be sized to satisfy the traction loading for Train movements to, into and out of each Track, and Train loads during repair, testing and maintenance through an auxiliary quick connect system to interface with the Vehicle auxiliary power receptacle.
 - (ii) Shop TPSS and TPSS Equipment shall be of the same design and manufacturer as the mainline TPSS and shall provide an interlocked contactor system for circuiting each Track and respective auxiliary quick connect distribution system.
 - (iii) Shop Traction Power system to each Track contact wire shall be through an isolation switch, wall-mounted for manual operation, and be interlocked for Safety through any crane, lifting jacking or maintenance device (wheel truing) or other device that may cause serious injury or damage if Traction Power remains energized.
 - (iv) Shop Traction Power system shall be interlocked throughout the shop through a resettable visual and audible Emergency trip system reporting directly to the MYCC and resettable only by the MYCC.

- (v) Shop TPSS shall be provided with a SCADA system reportable and controllably only through the MYCC through the MSF BMS SCADA.
- (vi) Shop negative rail system shall be continuous throughout and grounded.
- (f) Moodie Mainline TPSS
 - (i) Refer to Schedule 15-2, Part 3, Article 13 – Traction Power System.
- (g) Moodie AC Service
 - (i) DB Co shall design, furnish, install, test and commission a 44kV switch yard, including 72kV switchgear, stepdown transformers, a 15kV substation and all auxiliary systems to service the Moodie LMSF power facility. DB Co shall develop the site plan for the switchyard, and 15kV substation. The switchyard and 15kV substation shall be located at the Moodie LMSF.
 - (ii) The 44kV switch yard shall be supplied by two [REDACTED] supply feeders. The feeders shall be equipped with a pole mounted line side tie switch. The tie switch shall be owned by [REDACTED], controlled by [REDACTED] and maintained by [REDACTED]. The switch yard shall consist of two 72kv incoming line circuit breakers equipped with line side and load side disconnects, two 44kV to 13.2kV 9MVA stepdown transformers and all required auxiliary systems. The line side load break disconnect switches shall serve as the demarcation point between [REDACTED] and DB Co. Each stepdown transformer supplies a bus feeder circuit breaker located in the 15kV substation. The switchyard and its equipment shall be owned by the city, controlled by [REDACTED]. and maintained by DB Co.
 - (iii) The 15kV substation shall be a prefabricated enclosure housing 15kv switchgear consisting of two line circuit breakers, two 15kV busses with bus tie, four feeder circuit breakers and all auxiliary systems. Refer to Schedule 15-2, Part 3, Article 13- Traction Power System, for details of the 15kV substation construction. [REDACTED]'s revenue metering shall be provided through CT's and PT's on the two incoming feeder breakers in the 15kV substation. The revenue metering CT's and PT's shall be owned by [REDACTED], monitored by [REDACTED] through SCADA and maintained by [REDACTED]. The 15kV substation shall be owned by the City, controlled by DB Co and maintained by Project Co.
 - (iv) The switchyard shall be serviced by two [REDACTED], 3-phase 4-wire 44kV feeders. The assigned [REDACTED] feeders have a maximum capacity of 9MVA each. One 44kV [REDACTED] feeder shall be in service at all times. At the discretion of [REDACTED], the load from one feeder can be switched to the alternate feeder through a normally open tie switch connected between the two incoming feeders. The bus tie switch shall be owned by [REDACTED], controlled by [REDACTED] and maintained by [REDACTED]. 9MVA shall be the maximum power limit for the Moodie LMSF Facility.

- (v) Each incoming 44kV feeder shall have an overhead disconnect switch as part of the load break gang operated or cluster mount switches, owned by the City, controlled by [REDACTED] and maintained by Project Co;
- (h) DB Co shall ensure that the following control requirements are met:
 - (i) The TPSS shall be designed for unattended operation with remote supervision and control from all control centres through the SCADA system.
 - (ii) Local control shall be provided for all elements of the TPSS through a HMI and computer based TPSS control unit (PLC). Remote control shall be disabled when in local control. Local control shall be enabled by means of a “local/remote” switch. This switch shall enable and disable local control of the entire TPSS excepting circuit breaker trip functions. All TPSS indication and alarms shall be provided to the HMI.
 - (iii) HMI located in each TPSS shall be the local TPSS status screen annunciator. The HMI/PLC shall provide all information to SCADA at the TOCC, BCC, MYCC and BYCC. This includes alarms, equipment status and real-time metering values. The default screen shall be a representation of the TPSS single line indicating the current status.
- (i) DB Co shall ensure that the following SCADA requirements are met:
 - (i) Moodie LMSF power facility shall be provided with a SCADA monitored and controlled reporting directly to TOCC, BCC, MYCC and BYCC.
 - (ii) DB Co shall provide a system where all metering is monitored and logged by the SCADA system.
 - (iii) The LMSF power facility shall be provided with a SCADA RTU that shall interface with the SCADA systems specified in Schedule 15-2, Part 3, Article 8 – SCADA System, for the purposes of transmitting the information and control to TOCC, BCC, MYCC and BYCC.
 - (iv) The following status and control points, at a minimum, shall be incorporated into the LMSF power facility SCADA system functionality:
 - A. AC switchgear – Status and control:
 - i. Protective devices – Status; and,
 - ii. Lockout device – Status.
 - B. Loss of utility power – Status;
 - C. Transformer:

- i. Winding over temperature – Status.
 - D. LMSF power facility Local Control Enabled – Status;
 - E. Loss of Station auxiliary power – Status;
 - F. Intrusion detection – Status; and,
 - G. Fire alarm:
 - i. Trouble – Status;
 - ii. Power Supply – Status; and,
 - iii. Alarm – Status.
 - H. Loss of control power – Status;
 - I. Battery charger trouble/failure – Status;
 - J. Climate Control – Status;
 - K. LMSF power facility air temperature – Status;
 - L. Emergency trip activated – Status; and,
 - M. Mass trip control – Status.
- (v) 25% additional status and control point spare capacity shall be provided at the LMSF power facility.
- (vi) Communication between the local SCADA system, the TOCC, BCC, MYCC and BYCC shall be redundant via the CTS.
- (j) DB Co shall ensure that the following climate control requirement is met:
 - (i) The LMSF power facility 15kV substation shall include a climate control system which shall maintain indoor temperature and humidity to allow for PLC and SCADA equipment operational performance to be maintained throughout all expected external temperature variations. The climate control system shall be designed to continuously maintain the temperature within the LMSF power facility and provide status to the SCADA system.
 - (ii) Moodie’s AC service provides AC power to Moodie’s mainline TPSS, Station, LMSF TPSS and LMSF facility;
 - A. Moodie’s mainline TPSS: 13.2 kV, 3 phase, 4 wire.

- B. Moodie's Station: 13.2 kV, 3 phase, 4 wire to Station stepdown transformer.
- C. Moodie's LMSF TPSS: 13.2 kV, 3 phase, 4 wire.
- D. Moodie's LMSF facility: 13.2 kV, 3 phase, 4 wire to facility stepdown transformer.

(iii) Feeder protection schemes will be provided by electrical interlocking.

1.12 LMSF Coordination

- (a) DB Co shall provide the City access to and storage space within the LMSF in accordance with the requirements of Clause 5.2(m) of Schedule 15-2, Part 1 – General Requirements.

ARTICLE 2 ARCHITECTURAL DESIGN CRITERIA

2.1 Introduction

(a) General Requirements

(i) Reference Documents

A. The design and construction of the architectural requirements of the LMSF shall comply with the criteria contained in this Article, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:

- i. OBC;
- ii. NBC;
- iii. CGSB;
- iv. ASTM;
- v. ODA;
- vi. AODA;
- vii. The Ontario Heritage Act;
- viii. OHSA;
- ix. CSA Standards;
- x. ULC;
- xi. MNECB;
- xii. ASHRAE;
- xiii. NFPA, including but not limited to NFPA 130;
- xiv. NCC Regulations when applicable;
- xv. Others:
 - 1 the City standards;
 - 2 City of Ottawa Bylaws;

- 3 City of Ottawa Standards;
 - 4 City of Ottawa Guidelines;
 - 5 APTA Transit Standards; and
 - xvi. Ontario Fire Code
 - xvii. Canada GBC – LEED® Program.
- (ii) Scope of Construction Work
 - A. Materials employed in the construction of exterior façades shall be consistent with City standards.
 - B. The LMSF shall be designed and constructed as a campus with a common aesthetic throughout all Structures.
- (b) Materials
 - (i) All materials used in the construction of the interior and exterior of facility shall be of any code compliant material suitable for the appropriate type and durability of facility or otherwise indicated in the Project Agreement.
- (c) General Architecture
 - (i) The location of the LMSF Facility is considered a Scenic Entry Route in accordance with the City of Ottawa Official plan and a Capital Arrival Route in accordance with the NCC Greenbelt Master Plan.
 - (ii) DB Co shall consider the location of the LMSF in the design of the architecture of the site while confirming to the specific requirements of these documents.
 - (iii) The landscaping for the site shall use landscaping features to provide visual abatement of the Moodie LMSF from adjacent communities and uses, particularly in the vicinity of the Wesley Clover Facility and take into consideration views to and from the Capital Arrival perspective.

2.2 Signage

- (a) General Requirements:
 - (i) Shall comply with Schedule 15-2, Part 4, Article 7 – Wayfinding and Signage and the City of Ottawa Visual Identity Standards Manual.
 - (ii) Site signage including illuminated entry monument, roadway and rail signage and wayfinding signage for visitors and delivery vehicles.

- (iii) Building signage identifying address and facility for each building and as required to identify Track numbers at each rail door. Provide Emergency contact information and hours of operation (as relates to public access) at main entry doors.
- (iv) Interior signage identifying all departments and rooms: offices, workstations, breakrooms, washrooms, shop functions, etc. Provide meeting room agenda, staff directory, and daily events holders.
- (v) Regulatory signage for accessibility, Safety, and hazardous materials.
- (vi) Provide a fire safety plan(s) for the facility as approved by the AHJ.

2.3 Building Code Analysis

- (a) DB Co shall perform a code analysis with respect to the OBC.
- (b) Provide a complete code analysis for the LMSF, in accordance with Schedule 10 – Review Procedure, addressing the following minimum requirements:
 - (i) Building Size, Use and Occupancy:
 - A. Building area and number of storeys; and,
 - B. Mezzanines.
 - (ii) Structural Design:
 - A. Approach to compliance for structural design.
 - (iii) Occupant Load:
 - A. Occupant load factors and design occupant loads; and,
 - B. Occupant load calculation;
 - (iv) Construction Requirements:
 - A. Construction classification and construction requirements; and,
 - B. Interior finishes.
 - (v) Interconnected Floor Spaces:
 - A. Description of interconnected floor spaces; and,
 - B. Special protection for interconnected floor spaces.
 - (vi) Spatial Separation:

- A. Spatial separation and exposure protection.
- (vii) Fire Department Access:
 - A. Fire Department access route;
 - B. Fire Department access openings;
 - C. Water supply for firefighting; and,
 - D. Hydrants and Fire Department connections.
- (viii) Fire Separations and Compartmentalization:
 - A. Required fire separations;
 - B. Voluntary fire separations; and,
 - C. Fire resistance rating of assemblies and fire protection ratings of closures.
- (ix) Egress and Exiting:
 - A. Exiting concept including number and location of exits;
 - B. Travel distance;
 - C. Exit capacity;
 - D. Egress widths including, vertical egress widths and horizontal egress widths;
 - E. Egress time to protected route or exterior; and,
 - F. Door hardware.
- (x) Fire Protection Systems, Emergency Power and Communication Systems:
 - A. Fire alarm system and devices;
 - B. Standpipe system;
 - C. Sprinkler system: All buildings shall be sprinklered, including any Vehicle storage building, except where special extinguishing agents are required in sensitive areas\rooms;
 - D. Voluntary systems;
 - E. Emergency lighting and exit signage;

- F. Emergency power; and,
- G. Communication Systems.
- (xi) Ventilation:
 - A. Emergency ventilation.
- (xii) Washrooms:
 - A. Number of washroom fixtures; and,
 - B. Location of gender specific toilet rooms.
- (xiii) Barrier Free Design:
 - A. Provide analysis consisting of description of barrier free design requirements to meet the following to provide the most accommodating environment:
 - i. Barrier free access in accordance with the AODA Accessible Built Environment Standard.
 - B. Protection of a barrier-free path of travel.

ARTICLE 3 STRUCTURAL DESIGN CRITERIA

3.1 General Structural Design Criteria

(a) General Requirements

- (i) This structural Design Criteria presents the basic structural design guidelines, codes, and standards references that must be followed throughout the structural design process of the entire LMSF.
- (ii) Design and construction shall conform with the below mentioned codes with any amendments from City codes.
- (iii) Wood and wood products shall not be used for structural members.

(b) Reference Documents

- (i) The design and construction of structural Work shall comply with the criteria contained in this Article, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - A. OBC;
 - B. NBC;
 - C. User's Guide – NBC: Structural Commentaires (Part 4);
 - D. CSA;
 - E. CAN/CSA S6-06 including Supplement No. 1;
 - F. CAN/CSA S6 Package – Canadian Highway Design Code and CHBDC;
 - G. AREMA Manual for Railway Engineering;
 - H. CAN/CSA A23.1/A23.2;
 - I. CAN/CSA A23.3;
 - J. CAN/CSA G40.20-04/G40.21-04;
 - K. CAN/CSA O86;
 - L. CAN/CSA S16;
 - M. CAN/CSA S304.1; and

- N. ASTM International.
- (c) Structural Loads
 - (i) Dead Loads
 - A. Dead Load shall include all actual weight of materials used and shall not be less than minimum requirements by OBC and NBC and any amendments by the City.
 - (ii) Live Loads
 - A. Vertical and horizontal live loads shall be as described in the above Reference Documents based on occupancy and use of area. Any Equipment loads such as Bridge crane, jib crane, fork lift etc. shall be considered as live load.
 - (iii) Environmental Loads:
 - A. Snow, wind, ice and seismic loads shall be as described in the relevant Reference Documents, using the Importance Category of “Normal” with the building code and “Other” within CHBDC.
 - (iv) Lateral Earth Pressure Loads
 - A. All underground Structures including retaining walls and pits shall be designed for lateral earth pressure including surcharge. Lateral earth pressure and surcharge shall be as described in relevant Reference Documents and as may be prescribed in Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements.
- (d) Load Combinations
 - (i) Load Combinations shall be in accordance with the applicable building codes for the Facility Buildings and foundations and shall include any possible load combinations (dead load, live load, equipment load, crane loads, impact load, snow load, wind load, seismic load and lateral earth pressure).
- (e) Design Considerations for Structures above ground
 - (i) Seismic requirements shall be as per OBC and NBCC.
- (f) Design Considerations for Foundations
 - (i) Foundations for Structures shall be designed such that their displacements (SLS), as defined in the Reference Documents identified in this article and as may be prescribed in Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements, are compatible with the structural design, function, and structure

performance requirements, and clearance envelope requirements over their Design Life.

- (ii) Where there is a potential for new construction to adversely impact any Adjacent Structures, DB Co shall prepare and implement an appropriate instrumentation and monitoring plan for the existing Structure to confirm that the new construction will not adversely impact the Existing Adjacent Structures, as prescribed in Schedule 15-2, Part 2, Article 9 – Protection of Existing Adjacent Structures.

3.2 Materials

(a) Concrete

- (i) Design of concrete Structures shall be in accordance with CAN/CSA A23.3 and CAN/CSA S6.
- (ii) Design of prestressed and precast concrete Structures shall be in accordance with CAN/CSA A23 and CAN/CSA A251-00.
- (iii) Structures supporting Train loads, including ground-supported slabs, shall meet CHBDC standards for fatigue.
- (iv) For durability design within CAN/CSA A23.1, concrete shall be considered class C-1. Concrete supporting Train loads shall be class C-XL. Exterior slabs-on-grade may be class C-2.
- (v) All concrete exposed to freezing and thawing cycles shall be air entrained.
- (vi) All non-prestressed reinforcement and testing methods shall conform to the following standards:
 - A. CSA; and
 - i. CAN/CSA G30.18-M92
 - ii. CAN/CSA W186-M1990
 - B. ASTM International.
 - i. ASTM A82/A82M
 - ii. ASTM A182/A185M
 - iii. ASTM A496/A496M
 - iv. ASTM A497/A497M
 - v. ASTM A775/A775M

- (vii) All concrete materials, testing methods, and construction practices for plain and reinforced concrete shall conform to the following standards:
 - A. CSA; and
 - i. CAN/CSA A23.1/A23.2
 - ii. CAN/CSA A3000 (Consists of A3001, A3002, A3003, A3004, A3005)
 - B. ASTM International.
 - i. ASTM C260
 - ii. ASTM C494/C494M
 - iii. ASTM C1017/C1017M
- (viii) Concrete reinforcement shall conform to CAN/CSA G30.18 M, and welded wire mesh shall conform to CAN/CSA G30.5.
- (ix) Weldable reinforcing steel: CAN/CSA G30.18-M.
- (x) All bent reinforcing bars shall meet the bend test requirements of CAN/CSA G30.18.
- (xi) Joints
 - A. Construction joints
 - i. Waterstop shall be provided for the entire joint between units including invert slab, external walls and roof slab for Structures partially or completely underground. Wall construction joints above invert slab and below roof level shall have a horizontal water seal only.
- (b) Masonry
 - (i) Design of masonry Structures shall be in accordance with CAN/CSA S304.1 and CAN/CSA S6, where they are applicable.
 - (ii) Masonry Structures shall be designed to resist all applied vertical and lateral loads as required by the OBC (and the NBC where applicable). This requirement applies to load-bearing and no- load-bearing masonry.
 - (iii) All concrete materials, testing methods, and construction practices for reinforced and unreinforced masonry shall conform to the following standards:
 - A. CSA

- i. CAN/CSA A23.1/A23.2
 - ii. CAN/CSA A179
 - iii. CAN/CSA A370
 - iv. CAN/CSA A371
- (iv) All masonry walls shall have galvanized horizontal reinforcing.
- (c) Steel
 - (i) Design of cold formed steel Structures shall be in accordance with CAN/CSA S136.
 - (ii) All steel materials shall confirm to the following standards:
 - A. CSA; and
 - i. CAN/CSA G40.20/G40.21.
 - ii. Beam connections, columns, base plates, beams, purlins, girts and sag rods: CAN/CSA G40.20/G40.21-M.
 - iii. Welding materials: CAN/CSA W59-M, and certified by the Canadian Welding Bureau.
 - B. High strength bolts: ASTM A325M, Type 1. Nuts: ASTM A563. Washers: ASTM F436.
 - (iii) Protection of Steelwork
 - A. The minimum thickness of concrete when used as an encasement for steelwork shall be 60mm.
 - (iv) Protective Coatings
 - A. Structural steel members and connections shall be protected against corrosion.
 - B. Acceptable methods of protection are painting and hot dip galvanizing as follows:
 - i. Bolts, nuts and washers used with galvanized Structures shall also be galvanized in accordance with CAN/CSA G164-M92 (R2003).
 - ii. Protection shall be restored when severe damage to the galvanized coating has occurred during welding or as a result of rough handling or abrasion.

- iii. Methods of painting shall be in accordance with CISC/CPMA.
- (d) Metal Deck
 - (i) Design and Performance Requirements
 - A. Design steel deck to CAN/CSA S16, Update No. 1.
 - B. Formed steel sheet: CSSBI 101 M, Grade A and ASTM A653/A653M.
- (e) Metal Studs
 - (i) This section applies to all light gauge metal work
 - A. Include design, manufacture, supply, installation, inspection and testing of load bearing metal studs as described in these performance specifications and summarized in the following elements of the work:
 - i. Load bearing metal studs shall be capable of carrying live, dead, and imposed loads.
 - (ii) Design and Performance Requirements
 - A. Design load-bearing metal studs based on Limit States Design principles using factored loads and resistances. Loads and load factors to be in accordance with the OBC. Resistances and resistance factors to be determined in accordance with the OBC and CAN/CSA S136-M.

ARTICLE 4 MECHANICAL DESIGN CRITERIA

4.1 HVAC

(a) General HVAC Requirements

- (i) DB Co shall provide complete design and construction of HVAC systems for all facilities as required by and in accordance with all referenced codes and standards and where required in the Project Agreement.
- (ii) HVAC equipment shall be screened so as to not be visible from Corkstown Road and the MUP.

(b) Reference Documents

- (i) The design and construction of the mechanical systems shall comply with the criteria contained in this Article, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - A. Ontario Regulation 350/06 OBC;
 - B. NBCC;
 - C. ODA;
 - D. AODA;
 - E. CSA Codes and Standard;
 - F. Model National Energy Code of Canada for Buildings;
 - G. ULC;
 - H. NFC;
 - i. NFPA 70
 - ii. NFPA 90
 - iii. NFPA 91
 - iv. NFPA 130
 - I. ASHRAE Handbooks and Standards; and
 - J. SMACNA.

(c) Design Criteria and Parameters

- (i) The design of HVAC systems shall conform to the requirements of this Article, and all the applicable codes and standards.
- (ii) Noise Criteria
 - A. Mechanical Equipment and systems shall be designed so that the maximum transmitted by the systems do not exceed Ontario health and safety codes, ASHRAE Standards, or the following noise criteria.

Table 5-4.1

| Noise Level Criteria | | |
|----------------------------------|-----------------|---|
| Area | Noise Criterion | Equivalent Air-Weighted Sound Level dB(A) |
| Office and Staff Break Room | NC-40 | 49 |
| Conference Room | NC-35 | 44 |
| Toilet Room and Janitor's Closet | NC-45 | 53 |
| Communication Room | NC-50 | 58 |
| Equipment Room | NC-60 | 67 |
| Shop Areas | NC-60 | 67 |

(iii) Vibration Requirements

- A. All HVAC Equipment shall be designed and installed to eliminate or to reduce the transmission of vibration and noise to any part of the building as follows:
 - i. Provide vibration isolators to mechanical Equipment and components; and
 - ii. Provide seismic restraints for mechanical Equipment or components including ductwork and piping.

(iv) Design Conditions

- A. The design conditions shall be based on ASHRAE Handbook Fundamentals.

(v) Design Parameters

- A. The design parameter shall be based on ASHRAE standards 55, 62.1, 90.1 and 189.1

(vi) Duct Sizing Criteria

- A. Use equal pressure method to size ducts serving air conditioning system, heating and ventilation system, and normal building exhaust system. Use

velocity method for any other system that may require it due to system requirement or noise control or as indicated in the individual system.

(d) HVAC Equipment and Systems

(i) General Requirement

(ii) Design and Performance Requirements

A. Equipment

- i. Select HVAC Equipment containing no CFC refrigerant
- ii. Select HVAC Equipment utilizing refrigerant that will not contribute to ozone depletion and global climate change, such as Refrigerant 410A.
- iii. All HVAC Equipment shall be isolated from the building and anchored for seismic restraint.

B. System:

- i. Design high efficiency HVAC system to meet or exceed ASHRAE 90.1-2007.
- ii. System ventilation Design shall meet ASHRAE 62.1-2007 for indoor air quality.

(iii) Material and Product

- A. All Equipment shall be certified to be installed in Canada and meet the requirements of MNECB.

(e) HVAC Controls

(i) Design and Performance Requirements

- A. All building controllers, application controllers and all input/output devices shall use industry standard protocols.

(f) Testing and Balancing

(i) Performance Requirements

- A. Provide testing, adjusting and balancing by an agency certified by an agency certified by the AABC or NEBB.

4.2 Plumbing and Fire Protection

- (a) DB Co shall provide complete design and construction of plumbing and fire protection systems for all facilities as required by and in accordance with all referenced codes and standards and where required in the Project Agreement.
- (b) Reference Documents
 - (i) DB Co shall comply with all, applicable, municipal, provincial, and federal codes, standards, regulations and best practices.
 - A. Ontario Regulation 350/06
 - B. Ontario Mechanical Code
 - C. CSA Codes and Standard
 - D. NFPA 70
 - E. Ontario Regulation 213/07
- (c) Plumbing Fixture
 - (i) General Requirement
 - A. Provide design, approvals, supply of materials, installation, inspection and testing of works associated with the plumbing fixtures as described in these performance specifications and summarized in the following elements of the Work.
 - i. Urinal: Waterless type urinals are prohibited.
 - (ii) Design and Performance Requirements
 - A. Fixtures and fittings, where applicable, shall be in accordance with requirements of CSA B45 Series.
- (d) Fire Protection System
 - (i) Design of the fire protection systems shall conform to the latest edition of the following applicable codes and standards:
 - A. Ontario Regulation 350/06 OBC;
 - B. Ontario Fire Code (latest issue);
 - C. Ontario Mechanical Code;
 - D. CSA Codes and Standard;

- E. NFC: NFPA 13;
 - F. NFPA 14.
 - i. Provide dry standpipe systems in areas subject to freezing temperature. Provide pressure gauge at top of each standpipe riser. Siamese fire department connection for standpipe shall match connection for sprinkler systems;
 - G. NFPA 20 and
 - H. NFPA 2001.
- (ii) Fire Protection Specialties
- A. Design and performance requirements: All fire extinguishers shall be pressurized (stored pressure) rechargeable type, in accordance with NFPA 10, and ULC listed and labeled for the class of fires for which they are specified.

ARTICLE 5 ELECTRICAL DESIGN CRITERIA

5.1 Introduction

- (a) This article presents the basic electrical design guidelines, codes, and standards references that shall be followed throughout the electrical design process of the LMSF.
- (b) DB Co shall provide complete design and construction of electrical and communication systems for all facilities as required by and in accordance with all referenced codes and standards and where required in the Project Agreement.

5.2 Reference Documents

- (a) The design and construction of electrical Work shall comply with the criteria contained in this Article, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
 - (i) OBC;
 - (ii) NBCC;
 - (iii) Ontario Regulation 164/99, Current Edition;
 - (iv) CEC, Part I, 21st Ed: Safety Standard for Electrical Installations;
 - (v) ANSI;
 - (vi) ULC;
 - (vii) NEMA;
 - (viii) CSA;
 - (ix) IESNA, Lighting Handbook;
 - (x) ASHRAE 90.1;
 - (xi) City of Ottawa Standards;
 - (xii) NFPA 130;
 - (xiii) ASME A17.1;
 - (xiv) IEEE; and
 - (xv) [REDACTED] Standards.

5.3 Basis for Design

(a) Calculations:

- (i) Lighting-level calculations shall be completed for all interior and exterior spaces occupied by staff.

(ii) Light levels in lux:

| | |
|----------------------------------|-----|
| Offices Meeting & Training Rooms | 500 |
| Corridors | 200 |
| Kitchens | 500 |
| Maintenance Facility | 750 |
| Parking Lots | 35 |
| Utility Rooms | 300 |
| Wash, Shower & Locker Rooms | 200 |
| Stairways | 200 |

(b) An illumination plan shall be completed.

- (i) EA compliant Lighting Treatment Plan, in accordance with municipal standards, shall be prepared during the pre-construction phase. This plan shall include lighting fixtures and illumination along the various sections of the corridor. A lighting audit of the preferred lighting design plan may be conducted to confirm clear sight lines and appropriate illumination. City of Ottawa policy regarding lighting of connections to LRT stations shall be followed. Consideration shall also be given to the use of wavelengths safe for wildlife.
- (ii) The MTO requires illumination plans as part of the development package of any construction within permit control. The MTO requires that there be no light spillover from the development onto the ROW. However, since this development is within the right of way, light shall not spill over onto the existing and future widened Highway 417 travel lanes.

5.4 Functional Requirements

(a) Electrical Service

- (i) The LMSF will receive its service feeder from [REDACTED]. DB Co shall determine whether to receive medium voltage power from the Utility and distribute around the site at this level to pad mounted transformers at the various load points.
- (ii) Primary switching rooms for incoming service shall be:

- A. designed in partnership with [REDACTED] and in accordance to [REDACTED] Specification GCS0002: Primary Voltage Service Specification;
 - B. at grade or within five (5) meters below grade with two walls on the outside to allow ease of access for [REDACTED] incoming feeders and designed for a three (3) hour fire envelope;
 - C. a minimum of 5.5m wide, 9.5m long and a ceiling height of 3.2m; and
 - D. coordinated with [REDACTED] in terms of switchgear location and placement within the rooms.
- (iii) Emergency ventilation or fire suppression Equipment shall be provided a reliable power source or combination of sources. On-site power generation shall be provided as the backup source for these loads. All power sources shall be as approved by the Authority Having Jurisdiction and in conformance with the applicable code.
- (b) Metering
 - (i) Customer-owned metering shall be provided.
 - (ii) Utility revenue metering shall be provided as required by [REDACTED].
- (c) Duct banks, Maintenance Holes and Handholes
 - (i) Duct banks and maintenance holes shall be designed in accordance with the seismic criteria defined for this Project. Duct banks shall be designed to include spare capacity after completion of installation to protect for future growth and expansion. Ducts shall be sloped to maintenance holes to provide adequate drainage. Concrete encasement shall be provided where required by applicable code. Requirements for the installation of additional fibre along the Confederation Line for the use of the City is included in Schedule 15-2, Part 3 – Systems.
 - (ii) Maintenance holes and/or handholes shall be sufficiently sized and provided where access to or installation of cable is necessary.
- (d) Electrical Rooms
 - (i) Electrical rooms shall have sufficient space to house all Equipment. Adequate space shall consider minimum working clearances, conduit entry points and routing, Equipment removal / replacement and ventilation requirements.
- (e) Grounding and Bonding
 - (i) The electrical distribution system shall be solidly grounded.

- (ii) An applicable code compliant grounding electrode system shall be provided.
 - (iii) All non-current-carrying metal enclosures and all alternating current Equipment shall be securely connected to the grounding system.
 - (iv) Avoid natural gas piping and pipe connected to an active cathodic protection system.
- (f) Lighting
 - (i) Emergency fixtures, exit lights and essential signs shall be independently wired from the Emergency lighting panel. Emergency lighting shall be automatically energized upon failure of commercial power. Emergency lighting for stairs and passageways shall be designed to accommodate egress.
- (g) Fire Alarm
 - (i) The fire alarm system shall be analog addressable, non-coded with a general alarm sounding and strobe lights activated in the building when alarm conditions are initiated. Visual and audible alarms shall be initiated at the fire alarm control panel in each building. The central fire alarm control panel shall have the capability to receive alarm, supervisory and trouble signals from all buildings. Sprinkler systems and post indicator valves will be monitored by the fire alarm system, with water flow initiating a general alarm. The panel shall be provided with a dialer for calls of alarm and trouble conditions. A remote annunciator shall be placed in the lobby at the fire department's designated show-up location to aid in their locating the fire. The system shall be integrated with system wide fire alarm system.
- (h) Emergency and Standby Power System
 - (i) The critical loads of the electrical system shall be designated as an Emergency system as defined in CSA C282 and shall meet IEEE standard 446.
- (i) Emergency and Standby Power Sources
 - (i) The Emergency generator connections shall be able to assume the entire load of the Facility during critical events including 25% spare capacity for future growth. The Emergency generator shall comply with local noise and emissions requirement and the required approvals shall be obtained by the DB Co from Governmental Authorities.
 - (ii) The Emergency generator shall be designed in correlation with the UPS system to ensure the quality required for the MYCC.
 - (iii) Transient voltage surge suppression shall be provided for the generator output.

- (iv) Provide manual synchronization means beyond the automatic synchronization control for the back-up generator.
 - (v) All UPS systems shall be of the online, double conversion type, and shall be equipped with automatic static bypass switches, as well as an external manual maintenance bypass.
 - (vi) Emergency power feeders shall be rated for 2 hours either through the use of fire-rated cables/wiring or embedment in concrete.
 - (vii) Non-life safety loads shall automatically and instantaneously be shed in the event of generator overload.
 - (viii) Generator, fire pumps and main life safety switchboards shall not be located below grade.
 - (ix) The Emergency generator shall be diesel generator compliant with the requirements of CSA C282.
 - (x) Standby fixed mounted engine generator shall be installed in a conditioned indoor space (heated and ventilated) or outdoors, a completely enclosed weatherproof/sound attenuated housing to protect the generator from adverse weather conditions and reduce sound levels for surrounding residential neighbourhoods shall be provided. The generator shall be mounted on spring isolators with a floating floor, or equivalent means, to minimize the transmission of vibration. Enclosure shall have critical grade silencing suitable for residential installation. DB Co design shall follow NEMA/IEC enclosure/environmental protection standards.
 - (xi) The Emergency power generator shall be located in the area easily accessible for maintenance and refuelling.
 - (xii) Provide 120V/20A GFCI outlets around back-up diesel generators from UPS to provide power in the event of a concurrent generator and utility failure.
 - (xiii) Automatic transfer switches serving life safety loads shall be equipped with means of bypass to both sources
 - (xiv) When second Utility power source is selected, Emergency lighting, fire alarm and other Emergency equipment loads shall be connected to a UPS or battery system as required for loads classified as “emergency level 1”.
 - (xv) BACS – The BACS system within the LMSF shall provide supervisory control of the shop Traction Power System, LMSF electrical and mechanical systems, and communications subsystems. It shall be compatible with the SCADA system and supervision from the MYCC.
- (j) Automatic Transfer Switches/Load Bank

- (i) Multiple ATS shall be provided to transfer loads between the normal power system and the emergency power system. Loads shall be assigned to the ATS in accordance with CSA C282. Provide a load bank to allow exercising the generator under load without interruption of the building emergency loads. The load bank shall be sized at 100% of the maximum generator rating and shall have a step load capability in increments of 25%, 50%, 75% and 100% of the load bank rating.
- (k) Emergency Loads
 - (i) The crane and other Vehicle maintenance facility equipment do not require full generator support for continued operation, but a method to lower the cranes need to be identified whether it is mechanical, hydraulic pressure release, or control voltage which may require Emergency power.
- (l) UPS System
 - (i) Loads which cannot tolerate more than a ¼ cycle interruption shall be provided with internal or dedicated battery backup and/or connected to a central UPS or inverter system. These loads shall include, but are not limited to:
 - A. Fire alarm systems (inverter);
 - B. CCTV systems (UPS);
 - C. Yard control systems (inverter);
 - D. Telecommunications equipment (UPS);
 - E. ETEL (UPS);
 - F. AC/DC switchgear controls (inverter);
 - G. Emergency lighting and signage (inverter);
 - H. BMS PLC (UPS); and,
 - I. Access control (UPS).
 - (ii) The building UPS/inverter systems shall be sized to serve the anticipated demand load plus spare capacity of 25%. The UPS/inverter batteries shall be sized to carry the maximum UPS rated load for a period of 90 minutes. DB Co shall submit calculations which support the proposed size of the UPS/inverters and batteries. The UPS/inverter input shall be fed from the generator or the secondary utility feed for continued operation following the rated load period of 90 minutes.

ARTICLE 6 TRACKWORK

6.1 Order of Precedence

(a) General

(i) The design and construction of Trackwork shall comply with the criteria contained in this Article, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between the criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:

A. AREMA Track Standards, unless otherwise approved, or approved equivalent; and

B. The criteria in TCRP Report 57 may be used as a source for proposed alternative requirements.

6.2 General Requirements

(a) The scope of the Trackwork includes all Works related to the design and construction of a complete light rail yard for the maintenance and storage facility as specified herein. This includes, but is not limited to, the design, supply, installation, and testing of Yard Tracks and any and all related incidentals.

(b) The scope of the Special Trackwork consists of all Works related to the complete construction of Special Trackwork as described in these Output Specifications. This includes, but is not limited to, the design, supply, and installation of Special Trackwork, including all turnouts, adjoining Trackwork, fastening components, and all other Track materials.

(c) The limits of the yard begin at the points of switches for the yard Special Trackwork that designate the end of the LMSF connection Tracks and the beginning of the Yard Tracks.

(d) Grade

(i) The maximum grade on Storage Tracks shall be 0.3%.

(e) Horizontal curves shall not be less than 35m radius and vertical curves not less than 30m length crest and sag on the LMSF Tracks.

6.3 Operational Requirements

(a) Yard Tracks designed to hold or store full-length Trains clear of other Tracks and Structures shall accommodate the maximum Train consist between clear points, defined as the location where Track centres between two diverging Tracks from a given turnout are exactly 4m.

- (b) Track at handoff platform(s) shall be level or of sag geometry aligned to prevent unintended movement of Vehicles when stationed at the platform for operator access.

6.4 Track Types

- (a) General

- (i) The Track Structure shall be built to 1435mm Track gauge.
 - (ii) The running rails of all Track, including Special Trackwork, shall be electrically isolated from the ground.
 - (iii) The rail length shall be 23.8m, which will be used to establish the CWR.

- (b) Ballasted Track

- (i) Yard ballasted Track shall utilize timber or precast concrete crossties with a resilient rail fastening system.
 - (ii) Crushed stone or other material shall conform to AREMA ballast specifications.
 - (iii) The particle size requirements shall conform to AREMA requirements in relation to the crushed stone ballast, class number 4A.
 - (iv) Minimum depth of ballast below the bottom of ties under the running rail shall be 225mm. Shoulder ballast shall extend a minimum of 300 mm beyond the ends of ties before sloping at 2:1 to the sub-ballast.
 - (v) Ballast shall be well drained and shall not contact the running rails (25mm minimum clear) for mitigation of stray current and loss of shunting or calibration with signal systems.

- (c) Asphalt Concrete Paved Track

- (i) Paved Yard Track shall be utilized for grade crossings with site roadways, service aisles, cart paths.
 - (ii) Compacted asphalt shall be placed to embed the rails to top-of-rail elevation. Gaps shall be left on the inside of the rails for wheel flange ways. Rail shall be isolated from asphalt.

- (d) Embedded Track

- (i) Embedded Yard Track shall, except for gaps formed for wheel flange ways, consist of the rails fully embedded in concrete to top-of-rail elevation.
 - (ii) The embedment concrete and base slab concrete shall be designed to support and hold the rails in place to the correct Alignment, profile, and Track gauge.

- (iii) Embedded Track shall be utilized in the shop buildings and aprons immediately outside of buildings.
 - (iv) Embedded Track design shall include provisions for providing resiliency and electrical isolation between the rail and concrete slab.
 - (v) Embedded Track shall be drained.
 - (vi) Rails embedded in concrete require gauge flangeways and field side rail wear relief.
- (e) Pedestal Track
 - (i) Pedestal Track shall be utilized in pit areas of the shop building.
 - (ii) Rails shall be supported on short steel columns and fastened with crane rail clamps.
- (f) Direct Fixation Track
 - (i) DF Track shall be utilized in the car wash area of the shop building.
 - (ii) Rails shall be fastened to a concrete pedestal (plinth), leaving the rail fully exposed and isolated for stray current protection and fastened with crane rail clamps.

6.5 Track Materials

- (a) General
 - (i) Materials identified in the following sections shall be used for all Track construction.
- (b) Rail/115 lb. RE
 - (i) Supply rail that meets:
 - A. AREMA Volume 1, Chapter 4, Part 2; and
 - B. ASTM A1.
 - (ii) Second-hand Rail
 - A. Second-hand, or relay rail shall not be used.
 - (iii) Rail Lengths
 - A. All rail shall be CWR.

- B. Rail length to be provided is 23.8m, which will be used to establish the CWR.
- (c) Restraining Rails
 - (i) DB Co shall install restraining rails against the gauge side of the low rail for all mainline horizontal curves with a radius of 145m or less. Restraining rail is not required on Tracks within yards operating at or below yard speed.
 - (ii) Restraining rail shall be electrically isolated from running rail in order to maintain broken rail protection.
- (d) Rail Joints
 - (i) DB Co shall supply insulated glued joints for 115lb RE rail manufactured to AREMA standards.
 - (ii) Rail joints must be electrically tested prior to and after placement in Track.
- (e) Rail Bonding
 - (i) DB Co shall supply and install rail bonds that meet AREMA specifications in Volume 3, Chapter 33, Parts 7 and 12.
 - (ii) Rails shall be welded in continuous lengths and bolted joints must be electrically bonded.
 - (iii) At locations requiring insulated joints, the Traction Power direct current continuity of negative rails must be maintained by use of impedance bonds.
 - (iv) Rail shall be isolated from all Pavement.
- (f) Switch Clearing Device
 - (i) Switch clearing devices shall be supplied and installed by DB Co at Special Trackwork locations. DB Co shall provide conduits and junction boxes and other supporting Infrastructure for these devices.
 - (ii) DB Co shall provide switch clearing devices that are proven in railway industry and meet accepted industry standards and do not compromise safety.
 - (iii) Additional separate controlled heating that can melt snow in the critical switch areas shall be provided. Switch heaters shall be gas fired.
- (g) Switch Machines and other Turnout Appliances
 - (i) Switch machines and other associated Equipment shall be provided and installed by DB Co.

- (ii) DB Co shall allow for the location of trackside terminal boxes, which shall be located near the switch machine. Terminal boxes shall not be located within a position that would restrict the ability of maintenance personnel to maintain or manually throw the switch.
 - (iii) Switch machines shall be positively drained.
- (h) End-of-Track Devices (Bumping Posts)
 - (i) These devices shall be mounted near the end of Track on stub-end storage Tracks. The end-of-Track device shall meet the following requirements:
 - A. It shall be capable of stopping an unoccupied Train travelling at 10km/h;
 - B. It shall be suitable for permanent exterior exposure;
 - C. It shall engage the vehicle symmetrically about the coupler at bumper height;
 - D. It shall have a cushioned face and not produce any damage to a vehicle at vehicle speeds less than 5 km/h. DB Co shall coordinate the design of the stopping device to ensure engagement to the car is adequate to prevent damage; and
 - E. Upon approval(s), DB Co shall procure and install the approved end-of-Track devices as part of the Works.
 - (ii) Rail-mounted wheels stops shall be used at the ends of shop Tracks to impede the travel of any car beyond the end of the Track(s).

6.6 Special Trackwork

- (a) General
 - (i) All Special Trackwork shall be supplied and installed by DB Co. Special Trackwork assemblages include all materials necessary for construction.
 - (ii) All Special Trackwork joints shall be butt welded in-field except where DB Co can demonstrate that space does not permit. At these locations thermite welds performed in accordance with manufacturer's weld procedures are acceptable. Compromise welds shall be considered part of the Mainline Track conditions and installation. No holes, for temporary joint installation, or otherwise, shall be permitted within 150mm of the weld location.
 - (iii) All turnouts shall utilize curved switch points.
 - (iv) Special Trackwork components shall be based on AREMA specifications for turnout construction.

- (v) All components shall be designed so that the specified tolerances can be maintained throughout the operating life of the Special Trackwork with minimal maintenance.
 - (vi) Turnouts and switch machines shall be drained.
- (b) Types of Special Trackwork
 - (i) Turnouts
 - A. Provide minimum #6 turnouts within the yard.
 - B. All yard turnouts shall be power operated.

6.7 Track Construction Tolerances

- (a) Verification of the Track installation shall include a Trackstar Geometry Test (or equivalent).
- (b) Clearances shall be verified by laser measurement using an L-Kopia vehicle (or equivalent).

ARTICLE 7 COMMUNICATION AND PA SYSTEM

7.1 General Requirements

- (a) DB Co shall ensure that the communication systems and PA system for the LMSF provide support to the City and Project Co operations. The communications systems for the LMSF shall include the following:
 - (i) CTS;
 - (ii) MYCC;
 - (iii) Yard/shop PA system;
 - (iv) CCTV;
 - (v) Telephone system;
 - (vi) IT Infrastructure System;
 - (vii) SCADA which includes;
 - A. Traction Power SCADA; and,
 - B. LMSF BMS.
 - (viii) Intrusion Access Control; and
 - (ix) Train-to-wayside wireless communications.

7.2 Operational Description

- (a) CTS Interface – DB Co shall provide an interface to the CTS, which provides hi-speed fiber optic communications transmission for the various communications subsystems at the LMSF, including CCTV, PA, telephone, IAC, train-to-wayside communications, BMS, and SCADA systems.
 - (i) DB Co shall provide dual redundant hi-speed network nodes located at the main control room in the LMSF for sending and receiving voice and data information to the TOCC, BCC, BYCC and MYCC.
 - (ii) All backup for the system servers shall be located at the BCC at 805 Belfast MSF. DB Co shall provide data connectivity to the City's IT service for connectivity to the BCC at the Belfast MSF. Data connectivity between the TOCC at 875 Belfast and the BCC at 805 Belfast already exists.
- (b) LMSF PA System – The LMSF shall be equipped with a PA loudspeaker system that shall allow personnel at the MYCC to make announcements throughout the facility concerning Train movements, maintenance, and repair operations in the yard shop. The

system shall operate within local regulations and applicable laws with respect to ambient noise.

- (c) CCTV – CCTV cameras shall be deployed strategically throughout the LMSF to provide visual images of the LMSF to be viewed at TOCC, BCC, BYCC and MYCC. The CCTV system shall use video analytics and/or intrusion detection systems to detect if people or objects have made unauthorized entry into the LMSF Tracks including the yard wye and road crossings into the facility. The CCTV system shall be capable of monitoring Train movements throughout the yard. Additionally DB Co shall furnish and install two local CCTV PTZ cameras to inspect the Train roof/pantograph, with a CCTV workstation at floor level of the S&I Track. The final locations and arrangement shall be determined by the City.
- (d) Telephone System – DB Co shall provide maintenance telephones and administration telephones for all the offices and equipment rooms, including the MYCC, TPSS, signal equipment rooms, and electrical equipment rooms. DB Co shall provide an interface to the Existing Confederation Line PBX for the management and routing of the telephone extensions.
- (e) IT Infrastructure – An IT infrastructure shall be provided to support the daily office operations of the City and Project Co including desktop workstations, printing equipment, and teleconferencing equipment.
- (f) SCADA – The SCADA systems required for the LMSF includes the following subsystems:
 - (i) Traction Power – The Traction Power SCADA shall be an on-line, real-time, interactive system operated by TOCC, BCC, BYCC and MYCC personnel at the maintenance console to monitor and control power distribution and equipment. The shop Traction Power System shall include the shop TPSS, traction interlock systems, traction Emergency trip systems, shop Traction Power switch status and shop stinger system monitoring and control.
- (g) LMSF BMS – The BMS system within the LMSF shall provide supervisory control of the shop Traction Power System, LMSF electrical and mechanical systems, and communications subsystems. It shall be compatible with the Confederation Line SCADA system and supervision from the TOCC, BCC, BYCC and MYCC.
- (h) Voice/Data Radio System – The City and DB Co shall utilize the existing and planned Public Safety Service Radio System for its operations. DB Co shall procure from the Radio Supplier and install the dispatch workstations required in the MYCC. DB Co shall work with the Radio System Supplier to determine quantity and functionality required to efficiently operate and maintain the system. One full Voice/Data Radio System touchscreen radio console shall be procured and installed in the MYCC.
- (i) IAC – The IAC system shall control access and provide for detection of intrusion into entrance points of the LMSF. Intrusion sensor activation shall sound an audible alarm

locally and trigger an alarm notification for unauthorized entry or tampering to the TOCC, BCC (when active), BYCC and MYCC.

- (j) Train-to-wayside wireless System – A Train-to-wayside wireless system enabling wireless transmission of data from one device to a receptor within a limited range shall be provided in the LMSF. This system shall support the transfer of Train diagnostics, passenger counts, and the transfer of recorded video between the Trains and the data servers located within a secure data room.

7.3 Performance Requirements

(a) CTS

- (i) The LMSF CTS shall utilize the same network topology as the main Confederation Line CTS.
- (ii) The CTS shall provide hi-speed dual redundant fiber optic data connectivity to the TPSSs within the LMSF, MYCC, TOCC, BCC and main LMSF communications room.

(b) MYCC

- (i) The functions within the MYCC for operation and control of the LMSF shall include CCTV, IAC, PA, SCADA, Voice/Data Radio System Radio System and BMS monitoring of the electrical substation, sump pumps, pump systems, ventilation systems, car wash, cranes, lifts, wheel trueing, shop TPSS, Emergency trip system, Traction Power interlock system, shop Traction Power switch position, yard Train Control system controlling all Yard Track switch movements, monitoring of all Yard Track switch movements, monitoring of vehicles in yard, monitoring of vehicles within the yard and up to the Yard lead demark for turn over to mainline operations. In addition, the MYCC shall have access to maintenance monitoring, reporting and scheduling, defect reporting, vehicle scheduling, rostering of drivers, and status of in service fleet.
- (ii) Three wall mounted displays shall be provided which are capable of displaying various CBTC and SCADA displays as required by MYCC staff.
- (iii) The MYCC shall contain two workstations capable of administration of all LMSF communications systems. Functions shall vary based upon the responsibility and access rights of the person who is logged on at that workstation at any given time.
 - A. Workstations shall include visual displays, keyboards, telephones, headset connection and headset, microphone, printer, and portable radio station.
 - B. The workstations shall have a yard GUI installed which shall provide a graphic representation of the Track layouts and switch positions, power status, vehicle location and identification, CCTV images of the yard, logs

of maintenance, SCADA status, report generation daily logs, and security status.

- (iv) The MYCC shall contain three 40" wall mounted displays capable of administration of all LMSF communications systems. Functions shall vary based upon the responsibility and access rights of the person who is accessing the displays at any given time.

(c) Yard/Shop PA System

- (i) Announcements shall be addressed to single and multiple zones within the LMSF. Separate zones with separate amplifying channels and speaker systems shall be accessible individually or in combination. Zones shall be defined by operational needs and announcement sound levels shall be within applicable codes and standards.
- (ii) The LMSF PA system shall maintain a uniformly distributed sound level not less than 60dB plus or minus 30 degrees off axis, 1 meter above the floor, at Vehicle ambient noise level.
- (iii) Automatic gain adjustment of the PA system shall be provided based upon ambient noise levels captured by ambient noise sensors. The system shall adjust volume and clarity in proportion to the increase in noise level from a preset quiet level.
- (iv) The PA system shall be fully supervised with failure annunciation at the MYCC of all major system components such as preamplifiers, power amplifiers, supervision detectors, and power supplies.

(d) CCTV

- (i) The CCTV system camera views shall comply with any Applicable Law.
- (ii) The CCTV system cameras within the LMSF shall be capable of being controlled from the MYCC, TOCC, BCC (when active) or BYCC.
- (iii) The system shall include both fixed and PTZ cameras. Cameras shall be rated for the environment installed, including day/night capabilities, heater/blower, appropriate housing, etc.
- (iv) Camera locations shall be strategically selected to view the following, ensuring the views are clear, unobstructed, and not impaired by Structures, signage, foliage, intense lights, or any other obstacles:
 - A. All areas of the LMSF exterior and perimeter;
 - B. Entrances and exits to LMSF buildings and access controlled locations;

- C. Entrances to yard wye, access roads and pedestrian access through perimeter fence; and
 - D. All maintenance activities that require safety and security.
 - (v) The CCTV system shall have video analytics and/or intrusion detection systems to detect if there has been unauthorized entry into the LMSF Track areas within the perimeter fence.
 - (vi) The CCTV system shall interface to the IAC system. The CCTV system shall be capable of automatically displaying the best view of an access control device at MYCC, TOCC, BCC (when active) or BYCC automatically either via fixed camera or PTZ preset, upon activation of an IAC system. The system shall be capable of overriding the automatic panning if necessary.
 - (vii) All CCTV video shall be recorded and stored digitally for a minimum of 30 days. The system shall automatically archive all alarm events automatically detected to the Existing Confederation Line's head-end storage system.
 - (viii) The system shall capture, record, store, download, view (playback), and allow monitoring of all CCTV cameras. The system shall be capable of providing simultaneous viewing, recording, and playback.
 - (ix) The resolution and clarity of captured images shall be maintained under a range of lighting conditions from darkness (>10 lux) through bright sunlight while ensuring optimal picture quality.
 - (x) The system shall safeguard and maintain authenticity of the video images using security techniques such as digital image watermarking or encryption and shall be able to demonstrate a chain of custody for data that will be used as evidence in a court of law.
 - (xi) All cameras shall have a camera identity displayed so that image loss can be detected.
 - (xii) The system shall be capable of configuring recording rate and resolution individually for each camera locally or remotely.
 - (xiii) The system shall store all recorded images in an industry accepted standard authenticated format. At a minimum, the system shall be capable to support MPEG4 and H.264 video formats.
- (e) Telephone System
- (i) The telephone system, at a minimum, shall provide maintenance telephones located in communications rooms, electrical equipment TPSSs, signal equipment rooms, and the MYCC.

- (ii) The system shall provide clear and intelligible communication suitable for the environment the telephones are installed in.
 - (iii) The telephone system shall be fully compatible with the Existing Confederation Line's telephone system. The Existing Confederation Line's PBX shall provide call routing and processing for all telephones in the LMSF.
- (f) SCADA System
 - (i) The SCADA systems within the LMSF shall be capable of being controlled from the MYCC, BYCC, TOCC or BCC (when active).
 - (ii) The SCADA system shall facilitate the transmission of indications and alarms from the RTUs to the TOCC, BCC or MYCC as described previously via the CTS. Transmissions shall include:
 - A. Traction Power alarms, indications, and control signals.
 - B.
 - C. Facility power alarms, indications, and control signals.
 - D. Communications Systems alarms, indications, and control signals.
 - E. Lighting controls, auxiliary equipment monitoring such as HVAC and electrical equipment.
 - (iii) Indications transmitted from the RTUs to the processors shall be processed to provide monitoring information to all required subsystems, generate commands to be transmitted back to the RTUs, provide information for displays and alarm processing at the control consoles, and store information and historical data for future processing.
 - (iv) For each remote location, the SCADA system shall display the following items on the SCADA monitoring workstations:
 - A. Current system and subsystem status
 - B. Control panel status
 - C. Remote control RTU functions
 - D. Alarm handling and fault resets
 - E. Historical event logging
 - (v) RTUs shall operate in a full-duplex mode in which each continuously scans and reports the status of indicators and commands.

- (vi) Each RTU shall be designed to interface to the CTS. The RTU shall have electrical isolation between the system inputs/outputs and the CTS units.
- (vii) Each remote, monitored location shall contain a local human-machine interface for local alarm annunciation and system local control.
- (viii) Emergency conditions shall immediately be displayed within 3 seconds on the operating displays in TOCC, BCC, MYCC and BYCC to permit the monitoring of device actions.
- (g) Radio Communications
 - (i) The radio communications system shall provide full radio coverage of the LMSF, indoors and outside to support operations, maintenance, security and management personnel. A dispatch console with connectivity to the City's Radio Control Centre shall be installed in the MYCC.
- (h) Cellular System
 - (i) A cellular system shall provide full cellular coverage of the LMSF, indoors and outside.
- (i) Intrusion Access Control System
 - (i) The IAC systems within the LMSF shall be capable of being monitored from the MYCC, BYCC, TOCC and BCC (when active).
 - (ii) The system shall provide controlled access and detect intrusion of the following:
 - A. TPSS;
 - B. Signal equipment rooms;
 - C. MYCC;
 - D. CER;
 - E. External doors, entrances and exits of the LMSF; and
 - F. Yard perimeter and access gates including the yard wye.
 - (iii) All cardholders shall have access based on facility, card reader, time, and day. The system shall allow Project Co or the City to define access levels and apply them to any or all cardholders. Access authorization shall be denied by credential holder, time of day, group of staff, shift, and any additional characteristics that are identified by the system controller database.
 - A. Access cards shall be provided by DB Co to approved City staff for entry into the LMSF, CIHs, TPSS, and vent plants.

- B. Access cards shall be provided by the City to Project Co staff for entry into private station areas, the TOCC and BCC (when active).
- (iv) The IAC system which is interfaced with the CCTV system shall provide staff within the TOCC, BCC, BYCC and MYCC with the display of video of the nearest CCTV camera providing coverage of that area, upon activation of an IAC alarm.
- (j) Train-to-Wayside Wireless System
 - (i) The Train-to-wayside wireless system shall provide all Vehicles with a wireless data connection at the LMSF for the data transfer of Train diagnostics, passenger counts and recorded video from the NVR.
 - (ii) The Train-to-wayside wireless system shall be an extension of the CTS. A LAN connection shall be provided between the wireless access points and the nearest communications room in order to connect to the CTS WAN.
 - (iii) The system shall provide the latest wireless technology standards with backwards compatibility of established standards as needed. The system shall be fully compatible with the Vehicle systems.
- (k) Systems Infrastructure Interface
 - (i) Each communications system element has a requirement for both power supply and data transmission. DB Co shall supply and connect the power requirements necessary for each communications device to operate properly in accordance with appropriate codes to each device location in a raceway system. DB Co shall supply and connect the data transmission requirements necessary for each communications device to operate properly to each device in a raceway system.

ARTICLE 8 VEHICLE SERVICE EQUIPMENT

8.1 Overview

- (a) DB Co shall provide all equipment, accessories, materials, etc., and building systems required for the maintenance requirements of the Vehicles.
- (b) DB Co shall supply and install equipment as listed in Schedule 36 – Interface Agreement, Appendix 2.

8.2 Baseline Requirements for Industrial Equipment

- (a) This section sets forth baseline requirements that apply to all Vehicle service Equipment defined herein.
- (b) General Requirements
 - (i) Equipment shall be manufactured, installed and operated in accordance with all industrial and safety standards (or portions thereof) that apply to the Work, including but not limited to:
 - A. CCOHS;
 - i. OHSA
 - B. CSA;
 - i. CSA Standard C22.2 No 94
 - ii. CSA Standard C390-10
 - iii. CSA W47.1
 - iv. CSA W59
 - C. CEAA;
 - D. CGSB;
 - E. CISC;
 - F. CWB;
 - G. NBCC;
 - H. NFCC;
 - I. NPCC;

- J. OBC; and
 - K. OESC (Ontario Regulation 164/99).
- (ii) Labeling
- A. Manufacturer shall securely attach in a prominent location on each major item of Equipment a noncorrosive, indelible nameplate showing manufacturer's name, address, model number, serial number, and pertinent utility or operating data.
 - B. All electrical Equipment and materials shall be new and shall have attached labels attesting to CSA or Electrical Safety Authority approval, in categories for which standards have been set by that agency and labeled as such in the manufacturer's plant.

KEY PLAN / PLAN DE LOCALISATION

- 

director - Claude Robert - directeur

- Grading of proposed path shall match grades of existing path except where agreed upon LRT and parkway realignment/regrading requires the path grades to change, with approval of NCC. The Commission requires that contour grading along the pathway be established to respect UA requirements.
- All damages areas to be reinstated by contractor
- Underground locates to be completed prior to any excavation
- NCC to provide seeding bed layout and pathway coordinates once city has confirmed parkway alignment.
- South trail offset plant materials 2.5m from centreline

LOW MAINTENANCE LAWN: 'INDIGO GRAMINS' SEED PLANTING WITH 'INDIGO GRAMISEL' ALONG 2M OFFSET OF ALL PARKWAY EDGES

65% 'INDIGO-ULTRA POLINISATION' MIXED WITH 35% 'INDIGO-PLANTES MELLIFÈRES'

*BIOSWALE QUANTITIES INCLUDE TOTAL OF EACH MIX. CONTRACTOR TO DETERMINE EXACT QUANTITIES PER INDIVIDUAL BED

[illegible]

- Grading of proposed path shall match grades of existing path except where agreed upon LRT and parkway realignment/grading requires the path grades to change, with approval of NCC. The Commission requires that contour grading along the pathway be established to respect UA requirements.
- All damages areas to be reinstated by contractor
- Underground locates to be completed prior to any excavation
- NCC to provide seeding bed layout and pathway coordinates once city has confirmed parkway alignment.
- South trail offset plant materials 2.5m from centreline

LOW MAINTENANCE LAWN: 'INDIGO GRAMINE' SEED PLANTING WITH 'INDIGO GRAMISEL' ALONG 2M OFFSET OF ALL PARKWAY EDGES

65% 'INDIGO-ULTRA POLINISATION' MIXED WITH 35% 'INDIGO-PLANTES MELLIFERES'

CUSTOM SEED MIX (TYPE 1 - COOL)

1.2 RELATED SECTION

- .1 01 33 00 – Shop Drawing, Product Data and Samples
- .2 03 10 00.01 – Concrete forming and accessories
- .3 03 20 00.01 – Concrete reinforcing

1.3 SAMPLES

- .1 Submit required documents in accordance with Section 01 33 00 Shop Drawings, Products Data and Samples for review by NCC representative and do not proceed without written approval when deviations from mix design or parameters are found.
- .2 Concrete hauling time: submit for review by NCC representative, deviations exceeding maximum allowable time of 120 min for concrete to be delivered to site of Work and discharged after batching.

1.4 QUALITY ASSURANCE

- .1 Submit to NCC representative, minimum 1 week prior to starting concrete work, valid and recognized certificate from plant delivering concrete.
 - .1 When plant does not hold valid certification, provide test data and certification by qualified independent inspection and testing laboratory that materials used in concrete mixture will meet specified requirements.
- .2 Minimum 1 week prior to starting concrete work submit to NCC representative manufacturer's test data and certification by qualified independent inspection and testing laboratory that following materials will meet specified requirements:
 - .1 Falsework erection.
 - .2 Hot weather concrete.
 - .3 Cold weather concrete.
 - .4 Curing.
 - .5 Finishes.
 - .6 Formwork removal.
 - .7 Joints.
- .3 Quality Control Plan: submit written report, to NCC representative verifying compliance that concrete in place meets performance requirements of concrete as established in PART 2 - PRODUCTS.

1.5 DELIVERY, STORAGE AND HANDLING

.1 Delivery and acceptance:

- .1 Concrete hauling time: maximum allowable time for concrete to be delivered to site of Work and discharged not to exceed 120 minutes after batching.
 - .1 Modifications to maximum time limit must be agreed to NCC representative and concrete producer as described in CSA A23.1/A23.2.
 - .2 Deviations to be submitted for review by NCC Representative
- .2 Concrete delivery: ensure continuous concrete delivery from plant meets CSA A23.1/A23.2.

2.0 PRODUCTS

2.1 SUSTAINABLE REQUIREMENTS

- .1 According to the CSA A23.1/A23.2 and indications of Article DOSAGE FORMS PART 2 standard - PRODUCTS.

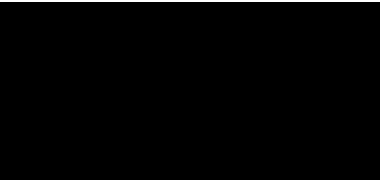

2.2 SUSTAINABLE REQUIREMENTS

- .1 Quality Control Plan : Ensure that the concrete supplier is able to provide concrete meeting the performance criteria established by the NCC representative and provide control of the compliance of the material according to the requirements of article QUALITY ASSURANCE, PART 1.

2.3 MATERIALS

- .1 Cement: to CAN/CSA-A3001, Type GU.
- .2 Water: to CAN/CSA-A23.1.
- .3 Aggregates: to CAN/CSA-A23.1. Coarse aggregates to be normal density.
- .4 Admixtures
 - .1 Air entraining admixture: to ASTM C 260.
 - .2 Chemical Admixtures: ASTM C494 standard. The NCC representative must accept accelerators used during concrete work.
- .5 Shrinkage compensating grout: premixed compound consisting of non-metallic aggregate, Portland cement, water reducing and plasticizing agents.
 - .1 Compressive strength: XXXXXXXXXX.
- .6 Tactile walking surface strip indicators

- .1 Tactile walking surface indicators shall be made of cast iron, according to CSA B651-2012 and follow Ontario Regulation 191/11, and meet the following requirements:

| Standard | Property | Minimum Result |
|---------------|------------------|---|
| ASTM A 8 | tensile strength |  |
| ASTM C 1028 | slip resistance | |
| ASTM C 501-84 | wear resistance | |

- .2 The truncated domes shall be of uniform size and shape. Units shall be uniform in texture, be free from pouring faults, sponginess, cracks, blowholes, and other defects, and have clean-cut and well-defined edges. All surfaces shall be bare, without any coating, and be uniform and free of flaking rust or mounts of rust or debris. Tactile walking surface indicators shall have ribs cast to the underside of the unit, have vent holes, and have a minimum plate thickness of 5 mm.

2.4 GRANULAR BASE COURSE

- .1 Granular base course quality: sound, hard, durable material free from soft, thin, elongated or laminated particles, organic material, clay lumps or minerals, or other substances that would act in deleterious manner for use intended.
- .2 Any granular materials specified for the various works, on the drawings or in other sections of the specifications or by direction of the NCC Representative, shall conform OPSS.MUNI 1010 Material Specification for Aggregates – Granular A, B, M, and Select Subgrade Material
- .3 Blending to obtain the correct gradation shall be permitted when the Contractor demonstrates that he can produce a correct gradation and has a plant capable of producing to the satisfaction of the NCC Representative.
- .4 Granular "A" : This materials shall conform to OPSS.MUNI 1010.
- .5 Granular "B": This material shall conform to OPSS.MUNI 1010.
- .6 Select Subgrade material: See section 31 23 10 Excavation, Trenching and Backfilling
- .7 Provide samples as per Section 01 33 00 – Shop Drawings, Product data and Samples

2.5 MIXES

- .1 Alternative 1 - Performance Method for specifying concrete: to meet NCC representative performance criteria in accordance with CAN/CSA-A23.1/A23.2.
 - .1 Ensure concrete supplier meets performance criteria as established below and provide verification of compliance as described in quality control plan.
 - .2 Provide concrete mix to meet following hard state requirements:
 1. Durability and class of exposure: C-1.
 2. Minimum compressive strength at [REDACTED].
 3. Intended application: C-1
 4. Diameter of aggregates: at least 20 mm.
 5. Air entrained 5 to 8%
 - .3 Provide quality management plan to ensure verification of concrete quality to specified performance.
 - .4 Concrete supplier's certification.

3.0 EXECUTION

3.1 PREPARATION

- .1 Obtain NCC representative's approval before placing concrete.
 1. Provide 48 hours notice prior to placing of concrete.
- .2 Place concrete reinforcing in accordance with Section 03 20 00.01 - Concrete Reinforcing
- .3 During concreting operations:
 1. Development of cold joints not allowed.
 2. Ensure concrete delivery and handling facilitates placing with minimum of re-handling, and without damage to existing structure or Work.
- .4 Pumping of concrete will not be permitted after approval of equipment and mix
- .5 Ensure reinforcement and inserts are not disturbed during concrete placement.
- .6 Prior to placing of concrete obtain NCC representative's approval of proposed method for protection of concrete during placing and curing in adverse weather.
- .7 Protect previous Work from staining.
- .8 Clean and remove stains prior to application for concrete finishes.
- .9 Maintain accurate records of poured concrete items to indicate date, location of pour, quality, air temperature and test samples taken.
- .10 In locations where new concrete is dowelled to existing work, drill holes in existing concrete.

3.2 IMPLEMENTATION

- .1 Do cast-in-place concrete work in accordance with CAN/CSA-A23.1.
- .2 Sleeves and inserts:
 - .1 Do not permit penetrations, sleeves, ducts, pipes or other openings to pass through joists, beams, column capitals or columns, except where indicated or approved by NCC representative.
 - .2 Sleeves and openings greater than 100 x 100 mm not indicated must be reviewed by NCC representative.

- .3 Do not eliminate or displace reinforcement to accommodate hardware. If inserts cannot be located as specified, obtain approval of modifications from NCC Representative before placing of concrete.
 - .4 Check locations and sizes of sleeves and openings shown on drawings.
 - .5 Set special inserts for strength testing as indicated and as required by non-destructive method of testing concrete.
 - .3 Anchor bolts.
 - .1 Set anchor bolts to templates under supervision of appropriate trade prior to placing concrete.
 - .2 With approval of NCC Representative, grout anchor bolts in preformed holes or holes drilled after concrete has set.
 - .1 Formed holes to be minimum 100 mm diameter.
 - .3 Protect anchor bolt holes from water accumulations, snow and ice build-ups.
 - .4 Set bolts and fill holes with shrinkage compensating grout.
 - .4 Finishing and curing:
 - .1 Finish concrete in accordance with CAN/CSA-A23.1.
 - .2 Concrete Pads and concrete barrier curbs (type 01 & Type 02) finish: Magnesium trowel finish
 - .3 Concrete mountable curb and dropped sidewalk finish: as per City of Ottawa's Standards – meet and match existent.
 - .4 Rub exposed sharp edges of concrete with carborundum to produce 3 mm radius edges unless otherwise indicated.
 - .5 Proceed to the sawing of the slab 200 mm thick concrete as soon as the support without leaving workers impression 6 to maximum 18 hours after pouring of concrete.
- 3.3 SITE TOLERANCE
- .1 Concrete tolerance in accordance with CAN/CSA-A23.1 straight edge method.
- 3.4 FIELD QUALITY CONTROL
- .1 Inspection and testing of concrete and concrete materials will be carried out by a Testing Laboratory designated by Consultant in accordance with CAN/CSA-A23.1.
 - .1 Concrete pours.

- .2 Slump tests.
- .3 Air entrained
- .4 Compressive strength at [REDACTED].
- .5 Ambient temperature and temperature of the concrete.
- .2 Inspection and testing of concrete and concrete materials will be carried out by testing laboratory designated by NCC Representative for review, to his satisfaction and in accordance with CSA-A23.1/A23.2. Testing of concrete and concrete materials will be paid by the Owner.
- .3 Contractor to paid repeat testing on fail sampling.
- .4 Ensure test results are distributed for discussion at pre-pouring concrete meeting between testing laboratory and NCC Representative.
- .5 Testing laboratory will take additional test cylinders during cold weather concreting. Cure cylinders on job site under same conditions as concrete which they represent.
- .6 Non-Destructive Methods for Testing Concrete: in accordance with CSA-A23.1/A23.2
- .7 Inspection or testing by NCC representative will not augment or replace Contractor quality control nor relieve Contractor of his contractual responsibility.

3.5 CLEANING

- .1 Perform cleanup as follow:
 - .1 Provide on-site, adequate space for safely washing concrete trucks.
 - .2 It is prohibited to dump unused adjuvants into sewers, in a stream, a lake, on the ground or any other place where it could pose a risk to health or the environment.
 - .3 Make the necessary arrangements to prevent contaminating adjuvants waterbodies or drinking water sources.
 - .4 If necessary, collect the liquid or solidify with an inert non-combustible taking all appropriate safety material.
 - .5 Remove and dispose of waste in accordance with the requirements of federal provincial territorial and local laws.

- .3 31 23 10.01 – Excavation, Trenching and Backfilling
- .4 32 91 21.01 – Topsoil and Finish Grading

1.3 PROTECTION

- .1 Protect existing fencing, landscaping, natural features, bench marks, buildings, pavement, surface or underground utilities which are to remain as directed by NCC Representative. If damaged, restore to original or better condition unless directed otherwise.
- .2 Maintain access roads to prevent accumulation of construction related debris on roads.

PART 2 PRODUCTS

2.1 GRANULAR BASE COURSE MATERIAL

- .1 Granular base course quality: sound, hard, durable material free from soft, thin, elongated or laminated particles, organic material, clay lumps or minerals, or other substances that would act in deleterious manner for use intended.
- .2 Any granular materials specified for the various works, on the drawings or in other sections of the specifications or by direction of the NCC Representative, shall conform OPSS.MUNI 1010 Material Specification for Aggregates – Granular A, B, M, and Select Subgrade Material
- .3 Blending to obtain the correct gradation shall be permitted when the Contractor demonstrates that he can produce a correct gradation and has a plant capable of producing to the satisfaction of the NCC Representative.
- .4 Granular "A" : This materials shall conform to OPSS.MUNI 1010.
- .5 Granular "B": This material shall conform to OPSS.MUNI 1010.
- .6 Select Subgrade material: See section 31 23 10 Excavation, Trenching and Backfilling
- .7 Provide samples as per Section 01 33 00 – Shop Drawings, Product data and Samples

PART 3 EXECUTION

3.1 STRIPPING OF TOPSOIL AND TURF

- .1 Do not strip or disturb existing soil and turf, unless otherwise indicated.
- .2 Any excavated topsoil from site to be disposed of as per Section 01 61 10 - Management and Disposal of Excess Material.

- .3 No excavated material can be re-used as backfilling material.

3.2 PLACING

- .1 Place granular material to depth and grade in areas indicated.
- .2 Ensure no frozen material is placed.
- .3 Place material only on clean unfrozen surface, free from snow and ice.
- .4 Place material using methods which do not lead to segregation or degradation of aggregate.
- .5 Spread and shape material in uniform layers of required thickness.
- .6 Shape each layer to smooth contour and compact to specify density before succeeding layer is placed.
- .7 Remove and replace that portion of layer in which material becomes segregated during spreading.

3.3 GRADING, COMPACTING AND TESTING

- .1 Rough grade to levels, profiles, and contours allowing for surface treatment as indicated in the contract documents. Compact to specified density as shown on the contract drawings.
- .2 Shape and roll alternately to obtain smooth, even and uniformly compacted base.
- .3 Apply water as necessary during compacting to obtain specified density. If material is excessively moist, aerate by scarifying with suitable equipment until moisture content is corrected.
- .4 In areas not accessible to rolling equipment, compact to specified density with mechanical tampers.
- .5 Compaction and testing as per OPSS.MUNI 501.
- .6 Compaction tests to be paid by owner and performed by pre-approve testing agency.
- .7 Contractor to pay for repeat testing on fail samples.
- .8 Testing to be performed throughout progress of work to determine adequacy of compaction.
- .9 Co-operate with inspection staff during testing period.
- .10 Correct surface irregularities by loosening and adding or removing material until surface is within specified tolerance.
- .5 Do not disturb existing contaminated bare soil, soil within branch spread of trees or shrubs to remain unless otherwise specified by the NCC Representative.

3.4 PROTECTION

- .1 Maintain finished base in condition conforming to this Section until succeeding material is applied or until acceptance by NCC Representative.

3.5 CLEANING

- .1 Leave aggregate stockpile site in tidy, well drained condition, free of standing surface water.
- .2 For temporary or permanent abandonment of aggregate source, restore source to condition meeting requirements of authority having jurisdiction

3.6 SURPLUS MATERIAL

- .1 Remove surplus material and material unsuitable for fill, grading or landscaping as directed by NCC Representative.

END OF SECTION

PART 1- GENERAL

- 1.1 Related Work Specified Elsewhere
 - .1 Environmental Protection Section 01 35 43
 - .2 Site Work Demolition and Removals Section 02 41 13
 - .3 Site Grading Section 31 23 13
- 1.2 Utility Lines
 - .1 Before commencing work, establish location and extent of underground utility lines in area of excavation. Notify Contract Administrator of findings.
 - .2 Advise Contract Administrator to re-route existing lines in area of excavation. Costs for such work will be paid by Owner.
 - .3 Record locations of maintained and re-routed underground utility lines.
 - .4 Make good and pay for damage to existing utility lines resulting from work.
- 1.3 Protection
 - .1 Protect bottoms of excavations from softening. Should softening occur, remove softened soil and replace with material as directed by Contract Administrator.
 - .2 Protect bottoms of excavations from freezing.
 - .3 Provide adequate protection around bench markers, layout markers, survey markers, and geodetic monuments.
 - .4 Provide protection to ensure no damage to existing facilities and equipment situated on site.
 - .5 Effect approved measures to minimize dust as a result of this work.
 - .6 Do not stockpile excavated material to interfere with site operation or drainage.
- 1.4 Compaction Densities
 - .1 Compaction densities are percentages of maximum densities obtainable from ASTM D698-70.

PART 2 - PRODUCTS

- 2.1 Materials
 - .1 Backfill: native fill as per Section 31 22 13 – Site Grading.
- 2.2 Stockpiling
 - .1 Stockpile fill materials in areas designated by Contract Administrator. Stockpile native fill in a manner to prevent segregation. Protect stockpiled fill material from freezing.
 - .2 Protect fill materials from contamination.

PART 3- EXECUTION

- 3.1 Excavating
 - .1 Excavate to elevations and dimensions indicated for installation, construction and inspection of work specified.
 - .2 Excavate all vegetation and surficial organic material (topsoil, rootmat, peat, etc.)
 - .3 Excavate to well defined lines to minimize quantity of fill material required.
 - .4 Earth bottoms of excavations to be dry undisturbed soil, level, free from loose or organic matter.
 - .5 Notify Contract Administrator when bottom of excavation is reached
 - .6 Obtain Contract Administrator's approval of completed excavation.
 - .7 Keep excavation free of water while work is in progress.
 - .8 Protect open excavations against flooding and damage due to surface run off.
 - .9 Provide sediment control measures in accordance with Section 01 35 43 and as indicated

- elsewhere in the contract.
- .10 Excavation must not interfere with normal 45 degree splay of bearing from bottom of any footing.
- .11 When complete, have Contract Administrator inspect excavations to verify soil bearing capacity, depths and dimensions.
- .12 Correct unauthorized excavation at no extra cost as follows:
 - .1 Fill under bearing surfaces with Select Subgrade Material compacted to 95% SPMDD as directed by Contract Administrator.
- .13 Do not disturb soil within branch spread of trees or shrubs that are to remain. If excavating through roots, excavate by hand and cut roots with sharp saw.
- .14 Remove concrete masonry, paving, walks, rubble and other obstructions encountered in course of excavation.
- .15 Dispose of all excavated non re-usable material off site.
- .16 Do not obstruct flow of surface drainage or natural watercourses.

3.2 Backfilling

- .1 Do not commence backfilling until areas of work to be backfilled have been inspected and approved by Contract Administrator.
- .2 Areas to be backfilled and backfill material must be free from debris, snow, ice, water or frozen ground.
- .3 Prior to installation of granular materials, compact existing subgrade to obtain required bearing capacity. Remove **"soft"**, unstable or weak subgrade materials and fill with approved material.
- .4 Backfill simultaneously each side of walls and other structures to equalize soil pressures.
- .5 Where temporary unbalanced earth pressures are liable to develop on walls or other structures, erect bracing or shoring to counteract unbalance, and leave in place until removal is approved by Contract Administrator.
- .6 Place and compact fill materials in continuous horizontal layers not exceeding 150 mm compacted depth. Compact to at least 95% Standard Proctor Maximum Dry Density. Compact each layer before placement of the next layer.
- .7 Use methods to prevent disturbing or damaging buried services. Make good any damage.

3.3 Surplus Material

- .1 Dispose of material unsuitable for fill, grading or landscaping off site.

END OF SECTION

PART 1 - GENERAL

1.1 Section Includes

- .1 Materials and installation for fertilizing and preserving root systems of plants affected by changing grades or excavation.
- .2 Materials and installation of ground protection and other measures as deemed necessary to protect existing trees according to contract drawings and conditions outlined in this section.

1.2 Related Sections

- .1 Section 01 33 00 – Submittal Procedures
- .2 Section 01 56 00 – Temporary Barriers and Enclosures
- .3 Section 01 74 19 – Waste Management

1.4 Submittals

- .1 Submittals in accordance with Section 01 33 00 - Submittal Procedures.
- .2 Submit monthly written reports on maintenance during warranty period to the NCC Representative identifying:
 - .1 Maintenance work carried out.
 - .2 Development and condition of plant material.
 - .3 Preventative or corrective measures required which are outside Contractor's responsibility.

1.5 Delivery, Storage and Handling

- .1 Separate waste materials for reuse and recycling in accordance with Section 01 74 19 – Waste Management.
- .2 Place materials defined as hazardous or toxic in designated containers.
- .3 Dispose of unused fertilizer material at official hazardous material collections site approved by the NCC Representative.
- .4 Handle and dispose of hazardous materials in accordance with CEPA, TDGA, regional and municipal regulations.
- .5 Do not dispose of unused fertilizer material into sewer system, into streams, lakes, onto ground in any other location where they will pose health or environmental hazard.
- .6 Ensure emptied containers are sealed and stored safely.

1.6 Scheduling

- .1 Obtain approval from the NCC Representative of schedule indicating beginning of Work.

1.7 Maintenance during Warranty Period

- .1 From time of acceptance by the NCC Representative to end of warranty period, perform following maintenance operations.
 - .1 Water to maintain soil moisture conditions for optimum growth and health of plant material without causing erosion.
 - .2 Apply fertilizer in early spring at manufacturer's suggested rate.
 - .3 Remove dead, broken or hazardous branches from plant material. Seek approval from NCC Representative prior to removing any branches. Pruning may only be carried out by a certified arborist.
 - .4 During periods of extended drought, wind or grading, trunks, limbs and foliage should be sprayed with water to remove accumulated construction dust.
 - .5 Maintain tree protection fencing in good repair.
 - .6 Maintain ground protection in good repair.

PART 2 - PRODUCTS

2.1 Materials

- .1 Fertilizer:
 - .1 To Canada Fertilizer Act and Fertilizers Regulations.
 - .2 Complete, commercial, slow release with 35 % of nitrogen content in water-insoluble form.
- .2 Anti-desiccant: commercial, wax-like emulsion.
- .3 Water: potable - free from impurities that inhibit growth.

2.2 Tree Protection Fencing

- .1 The modular construction fencing shall act as the tree protection fencing. Refer to Section 01 56 00 – Temporary Barriers and Enclosures.

2.3 Ground Protection

- .1 Mulch: 2" unpainted, untreated wood chip or bark mulch.
- .2 Granular A.
- .3 Steel plates.

PART 3 - EXECUTION

3.1 Identification and Protection

- .1 Do construction occupational health and safety in accordance with Section 01 35 30 – Health and Safety.
- .2 The trees on this site are ceremonial trees and are designated cultural assets of great importance. They are considered irreplaceable.
- .3 Extreme care must be taken to protect existing trees (including crown, trunk and root system) from damage, compaction and contamination during all stages of work. The roots of a tree can extend from the trunk to approximately 2-3 times the distance of the dripline.
- .4 No material, construction equipment, or vehicles are to be stored in the tree protection zone (TPZ) or within the critical root zone (drip line) of trees at any time.
- .5 No movement of vehicles, equipment or pedestrian in the TPZ will be permitted.
- .6 The use of tree trunks as a backstop, winch support, anchorage, as a temporary power pole, signpost or other similar function is prohibited.

- .7 Any disturbed vegetation or landscaping will be repaired or replaced without delay to the satisfaction of the NCC Representative.

3.2 Tree Protection Fencing (**Green colored**)

- .1 Supply and install **Green** colored tree protection fencing to protect existing trees.
- .2 Tree protection fencing must be installed before construction begins and equipment arrives on site and maintained until the project is completed.
- .3 Removal of fences, even temporarily to allow deliveries or equipment access is not allowed unless approved by the NCC Representative and ground protection is installed.

3.3 Ground Protection within the Critical Root Zone

- .1 Ground protection must be installed before construction begins and equipment arrives on site and maintained until the project is completed.
- .2 In areas where the critical root zone cannot be fenced and is within the limits of work, wood chip or bark mulch must be installed to a minimum depth of 6", followed by a layer of Granular A with ¾" plywood sheets laid on top. Steel plates can also be used in place of plywood. Leave the tree trunks clear of mulch. Install where indicated in the drawings and as directed by the NCC Representative to protect the sensitive root zone.
- .3 Asphalt removal from within the critical root zone must be supervised by a certified arborist. Once removed, the granular base shall be protected from repeated compaction from vehicular circulation by the placement of steel plates.

3.4 Excavation within the Critical Root Zone

- .1 Limits of excavation to be approved by the NCC Representative prior to commencing work.
- .2 Hand digging, hydraulic, or pneumatic excavations are permitted methods for excavation within the critical root zone.
- .3 Do not cut or damage roots greater than 25mm (1") diameter. When larger roots are encountered, consult a certified arborist before proceeding. If there are no roots greater than 25mm diameter, leave at least two (2) of the largest roots per meter of trench. Retain as many roots as possible.
- .4 Prune roots that must be removed using sharp, clean tools such as secateurs or a landscape handsaw. Make a clean cut and leave as small a wound as possible. All root pruning to be supervised by a certified arborist.
- .5 If any roots are exposed during construction, they should be immediately reburied with soil or wrapped in peat moss and burlap and kept moist until they can be buried permanently. Avoid exposing roots during hot, dry weather.
- .6 Directional micro-tunneling and boring may be permitted within the limits of the critical root zone subject to the approval of the NCC Representative.
- .7 Open face cuts that are consistent with an approved plan and that require root pruning, require the services of a certified arborist. An exploratory dig, either by hand or using a low water pressure hydro vacuum, or air spade method, must be completed prior to commencing with open face cuts.

3.5 Lowering Grade Around Existing Tree

- .1 Begin Work in accordance with schedule approved by the NCC Representative.
- .2 Cut slope not less than 500 mm from tree trunk to new grade level.
- .3 Excavate to depths as indicated. Protect from damage root zone which is to remain.
- .4 When severing roots at excavation level, cut roots with sharp tools.
- .5 Cultivate excavated surface manually to 15 mm depth.
- .6 Prepare homogeneous soil mixture consisting by volume of:
 - .1 60 % excavated soil cleaned of roots, plant matter, stones, debris.

- .2 25 % coarse, clean sterile sand.
- .3 15 % organic matter.
- .4 Grade 2:12:8 fertilizer at rate of 1.5 kg/m³.
- .7 Place soil mixture over area of excavation to finished grade level. Compact to 85 % Standard Proctor Density.
- .8 Water entire root zone to optimum soil moisture level.

3.6 Watering

- .1 Ensure that the ongoing maintenance and irrigation of the site vegetation is performed by a qualified contractor, while the construction hoarding is in place.
- .2 During the construction period, water existing trees within protected areas by applying water to surface, soaking area 1.5 times the diameter of the dripline of each tree.
- .3 Watering schedule to be approved by the NCC Representative.

3.7 Damage to Trees

- .1 Any damage or injury to trees shall be reported as soon as possible to the NCC Representative.
- .2 A substantial fine, as determined by the NCC Representative, may be enforced for any damage to the trees including unauthorized pruning.

3.8 Pruning

- .1 If pruning is required, consult an arborist and seek approval from the NCC Representative.
- .2 Prune in accordance with Section 32 93 45 - Tree Pruning.
- .3 Prune crown to compensate for root loss while maintaining general form and character of plant.

3.9 Anti-Desiccant

- .1 Apply anti-desiccant to foliage where applicable and as directed by the NCC Representative.

PART 2 – PRODUCTS

2.1 Materials -
General Requirements

- | | |
|-----|---|
| .1 | Any granular materials specified for the various works, on the drawings or in other sections of the specifications or by direction of the Contract Administrator, shall conform to this material specification for the class of granular material required. |
| .2 | The materials shall be selected or produced from pits or quarries to conform to the requirements specified herein for each class of granular materials. |
| .3 | Material retained on the number 4 sieve shall consist of hard durable particles or fragments of stone or gravel. |
| .4 | Materials that break up when alternatively frozen and thawed or wetted and dried shall not be permitted. |
| .5 | Fine aggregate passing the Number 4 sieve shall consist of natural or crushed sand, and, material passing the Number 200 sieve shall consist of fine mineral particles. |
| .6 | The material shall be free from vegetable matter and lumps or balls of clay. |
| .7 | The material shall be non-plastic and non-frost susceptible. |
| .8 | Blending to obtain the correct gradation will be permitted when the Contractor demonstrates that he can produce a correct gradation and has a plant capable of producing to the satisfaction of the Contract Administrator. |
| .9 | The Contractor shall advise the Contract Administrator two weeks in advance of the intent use of any of the specified materials to allow sufficient time for sampling and testing. The Contractor shall submit samples of granular materials to be used in the works if so requested by the Contract Administrator. |
| .10 | Approval of a sample does not mean acceptance of the whole |

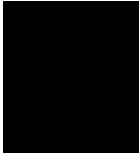

GRANULAR MATERIALS

source. Each load of material received at the job site shall be subject to all the requirements of that material.

- .11 All gradation requirements are shown as percentage by weight passing U.S. Standards Sieves, A.A.S.H.O. M-92-65.

2.2 Materials:
Specific Requirements

- .1 Granular "A":
.1 This material shall conform to OPSS 1010.
- .2 Granular "B" Type II
.1 This material shall conform to OPSS 1010
- .3 Granular "D" (stonedust):
.1 This material shall be crushed rock screenings or stone dust.

| 3.1 Layout of Pathway | .1 | Notify Contract Administrator after completion of each stage and receive approval of layout prior to proceeding to next stage. Stages: .1 Staking of centerline. .2 Subgrade .3 Sub-base .4 Prior to laying of Granular D, Contract Administrator to inspect alignment and grades | |
| | .2 | All curves shall be true. No tangents shall be accepted at the beginning or end of curves. Obtain approval of Contract Administrator on site during work. | |
| 3.2 Inspection | .1 | Check graded subgrade for conformity with elevations and sections before placing granular base materials and obtain approval of Contract Administrator. | |
| | .2 | Proof roll graded subgrade surface with a heavy smooth drum roller (weight and type of roller to be approved by Contract Administrator). .1 Check for unstable areas. .2 Check for areas requiring additional compaction. .3 Notify Contract Administrator of unsatisfactory conditions. | |
| 3.3 Sub-base | .1 | Refer to Section 31 23 10, Excavating and Backfilling | |
| 3.4 Base Course | .1 | Place Granular 'A' and Granular 'B' base materials to compacted thickness as indicated. | |

PATHWAY CONSTRUCTION

- .2 Place in layers not exceeding 150mm compacted thickness. Compact each layer to 100% maximum dry density as determined by Standard Proctor Density.

- .3 Obtain approval of Contract Administrator prior to laying of stonedust .

3.5 Surface Course

- .1 Place stonedust surface course to compacted thickness as indicated and compact to 98% SPMDD.

3.6 Reinstatement of Edges

- .1 Reinstatement edges of pathway with approved earth fill and topsoil as indicated.

- 1.1 Related Works Specified Elsewhere
 - .1 Excavating and Backfilling Section 31 23 10
 - .2 Granular Materials Section 32 11 23
 - .3 Pathway Construction Section 32 11 30
- 1.2 References
 - .1 Ontario Provincial Standard Specification (OPSS):
 - .1 310, 311
 - .2 City of Ottawa Special Provisions 2009:
 - .1 F-3104
 - .3 City of Ottawa Standard Detailed Drawings 2009:
 - .1 R-10
- 1.3 Protect existing items designated to remain and materials designated for salvage and relocation. In event of damage, immediately replace such items or make repairs to the satisfaction of Contract Administrator and at no additional cost to the Commission.
- 1.4 Site Conditions
 - .1 Contractor to contact appropriate utilities to verify presence and location of all overhead and underground services and establish location for all such services in the field before commencing work. Report any discrepancies to Contract Administrator
- 1.5 Basis of Payment
 - .1 Basis of payment clauses included in references are deleted in their entirety and will be measured and paid as per Section 01 10 00 – Pay Items Description

PART 2 - PRODUCTS

- 2.1 Materials
 - .1 Performance Graded HL3 Hot Mix Asphalt – (Beige colored and black colored) submit samples prior to commencement of work. :
 - .1 This material shall conform to OPSS 310 as amended by City of Ottawa Special Provisions F-3104
 - .2 Tack Coat - (Beige colored and black colored) submit samples prior to commencement of work. :
 - .1 This material shall conform to OPSS 310 as amended by City of Ottawa Special Provision F-3107

PART 3 - EXECUTION

- 3.1 Asphalt Paving
 - .1 The Contractor shall notify the Contract Administrator five (5) days prior to paving.
 - .2 The Contractor must obtain the Contract Administrators approval before placing any asphalt.
 - .3 Asphalt is to be placed to thicknesses, grades and lines as shown on plans or as indicated by the Contract Administrator
 - .4 The Contractor paving shall be conducted as specified in OPSS 310 or as directed by the Contract

Administrator

- .5 Step joints shall be used as indicated where new asphalt will connect to existing pavement

3.2 Quality Control and Assurance

- .1 OPSS 310 sub-sections 310.07.01 and 310.07.05 are deleted in their entirety.
- .2 The Contractor must supply a minimum of one (1) quality assurance sample and one (1) referee sample to the Contract Administrator. The samples shall be randomly chosen or as directed by the Contract Administrator. The Contract Administrator may request additional samples.
- .3 The samples shall be delivered within 4 hours to a location as specified by the Contract Administrator.
- .4 Samples shall be accompanied by the City of Ottawa 'Quality Assurance Sample Data Sheet' for Hot Mix Asphalt and completed to the satisfaction of the Contract Administrator.

3.3 Compaction

- .1 Compaction requirements shall be as specified in OPSS sub-section 310.08.015.03 and meet the requirements specified in OPSS 310, Table 9, to the satisfaction of the Contract Administrator
- .2 The Contractor shall conduct the compaction testing and supply the Contract Administrator with the results.

END OF SECTION

PART 1- GENERAL

1.1 RELATED SECTIONS

- .1 Section 31 23 10 – Excavation and Backfilling
- .2 Section 31 05 17 – Granular Materials

1.2 PROTECTION

- .1 Prevent damage to landscaping, curbs, sidewalks, trees, fences, roads and adjacent property. Make good any damage.

1.3 SAMPLES

- .1 Submit a full-size sample of each type of unit paver used.
- .3 Install a mock-up of pavers layout for NCC Representative approval's before commencement of work. Mock-up to be at minimum 1m x 1m.

PART 2- PRODUCTS

2.1 MATERIALS

- .1 Prefabricated concrete unit pavers:
 - .A Dimension : 100x300x100mm
Range color: Dark Grey
Finish: Smooth
 - .b Dimension : 100x300x100mm
Range color: Light Grey
Finish: Smooth
- .2 On granular base: 150mm granular 'A' & 150mm granular 'B'
- .3 Laying Course: dry clean masonry sand, 25mm thickness
- .4 Joint materials: Polymeric Sand, dark Grey colour
- .5 Edge Restraint: Flexible PVC such as SNAP EDGE (or approved equal) with min 300mm spikes at 300mm O.C..

PART 3- EXECUTION

3.1 SUBGRADE

- .1 Ensure that subgrade preparation conforms to levels and compaction required to allow for installation of granular base.

- .1 Ensure that subgrade preparation conforms to levels and compaction required to allow for installation of granular base.

3.2 GRANULAR BASE

- .1 Place base to compacted thicknesses as indicated on drawings.
- .2 Compact to a density of not less than 95% Standard Density in accordance with ASTM D698.
- .3 Shape and roll alternately to obtain a smooth, even and uniformly compacted granular base and ensure conformity of grades with finish surface.
- .4 Apply water as necessary during compaction to obtain specified density. If granular base is excessively moist, aerate by scarifying with suitable equipment until moisture content is corrected.
- .5 In areas not accessible to rolling equipment, compact to specified density with approved mechanical tampers.
- .6 Ensure top of granular base does not exceed plus or minus 10 mm of finished grade, less combined thickness of sand laying course plus concrete unit pavers.

3.3 LAYING COURSE

- .1 Place masonry sand laying course to compacted thickness as indicated on drawings.
- .2 Ensure laying course is dry (4-8% moisture content) prior to placement of unit pavers.

3.4 SURFACE COURSE

- .1 Install unit paving true to grade, in location, layout and pattern as indicated on drawings.
- .2 Install stone step tight to building face, and in same manner as unit paving on granular base and sand levelling course (slope step away from building).
- .3 Where required, cut unit pavers accurately without damaging edges.
- .4 Tamp down and level pavers with mechanical plate vibrator on minimum 19 mm thick plywood until pavers are true to grade and free of movement.
- .5 Fill spaces between pavers by sweeping polymeric sand into joints, vibrating, wetting and cleaning as per manufacturer's instructions. Completely fill joints.
- .6 Surface of finished pavement: free from depressions exceeding 5 mm as measured with 3 m straight edge.
- .7 Sweep surface course clean.

END OF SECTION

PART 1 - GENERAL

- 1.1 Related Works Specified Elsewhere
 - .1 Site Work Demolition and Removals Section 02 41 13
 - .2 Asphalt Paving Section 32 12 16
- 1.2 Basis of Payment
 - .1 Basis of payment clauses included in references are deleted in their entirety and will be measured and paid as per Section 01 10 00 – Pay Items Description

PART 2 - PRODUCTS

- 2.1 .1 Paint:
 - .1 To CGSB 1-GP-74M, alkyd traffic paint.
 - .2 Color: white
 - .3 Upon request, NCC Representative will supply a qualified product list of paints applicable to work. Qualified paints may be used but NCC Representative reserves right to perform further tests.
- .2 Thinner: to CGSB 1-GP-5M.
- .3 Templates and Stencils: as required to produce symbols as indicated on drawings. Submit manufacturer's data including size of each stencil.
- 2.2 EQUIPMENT REQUIREMENT
 - .1 Paint applicator to be an approved pressure type mobile distributor capable of applying paint in single solid lines. Applicator to be capable of applying marking components uniformly, as rates specified, and to dimensions as indicated, and to have positive shut-off.

PART 3 - EXECUTION

- 3.1 CONDITIONS OF SURFACES
 - .1 Pavement surface to be dry, free from ponded water, frost, ice, dust, oil, grease and other foreign materials.
 - .2 Remove existing markings that will interfere with legibility of new painted lines and symbols.
- 3.2 APPLICATION
 - .1 Lay out pavement markings and obtain approval by NCC Representative.
 - .2 Unless otherwise approved by NCC Representative, apply paint only when air temperature is above 10°C, wind speed is less than 60 km/h and no rain is forecast within next 4 h.
 - .3 Apply traffic paint evenly at rate of 3 m²/L.
 - .4 Do not thin paint unless approved by NCC Representative.
 - .5 Symbols and letters to conform to dimensions indicated.
 - .6 Paint lines to be of uniform color and density with sharp edges.
 - .7 Width of paint lines to be 65 mm.
 - .8 Thoroughly clean distributor tank before refilling with paint.

3.3 TOLERANCE

- .1 Paint markings to be within plus or minus 12 mm of dimensions indicated.
- .2 Remove incorrect markings as indicated by NCC Representative.

3.4 PROTECTION OF WORK

- .1 Protect pavement markings until dry.

END OF SECTION

PART 1- GENERAL

1.1 RELATED SECTION

- .1 01 33 00 - Shop Drawing, product data and samples

1.2 SUBMITTALS

- .1 Submit product data in accordance with Section 01 33 00 – Shop Drawing, product data and samples
- .2 Submit required shop drawings in accordance with Section 01 33 00 - Shop Drawing, product data and samples.
- .3 Indicate dimensions, sizes, assembly, anchorage and installation details for each furnishing specified.
- .4 Provide maintenance data for care and cleaning of site furnishings.

1.3 DELIVERY, STORAGE AND HANDLING

- .1 Damaged furniture and components will not be accepted and will have to be replaced at no charge for the NCC.

PART 2- PRODUCTS

2.1 BENCHES

- .1 Type: Model C-140 from the [REDACTED] as supplied by [REDACTED].
 - Specifications:
 - .1 C-140 components
 - .2 6 foot length
 - .3 Standard metalwork color: black
 - .4 2x3 IPE Slats
 - .5 No stain
 - Installation :
 - .1 Install and secure to asphalt covered concrete base (refer to landscape plans)
 - .2 Clearance for 3/8" (10mm) anchor bolts (anchor bolts to be provided by contractor)
 - .3 Mounting: It is not recommended to locate anchor bolts until bench is in place.

2.2 WASTE RECEPTACLE

- .1 Type: Model S-42 from the [REDACTED] as supplied by [REDACTED].
 - .1 Standard metalwork color: black
 - .2 Mounting plate: (3) anchor bolt holes.
 - Installation :
 - .1 Install and secure to asphalt covered concrete base (refer to landscape plans)
 - .2 Clearance for 3/8" (10mm) anchor bolts (anchor bolts to be provided by contractor)

- .3 Mounting: It is not recommended to locate anchor bolts until bench is in place.

2.3 BOLLARD (BLACK) - FIXED BOLLARD

- .1 Model: Maglin MTB500-B1 Bollard
 - a. Dimensions:
 - 1. Height: 34.5" (87.6 cm)
 - 2. Diameter: 4.5" (11.4 cm)

PART 3- EXECUTION

3.1 INSTALLATION

- .1 Assemble furnishings in accordance with manufacturer's instructions.
- .2 Install furnishing true, plumb, anchored and firmly supported, as indicated by the NCC Representative.
- .3 Touch-up damaged finishes to approval of the NCC Representative.

END OF SECTION

PARTIE 1 - GENERAL

- 1.1 Related Work Specified Elsewhere
- | | |
|-----------------------------|------------------|
| .1 Excavating & Backfilling | Section 31 23 10 |
| .2 Seeding | Section 32 92 20 |
| .3 Sodding | Section 32 92 23 |
- 1.2 Testing
- .1 Obtain Contract Administrator's initial approval of imported topsoil at source.
 - .2 Test existing and imported topsoil for NPK, Mg, soluble salt content, organic matter and pH value prior to delivery to site.
 - 1 Submit 0.5 kg sample of topsoil to testing laboratory and indicate intended use.
 - 2 Determine requirements for amendments to bring pH value of soil to 5.5 to 7.7 level.
 - 3 Submit two copies of soil analysis and recommendations for corrections to Contract Administrator.
 - .4 Inspection and testing of topsoil will be carried out by testing laboratory designated by Contract Administrator.
 - .5 National Capital Commission will pay cost of testing.
- 1.3 Scheduling of Work
- .1 Schedule placing of topsoil to permit immediate seeding and sodding operations.

PARTIE 2 - PRODUCTS

- 2.1 Bioswale soil (Atlantis parking area)

Mix ratio:

50% sand (0.05-2mm)

30% soil consisting of:

50-85% sand

0-50% silt (0.002-0.05mm)

10-20% clay (<0.002mm)

- 1.5-10% organic matter
- 20% well decomposed, stable compost, free of weeds and weed seeds
- pH: 5.5-7.5

- 2.2 [REDACTED] (seeding and reforestation soil amendment areas)

[REDACTED] as supplied by [REDACTED] or approved equal. Submit sample and name of supplier five (5) days in advance and obtain approval by NCC representative prior to shipping to site.

- 2.3 [REDACTED] (soil amendment under existing trees within seeding area)

[REDACTED] as supplied by [REDACTED] or approved equal. Submit sample and

name of supplier five (5) days in advance and obtain approval by NCC representative prior to shipping to site.

2.4 Topsoil: (imported should be avoided, re-use on site soil for all grading requirements)

- .1 Stockpiled topsoil: see Section 31 23 10
- .2 If additional soil is required, it should meet the following requirements: friable loam, neither heavy clay nor of very light sandy nature containing minimum of 10% organic matter for sandy loams to maximum of 25% by volume. Free from subsoil, roots, grass, weeds, toxic materials, stones, foreign objects and an acidity range (Ph) of 5.5 to 7.5. Topsoil containing crabgrass, couch grass or other noxious weeds, not acceptable.

PARTIE 3 - EXECUTION

3.1 Preparation

- .1 Grade subgrade, eliminating uneven areas and low spots, ensuring positive drainage. Remove stones larger than 50 mm diameter and other deleterious materials. Remove subsoil that has been contaminated with oil, gasoline or calcium chloride. Dispose of removed materials as directed.
- .2 Cultivate entire area receiving topsoil to depth of 50 mm. Core aerate in those areas where equipment used for hauling and spreading has compacted subgrade. Do not cultivate soils around existing trees and shrubs.

3.2 Reuse of Existing Topsoil

- .1 Unless otherwise indicated existing stockpiled topsoil shall be used for all reinstatement. Imported sources of topsoil shall only be used when all approved sources of existing topsoil have been used.

3.3 Spreading of Topsoil

- .1 Do not spread topsoil until Contract Administrator has inspected and approved subgrade.
- .2 Spread topsoil with adequate moisture in uniform layers during dry weather over approved, dry, unfrozen subgrade, where seeding is indicated.
- .3 Bring topsoil up to finished grade.
- .4 Remove stones, roots, grass, weeds, construction materials, debris and foreign non-organic objects from topsoil.
- .5 Manually spread topsoil around trees, plants, surface utilities and other obstacles.

3.4 Soil Amendments

- .1 If required, apply lime, sulphur or other soil amendment at rate determined from soil sample test.

- .2 Mix soil amendment well into full depths of topsoil by cultivating.

3.5 Finish Grading

- .1 Fine grade entire topsoiled area to contours and elevations as indicated or as directed. Eliminate rough spots and low areas to ensure positive drainage.
- .2 Roll topsoil with 50 kg roller, minimum 900 mm wide, to compact and retain surface.
- .3 Leave surface smooth, uniform, firm against deep foot printing, with fine loose texture.

3.6 Surplus Material

- .1 Dispose of surplus topsoil not required for fine grading/landscaping off site.

| Deschampsia cespitosa | -3% |
| Deschampsia flexuosa | -5% |
| Lolium multiflorum | -8% |
| Sorghastrum nutans | -4% |
| Sporobolus heterolepis | -4% |

(Sowing rate to be determined by supplier)

* add additional Lolium Multiflorum nurse crop to mix (Sowing rate of 3 g/m²)

.7 Mown lawn

55% *Festuca rubra*
30% *Poa pratensis*
15% *Lolium perenne*

(Sowing rate to be determined by supplier)

- .2 Packages will be individually labeled in accordance with 'Seeds Regulations' and indicate clearly the name of the supplier, species, content, grade and mass.
- .3 Use appropriate agriculture broadcast or no till planter seeder and mulching equipment. The Contract Administrator to approve all proposed products and equipment for the work. Ensure soil cover over all new seeds.

2.2 WATER

- .1 Free of impurities that would inhibit germination and growth.
- .2 Water must be supplied from a designated source.

2.3 CELLULOSE-BASED MULCH (PAPER MULCH)

- .1 Use only cellulose-based mulch if seeds were broadcasted to ensure moisture retention during germination. Do not use a tackifier since wildflower seeds can't penetrate through.

PART 3 - EXECUTION

3.1 WORKMANSHIP

- .1 Do not perform work under adverse field conditions as determined by the NCC Representative.
- .2 Additional care shall be taken when seeding adjacent to watercourses or paved area to ensure that seed does not spread or blown onto those areas.

3.2 PERMANENT COVER

- .1 Seeding shall not be carried out under adverse conditions, of high wind, frozen ground or ground covered with snow, ice or standing water.
- .2 Sowing shall be done during the following periods:
 1. Between May 15 and June 15th;
 2. Between September 1st and October 15. (Preferable)
 3. Dormant seeding after November 1st when daytime temperatures are consistently below 5oC.

3.3 SEED BED PREPARATION ON DISTURBED SOIL OR NEW CONSTRUCTION SITE

- .1 Mow existing weeds as low as possible and disposed off-site.
- .2 Remove and dispose of all debris, stones 50 mm in diameter and larger, soil contaminated by oil, gasoline and other deleterious materials off-site.
- .3 Aerate all compacted soil due to construction traffic.
- .4 Add 50mm of live mulch (as supplied by [REDACTED] or approved equivalent) and till in top 200mm of existing soil.
- .5 Do not carry out seed bed preparation more than 1 calendar day before the seeding operation so the Contractor shall avoid run-off problems.
- .6 Surface preparation will produce a soil surface that is predominantly fine in nature (particle sizes of 5 to 10 mm), with no more than five lumps measuring between 10-25 mm in diameter in any 1m² area, and no lumps larger than 25 mm.

SEED BED PREPARATION UNDER EXISTING TREES

- .1 Mow existing grass as low as possible and dispose off-site.
- .2 Remove and dispose of all debris, stones 50 mm in diameter and larger, soil contaminated by oil, gasoline and other deleterious materials off-site.
- .3 Add 50mm of [REDACTED] soil (as supplied by [REDACTED] or approved equivalent) and spread by hand under protected root zone. Ensure mulch doesn't touch trunk at any time
- .4 Do not carry out seed bed preparation more than 1 calendar day before the seeding operation so the Contractor shall avoid run-off problems.
- .5 Surface preparation will produce a soil surface that is predominantly fine in nature (particle sizes of 5 to 10 mm), with no more than five lumps measuring between 10-25 mm in diameter in any 1m² area, and no lumps larger than 25 mm.

SEED BED PREPARATION IN UNDISTURBED GRASS AREAS

- .1 Mow existing grass as low as possible. and disposed off-site.
- .2 Remove and dispose of all debris, stones 50 mm in diameter and larger, soil contaminated by oil, gasoline and other deleterious materials off-site.
- .3 Remove the top 75mm of existing grass and soil with a sod cutter off-site.
- .4 Add 50mm of live mulch (as supplied by [REDACTED] or approved equivalent) and till in top 200mm of existing soil.
- .5 Do not carry out seed bed preparation more than 1 calendar day before the seeding operation so the Contractor shall avoid run-off problems.
- .6 Surface preparation will produce a soil surface that is predominantly fine in nature (particle sizes of 5 to 10 mm), with no more than five lumps measuring between 10-25 mm in diameter in any 1m² area, and no lumps larger than 25 mm.

3.4 HYDROSEEDING (HYDRAULIC SEEDING)

- .1 This application method will **NOT** be accepted for any of the seeding within this contract. It does not ensure firm seed to soil contact and prevents seed stratification to happen which will lead the seed to germinate at the wrong time of the year.

3.5 MECHANICAL PLANTERS

- .1 Use appropriate agriculture broadcast or no till planter seeder. Specific models that can successfully plant native grasses and flowers include the Tye drill, Truax drill, John Deere Rangeland drill, and properly outfitted Brillion seeders.
- .2 Ensure soil cover over all new seeds.
- .3 Roll the seeded area after planting. This step is very important for germination success
- .4 The Contract Administrator to approve all proposed products and equipment for the work.
- .5 Sowing rate to be followed and never increased as it will result in a dominant grass meadow rather than flower meadow where indicated.

3.6 CELLULOSE-BASED MULCH (PAPER MULCH)

- .1 All bare soil areas shall be stabilized with paper mulch immediately after seeding.
- .2 The Contract Administrator to approve all proposed products and equipment for the work.

3.7 MAINTENANCE DURING ESTABLISHMENT AND 2 YEAR WARRANTY PERIOD

Establishment:

- .1 Water seeded areas to maintain optimum soil moisture level for germination and continued growth of grass. Control watering to prevent washouts.
- .2 Gully formations and washouts as a result of rain events greater than 20 mm per day shall be repaired, including regrading and re-seeding.
- .3 Seeded areas shall be accepted by the NCC Representative provided that:
 - .1 seeded areas are properly established;
 - .2 seeded areas are free of weeds and bare or dead spots;
 - .3 no surface soil is visible when grass has been cut to a height of 50 mm;
(mown lawn only)
 - .4 seeded areas have been cut minimum 2 times, the second cut within 24 hours prior to acceptance.
- .4 Areas seeded in fall will be accepted the following spring, one month after the beginning of the growing season, provided the acceptance conditions are met.
- .5 The Contractor shall maintain the seeded areas including mowing until acceptance by the NCC Representative. Unacceptable areas shall be reseeded.
- .6 Weed control:
 - .1 Do not pull weeds at any time. Mowing or hand cutting will be accepted.

First year of maintenance:

- .1 Weed control:
 - a. Mow weeds when they reach a maximum height of at 200-250mm height on a regular basis to prevent them from self-seeding throughout 1st growing season.
 - b. A flail-type mower works best, as it chops up the weeds so they can dry out rapidly. Rotary mowers and sickle bar mowers will not be accepted.

- c. Do not pull weeds at any time due to soil disturbance. Large weeds can be cut by hand if required.
- d. If weeds become thick by mid-summer they should be cut back, along with the nurse crop. If weeds are thin, cut when in bloom, before they set seed.
- e. Do not mow down the year's growth at the end of the season. Leave it to help protect the young plants over the winter. The plant litter and the snow that it catches insulate the soil from rapid changes in soil temperatures, which can cause plant losses due to frost heaving.

Second year of maintenance:

- .1 Weed control:
 - a. Mow the meadow in spring of the second year right to the ground and rake off the cuttings.
 - b. If weeds remain a problem in the second year, mow the meadow in late spring or early summer (before the weeds reach 200-250mm height)
 - c. A flail-type mower works best, as it chops up the weeds so they can dry out rapidly. Rotary mowers and sickle bar mowers will not be accepted.

END OF SECTION

PART 1 GENERAL

1.1 RELATED SECTION

- .1 32 91 21.01 – Topsoil and finish grading
- .2 32 93 12.01 – Plant maintenance and warranty

1.2 SOURCE QUALITY CONTROL

- .1 The Contractor shall commence sourcing the specified material immediately upon award of the Contract.
- .2 Plant materials shall be conformed to species specified in the contract document. All plant materials shall be identified with their complete name and caliper.
- .3 No substitutions will be considered unless the Contractor can demonstrate to the NCC Representative's satisfaction that a prolonged and widespread search for the specified cultivars has been undertaken. The NCC Representative's written approval of plant substitution is required.
- .4 Obtain approval of source of plant material. Acceptance and selection of plant at its source does not prevent rejection on site prior to or after planting operations.
- .5 After harvesting and prior to shipping any plants from the growing nursery, notify the NCC Representative to allow for an inspection of the plants at the growing nursery to assure that all harvesting requirements have been satisfied.

1.3 SHIPMENT AND PRE-PLANTING CARE

- .1 All plants shall be inspected by the Contractor for damage in transit. No defective material shall be delivered to the site. Material subsequently damaged shall be replaced immediately at no additional cost for the NCC.
- .2 Protect plant materials against abrasion, exposure and extreme temperature change during transit.
- .3 Keep roots moist and protected from sun and wind

1.4 STORAGE AND PROTECTION

- .1 Protect plant materials from frost, excessive heat, wind and sun during delivery.
- .2 Immediately store and protect plant material which will not be installed within 1 hour after their arrival on site, in storage locations approved by NCC Representative.
- .3 Protect plant material from damage during transportation
 - .1 When delivery distance is less than 30 km, and vehicle travels at speeds under 80 km/h, tie tarpaulins around plants or over vehicle box.
 - .2 When delivery distance exceeds 30 km or vehicle travels at speeds over 80 km/h, use enclosed vehicle where practical.

- .3 Protect foliage and root balls using anti-desiccants and tarpaulins, where use of enclosed vehicle is impractical due to size and weight of plant material.
- .4 Protect stored plant material from frost, wind and sun and as follows:
 - .1 For pots and containers, maintain moisture level in containers.
 - .3 For balled and burlapped, and wire basket root balls, place to protect branches from damage. Maintain moisture level in root zones.

PART 2 PRODUCTS

2.1 PLANT MATERIALS

- .1 Comply with Guide Specification for Nursery Stock, latest edition, of Canadian Nursery Trades Association referring to size and development of plant material and root ball.
- .2 All plant material to come from a commercial nurseries. The plant material shall be grown in zone 4b or 5a, according to the hardiness zones for plants in Canada established by Agriculture Canada.
- .3 Use plants with strong fibrous root systems free of disease, insects, defects or injuries and structurally sound. Plants must have been root pruned regularly, but not later than one growing season prior to arrival on site.
- .4 Substitution to plant material as indicated on planting plan are not permitted unless written approval has been obtained as to type, variety and size.
- .5 Size indicated are the minimum allowable after pruning.

2.2 WATER

- .1 Free of impurities that would inhibit plant growth.

2.3 MYCORRHIZE INOCULANTS

- .1 Apply mycorrhize inoculants [REDACTED] of [REDACTED], following application instructions, or an equivalent approved by the NCC and registered in Canada;

2.4 STAKES

- .1 No staking required

2.5 GUYING COLLAR

- .1 N/A

2.6 TREE TRUNK PROTECTION

- .1 'Surtronic' fine mesh trunk wraps as supplied by Dendrotik or approved equal.

2.7 MULCH

- .1 [REDACTED] Composted Pine Mulch as supplied by [REDACTED] or approved equal. Submit sample and name of supplier five (5) days in advance and obtain approval by NCC representative prior to shipping to site.

2.8 GROWING MEDIUM

Growing medium according to section 32 91 21.01 – Topsoil and finish grading

2.9 ANTI-DESICCANT

- .1 Wax-like emulsion to provide film over plant surfaces reducing evaporation but permeable enough to permit transpiration.

2.10 BONEMEAL

- .1 Bonemeal: raw bonemeal, finely ground (minimum analysis of 4% nitrogen and 20% phosphoric acid) to be added at the bottom of each tree and shrub planting hole as per manufacturer recommendations. Mix bonemeal thoroughly with soil.

PART 3 EXECUTION

3.1 PRE-PLANTING PREPARATION

- .1 Delivered plant material to be inspected and approved NCC Representative.
- .2 NCC Representative to approve layout mockup of plant material for all beds until advised differently. Planting bed grades will also need to be approved before planting.

3.2 PLANTING TIME

- .1 Plant materials shall be planted from May 15 to June 30 or from August 15 to October 1, unless otherwise approved by the NCC Representative
- .2 The Contractor shall arrange for all plant species recommended for spring only digging, to be dug and containerized in the spring, immediately upon award of the Contract.
- .3 The foliage of deciduous trees which have broken buds shall be sprayed with anti-desiccant to slow down transpiration prior to transplanting.

3.3 EXCAVATION

- .1 Excavate planting holes to width and depth as indicated on drawings.
- .2 The sides of the planting hole shall be scarified so that water and roots can readily penetrate.

- .3 Place mycorrhize inoculants and bonemeal in the bottom of each plant hole as per manufacturer recommendation.

3.4 PLANTING

- .1 Planting trees and shrubs vertically in the places indicated, oriented in a manner to produce the best possible visual effect with the surrounding structures such as buildings, roads and sidewalks.
- .2 For burlapped root balls, cut away top one third of wrapping and wire basket without damaging root ball. Do not pull burlap or rope from under root ball.
- .3 For container stocks or root balls in non-degradable wrapping, remove entire container or wrapping without damaging root ball.
- .4 Place plant material at a depth similar to depth in nursery.
- .5 Backfill with existing soil in 150 mm layers. Tamp each layer to eliminate air pockets. When two thirds of depth of planting pit has been backfilled, fill remaining space with water. After water has penetrated into soil, backfill to finish grade. Form watering saucer as indicated.
- .6 Water plant material thoroughly.
- .7 After soil settlement has occurred, fill with soil to finish grade.
- .8 Spread 75mm of mulch over all areas of bare soil. Mulch heavily contaminated with soil is not acceptable. Diameter of 400mm around all plant material.
- .9 Remove dead and injured branches and branches that rub causing damage to bark.
- .10 Dispose of burlap, wire and container material off site.

3.5 TRUNK PROTECTION

- .1 Install fine mesh trunk wraps on deciduous trees as indicated.

3.6 TREE SUPPORTS

- .1 No staking required

3.7 PROTECTION DURING CONSTRUCTION

- .1 The Contractor shall protect all work and materials from damage due to planting operations; operations by other Contractors; or trespassers. Maintain protection during installation until acceptance. Treat, repair or replace damaged work immediately.
- .2 Damage done to any of the work by the Contractor, or any of their sub-contractors, shall be replaced by the Contractor at their own expense.

3.8 MAINTENANCE PRIOR TO FINAL INSPECTION

- .1 Perform following maintenance operations from time of planting until the project has been approved by the NCC Representative and the interim certificate of Approval has been issued at Substantial Performance.
 - .1 Water to maintain soil moisture conditions, for optimum establishment, growth and health of plant material without causing erosion.
 - .2 **Structural pruning by a certified arborist must be completed once a year and arborist must provide report to NCC representative.**
 - .3 If acceptance is delayed due to a drawn out schedule by the Contractor, the Contractor shall be responsible for the scope of maintenance outlined in section 32 93 12.01 until final acceptance of the site. The Contractor shall still be responsible for the full term of the warranty as of the date of approval.

3.9 FINAL INSPECTION

- .1 At final inspection, plant material shall be acceptable when it is properly installed, unbroken, shows adequate formation of buds and is free from blight of any description. All planting areas shall be free of weeds, litter and in good order.

END OF SECTION

PART 1 - GENERAL

1.1 RELATED WORKS

- .1 Trees and shrub planting Section 32 93 10.01

1.2.1 WARRANTY

- .1 All plant material shall be warranted for a period of two years from the date of substantial performance.
- .2 The warranty shall cover any defects in materials and workmanship.
- .3 A warranty inspection shall be carried out at the end of the warranty period.
- .4 Extend 2 year warranty on all replacement of plant material.

1.3 DURATION

- .1 Plant material maintenance shall begin immediately after each portion of planting has been completed and shall continue throughout the maintenance and warranty period to the satisfaction of the NCC Representative.

PART 2 - PRODUCTS

2.1 MATERIALS

- .1 Water: shall be free from any contaminants which could adversely affect plant growth.
- .2 Pruning Tools: shall be designed specifically for horticultural purposes and shall be clean, sharp and in proper, safe, working order. Pruning equipment shall be capable of producing clean, flush cuts without tearing or fraying the bark.

PART 3 - EXECUTION

3.1 OPERATIONAL CONSTRAINTS

- .1 Do each maintenance operation continuously and complete within a reasonable time period.
- .2 No maintenance equipment, materials or other miscellaneous items may be stored on site.
- .3 All debris, waste and other extraneous material resulting from the maintenance operation shall be removed from the site daily upon completion of maintenance.
- .4 The Contractor shall be fully acquainted with all relevant Provincial and Municipal By-laws and Regulatory Codes relating to the work of this contract, and will be required to comply with such by-laws and codes without extra compensation.
- .5 Notify the NCC Representative immediately of damage incurred by pest, disease, mechanical or vandalism.

3.2 INTERIM REPLACEMENT OF PLANT MATERIAL

- .1 Throughout the maintenance and warranty period, units of plant material that are found to be unacceptable will be replaced by the Contractor. Any unacceptable material must be replaced within one month unless otherwise directed by the NCC representative. Weekly inspections must be reported for the first growing season.
- .2 At the discretion of the NCC Representative, plant material that is identified as dead or in a poor or diseased condition shall be immediately removed from the site.

3.3 WATERING

- .1 The Contractor is responsible for interim manual watering of all plant material, from time of planting until the end of the warranty period (24 MONTHS).
- .2 Water all plant material immediately after installation. Thereafter,
 - .1 Water daily for the first week after planting;
 - .2 Water every second day for the next 3 weeks;
- .3 For the first warranty year;
 - .1 The contractor shall submit for approval a watering schedule at the beginning of the warranty period. The watering shall occur at least once a week, on Thursday, Wednesday or Tuesday. Once the day is chosen, the watering shall happen each week at the same day.
 - .2 Provide all water required to keep soil within and around the root and in the soil at optimum moisture content between 10 and 20% as measured using a General Digital Moisture Meter.
 - .3 Proceed to watering with a slow water spray jet oriented toward the growing media.
 - .4 The watering shall be made before 11h am or after 14h30 pm to avoid full sun period. Watering should also be avoided during peak use period between 7-9am, 12-1pm and 3-5pm.
 - .5 Proceed to the watering even on rainy days unless receiving written notice of the NCC representative.
 - .6 Hose bibs are available on site, see plans.
- .4 For the remainder of the warranty period, thoroughly water whenever natural precipitation falls below 20 mm per week (Sunday to Saturday) for 2 consecutive weeks. Precipitation data shall be as per Environment Canada from the Macdonald-Cartier Airport weather station.
- .5 Ensure the root zone is thoroughly saturated during each watering operation.
- .6 Repair any damage caused by watering operations.

3.4 WEEDING

- .1 All weeds, dead plants, leaves, branches, paper and other refuse within planting beds shall be removed by hand and disposed of off the Contract site.
- .2 Weeds shall not exceed 5 cm in height between weeding's.
- .3 Ensure the entire root system of weeds is removed and not just the above ground growth.
- .4 At a minimum, weeding shall occur:
 - .1 Weekly from June 1 to August 15;
 - .2 Every two weeks from May 1 to May 31, and from August 16 to October 31.
 - .3 A final weeding shall be completed immediately prior to the final warranty inspection.
- .5 The application of herbicides or mechanical weed removers is prohibited.
- .6 Ensure planting beds are weed free prior to the application of mulch material.
- .7 The scope of work also includes weeding of joints between pavers and between curbs.

3.5 PRUNING

- .1 Prune off dead and injured branches in accordance with accepted arboricultural practices.

3.6 GARBAGE REMOVAL

- .1 Keep planting beds free of garbage and other foreign debris. Remove garbage off-site.

3.7 PEST MANAGEMENT

- .1 Monitor plant material throughout the warranty period for any sign of disease or insect problems. Practice integrated pest management.
- .2 The use of pesticides shall not be permitted.

3.8 WINTER PREPARATION

- .1 In the fall of each warranty year, the Contractor is responsible for completion of the following:
 - .1 Ensure all plant material is watered before freeze-up.

3.9 SPRING PREPARATION

- .1 In late spring of each warranty year, after the soil has thawed and dried up, re-apply mulch over all thin or bare areas to ensure good weed suppression. Mulch thicknesses shall be in accordance with Section 32 93 10.01, Trees and shrubs planting. Ensure new growth is not suppressed by the application of mulch material. Ensure mulch is neat and tidy with clean edges.

3.10 INCIDENTAL MAINTENANCE

- .1 The Contractor shall, in general, be responsible for any incidental maintenance to ensure healthy plant growth and a satisfactory appearance of plant material.

3.11 REINSTATEMENT

- .1 Any damage to vegetation, hard surfaces, structures or services caused as a result of the Contractor's work methods and practices for plant material maintenance shall be reinstated or repaired to the satisfaction of the NCC Representative. The cost of such reinstatement or repair shall be solely at the Contractor's expense.

3.12 FINAL WARRANTY INSPECTION

- .1 A one-time inspection of all plant material shall be carried out by the NCC Representative upon completion of the maintenance and warranty period.
- .2 Plant material shall be **acceptable** when it is undamaged, shows adequate growth and formation of buds, and is free from blight of any description. All planting beds and tree pits shall be free of weeds, litter and in good order, including the removal of all tree supports.
- .3 Plant material shall be **unacceptable** when it does not meet this quality standard.
- .4 Units of plant material that are found to be unacceptable will be replaced by the Contractor at the earliest opportunity. The NCC Representative reserves the right to extend the Contractor's maintenance and warranty responsibilities for an additional one-year for replacement plant material.
- .5 In the event that this inspection is satisfactory to the NCC Representative, and that there are no outstanding commitments to the contracted works, the Contractor will be given final approval of the maintenance and warranty requirements.
- .6 Where, in the opinion of the NCC Representative, the Contractor has failed to complete obligations as detailed in this Specification; and further, fails to rectify said deficiency within two days of written notification from the NCC Representative, the NCC Representative reserves the right to retain others to complete the work and deduct incurred expenses from monies owing to the Contractor.

END OF SECTION

PART 1 – GENERAL

- 1.1 Related Work Specified Elsewhere
 - .1 Clearing and Grubbing Section 31 11 00
- 1.2 References
 - .1 Ontario Ministry of Agriculture and Food
 - .1 Pruning Ornamentals - 1992.
- 1.3 Qualifications
 - .1 Pruning shall be carried out by a certified arborist, as designated by the ISA. Please provide ISA # and name of arborist to NCC representative prior to commencement of work.
- 1.4 Field Sample
 - .1 Do sample pruning acceptable to Contract Administrator to identify:
 - .1 Knowledge of target areas including branch bark ridge and branch collars.
 - .2 Technique for selection process and pruning used to establish desired form and shape for each species.
 - .2 Acceptance of work will be determined by Contract Administrator from field sample.

PART 2 - PRODUCTS

- 2.1 Pruning Equipment
 - .1 All pruning or cutting equipment shall be designed specifically for tree work and shall be clean, sharp, and in proper safe, working order. Pruning equipment shall be capable of producing clean, flush cuts without tearing or fraying the bark.
- 2.2 Disinfectant
 - .1 20% solution of sodium hypochlorite or 70% solution of ethyl alcohol.

PART 3 - EXECUTION

- 3.1 General
 - .1 Prune in accordance with Pruning Ornamentals, and as directed by Contract Administrator. Where discrepancies occur between standard and specifications, specifications govern.
 - .2 Tool maintenance:
 - .1 Ensure that tools are clean and sharp throughout pruning operation. Do not use tools which crush or tear bark.
 - .2 Disinfect tools before each tree is pruned.
 - .3 On diseased plant material disinfect tools before each cut.
 - .3 Notify immediately Contract Administrator of conditions detrimental to health of plant material or operations.

- .4 Prune during plant dormant period or after leaves have matured. Avoid pruning during leaf formation, at time of leaf fall, or when seasonal temperature drops below minus 10°C.
- .5 Retain natural form and shape of plant species.
- .6 Do not:
 - .1 Flush cut branches.
 - .2 Crush or tear bark.
 - .3 Cut behind branch bark ridge.
 - .4 Damage branch collars.
 - .5 Damage branches to remain.
- 3.2 Safety Pruning
 - .1 Remove dead, dying, diseased and weak growth from plant material designated by Contract Administrator in order to promote healthy growth and the safety of pathway users.
 - .2 Remove loose branches, twigs and other debris lodged in tree.
 - .3 For branches under 50 mm in diameter:
 - .1 Locate branch bark ridge and make cuts smooth and flush with outer edge of branch collar to ensure retention of branch collar. Cut target area to bottom of branch collar at an angle equal to that formed by line opposite to branch bark ridge.
 - .2 Make cuts on dead branches smooth and flush with swollen callus collar. Do not injure or remove callus collar.
 - .3 Do not cut lead branches unless directed by Contract Administrator.
 - .4 For branches greater than 50 mm in diameter:
 - .1 Make first cut on lower side of branch 300mm from trunk, one third diameter of branch.
 - .2 Make second cut on upper side of branch 500mm from trunk until branch falls off.
 - .3 Make final cut adjacent to and outside branch collar.
 - .5 Ensure that trunk bark and branch collar are not damaged or torn during limb removal. Repair areas which are damaged, or remove damaged area back to next branch collar.
- 3.3 Structural Pruning
 - .1 Follow: ISA ANSI A300 pruning standard - part 1
- 3.4 Care of Wounds
 - .1 Shape bark around wound to an oblong configuration ensuring minimal increase in wound size. Retain peninsulas of existing live bark.
- 3.5 Clean-Up
 - .1 Collect and dispose of pruned material daily and remove from site.
 - .2 Dispose of woody material in accordance with Section 31 11 00, Clearing and Grubbing.

1.2 RELATED SECTION

- .1 01 33 00 – Shop Drawing, Product Data and Samples
- .2 03 10 00.01 – Concrete forming and accessories
- .3 03 20 00.01 – Concrete reinforcing

1.3 SAMPLES

- .1 Submit required documents in accordance with Section 01 33 00 Shop Drawings, Products Data and Samples for review by NCC representative and do not proceed without written approval when deviations from mix design or parameters are found.
- .2 Concrete hauling time: submit for review by NCC representative, deviations exceeding maximum allowable time of 120 min for concrete to be delivered to site of Work and discharged after batching.

1.4 QUALITY ASSURANCE

- .1 Submit to NCC representative, minimum 1 week prior to starting concrete work, valid and recognized certificate from plant delivering concrete.
 - .1 When plant does not hold valid certification, provide test data and certification by qualified independent inspection and testing laboratory that materials used in concrete mixture will meet specified requirements.
- .2 Minimum 1 week prior to starting concrete work submit to NCC representative manufacturer's test data and certification by qualified independent inspection and testing laboratory that following materials will meet specified requirements:
 - .1 Falsework erection.
 - .2 Hot weather concrete.
 - .3 Cold weather concrete.
 - .4 Curing.
 - .5 Finishes.
 - .6 Formwork removal.
 - .7 Joints.
- .3 Quality Control Plan: submit written report, to NCC representative verifying compliance that concrete in place meets performance requirements of concrete as established in PART 2 - PRODUCTS.

1.5 DELIVERY, STORAGE AND HANDLING

.1 Delivery and acceptance:

- .1 Concrete hauling time: maximum allowable time for concrete to be delivered to site of Work and discharged not to exceed 120 minutes after batching.
 - .1 Modifications to maximum time limit must be agreed to NCC representative and concrete producer as described in CSA A23.1/A23.2.
 - .2 Deviations to be submitted for review by NCC Representative
- .2 Concrete delivery: ensure continuous concrete delivery from plant meets CSA A23.1/A23.2.

2.0 PRODUCTS

2.1 SUSTAINABLE REQUIREMENTS

- .1 According to the CSA A23.1/A23.2 and indications of Article DOSAGE FORMS PART 2 standard - PRODUCTS.

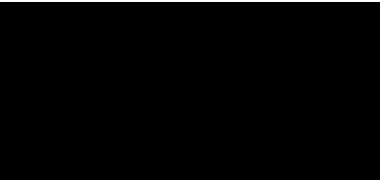

2.2 SUSTAINABLE REQUIREMENTS

- .1 Quality Control Plan : Ensure that the concrete supplier is able to provide concrete meeting the performance criteria established by the NCC representative and provide control of the compliance of the material according to the requirements of article QUALITY ASSURANCE, PART 1.

2.3 MATERIALS

- .1 Cement: to CAN/CSA-A3001, Type GU.
- .2 Water: to CAN/CSA-A23.1.
- .3 Aggregates: to CAN/CSA-A23.1. Coarse aggregates to be normal density.
- .4 Admixtures
 - .1 Air entraining admixture: to ASTM C 260.
 - .2 Chemical Admixtures: ASTM C494 standard. The NCC representative must accept accelerators used during concrete work.
- .5 Shrinkage compensating grout: premixed compound consisting of non-metallic aggregate, Portland cement, water reducing and plasticizing agents.
 - .1 Compressive strength: XXXXXXXXXX.
- .6 Tactile walking surface strip indicators

- .1 Tactile walking surface indicators shall be made of cast iron, according to CSA B651-2012 and follow Ontario Regulation 191/11, and meet the following requirements:

| Standard | Property | Minimum Result |
|---------------|------------------|---|
| ASTM A 8 | tensile strength |  |
| ASTM C 1028 | slip resistance | |
| ASTM C 501-84 | wear resistance | |

- .2 The truncated domes shall be of uniform size and shape. Units shall be uniform in texture, be free from pouring faults, sponginess, cracks, blowholes, and other defects, and have clean-cut and well-defined edges. All surfaces shall be bare, without any coating, and be uniform and free of flaking rust or mounts of rust or debris. Tactile walking surface indicators shall have ribs cast to the underside of the unit, have vent holes, and have a minimum plate thickness of 5 mm.

2.4 GRANULAR BASE COURSE

- .1 Granular base course quality: sound, hard, durable material free from soft, thin, elongated or laminated particles, organic material, clay lumps or minerals, or other substances that would act in deleterious manner for use intended.
- .2 Any granular materials specified for the various works, on the drawings or in other sections of the specifications or by direction of the NCC Representative, shall conform OPSS.MUNI 1010 Material Specification for Aggregates – Granular A, B, M, and Select Subgrade Material
- .3 Blending to obtain the correct gradation shall be permitted when the Contractor demonstrates that he can produce a correct gradation and has a plant capable of producing to the satisfaction of the NCC Representative.
- .4 Granular "A" : This materials shall conform to OPSS.MUNI 1010.
- .5 Granular "B": This material shall conform to OPSS.MUNI 1010.
- .6 Select Subgrade material: See section 31 23 10 Excavation, Trenching and Backfilling
- .7 Provide samples as per Section 01 33 00 – Shop Drawings, Product data and Samples

2.5 MIXES

- .1 Alternative 1 - Performance Method for specifying concrete: to meet NCC representative performance criteria in accordance with CAN/CSA-A23.1/A23.2.
 - .1 Ensure concrete supplier meets performance criteria as established below and provide verification of compliance as described in quality control plan.
 - .2 Provide concrete mix to meet following hard state requirements:
 1. Durability and class of exposure: C-1.
 2. Minimum compressive strength at [REDACTED].
 3. Intended application: C-1
 4. Diameter of aggregates: at least 20 mm.
 5. Air entrained 5 to 8%
 - .3 Provide quality management plan to ensure verification of concrete quality to specified performance.
 - .4 Concrete supplier's certification.

3.0 EXECUTION

3.1 PREPARATION

- .1 Obtain NCC representative's approval before placing concrete.
 1. Provide 48 hours notice prior to placing of concrete.
- .2 Place concrete reinforcing in accordance with Section 03 20 00.01 - Concrete Reinforcing
- .3 During concreting operations:
 1. Development of cold joints not allowed.
 2. Ensure concrete delivery and handling facilitates placing with minimum of re-handling, and without damage to existing structure or Work.
- .4 Pumping of concrete will not be permitted after approval of equipment and mix
- .5 Ensure reinforcement and inserts are not disturbed during concrete placement.
- .6 Prior to placing of concrete obtain NCC representative's approval of proposed method for protection of concrete during placing and curing in adverse weather.
- .7 Protect previous Work from staining.
- .8 Clean and remove stains prior to application for concrete finishes.
- .9 Maintain accurate records of poured concrete items to indicate date, location of pour, quality, air temperature and test samples taken.
- .10 In locations where new concrete is dowelled to existing work, drill holes in existing concrete.

3.2 IMPLEMENTATION

- .1 Do cast-in-place concrete work in accordance with CAN/CSA-A23.1.
- .2 Sleeves and inserts:
 - .1 Do not permit penetrations, sleeves, ducts, pipes or other openings to pass through joists, beams, column capitals or columns, except where indicated or approved by NCC representative.
 - .2 Sleeves and openings greater than 100 x 100 mm not indicated must be reviewed by NCC representative.

- .3 Do not eliminate or displace reinforcement to accommodate hardware. If inserts cannot be located as specified, obtain approval of modifications from NCC Representative before placing of concrete.
- .4 Check locations and sizes of sleeves and openings shown on drawings.
- .5 Set special inserts for strength testing as indicated and as required by non-destructive method of testing concrete.
- .3 Anchor bolts.
 - .1 Set anchor bolts to templates under supervision of appropriate trade prior to placing concrete.
 - .2 With approval of NCC Representative, grout anchor bolts in preformed holes or holes drilled after concrete has set.
 - .1 Formed holes to be minimum 100 mm diameter.
 - .3 Protect anchor bolt holes from water accumulations, snow and ice build-ups.
 - .4 Set bolts and fill holes with shrinkage compensating grout.
- .4 Finishing and curing:
 - .1 Finish concrete in accordance with CAN/CSA-A23.1.
 - .2 Concrete Pads and concrete barrier curbs (type 01 & Type 02) finish: Magnesium trowel finish
 - .3 Concrete mountable curb and dropped sidewalk finish: as per City of Ottawa's Standards – meet and match existant.
 - .4 Rub exposed sharp edges of concrete with carborundum to produce 3 mm radius edges unless otherwise indicated.
 - .5 Proceed to the sawing of the slab 200 mm thick concrete as soon as the support without leaving workers impression 6 to maximum 18 hours after pouring of concrete.

3.3 SITE TOLERANCE

- .1 Concrete tolerance in accordance with CAN/CSA-A23.1 straight edge method.

3.4 FIELD QUALITY CONTROL

- .1 Inspection and testing of concrete and concrete materials will be carried out by a Testing Laboratory designated by Consultant in accordance with CAN/CSA-A23.1.
 - .1 Concrete pours.

- .2 Slump tests.
- .3 Air entrained
- .4 Compressive strength at [REDACTED].
- .5 Ambient temperature and temperature of the concrete.
- .2 Inspection and testing of concrete and concrete materials will be carried out by testing laboratory designated by NCC Representative for review, to his satisfaction and in accordance with CSA-A23.1/A23.2. Testing of concrete and concrete materials will be paid by the Owner.
- .3 Contractor to paid repeat testing on fail sampling.
- .4 Ensure test results are distributed for discussion at pre-pouring concrete meeting between testing laboratory and NCC Representative.
- .5 Testing laboratory will take additional test cylinders during cold weather concreting. Cure cylinders on job site under same conditions as concrete which they represent.
- .6 Non-Destructive Methods for Testing Concrete: in accordance with CSA-A23.1/A23.2
- .7 Inspection or testing by NCC representative will not augment or replace Contractor quality control nor relieve Contractor of his contractual responsibility.

3.5 CLEANING

- .1 Perform cleanup as follow:
 - .1 Provide on-site, adequate space for safely washing concrete trucks.
 - .2 It is prohibited to dump unused adjuvants into sewers, in a stream, a lake, on the ground or any other place where it could pose a risk to health or the environment.
 - .3 Make the necessary arrangements to prevent contaminating adjuvants waterbodies or drinking water sources.
 - .4 If necessary, collect the liquid or solidify with an inert non-combustible taking all appropriate safety material.
 - .5 Remove and dispose of waste in accordance with the requirements of federal provincial territorial and local laws.

1.3 PROTECTION

- .1 Protect existing fencing, landscaping, natural features, bench marks, buildings, pavement, surface or underground utilities which are to remain as directed by NCC Representative. If damaged, restore to original or better condition unless directed otherwise.
- .2 Maintain access roads to prevent accumulation of construction related debris on roads.

PART 2 PRODUCTS

2.1 GRANULAR BASE COURSE MATERIAL

- .1 Granular base course quality: sound, hard, durable material free from soft, thin, elongated or laminated particles, organic material, clay lumps or minerals, or other substances that would act in deleterious manner for use intended.
- .2 Any granular materials specified for the various works, on the drawings or in other sections of the specifications or by direction of the NCC Representative, shall conform OPSS.MUNI 1010 Material Specification for Aggregates – Granular A, B, M, and Select Subgrade Material
- .3 Blending to obtain the correct gradation shall be permitted when the Contractor demonstrates that he can produce a correct gradation and has a plant capable of producing to the satisfaction of the NCC Representative.
- .4 Granular "A" : This materials shall conform to OPSS.MUNI 1010.
- .5 Granular "B": This material shall conform to OPSS.MUNI 1010.
- .6 Select Subgrade material: See section 31 23 10 Excavation, Trenching and Backfilling
- .7 Provide samples as per Section 01 33 00 – Shop Drawings, Product data and Samples

PART 3 EXECUTION

3.1 STRIPPING OF TOPSOIL AND TURF

- .1 Do not strip or disturb existing soil and turf, unless otherwise indicated.
- .2 Any excavated topsoil from site to be disposed of as per Section 01 61 10 - Management and Disposal of Excess Material.

- .3 No excavated material can be re-used as backfilling material.

3.2 PLACING

- .1 Place granular material to depth and grade in areas indicated.
- .2 Ensure no frozen material is placed.
- .3 Place material only on clean unfrozen surface, free from snow and ice.
- .4 Place material using methods which do not lead to segregation or degradation of aggregate.
- .5 Spread and shape material in uniform layers of required thickness.
- .6 Shape each layer to smooth contour and compact to specify density before succeeding layer is placed.
- .7 Remove and replace that portion of layer in which material becomes segregated during spreading.

3.3 GRADING, COMPACTING AND TESTING

- .1 Rough grade to levels, profiles, and contours allowing for surface treatment as indicated in the contract documents. Compact to specified density as shown on the contract drawings.
- .2 Shape and roll alternately to obtain smooth, even and uniformly compacted base.
- .3 Apply water as necessary during compacting to obtain specified density. If material is excessively moist, aerate by scarifying with suitable equipment until moisture content is corrected.
- .4 In areas not accessible to rolling equipment, compact to specified density with mechanical tampers.
- .5 Compaction and testing as per OPSS.MUNI 501.
- .6 Compaction tests to be paid by owner and performed by pre-approve testing agency.
- .7 Contractor to pay for repeat testing on fail samples.
- .8 Testing to be performed throughout progress of work to determine adequacy of compaction.
- .9 Co-operate with inspection staff during testing period.
- .10 Correct surface irregularities by loosening and adding or removing material until surface is within specified tolerance.
- .5 Do not disturb existing contaminated bare soil, soil within branch spread of trees or shrubs to remain unless otherwise specified by the NCC Representative.

3.4 PROTECTION

- .1 Maintain finished base in condition conforming to this Section until succeeding material is applied or until acceptance by NCC Representative.

3.5 CLEANING

- .1 Leave aggregate stockpile site in tidy, well drained condition, free of standing surface water.
- .2 For temporary or permanent abandonment of aggregate source, restore source to condition meeting requirements of authority having jurisdiction

3.6 SURPLUS MATERIAL

- .1 Remove surplus material and material unsuitable for fill, grading or landscaping as directed by NCC Representative.

END OF SECTION

PART 1- GENERAL

- 1.1 Related Work Specified Elsewhere
 - .1 Environmental Protection Section 01 35 43
 - .2 Site Work Demolition and Removals Section 02 41 13
 - .3 Site Grading Section 31 23 13
- 1.2 Utility Lines
 - .1 Before commencing work, establish location and extent of underground utility lines in area of excavation. Notify Contract Administrator of findings.
 - .2 Advise Contract Administrator to re-route existing lines in area of excavation. Costs for such work will be paid by Owner.
 - .3 Record locations of maintained and re-routed underground utility lines.
 - .4 Make good and pay for damage to existing utility lines resulting from work.
- 1.3 Protection
 - .1 Protect bottoms of excavations from softening. Should softening occur, remove softened soil and replace with material as directed by Contract Administrator.
 - .2 Protect bottoms of excavations from freezing.
 - .3 Provide adequate protection around bench markers, layout markers, survey markers, and geodetic monuments.
 - .4 Provide protection to ensure no damage to existing facilities and equipment situated on site.
 - .5 Effect approved measures to minimize dust as a result of this work.
 - .6 Do not stockpile excavated material to interfere with site operation or drainage.
- 1.4 Compaction Densities
 - .1 Compaction densities are percentages of maximum densities obtainable from ASTM D698-70.

PART 2 - PRODUCTS

- 2.1 Materials
 - .1 Backfill: native fill as per Section 31 22 13 – Site Grading.
- 2.2 Stockpiling
 - .1 Stockpile fill materials in areas designated by Contract Administrator. Stockpile native fill in a manner to prevent segregation. Protect stockpiled fill material from freezing.
 - .2 Protect fill materials from contamination.

PART 3- EXECUTION

- 3.1 Excavating
 - .1 Excavate to elevations and dimensions indicated for installation, construction and inspection of work specified.
 - .2 Excavate all vegetation and surficial organic material (topsoil, rootmat, peat, etc.)
 - .3 Excavate to well defined lines to minimize quantity of fill material required.
 - .4 Earth bottoms of excavations to be dry undisturbed soil, level, free from loose or organic matter.
 - .5 Notify Contract Administrator when bottom of excavation is reached
 - .6 Obtain Contract Administrator's approval of completed excavation.
 - .7 Keep excavation free of water while work is in progress.
 - .8 Protect open excavations against flooding and damage due to surface run off.
 - .9 Provide sediment control measures in accordance with Section 01 35 43 and as indicated

- elsewhere in the contract.
- .10 Excavation must not interfere with normal 45 degree splay of bearing from bottom of any footing.
- .11 When complete, have Contract Administrator inspect excavations to verify soil bearing capacity, depths and dimensions.
- .12 Correct unauthorized excavation at no extra cost as follows:
 - .1 Fill under bearing surfaces with Select Subgrade Material compacted to 95% SPMDD as directed by Contract Administrator.
- .13 Do not disturb soil within branch spread of trees or shrubs that are to remain. If excavating through roots, excavate by hand and cut roots with sharp saw.
- .14 Remove concrete masonry, paving, walks, rubble and other obstructions encountered in course of excavation.
- .15 Dispose of all excavated non re-usable material off site.
- .16 Do not obstruct flow of surface drainage or natural watercourses.

3.2 Backfilling

- .1 Do not commence backfilling until areas of work to be backfilled have been inspected and approved by Contract Administrator.
- .2 Areas to be backfilled and backfill material must be free from debris, snow, ice, water or frozen ground.
- .3 Prior to installation of granular materials, compact existing subgrade to obtain required bearing capacity. Remove **"soft"**, unstable or weak subgrade materials and fill with approved material.
- .4 Backfill simultaneously each side of walls and other structures to equalize soil pressures.
- .5 Where temporary unbalanced earth pressures are liable to develop on walls or other structures, erect bracing or shoring to counteract unbalance, and leave in place until removal is approved by Contract Administrator.
- .6 Place and compact fill materials in continuous horizontal layers not exceeding 150 mm compacted depth. Compact to at least 95% Standard Proctor Maximum Dry Density. Compact each layer before placement of the next layer.
- .7 Use methods to prevent disturbing or damaging buried services. Make good any damage.

3.3 Surplus Material

- .1 Dispose of material unsuitable for fill, grading or landscaping off site.

END OF SECTION

PART 1 - GENERAL

1.1 Section Includes

- .1 Materials and installation for fertilizing and preserving root systems of plants affected by changing grades or excavation.
- .2 Materials and installation of ground protection and other measures as deemed necessary to protect existing trees according to contract drawings and conditions outlined in this section.

1.2 Related Sections

- .1 Section 01 33 00 – Submittal Procedures
- .2 Section 01 56 00 – Temporary Barriers and Enclosures
- .3 Section 01 74 19 – Waste Management

1.3 References

- .1 Canadian Standards Association (CSA International)

 - .1 Material Safety Data Sheets (MSDS).

1.4 Submittals

- .1 Submittals in accordance with Section 01 33 00 - Submittal Procedures.
- .2 Submit monthly written reports on maintenance during warranty period to the NCC Representative identifying:
 - .1 Maintenance work carried out.
 - .2 Development and condition of plant material.
 - .3 Preventative or corrective measures required which are outside Contractor's responsibility.

1.5 Delivery, Storage and Handling

- .1 Separate waste materials for reuse and recycling in accordance with Section 01 74 19 – Waste Management.
- .2 Place materials defined as hazardous or toxic in designated containers.
- .3 Dispose of unused fertilizer material at official hazardous material collections site approved by the NCC Representative.
- .4 Handle and dispose of hazardous materials in accordance with CEPA, TDGA, regional and municipal regulations.
- .5 Do not dispose of unused fertilizer material into sewer system, into streams, lakes, onto ground in any other location where they will pose health or environmental hazard.
- .6 Ensure emptied containers are sealed and stored safely.

1.6 Scheduling

- .1 Obtain approval from the NCC Representative of schedule indicating beginning of Work.

1.7 Maintenance during Warranty Period

- .1 From time of acceptance by the NCC Representative to end of warranty period, perform following maintenance operations.
 - .1 Water to maintain soil moisture conditions for optimum growth and health of plant material without causing erosion.
 - .2 Apply fertilizer in early spring at manufacturer's suggested rate.
 - .3 Remove dead, broken or hazardous branches from plant material. Seek approval from NCC Representative prior to removing any branches. Pruning may only be carried out by a certified arborist.
 - .4 During periods of extended drought, wind or grading, trunks, limbs and foliage should be sprayed with water to remove accumulated construction dust.
 - .5 Maintain tree protection fencing in good repair.
 - .6 Maintain ground protection in good repair.

PART 2 - PRODUCTS

2.1 Materials

- .1 Fertilizer:
 - .1 To Canada Fertilizer Act and Fertilizers Regulations.
 - .2 Complete, commercial, slow release with 35 % of nitrogen content in water-insoluble form.
- .2 Anti-desiccant: commercial, wax-like emulsion.
- .3 Water: potable - free from impurities that inhibit growth.

2.2 Tree Protection Fencing

- .1 The modular construction fencing shall act as the tree protection fencing. Refer to Section 01 56 00 – Temporary Barriers and Enclosures.

2.3 Ground Protection

- .1 Mulch: 2" unpainted, untreated wood chip or bark mulch.
- .2 Granular A.
- .3 Steel plates.

PART 3 - EXECUTION

3.1 Identification and Protection

- .1 Do construction occupational health and safety in accordance with Section 01 35 30 – Health and Safety.
- .2 The trees on this site are ceremonial trees and are designated cultural assets of great importance. They are considered irreplaceable.
- .3 Extreme care must be taken to protect existing trees (including crown, trunk and root system) from damage, compaction and contamination during all stages of work. The roots of a tree can extend from the trunk to approximately 2-3 times the distance of the dripline.
- .4 No material, construction equipment, or vehicles are to be stored in the tree protection zone (TPZ) or within the critical root zone (drip line) of trees at any time.
- .5 No movement of vehicles, equipment or pedestrian in the TPZ will be permitted.
- .6 The use of tree trunks as a backstop, winch support, anchorage, as a temporary power pole, signpost or other similar function is prohibited.

- .7 Any disturbed vegetation or landscaping will be repaired or replaced without delay to the satisfaction of the NCC Representative.

3.2 Tree Protection Fencing (**Green colored**)

- .1 Supply and install **Green** colored tree protection fencing to protect existing trees.
- .2 Tree protection fencing must be installed before construction begins and equipment arrives on site and maintained until the project is completed.
- .3 Removal of fences, even temporarily to allow deliveries or equipment access is not allowed unless approved by the NCC Representative and ground protection is installed.

3.3 Ground Protection within the Critical Root Zone

- .1 Ground protection must be installed before construction begins and equipment arrives on site and maintained until the project is completed.
- .2 In areas where the critical root zone cannot be fenced and is within the limits of work, wood chip or bark mulch must be installed to a minimum depth of 6", followed by a layer of Granular A with ¾" plywood sheets laid on top. Steel plates can also be used in place of plywood. Leave the tree trunks clear of mulch. Install where indicated in the drawings and as directed by the NCC Representative to protect the sensitive root zone.
- .3 Asphalt removal from within the critical root zone must be supervised by a certified arborist. Once removed, the granular base shall be protected from repeated compaction from vehicular circulation by the placement of steel plates.

3.4 Excavation within the Critical Root Zone

- .1 Limits of excavation to be approved by the NCC Representative prior to commencing work.
- .2 Hand digging, hydraulic, or pneumatic excavations are permitted methods for excavation within the critical root zone.
- .3 Do not cut or damage roots greater than 25mm (1") diameter. When larger roots are encountered, consult a certified arborist before proceeding. If there are no roots greater than 25mm diameter, leave at least two (2) of the largest roots per meter of trench. Retain as many roots as possible.
- .4 Prune roots that must be removed using sharp, clean tools such as secateurs or a landscape handsaw. Make a clean cut and leave as small a wound as possible. All root pruning to be supervised by a certified arborist.
- .5 If any roots are exposed during construction, they should be immediately reburied with soil or wrapped in peat moss and burlap and kept moist until they can be buried permanently. Avoid exposing roots during hot, dry weather.
- .6 Directional micro-tunneling and boring may be permitted within the limits of the critical root zone subject to the approval of the NCC Representative.
- .7 Open face cuts that are consistent with an approved plan and that require root pruning, require the services of a certified arborist. An exploratory dig, either by hand or using a low water pressure hydro vacuum, or air spade method, must be completed prior to commencing with open face cuts.

3.5 Lowering Grade Around Existing Tree

- .1 Begin Work in accordance with schedule approved by the NCC Representative.
- .2 Cut slope not less than 500 mm from tree trunk to new grade level.
- .3 Excavate to depths as indicated. Protect from damage root zone which is to remain.
- .4 When severing roots at excavation level, cut roots with sharp tools.
- .5 Cultivate excavated surface manually to 15 mm depth.
- .6 Prepare homogeneous soil mixture consisting by volume of:
 - .1 60 % excavated soil cleaned of roots, plant matter, stones, debris.

- .2 25 % coarse, clean sterile sand.
- .3 15 % organic matter.
- .4 Grade 2:12:8 fertilizer at rate of 1.5 kg/m³.
- .7 Place soil mixture over area of excavation to finished grade level. Compact to 85 % Standard Proctor Density.
- .8 Water entire root zone to optimum soil moisture level.

3.6 Watering

- .1 Ensure that the ongoing maintenance and irrigation of the site vegetation is performed by a qualified contractor, while the construction hoarding is in place.
- .2 During the construction period, water existing trees within protected areas by applying water to surface, soaking area 1.5 times the diameter of the dripline of each tree.
- .3 Watering schedule to be approved by the NCC Representative.

3.7 Damage to Trees

- .1 Any damage or injury to trees shall be reported as soon as possible to the NCC Representative.
- .2 A substantial fine, as determined by the NCC Representative, may be enforced for any damage to the trees including unauthorized pruning.

3.8 Pruning

- .1 If pruning is required, consult an arborist and seek approval from the NCC Representative.
- .2 Prune in accordance with Section 32 93 45 - Tree Pruning.
- .3 Prune crown to compensate for root loss while maintaining general form and character of plant.

3.9 Anti-Desiccant

- .1 Apply anti-desiccant to foliage where applicable and as directed by the NCC Representative.

PART 2 – PRODUCTS

2.1 Materials -
General Requirements

- | | |
|-----|---|
| .1 | Any granular materials specified for the various works, on the drawings or in other sections of the specifications or by direction of the Contract Administrator, shall conform to this material specification for the class of granular material required. |
| .2 | The materials shall be selected or produced from pits or quarries to conform to the requirements specified herein for each class of granular materials. |
| .3 | Material retained on the number 4 sieve shall consist of hard durable particles or fragments of stone or gravel. |
| .4 | Materials that break up when alternatively frozen and thawed or wetted and dried shall not be permitted. |
| .5 | Fine aggregate passing the Number 4 sieve shall consist of natural or crushed sand, and, material passing the Number 200 sieve shall consist of fine mineral particles. |
| .6 | The material shall be free from vegetable matter and lumps or balls of clay. |
| .7 | The material shall be non-plastic and non-frost susceptible. |
| .8 | Blending to obtain the correct gradation will be permitted when the Contractor demonstrates that he can produce a correct gradation and has a plant capable of producing to the satisfaction of the Contract Administrator. |
| .9 | The Contractor shall advise the Contract Administrator two weeks in advance of the intent use of any of the specified materials to allow sufficient time for sampling and testing. The Contractor shall submit samples of granular materials to be used in the works if so requested by the Contract Administrator. |
| .10 | Approval of a sample does not mean acceptance of the whole |

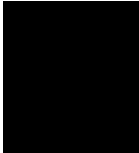

GRANULAR MATERIALS

source. Each load of material received at the job site shall be subject to all the requirements of that material.

- .11 All gradation requirements are shown as percentage by weight passing U.S. Standards Sieves, A.A.S.H.O. M-92-65.

2.2 Materials:
Specific Requirements

- .1 Granular "A":
.1 This material shall conform to OPSS 1010.
- .2 Granular "B" Type II
.1 This material shall conform to OPSS 1010
- .3 Granular "D" (stonedust):
.1 This material shall be crushed rock screenings or stone dust.

PART 3- EXECUTION

- | | | | |
|-----------------------|----|---|--|
| 3.1 Layout of Pathway | .1 | Notify Contract Administrator after completion of each stage and receive approval of layout prior to proceeding to next stage. Stages: .1 Staking of centerline. .2 Subgrade .3 Sub-base .4 Prior to laying of Granular D, Contract Administrator to inspect alignment and grades | |
| | .2 | All curves shall be true. No tangents shall be accepted at the beginning or end of curves. Obtain approval of Contract Administrator on site during work. | |
| 3.2 Inspection | .1 | Check graded subgrade for conformity with elevations and sections before placing granular base materials and obtain approval of Contract Administrator. | |
| | .2 | Proof roll graded subgrade surface with a heavy smooth drum roller (weight and type of roller to be approved by Contract Administrator). .1 Check for unstable areas. .2 Check for areas requiring additional compaction. .3 Notify Contract Administrator of unsatisfactory conditions. | |
| 3.3 Sub-base | .1 | Refer to Section 31 23 10, Excavating and Backfilling | |
| 3.4 Base Course | .1 | Place Granular 'A' and Granular 'B' base materials to compacted thickness as indicated. | |

PATHWAY CONSTRUCTION

- .2 Place in layers not exceeding 150mm compacted thickness. Compact each layer to 100% maximum dry density as determined by Standard Proctor Density.
- .3 Obtain approval of Contract Administrator prior to laying of stonedust .

3.5 Surface Course

- .1 Place stonedust surface course to compacted thickness as indicated and compact to 98% SPMDD.

3.6 Reinstatement of Edges

- .1 Reinstatement of edges of pathway with approved earth fill and topsoil as indicated.

- 1.3 Protect existing items designated to remain and materials designated for salvage and relocation. In event of damage, immediately replace such items or make repairs to the satisfaction of Contract Administrator and at no additional cost to the Commission.
- 1.4 Site Conditions
 - .1 Contractor to contact appropriate utilities to verify presence and location of all overhead and underground services and establish location for all such services in the field before commencing work. Report any discrepancies to Contract Administrator
- 1.5 Basis of Payment
 - .1 Basis of payment clauses included in references are deleted in their entirety and will be measured and paid as per Section 01 10 00 – Pay Items Description

PART 2 - PRODUCTS

- 2.1 Materials
 - .1 Performance Graded HL3 Hot Mix Asphalt – (Beige colored and black colored) submit samples prior to commencement of work. :
 - .1 This material shall conform to OPSS 310 as amended by City of Ottawa Special Provisions F-3104
 - .2 Tack Coat - (Beige colored and black colored) submit samples prior to commencement of work. :
 - .1 This material shall conform to OPSS 310 as amended by City of Ottawa Special Provision F-3107

PART 3 - EXECUTION

- 3.1 Asphalt Paving
 - .1 The Contractor shall notify the Contract Administrator five (5) days prior to paving.
 - .2 The Contractor must obtain the Contract Administrators approval before placing any asphalt.
 - .3 Asphalt is to be placed to thicknesses, grades and lines as shown on plans or as indicated by the Contract Administrator
 - .4 The Contractor paving shall be conducted as specified in OPSS 310 or as directed by the Contract

Administrator

- .5 Step joints shall be used as indicated where new asphalt will connect to existing pavement

3.2 Quality Control and Assurance

- .1 OPSS 310 sub-sections 310.07.01 and 310.07.05 are deleted in their entirety.
- .2 The Contractor must supply a minimum of one (1) quality assurance sample and one (1) referee sample to the Contract Administrator. The samples shall be randomly chosen or as directed by the Contract Administrator. The Contract Administrator may request additional samples.
- .3 The samples shall be delivered within 4 hours to a location as specified by the Contract Administrator.
- .4 Samples shall be accompanied by the City of Ottawa 'Quality Assurance Sample Data Sheet' for Hot Mix Asphalt and completed to the satisfaction of the Contract Administrator.

3.3 Compaction

- .1 Compaction requirements shall be as specified in OPSS sub-section 310.08.015.03 and meet the requirements specified in OPSS 310, Table 9, to the satisfaction of the Contract Administrator
- .2 The Contractor shall conduct the compaction testing and supply the Contract Administrator with the results.

END OF SECTION

PART 1- GENERAL

1.1 RELATED SECTIONS

- .1 Section 31 23 10 – Excavation and Backfilling
- .2 Section 31 05 17 – Granular Materials

1.2 PROTECTION

- .1 Prevent damage to landscaping, curbs, sidewalks, trees, fences, roads and adjacent property. Make good any damage.

1.3 SAMPLES

- .1 Submit a full-size sample of each type of unit paver used.
- .3 Install a mock-up of pavers layout for NCC Representative approval's before commencement of work. Mock-up to be at minimum 1m x 1m.

PART 2- PRODUCTS

2.1 MATERIALS

- .1 Prefabricated concrete unit pavers:
 - .A Dimension : 100x300x100mm
Range color: Dark Grey
Finish: Smooth
 - .b Dimension : 100x300x100mm
Range color: Light Grey
Finish: Smooth
- .2 On granular base: 150mm granular 'A' & 150mm granular 'B'
- .3 Laying Course: dry clean masonry sand, 25mm thickness
- .4 Joint materials: Polymeric Sand, dark Grey colour
- .5 Edge Restraint: Flexible PVC such as SNAP EDGE (or approved equal) with min 300mm spikes at 300mm O.C..

PART 3- EXECUTION

3.1 SUBGRADE

- .1 Ensure that subgrade preparation conforms to levels and compaction required to allow for installation of granular base.

- .1 Ensure that subgrade preparation conforms to levels and compaction required to allow for installation of granular base.

3.2 GRANULAR BASE

- .1 Place base to compacted thicknesses as indicated on drawings.
- .2 Compact to a density of not less than 95% Standard Density in accordance with ASTM D698.
- .3 Shape and roll alternately to obtain a smooth, even and uniformly compacted granular base and ensure conformity of grades with finish surface.
- .4 Apply water as necessary during compaction to obtain specified density. If granular base is excessively moist, aerate by scarifying with suitable equipment until moisture content is corrected.
- .5 In areas not accessible to rolling equipment, compact to specified density with approved mechanical tampers.
- .6 Ensure top of granular base does not exceed plus or minus 10 mm of finished grade, less combined thickness of sand laying course plus concrete unit pavers.

3.3 LAYING COURSE

- .1 Place masonry sand laying course to compacted thickness as indicated on drawings.
- .2 Ensure laying course is dry (4-8% moisture content) prior to placement of unit pavers.

3.4 SURFACE COURSE

- .1 Install unit paving true to grade, in location, layout and pattern as indicated on drawings.
- .2 Install stone step tight to building face, and in same manner as unit paving on granular base and sand levelling course (slope step away from building).
- .3 Where required, cut unit pavers accurately without damaging edges.
- .4 Tamp down and level pavers with mechanical plate vibrator on minimum 19 mm thick plywood until pavers are true to grade and free of movement.
- .5 Fill spaces between pavers by sweeping polymeric sand into joints, vibrating, wetting and cleaning as per manufacturer's instructions. Completely fill joints.
- .6 Surface of finished pavement: free from depressions exceeding 5 mm as measured with 3 m straight edge.
- .7 Sweep surface course clean.

END OF SECTION

PART 1 - GENERAL

- 1.1 Related Works Specified Elsewhere
 - .1 Site Work Demolition and Removals Section 02 41 13
 - .2 Asphalt Paving Section 32 12 16
- 1.2 Basis of Payment
 - .1 Basis of payment clauses included in references are deleted in their entirety and will be measured and paid as per Section 01 10 00 – Pay Items Description

PART 2 - PRODUCTS

- 2.1 .1 Paint:
 - .1 To CGSB 1-GP-74M, alkyd traffic paint.
 - .2 Color: white
 - .3 Upon request, NCC Representative will supply a qualified product list of paints applicable to work. Qualified paints may be used but NCC Representative reserves right to perform further tests.
 - .2 Thinner: to CGSB 1-GP-5M.
 - .3 Templates and Stencils: as required to produce symbols as indicated on drawings. Submit manufacturer's data including size of each stencil.
- 2.2 EQUIPMENT REQUIREMENT
 - .1 Paint applicator to be an approved pressure type mobile distributor capable of applying paint in single solid lines. Applicator to be capable of applying marking components uniformly, as rates specified, and to dimensions as indicated, and to have positive shut-off.

PART 3 - EXECUTION

- 3.1 CONDITIONS OF SURFACES
 - .1 Pavement surface to be dry, free from ponded water, frost, ice, dust, oil, grease and other foreign materials.
 - .2 Remove existing markings that will interfere with legibility of new painted lines and symbols.
- 3.2 APPLICATION
 - .1 Lay out pavement markings and obtain approval by NCC Representative.
 - .2 Unless otherwise approved by NCC Representative, apply paint only when air temperature is above 10°C, wind speed is less than 60 km/h and no rain is forecast within next 4 h.
 - .3 Apply traffic paint evenly at rate of 3 m²/L.
 - .4 Do not thin paint unless approved by NCC Representative.
 - .5 Symbols and letters to conform to dimensions indicated.
 - .6 Paint lines to be of uniform color and density with sharp edges.
 - .7 Width of paint lines to be 65 mm.
 - .8 Thoroughly clean distributor tank before refilling with paint.

3.3 TOLERANCE

- .1 Paint markings to be within plus or minus 12 mm of dimensions indicated.
- .2 Remove incorrect markings as indicated by NCC Representative.

3.4 PROTECTION OF WORK

- .1 Protect pavement markings until dry.

- .1 01 33 00 - Shop Drawing, product data and samples

1.2 SUBMITTALS

- .1 Submit product data in accordance with Section 01 33 00 – Shop Drawing, product data and samples
- .2 Submit required shop drawings in accordance with Section 01 33 00 - Shop Drawing, product data and samples.
- .3 Indicate dimensions, sizes, assembly, anchorage and installation details for each furnishing specified.
- .4 Provide maintenance data for care and cleaning of site furnishings.

1.3 DELIVERY, STORAGE AND HANDLING

- .1 Damaged furniture and components will not be accepted and will have to be replaced at no charge for the NCC.

PART 2- PRODUCTS

2.1 BENCHES

- .1 Type: Model C-140 from the [REDACTED] as supplied by [REDACTED].
 - Specifications:
 - .1 C-140 components
 - .2 6 foot length
 - .3 Standard metalwork color: black
 - .4 2x3 IPE Slats
 - .5 No stain
 - Installation :
 - .1 Install and secure to asphalt covered concrete base (refer to landscape plans)
 - .2 Clearance for 3/8" (10mm) anchor bolts (anchor bolts to be provided by contractor)
 - .3 Mounting: It is not recommended to locate anchor bolts until bench is in place.

2.2 WASTE RECEPTACLE

- .1 Type: Model S-42 from the [REDACTED] as supplied by [REDACTED].
 - .1 Standard metalwork color: black
 - .2 Mounting plate: (3) anchor bolt holes.
 - Installation :
 - .1 Install and secure to asphalt covered concrete base (refer to landscape plans)
 - .2 Clearance for 3/8" (10mm) anchor bolts (anchor bolts to be provided by contractor)

- .3 Mounting: It is not recommended to locate anchor bolts until bench is in place.

2.3 BOLLARD (BLACK) - FIXED BOLLARD

- .1 Model: Maglin MTB500-B1 Bollard
 - a. Dimensions:
 - 1. Height: 34.5" (87.6 cm)
 - 2. Diameter: 4.5" (11.4 cm)

PART 3- EXECUTION

3.1 INSTALLATION

- .1 Assemble furnishings in accordance with manufacturer's instructions.
- .2 Install furnishing true, plumb, anchored and firmly supported, as indicated by the NCC Representative.
- .3 Touch-up damaged finishes to approval of the NCC Representative.

END OF SECTION

PARTIE 1 - GENERAL

- 1.1 Related Work Specified Elsewhere
- | | |
|-----------------------------|------------------|
| .1 Excavating & Backfilling | Section 31 23 10 |
| .2 Seeding | Section 32 92 20 |
| .3 Sodding | Section 32 92 23 |
- 1.2 Testing
- .1 Obtain Contract Administrator's initial approval of imported topsoil at source.
 - .2 Test existing and imported topsoil for NPK, Mg, soluble salt content, organic matter and pH value prior to delivery to site.
 - 1 Submit 0.5 kg sample of topsoil to testing laboratory and indicate intended use.
 - 2 Determine requirements for amendments to bring pH value of soil to 5.5 to 7.7 level.
 - 3 Submit two copies of soil analysis and recommendations for corrections to Contract Administrator.
 - .4 Inspection and testing of topsoil will be carried out by testing laboratory designated by Contract Administrator.
 - .5 National Capital Commission will pay cost of testing.
- 1.3 Scheduling of Work
- .1 Schedule placing of topsoil to permit immediate seeding and sodding operations.

PARTIE 2 - PRODUCTS

- 2.1 Bioswale soil (Atlantis parking area)

Mix ratio:

50% sand (0.05-2mm)

30% soil consisting of:

50-85% sand

0-50% silt (0.002-0.05mm)

10-20% clay (<0.002mm)

- 1.5-10% organic matter
- 20% well decomposed, stable compost, free of weeds and weed seeds
- pH: 5.5-7.5

- 2.2 [REDACTED] (seeding and reforestation soil amendment areas)

[REDACTED] as supplied by [REDACTED] or approved equal. Submit sample and name of supplier five (5) days in advance and obtain approval by NCC representative prior to shipping to site.

- 2.3 [REDACTED] (soil amendment under existing trees within seeding area)

[REDACTED] as supplied by [REDACTED] or approved equal. Submit sample and

name of supplier five (5) days in advance and obtain approval by NCC representative prior to shipping to site.

2.4 Topsoil: (imported should be avoided, re-use on site soil for all grading requirements)

- .1 Stockpiled topsoil: see Section 31 23 10
- .2 If additional soil is required, it should meet the following requirements: friable loam, neither heavy clay nor of very light sandy nature containing minimum of 10% organic matter for sandy loams to maximum of 25% by volume. Free from subsoil, roots, grass, weeds, toxic materials, stones, foreign objects and an acidity range (Ph) of 5.5 to 7.5. Topsoil containing crabgrass, couch grass or other noxious weeds, not acceptable.

PARTIE 3 - EXECUTION

3.1 Preparation

- .1 Grade subgrade, eliminating uneven areas and low spots, ensuring positive drainage. Remove stones larger than 50 mm diameter and other deleterious materials. Remove subsoil that has been contaminated with oil, gasoline or calcium chloride. Dispose of removed materials as directed.
- .2 Cultivate entire area receiving topsoil to depth of 50 mm. Core aerate in those areas where equipment used for hauling and spreading has compacted subgrade. Do not cultivate soils around existing trees and shrubs.

3.2 Reuse of Existing Topsoil

- .1 Unless otherwise indicated existing stockpiled topsoil shall be used for all reinstatement. Imported sources of topsoil shall only be used when all approved sources of existing topsoil have been used.

3.3 Spreading of Topsoil

- .1 Do not spread topsoil until Contract Administrator has inspected and approved subgrade.
- .2 Spread topsoil with adequate moisture in uniform layers during dry weather over approved, dry, unfrozen subgrade, where seeding is indicated.
- .3 Bring topsoil up to finished grade.
- .4 Remove stones, roots, grass, weeds, construction materials, debris and foreign non-organic objects from topsoil.
- .5 Manually spread topsoil around trees, plants, surface utilities and other obstacles.

3.4 Soil Amendments

- .1 If required, apply lime, sulphur or other soil amendment at rate determined from soil sample test.

- .2 Mix soil amendment well into full depths of topsoil by cultivating.

3.5 Finish Grading

- .1 Fine grade entire topsoiled area to contours and elevations as indicated or as directed. Eliminate rough spots and low areas to ensure positive drainage.
- .2 Roll topsoil with 50 kg roller, minimum 900 mm wide, to compact and retain surface.
- .3 Leave surface smooth, uniform, firm against deep foot printing, with fine loose texture.

3.6 Surplus Material

- .1 Dispose of surplus topsoil not required for fine grading/landscaping off site.

2.1 MATERIALS

- .1 Seed:
.1 [REDACTED] as supplied by [REDACTED] or approved equal.
Contact info: [REDACTED]
(Sowing rate of 15,0 g/m²)
* add additional Lolium Multiflorum nurse crop to mix (Sowing rate of 3 g/m²)
- .2 [REDACTED] as supplied by [REDACTED] or approved equal.
Contact info: [REDACTED]
(Sowing rate of 25,0 g/m²)
- .3 [REDACTED] as supplied by [REDACTED] or approved equal. Contact info: [REDACTED]
(Sowing rate of 4,0 g/m²)
* add additional Lolium Multiflorum nurse crop to mix (Sowing rate of 3 g/m²)
- .4 [REDACTED] as supplied by [REDACTED] or approved equal. Contact info: [REDACTED]
(Sowing rate of 7 g/m²)
- .5 **Type 1- cool custom seed mix**
Agastache foeniculum - 10%
Allium cernuum - 4%
Asclepias syriaca - 5%
Asclepias verticillata - 4%
Aster laevis - 7%
Echinacea pallida - 9%
Iris Versicolor - 5%
Liatris Spicata - 12%
Monarda fistulosa - 5%
Physostegia Virginiana - 2%
Tradescantia ohiensis - 5%
Verbena Hastata - 5%
- Grasses:
Carex pensylvanica -4%
Carex Vulpinoida -4%
Deschampsia flexuosa -4%
Elymus Canadensis -5%
Lolium multiflorum -8%
Schizachyrium scoparium -2%
- (Sowing rate to be determined by supplier)
* add additional Lolium Multiflorum nurse crop to mix (Sowing rate of 3 g/m²)
- .6 **Type 2- warm custom seed mix**
Perennials:
Achillea millefolium -8%
Asclepias tuberosa -5%

| Lolium multiflorum | -8% |
| Sorghastrum nutans | -4% |
| Sporobolus heterolepis | -4% |

(Sowing rate to be determined by supplier)

* add additional Lolium Multiflorum nurse crop to mix (Sowing rate of 3 g/m²)

.7 Mown lawn

55% *Festuca rubra*
30% *Poa pratensis*
15% *Lolium perenne*

(Sowing rate to be determined by supplier)

- .2 Packages will be individually labeled in accordance with 'Seeds Regulations' and indicate clearly the name of the supplier, species, content, grade and mass.
- .3 Use appropriate agriculture broadcast or no till planter seeder and mulching equipment. The Contract Administrator to approve all proposed products and equipment for the work. Ensure soil cover over all new seeds.

2.2 WATER

- .1 Free of impurities that would inhibit germination and growth.
- .2 Water must be supplied from a designated source.

2.3 CELLULOSE-BASED MULCH (PAPER MULCH)

- .1 Use only cellulose-based mulch if seeds were broadcasted to ensure moisture retention during germination. Do not use a tackifier since wildflower seeds can't penetrate through.

PART 3 - EXECUTION

3.1 WORKMANSHIP

- .1 Do not perform work under adverse field conditions as determined by the NCC Representative.
- .2 Additional care shall be taken when seeding adjacent to watercourses or paved area to ensure that seed does not spread or blown onto those areas.

3.2 PERMANENT COVER

- .1 Seeding shall not be carried out under adverse conditions, of high wind, frozen ground or ground covered with snow, ice or standing water.
- .2 Sowing shall be done during the following periods:
 1. Between May 15 and June 15th;
 2. Between September 1st and October 15. (Preferable)
 3. Dormant seeding after November 1st when daytime temperatures are consistently below 5oC.

3.3 SEED BED PREPARATION ON DISTURBED SOIL OR NEW CONSTRUCTION SITE

- .1 Mow existing weeds as low as possible and disposed off-site.
- .2 Remove and dispose of all debris, stones 50 mm in diameter and larger, soil contaminated by oil, gasoline and other deleterious materials off-site.
- .3 Aerate all compacted soil due to construction traffic.
- .4 Add 50mm of live mulch (as supplied by [REDACTED] or approved equivalent) and till in top 200mm of existing soil.
- .5 Do not carry out seed bed preparation more than 1 calendar day before the seeding operation so the Contractor shall avoid run-off problems.
- .6 Surface preparation will produce a soil surface that is predominantly fine in nature (particle sizes of 5 to 10 mm), with no more than five lumps measuring between 10-25 mm in diameter in any 1m² area, and no lumps larger than 25 mm.

SEED BED PREPARATION UNDER EXISTING TREES

- .1 Mow existing grass as low as possible and dispose off-site.
- .2 Remove and dispose of all debris, stones 50 mm in diameter and larger, soil contaminated by oil, gasoline and other deleterious materials off-site.
- .3 Add 50mm of [REDACTED] soil (as supplied by [REDACTED] or approved equivalent) and spread by hand under protected root zone. Ensure mulch doesn't touch trunk at any time
- .4 Do not carry out seed bed preparation more than 1 calendar day before the seeding operation so the Contractor shall avoid run-off problems.
- .5 Surface preparation will produce a soil surface that is predominantly fine in nature (particle sizes of 5 to 10 mm), with no more than five lumps measuring between 10-25 mm in diameter in any 1m² area, and no lumps larger than 25 mm.

SEED BED PREPARATION IN UNDISTURBED GRASS AREAS

- .1 Mow existing grass as low as possible. and disposed off-site.
- .2 Remove and dispose of all debris, stones 50 mm in diameter and larger, soil contaminated by oil, gasoline and other deleterious materials off-site.
- .3 Remove the top 75mm of existing grass and soil with a sod cutter off-site.
- .4 Add 50mm of live mulch (as supplied by [REDACTED] or approved equivalent) and till in top 200mm of existing soil.
- .5 Do not carry out seed bed preparation more than 1 calendar day before the seeding operation so the Contractor shall avoid run-off problems.
- .6 Surface preparation will produce a soil surface that is predominantly fine in nature (particle sizes of 5 to 10 mm), with no more than five lumps measuring between 10-25 mm in diameter in any 1m² area, and no lumps larger than 25 mm.

3.4 HYDROSEEDING (HYDRAULIC SEEDING)

- .1 This application method will **NOT** be accepted for any of the seeding within this contract. It does not ensure firm seed to soil contact and prevents seed stratification to happen which will lead the seed to germinate at the wrong time of the year.

3.5 MECHANICAL PLANTERS

- .1 Use appropriate agriculture broadcast or no till planter seeder. Specific models that can successfully plant native grasses and flowers include the Tye drill, Truax drill, John Deere Rangeland drill, and properly outfitted Brillion seeders.
- .2 Ensure soil cover over all new seeds.
- .3 Roll the seeded area after planting. This step is very important for germination success
- .4 The Contract Administrator to approve all proposed products and equipment for the work.
- .5 Sowing rate to be followed and never increased as it will result in a dominant grass meadow rather than flower meadow where indicated.

3.6 CELLULOSE-BASED MULCH (PAPER MULCH)

- .1 All bare soil areas shall be stabilized with paper mulch immediately after seeding.
- .2 The Contract Administrator to approve all proposed products and equipment for the work.

3.7 MAINTENANCE DURING ESTABLISHMENT AND 2 YEAR WARRANTY PERIOD

Establishment:

- .1 Water seeded areas to maintain optimum soil moisture level for germination and continued growth of grass. Control watering to prevent washouts.
- .2 Gully formations and washouts as a result of rain events greater than 20 mm per day shall be repaired, including regrading and re-seeding.
- .3 Seeded areas shall be accepted by the NCC Representative provided that:
 - .1 seeded areas are properly established;
 - .2 seeded areas are free of weeds and bare or dead spots;
 - .3 no surface soil is visible when grass has been cut to a height of 50 mm;
(mown lawn only)
 - .4 seeded areas have been cut minimum 2 times, the second cut within 24 hours prior to acceptance.
- .4 Areas seeded in fall will be accepted the following spring, one month after the beginning of the growing season, provided the acceptance conditions are met.
- .5 The Contractor shall maintain the seeded areas including mowing until acceptance by the NCC Representative. Unacceptable areas shall be reseeded.
- .6 Weed control:
 - .1 Do not pull weeds at any time. Mowing or hand cutting will be accepted.

First year of maintenance:

- .1 Weed control:
 - a. Mow weeds when they reach a maximum height of at 200-250mm height on a regular basis to prevent them from self-seeding throughout 1st growing season.
 - b. A flail-type mower works best, as it chops up the weeds so they can dry out rapidly. Rotary mowers and sickle bar mowers will not be accepted.

- c. Do not pull weeds at any time due to soil disturbance. Large weeds can be cut by hand if required.
- d. If weeds become thick by mid-summer they should be cut back, along with the nurse crop. If weeds are thin, cut when in bloom, before they set seed.
- e. Do not mow down the year's growth at the end of the season. Leave it to help protect the young plants over the winter. The plant litter and the snow that it catches insulate the soil from rapid changes in soil temperatures, which can cause plant losses due to frost heaving.

Second year of maintenance:

- .1 Weed control:
 - a. Mow the meadow in spring of the second year right to the ground and rake off the cuttings.
 - b. If weeds remain a problem in the second year, mow the meadow in late spring or early summer (before the weeds reach 200-250mm height)
 - c. A flail-type mower works best, as it chops up the weeds so they can dry out rapidly. Rotary mowers and sickle bar mowers will not be accepted.

END OF SECTION

PART 1 GENERAL

1.1 RELATED SECTION

- .1 32 91 21.01 – Topsoil and finish grading
- .2 32 93 12.01 – Plant maintenance and warranty

1.2 SOURCE QUALITY CONTROL

- .1 The Contractor shall commence sourcing the specified material immediately upon award of the Contract.
- .2 Plant materials shall be conformed to species specified in the contract document. All plant materials shall be identified with their complete name and caliper.
- .3 No substitutions will be considered unless the Contractor can demonstrate to the NCC Representative's satisfaction that a prolonged and widespread search for the specified cultivars has been undertaken. The NCC Representative's written approval of plant substitution is required.
- .4 Obtain approval of source of plant material. Acceptance and selection of plant at its source does not prevent rejection on site prior to or after planting operations.
- .5 After harvesting and prior to shipping any plants from the growing nursery, notify the NCC Representative to allow for an inspection of the plants at the growing nursery to assure that all harvesting requirements have been satisfied.

1.3 SHIPMENT AND PRE-PLANTING CARE

- .1 All plants shall be inspected by the Contractor for damage in transit. No defective material shall be delivered to the site. Material subsequently damaged shall be replaced immediately at no additional cost for the NCC.
- .2 Protect plant materials against abrasion, exposure and extreme temperature change during transit.
- .3 Keep roots moist and protected from sun and wind

1.4 STORAGE AND PROTECTION

- .1 Protect plant materials from frost, excessive heat, wind and sun during delivery.
- .2 Immediately store and protect plant material which will not be installed within 1 hour after their arrival on site, in storage locations approved by NCC Representative.
- .3 Protect plant material from damage during transportation
 - .1 When delivery distance is less than 30 km, and vehicle travels at speeds under 80 km/h, tie tarpaulins around plants or over vehicle box.
 - .2 When delivery distance exceeds 30 km or vehicle travels at speeds over 80 km/h, use enclosed vehicle where practical.

- .3 Protect foliage and root balls using anti-desiccants and tarpaulins, where use of enclosed vehicle is impractical due to size and weight of plant material.
- .4 Protect stored plant material from frost, wind and sun and as follows:
 - .1 For pots and containers, maintain moisture level in containers.
 - .3 For balled and burlapped, and wire basket root balls, place to protect branches from damage. Maintain moisture level in root zones.

PART 2 PRODUCTS

2.1 PLANT MATERIALS

- .1 Comply with Guide Specification for Nursery Stock, latest edition, of Canadian Nursery Trades Association referring to size and development of plant material and root ball.
- .2 All plant material to come from a commercial nurseries. The plant material shall be grown in zone 4b or 5a, according to the hardiness zones for plants in Canada established by Agriculture Canada.
- .3 Use plants with strong fibrous root systems free of disease, insects, defects or injuries and structurally sound. Plants must have been root pruned regularly, but not later than one growing season prior to arrival on site.
- .4 Substitution to plant material as indicated on planting plan are not permitted unless written approval has been obtained as to type, variety and size.
- .5 Size indicated are the minimum allowable after pruning.

2.2 WATER

- .1 Free of impurities that would inhibit plant growth.

2.3 MYCORRHIZE INOCULANTS

- .1 Apply mycorrhize inoculants [REDACTED] of [REDACTED], following application instructions, or an equivalent approved by the NCC and registered in Canada;

2.4 STAKES

- .1 No staking required

2.5 GUYING COLLAR

- .1 N/A

2.6 TREE TRUNK PROTECTION

- .1 'Surtronic' fine mesh trunk wraps as supplied by Dendrotik or approved equal.

2.7 MULCH

- .1 [REDACTED] Composted Pine Mulch as supplied by [REDACTED] or approved equal. Submit sample and name of supplier five (5) days in advance and obtain approval by NCC representative prior to shipping to site.

2.8 GROWING MEDIUM

Growing medium according to section 32 91 21.01 – Topsoil and finish grading

2.9 ANTI-DESICCANT

- .1 Wax-like emulsion to provide film over plant surfaces reducing evaporation but permeable enough to permit transpiration.

2.10 BONEMEAL

- .1 Bonemeal: raw bonemeal, finely ground (minimum analysis of 4% nitrogen and 20% phosphoric acid) to be added at the bottom of each tree and shrub planting hole as per manufacturer recommendations. Mix bonemeal thoroughly with soil.

PART 3 EXECUTION

3.1 PRE-PLANTING PREPARATION

- .1 Delivered plant material to be inspected and approved NCC Representative.
- .2 NCC Representative to approve layout mockup of plant material for all beds until advised differently. Planting bed grades will also need to be approved before planting.

3.2 PLANTING TIME

- .1 Plant materials shall be planted from May 15 to June 30 or from August 15 to October 1, unless otherwise approved by the NCC Representative
- .2 The Contractor shall arrange for all plant species recommended for spring only digging, to be dug and containerized in the spring, immediately upon award of the Contract.
- .3 The foliage of deciduous trees which have broken buds shall be sprayed with anti-desiccant to slow down transpiration prior to transplanting.

3.3 EXCAVATION

- .1 Excavate planting holes to width and depth as indicated on drawings.
- .2 The sides of the planting hole shall be scarified so that water and roots can readily penetrate.

- .3 Place mycorrhize inoculants and bonemeal in the bottom of each plant hole as per manufacturer recommendation.

3.4 PLANTING

- .1 Planting trees and shrubs vertically in the places indicated, oriented in a manner to produce the best possible visual effect with the surrounding structures such as buildings, roads and sidewalks.
- .2 For burlapped root balls, cut away top one third of wrapping and wire basket without damaging root ball. Do not pull burlap or rope from under root ball.
- .3 For container stocks or root balls in non-degradable wrapping, remove entire container or wrapping without damaging root ball.
- .4 Place plant material at a depth similar to depth in nursery.
- .5 Backfill with existing soil in 150 mm layers. Tamp each layer to eliminate air pockets. When two thirds of depth of planting pit has been backfilled, fill remaining space with water. After water has penetrated into soil, backfill to finish grade. Form watering saucer as indicated.
- .6 Water plant material thoroughly.
- .7 After soil settlement has occurred, fill with soil to finish grade.
- .8 Spread 75mm of mulch over all areas of bare soil. Mulch heavily contaminated with soil is not acceptable. Diameter of 400mm around all plant material.
- .9 Remove dead and injured branches and branches that rub causing damage to bark.
- .10 Dispose of burlap, wire and container material off site.

3.5 TRUNK PROTECTION

- .1 Install fine mesh trunk wraps on deciduous trees as indicated.

3.6 TREE SUPPORTS

- .1 No staking required

3.7 PROTECTION DURING CONSTRUCTION

- .1 The Contractor shall protect all work and materials from damage due to planting operations; operations by other Contractors; or trespassers. Maintain protection during installation until acceptance. Treat, repair or replace damaged work immediately.
- .2 Damage done to any of the work by the Contractor, or any of their sub-contractors, shall be replaced by the Contractor at their own expense.

3.8 MAINTENANCE PRIOR TO FINAL INSPECTION

- .1 Perform following maintenance operations from time of planting until the project has been approved by the NCC Representative and the interim certificate of Approval has been issued at Substantial Performance.
 - .1 Water to maintain soil moisture conditions, for optimum establishment, growth and health of plant material without causing erosion.
 - .2 **Structural pruning by a certified arborist must be completed once a year and arborist must provide report to NCC representative.**
 - .3 If acceptance is delayed due to a drawn out schedule by the Contractor, the Contractor shall be responsible for the scope of maintenance outlined in section 32 93 12.01 until final acceptance of the site. The Contractor shall still be responsible for the full term of the warranty as of the date of approval.

3.9 FINAL INSPECTION

- .1 At final inspection, plant material shall be acceptable when it is properly installed, unbroken, shows adequate formation of buds and is free from blight of any description. All planting areas shall be free of weeds, litter and in good order.

END OF SECTION

PART 1 - GENERAL

1.1 RELATED WORKS

- .1 Trees and shrub planting Section 32 93 10.01

1.2.1 WARRANTY

- .1 All plant material shall be warranted for a period of two years from the date of substantial performance.
- .2 The warranty shall cover any defects in materials and workmanship.
- .3 A warranty inspection shall be carried out at the end of the warranty period.
- .4 Extend 2 year warranty on all replacement of plant material.

1.3 DURATION

- .1 Plant material maintenance shall begin immediately after each portion of planting has been completed and shall continue throughout the maintenance and warranty period to the satisfaction of the NCC Representative.

PART 2 - PRODUCTS

2.1 MATERIALS

- .1 Water: shall be free from any contaminants which could adversely affect plant growth.
- .2 Pruning Tools: shall be designed specifically for horticultural purposes and shall be clean, sharp and in proper, safe, working order. Pruning equipment shall be capable of producing clean, flush cuts without tearing or fraying the bark.

PART 3 - EXECUTION

3.1 OPERATIONAL CONSTRAINTS

- .1 Do each maintenance operation continuously and complete within a reasonable time period.
- .2 No maintenance equipment, materials or other miscellaneous items may be stored on site.
- .3 All debris, waste and other extraneous material resulting from the maintenance operation shall be removed from the site daily upon completion of maintenance.
- .4 The Contractor shall be fully acquainted with all relevant Provincial and Municipal By-laws and Regulatory Codes relating to the work of this contract, and will be required to comply with such by-laws and codes without extra compensation.
- .5 Notify the NCC Representative immediately of damage incurred by pest, disease, mechanical or vandalism.

3.2 INTERIM REPLACEMENT OF PLANT MATERIAL

- .1 Throughout the maintenance and warranty period, units of plant material that are found to be unacceptable will be replaced by the Contractor. Any unacceptable material must be replaced within one month unless otherwise directed by the NCC representative. Weekly inspections must be reported for the first growing season.
- .2 At the discretion of the NCC Representative, plant material that is identified as dead or in a poor or diseased condition shall be immediately removed from the site.

3.3 WATERING

- .1 The Contractor is responsible for interim manual watering of all plant material, from time of planting until the end of the warranty period (24 MONTHS).
- .2 Water all plant material immediately after installation. Thereafter,
 - .1 Water daily for the first week after planting;
 - .2 Water every second day for the next 3 weeks;
- .3 For the first warranty year;
 - .1 The contractor shall submit for approval a watering schedule at the beginning of the warranty period. The watering shall occur at least once a week, on Thursday, Wednesday or Tuesday. Once the day is chosen, the watering shall happen each week at the same day.
 - .2 Provide all water required to keep soil within and around the root and in the soil at optimum moisture content between 10 and 20% as measured using a General Digital Moisture Meter.
 - .3 Proceed to watering with a slow water spray jet oriented toward the growing media.
 - .4 The watering shall be made before 11h am or after 14h30 pm to avoid full sun period. Watering should also be avoided during peak use period between 7-9am, 12-1pm and 3-5pm.
 - .5 Proceed to the watering even on rainy days unless receiving written notice of the NCC representative.
 - .6 Hose bibs are available on site, see plans.
- .4 For the remainder of the warranty period, thoroughly water whenever natural precipitation falls below 20 mm per week (Sunday to Saturday) for 2 consecutive weeks. Precipitation data shall be as per Environment Canada from the Macdonald-Cartier Airport weather station.
- .5 Ensure the root zone is thoroughly saturated during each watering operation.
- .6 Repair any damage caused by watering operations.

3.4 WEEDING

- .1 All weeds, dead plants, leaves, branches, paper and other refuse within planting beds shall be removed by hand and disposed of off the Contract site.
- .2 Weeds shall not exceed 5 cm in height between weeding's.
- .3 Ensure the entire root system of weeds is removed and not just the above ground growth.
- .4 At a minimum, weeding shall occur:
 - .1 Weekly from June 1 to August 15;
 - .2 Every two weeks from May 1 to May 31, and from August 16 to October 31.
 - .3 A final weeding shall be completed immediately prior to the final warranty inspection.
- .5 The application of herbicides or mechanical weed removers is prohibited.
- .6 Ensure planting beds are weed free prior to the application of mulch material.
- .7 The scope of work also includes weeding of joints between pavers and between curbs.

3.5 PRUNING

- .1 Prune off dead and injured branches in accordance with accepted arboricultural practices.

3.6 GARBAGE REMOVAL

- .1 Keep planting beds free of garbage and other foreign debris. Remove garbage off-site.

3.7 PEST MANAGEMENT

- .1 Monitor plant material throughout the warranty period for any sign of disease or insect problems. Practice integrated pest management.
- .2 The use of pesticides shall not be permitted.

3.8 WINTER PREPARATION

- .1 In the fall of each warranty year, the Contractor is responsible for completion of the following:
 - .1 Ensure all plant material is watered before freeze-up.

3.9 SPRING PREPARATION

- .1 In late spring of each warranty year, after the soil has thawed and dried up, re-apply mulch over all thin or bare areas to ensure good weed suppression. Mulch thicknesses shall be in accordance with Section 32 93 10.01, Trees and shrubs planting. Ensure new growth is not suppressed by the application of mulch material. Ensure mulch is neat and tidy with clean edges.

3.10 INCIDENTAL MAINTENANCE

- .1 The Contractor shall, in general, be responsible for any incidental maintenance to ensure healthy plant growth and a satisfactory appearance of plant material.

3.11 REINSTATEMENT

- .1 Any damage to vegetation, hard surfaces, structures or services caused as a result of the Contractor's work methods and practices for plant material maintenance shall be reinstated or repaired to the satisfaction of the NCC Representative. The cost of such reinstatement or repair shall be solely at the Contractor's expense.

3.12 FINAL WARRANTY INSPECTION

- .1 A one-time inspection of all plant material shall be carried out by the NCC Representative upon completion of the maintenance and warranty period.
- .2 Plant material shall be **acceptable** when it is undamaged, shows adequate growth and formation of buds, and is free from blight of any description. All planting beds and tree pits shall be free of weeds, litter and in good order, including the removal of all tree supports.
- .3 Plant material shall be **unacceptable** when it does not meet this quality standard.
- .4 Units of plant material that are found to be unacceptable will be replaced by the Contractor at the earliest opportunity. The NCC Representative reserves the right to extend the Contractor's maintenance and warranty responsibilities for an additional one-year for replacement plant material.
- .5 In the event that this inspection is satisfactory to the NCC Representative, and that there are no outstanding commitments to the contracted works, the Contractor will be given final approval of the maintenance and warranty requirements.
- .6 Where, in the opinion of the NCC Representative, the Contractor has failed to complete obligations as detailed in this Specification; and further, fails to rectify said deficiency within two days of written notification from the NCC Representative, the NCC Representative reserves the right to retain others to complete the work and deduct incurred expenses from monies owing to the Contractor.

END OF SECTION

PART 1 – GENERAL

- 1.1 Related Work Specified Elsewhere
 - .1 Clearing and Grubbing Section 31 11 00
- 1.2 References
 - .1 Ontario Ministry of Agriculture and Food
 - .1 Pruning Ornamentals - 1992.
- 1.3 Qualifications
 - .1 Pruning shall be carried out by a certified arborist, as designated by the ISA. Please provide ISA # and name of arborist to NCC representative prior to commencement of work.
- 1.4 Field Sample
 - .1 Do sample pruning acceptable to Contract Administrator to identify:
 - .1 Knowledge of target areas including branch bark ridge and branch collars.
 - .2 Technique for selection process and pruning used to establish desired form and shape for each species.
 - .2 Acceptance of work will be determined by Contract Administrator from field sample.

PART 2 - PRODUCTS

- 2.1 Pruning Equipment
 - .1 All pruning or cutting equipment shall be designed specifically for tree work and shall be clean, sharp, and in proper safe, working order. Pruning equipment shall be capable of producing clean, flush cuts without tearing or fraying the bark.
- 2.2 Disinfectant
 - .1 20% solution of sodium hypochlorite or 70% solution of ethyl alcohol.

PART 3 - EXECUTION

- 3.1 General
 - .1 Prune in accordance with Pruning Ornamentals, and as directed by Contract Administrator. Where discrepancies occur between standard and specifications, specifications govern.
 - .2 Tool maintenance:
 - .1 Ensure that tools are clean and sharp throughout pruning operation. Do not use tools which crush or tear bark.
 - .2 Disinfect tools before each tree is pruned.
 - .3 On diseased plant material disinfect tools before each cut.
 - .3 Notify immediately Contract Administrator of conditions detrimental to health of plant material or operations.

- .4 Prune during plant dormant period or after leaves have matured. Avoid pruning during leaf formation, at time of leaf fall, or when seasonal temperature drops below minus 10°C.
- .5 Retain natural form and shape of plant species.
- .6 Do not:
 - .1 Flush cut branches.
 - .2 Crush or tear bark.
 - .3 Cut behind branch bark ridge.
 - .4 Damage branch collars.
 - .5 Damage branches to remain.
- 3.2 Safety Pruning
 - .1 Remove dead, dying, diseased and weak growth from plant material designated by Contract Administrator in order to promote healthy growth and the safety of pathway users.
 - .2 Remove loose branches, twigs and other debris lodged in tree.
 - .3 For branches under 50 mm in diameter:
 - .1 Locate branch bark ridge and make cuts smooth and flush with outer edge of branch collar to ensure retention of branch collar. Cut target area to bottom of branch collar at an angle equal to that formed by line opposite to branch bark ridge.
 - .2 Make cuts on dead branches smooth and flush with swollen callus collar. Do not injure or remove callus collar.
 - .3 Do not cut lead branches unless directed by Contract Administrator.
 - .4 For branches greater than 50 mm in diameter:
 - .1 Make first cut on lower side of branch 300mm from trunk, one third diameter of branch.
 - .2 Make second cut on upper side of branch 500mm from trunk until branch falls off.
 - .3 Make final cut adjacent to and outside branch collar.
 - .5 Ensure that trunk bark and branch collar are not damaged or torn during limb removal. Repair areas which are damaged, or remove damaged area back to next branch collar.
- 3.3 Structural Pruning
 - .1 Follow: ISA ANSI A300 pruning standard - part 1
- 3.4 Care of Wounds
 - .1 Shape bark around wound to an oblong configuration ensuring minimal increase in wound size. Retain peninsulas of existing live bark.
- 3.5 Clean-Up
 - .1 Collect and dispose of pruned material daily and remove from site.
 - .2 Dispose of woody material in accordance with Section 31 11 00, Clearing and Grubbing.

**SCHEDULE 15-2
DESIGN AND CONSTRUCTION REQUIREMENTS**

**PART 6
URBAN DESIGN, LANDSCAPE ARCHITECTURE AND CONNECTIVITY
REQUIREMENTS**

ARTICLE 1 INTRODUCTION

1.1 Introduction

- (a) The work under this Part 6 identifies the requirements for the integration of the Stations, sidewalks, MUPs, additional work on NCC lands and City lands that shall be developed to enhance the public realm.
- (b) The Site plans shall be developed in conjunction with the Project Stations, Civil and Guideway and Federal Land requirements to provide a comprehensive solution for the alignment.

1.2 Overview

- (a) The Project includes the design and construction of the Site development for the proposed Stations, Park and Ride facilities, MUPs, PPUDO, bike rack and storage areas, sidewalks and landscape restoration of lands affected by the construction of the Confederation Line.
- (b) DB Co shall obtain all the necessary Permits, Licences and Approvals for the construction of the Site works. Refer to Schedule 17 – Environmental Obligations and Schedule 15-2, Part 2, Article 5 – Drainage and Stormwater Management Design Criteria for coordination with final Site works.
- (c) In general, the work includes the Site plans for:
 - (i) 17 Stations;
 - (ii) Protection of, and enhancement to, the Connectivity for the Stations, and the adjacent community;
 - (iii) Modification to, and additional development of, the Park and Ride facilities;
 - (iv) MUPs adjacent to the Track alignment, with connections to existing Facilities, as indicated within this Part 6;
 - (v) Completion of the landscape works as identified by the NCC for the SJAM Parkway, Kitchissippi Lookout and Rochester Fields lands;

- A. Works within the Rochester Field lands shall include the centerline axis for the Rochester Field pathway and crossing, including associated rough grading and site servicing plans, contained within this Part 6.
- (vi) Completion of the Streetscape for the Richmond Road Complete Street;
 - (vii) Completion of Byron Linear Park, and Bryon Avenue;
 - (viii) Completion of Miscellaneous Site Works as identified within this Part 6;
 - (ix) Development of Tree Mitigation Report(s) and Tree Compensation Drawing(s);
 - (x) Development of the mitigation plan for the SWM requirements;
 - (xi) Miscellaneous mitigation works as identified within this Part 6; and
 - (xii) Restoration of lands required for the construction of the Confederation Line, including the construction staging areas.

ARTICLE 2 DESIGN CRITERIA

2.1 Introduction

- (a) This Article 2 presents the design requirements for the landscape architecture and urban design that shall be integrated into the design of the Project, including the standards for streetscape elements, bicycle facilities, Park and Ride facilities, fencing, pedestrian and cycling access to the Stations, planting, and tree compensation.

2.2 Reference Documents

- (a) Order of Precedence
 - (i) All Project urban design and landscape works shall comply with the criteria contained within this Article 2 and the Applicable Law, guidelines or practices applicable to the Project, including but not limited to the following Reference Documents. The Order of Precedence for this portion of the Contract shall be as follows:
 - A. The criteria in this Article 2;
 - B. OBC;
 - C. COADS;
 - D. AODA;
 - E. OTM (Books 1 through to 12 and 18);
 - F. City of Ottawa Construction Specifications, Drawings and Details;
 - G. Other relevant City Operation Policy, Procedures and Guidelines;
 - H. OPSS and OPSD;
 - I. TAC Guidelines for Understanding Use and Implementation of Accessible Pedestrian Signals;
 - J. Canadian Standards for Nursery Stock, most recent edition;
 - K. NCC Landscape Drawings, as identified in Appendix A, B, C and D;

2.3 Scope of Work

- (a) The general scope of work shall include, but not limited to:

- (i) Public realm: Station entry plazas, Site furnishings, pedestrian lighting, sidewalk and MUP connections from the community to the plaza entry, PPUDOs, plant material, and miscellaneous items to complete the Work;
- (ii) Park and Rides: the parking lot configuration, pedestrian requirements, lighting, plant material, and coordination with Site plan requirements;
- (iii) Any restoration and rehabilitation of the lands disturbed by the construction of the Project; and,
- (iv) All other works identified within this Part 6.

2.4 Urban Design and Landscape Architectural Design

- (a) Designs shall meet COADS and AODA standards for all Works surrounding bus waiting areas, sidewalks, entrances and pathways to the Station Platform/Revenue Vehicle area. Safe, efficient and accessible pedestrian circulation shall be given the highest priority in Station design.
- (b) There shall be a consistent use of standard landscape elements including fencing, paving, plant material, and other items identified in this Article 2, utilized throughout the alignment and within the Existing Confederation Line.
- (c) Urban development and landscape treatments shall compliment the adjacent land use. Pedestrian and cycling links shall be protected and connections to the adjacent communities provided.
- (d) Refer to Article 3 – Connectivity Requirements, and Article 4 – Site Specific Desired Outcomes, of this Part 6 for additional requirements.
- (e) Native plant material shall be used wherever feasible.
- (f) Where appropriate, existing landforms and vegetation shall be preserved and incorporated into urban design. Designs shall be achieved with the intent to minimize impacts to the surrounding environment.
- (g) The landscape design of each Station shall have standard and common finishes. All Stations shall express the local character and qualities of their communities and planning context and assist in wayfinding/Station identification. Station entrances shall be easily identifiable and be designed to discourage loitering and to maximize safety/observation through the use of lighting and glazing.
- (h) DB Co shall design and construct the urban design elements and landscaping in accordance with CPTED principles. DB Co shall submit a CPTED report outlining all measures undertaken to conform to CPTED principles.

- (i) All Emergency egress points shall be designed to accommodate snow removal and clearing operations. DB Co shall provide a turn-around for the snow clearing equipment as per Schedule 15-2, Part 2, Article 1 – Introduction.

2.5 Park and Ride Facilities

- (a) Parking lot shall adhere to City standards, including the following:
 - (i) There shall be a minimum of 15% landscape treatment within the parking lot. This landscape treatment may contain a combination of paved walking surfaces, dry SWM facilities, street trees, and sod. Wet ponds shall not be considered part of the 15% landscape requirements;
 - (ii) The alignment of the stalls shall be developed to accommodate unobstructed pedestrian paths along the drive aisles to the sidewalk connections to the Station Platform and Station Plaza. The direct pedestrian routes to the sidewalks and Station should not bisect the drive aisles;
 - (iii) The accessible parking spaces shall be designed according to COADS and located immediately adjacent to the Station entry;
 - (iv) Refer to Schedule 15-2, Part 4, Article 2.6, (i) for additional park and ride requirements;
 - (v) There shall be a main drive aisle, with sidewalks on either side, perpendicular from the Station to the furthest limit of the parking lot. This main drive aisle shall have shade trees adjacent to the sidewalk, with a maximum of 7m on centre spacing;
 - (vi) There shall be a continuous sidewalk connecting the Park and Ride facility to the Station entry plaza. Where the pedestrian route crosses a traffic lane(s), a painted crosswalk demarcating the pedestrian route shall be provided;
 - (vii) The parking lot shall be divided into parking cells, aligned with drive aisle access, and a maximum of 200 parking spaces per cell;
 - (viii) The cells shall be defined with parking islands at the end of each row of parking spaces;
 - (ix) In each cell, the islands closest to the Station shall have a minimum of two deciduous trees, with a minimum width of 3m, and a surface treatment capable of allowing precipitation to percolate into the soil;
 - (x) In each cell, the islands furthest from the Station shall have a minimum width of 2.4m, paved walking surface, and TWSI to current City standards;

- (xi) The pedestrian route between the islands shall be delineated on the roadway surface;
- (xii) The pedestrian sidewalk shall be immediately adjacent to the parking lot, and offset a minimum of 2.4m from any MUP. There shall be a landscape buffer between the sidewalk and MUP, and shall include shade trees, with a maximum of 7m on centre; and,
- (xiii) Supplemental lighting for the sidewalk shall be provided as required to provide lighting levels to meet the Schedule 15-2, Part 4, Article 6 - Electrical Design Criteria.

2.6 Landscape Plans

- (a) DB Co shall submit Landscape Plans in accordance with Schedule 10 – Review Procedure:
- (b) Station, Facilities and Site Specific Drawing Requirements:
 - (i) Layout drawings, dimensioning all landscape items;
 - (ii) Grading drawings, indicating the drainage in accordance with the criteria of Schedule 15-2, Part 2, Article 5 – Drainage and Stormwater Management Design Criteria and shall include the finished elevations of all built elements from the edge of the Station façade to the original surface, edge of roadway curb, or limits of adjacent landscape not disturbed by the construction;
 - (iii) Fencing plans, indicating all fence locations, maintenance and access gates, bridge fences, heights, and connections to existing and proposed features;
 - (iv) Planting plans;
 - (v) Details indicating all construction requirements for the landscape items; and,
 - (vi) All coordination Site works, including civil, electrical, architectural, existing and proposed above and below services, and existing vegetation, Structures and miscellaneous works to provide a complete illustration of the proposed Site within the adjacent lands.
- (c) Proposed MUP and Connectivity Requirements:
 - (i) Layout and grading, including cross-slopes for all proposed pathways, MUPs and sidewalks, bridges, Culverts, lighting and wayfinding signage, roadway crossings, beyond the individual Stations and connections into the existing pedestrian and cycling system.

- (ii) All coordination Site works, including civil, electrical, architectural, fencing, existing and proposed above and below services, stormwater management criteria, and existing vegetation, Structures and miscellaneous works to provide a complete illustration of the proposed Site within the adjacent lands.
- (d) Tree Mitigation Report(s) and a Tree Compensation Plans(s)
 - (i) DB Co shall submit a package for the Tree Mitigation Report(s) and Tree Compensation Plan(s) for review prior to commencement of work for each segment.
 - (ii) Tree Mitigation Plan(s) shall include:
 - A. Survey of all existing trees, including species, caliper, and evaluation within the Lands;
 - B. Survey of all existing trees, including species, caliper and evaluation within 20m of the limits of construction on City, Federal, or private lands;
 - C. Identify all SAR Butternut trees, and SAR bat maternity roost trees, methodology of protection wherever feasible, where removal is required, provide mitigation and/or compensation as per Schedule 17 – Environmental Obligations and as identified in any SARA permitting requirements; and,
 - D. Methodology for the review, and approval, of any trees identified for protection during the initial planning, and subsequently identified for potential removal due to construction conflicts.
 - (iii) Tree Compensation Plan(s) shall include:
 - A. Limits of construction as per Schedule 15-2, Part 1, Article 4 – Design and Construction, and Tree Protection Fence(s) as required to protect all existing trees identified to remain;
 - B. Location, species, quantity and size of all trees proposed to be removed to accommodate the construction requirements;
 - C. Location, species, quantity and size of proposed trees for the compensation for all the existing tree removals, as per City and Federal requirements. The compensation shall include all the proposed trees as identified within this Part 6;
 - D. Identification of proposed butternut plantings, as per Schedule 17 – Environmental Obligations.

- (e) The drawings and specifications identified in Appendices A, B, C, D, E, and G of this Part 6 reflect the requirements for the Federal Lands and shall be considered as the Pre-Final Design Development submittal. DB Co shall finalize the detailed drawings prepared by the NCC for the Federal Lands for the Final Design Development submittal, unless otherwise identified. The drawings identified in Appendix M of this Part 6 reflect the requirements for [REDACTED].
- (f) Restoration Drawings
 - (i) DB Co shall provide restoration drawings for all lands affected by the construction of the Works, including temporary construction facilities, and lands decommissioned after the closure of the Transitway;
 - (ii) The restoration drawings shall include all other lands affected by the construction, not identified above;
 - A. Existing structures and facilities to be removed, including all permanent and temporary roads and facilities;
 - B. Grading and layout of all pathways, roadways, sidewalks, lighting, and miscellaneous Site works; and,
 - C. Final landscape treatment, including seeding, sodding, plant material, and miscellaneous items to restore the Site.

2.7 Urban Design and Landscape Elements

- (a) Sidewalk, Pathways and Plaza Pavement
 - (i) Each Station shall have an entry plaza, across the façade of all Passenger entry points to the Station, large enough to accommodate the peak flow identified;
 - (ii) The Station entry plaza shall extend from the front face of the Station to the adjacent roadway, and encompass any existing sidewalks;
 - (iii) There shall be a minimum of 3m clear from the front façade of the entry or ticket machines to any intersecting MUP;
 - (iv) There shall be a minimum of 3m clear from the front façade of the entry to any intersecting MUP. A combination of concrete and unit paving stones shall be used to construct primary sidewalks and plaza spaces. Sidewalks and plazas shall apply COADS, have a minimum width of 3m, unless specified elsewhere in this Part 6, and shall be a paved surface capable of withstanding heavy duty commercial use including access by Emergency and Maintenance Vehicles as per City standards.

- (v) Contrasting pavers and textures delineating thresholds and pedestrian routes to meet the current COADS, AODA and CAN/CSA B651 shall be provided at all Stations and bus Platforms. This shall commence at the limit of the Station Entry plaza and be continuous through to the Station. The pavers and textures shall be consistent with the materials utilized within the Station, and match the pavers utilized in the Existing Confederation Line, including:
 - A. Type 1 Paving Stones: Cambrian Black Buffed, as manufactured by [REDACTED], or approved equal.
 - B. Type 2 Paving Stones: Beige/Grey, as manufactured by [REDACTED], or approved equal.
- (vi) Sidewalks and MUPs shall be designed in accordance with the applicable existing and recreational networks of the surrounding community and shall adhere to City of Ottawa Construction Specifications, Drawings and Details for MUPs. Within Federal Lands, MUPs, and Pathways shall adhere to NCC standards. Design and selection of construction materials and layout alignment shall be consistent with specific Site context and associated landscape type.
- (vii) There shall be a sufficient offset of all streetscape elements to have a minimum of 1.8m clear space for all sidewalks.
- (viii) Sidewalks and MUPs shall be reconstructed to the full width. Patching shall not be permitted.
- (ix) All existing recreational pathways, MUPs, and sidewalks shall remain open to public use during construction. Refer to Article 3 – Connectivity Requirements, of this Part 6.
- (x) The primary sidewalks and secondary pathways shall meet the requirements of the AODA and COADS, and shall not exceed a grade of 5% with a minimum landing distance of 6m at the bottom of each slope prior to a horizontal alignment shift. Sidewalks adjacent to roadways shall follow the same grade profile of the roadway and may exceed 5%. Cross slopes shall not exceed 2%. The primary sidewalks and secondary MUPs shall be designed to maintain positive Drainage and eliminate water accumulation in accordance with City guidelines.
- (xi) DB Co shall delineate the intersections between the bus and LRT Passengers accessing the system from the cyclists and MUP users with the following:
 - A. Where a cycle track or MUP intersects with a Station entry plaza, the concrete paving of the entry plaza will extend across the cycling/MUP facility.

- B. Where a bus stop occurs on a Roadway, the concrete paving from the bus waiting area shall extend across any MUP or segregated cycling facility. The minimum length of the concrete paving shall be 9m.
- C. Three double soldier course bands of interlocking paving, minimum 600mm on centre spacing, shall be installed as warning indicators on the cycle track or MUP in the asphalt paving.
- (xii) Pedestrian crosswalks with vehicular traffic, including cycle lanes shall include TWSI as per City of Ottawa Construction Specifications, Drawings and Details;
- (xiii) PPUDOs shall be installed with a continuous pedestrian sidewalk to the Station with the quantities delineated in Article 4 – Site Specific Desired Outcomes, of this Part 6.
- (xiv) Paving materials shall be as follows:
 - A. Primary Paving Stones: Cambrian Black Buffed, as manufactured by [REDACTED], or approved equal. Size to meet and match the dimensions of the Platform edge pavers;
 - B. Accent Paving Stones: Beige/Grey, as manufactured by [REDACTED], or approved equal. Size to meet and match the dimensions of the Platform edge pavers. When utilized as the contrasting colour for the visually impaired, the paver shall have a texture variation to meet the standards of the AODA;
 - C. Concrete Paving: shall be to 35 MPa, with a magnesium float finish, caulked expansion joints and saw cut control joints. There shall be no tooled edges;
 - D. DB Co shall design and construct new work to provide smooth, safe and seamless transition of materials where the construction of, including but not limited to, sidewalks, pathways, MUPs, and plazas adjoins existing installations; and,
 - E. Where the proposed sidewalk is immediately adjacent to a cycle track or MUP, there shall be a 200mm wide delineator strip between the sidewalk, and the asphalt surface.
- (b) Site Furnishing
 - (i) Site furniture shall be in the family of complementary Site furnishings, from the Existing Confederation Line, that provide an unobstructed view of the underside of the furniture, coordinated with the interior Station furniture and sustainable in terms of its recycled content and long-term durability. Site furnishings shall be

strategically placed along sidewalks, plaza spaces and Platform areas to maximize their use and not encumber pedestrian movement. All furniture shall be fastened to the surface with non-corrosive fastenings to reduce vandalism and to protect for future replacement requirements. All furniture and landscape features shall be coordinated with light standards, CCTV and other elements to reduce vandalism. Site furnishings utilized on the Existing Confederation Line include:

- A. 3-Stream Recycling Container CAR-205, by [REDACTED];
 - B. Narrow U-stand, stainless steel Bicycle Rack MBR-500 DB, by [REDACTED];
 - C. Ipe wood slats, powder coated cast aluminum sides, Bench, MLB 100-W-A, by [REDACTED]; and,
 - D. KicK – K4 Small Scale Luminaire, Light Standard, by [REDACTED].
- (ii) The Site furniture shall be located to provide clear access and visibility to any Site wayfinding signage, so that it does not obstruct views for CCTV and with sufficient offset to restrict unauthorized access.
 - (iii) Waste/Recycle Receptacle units shall be provided and shall be easily accessible for maintenance and trash pick-up. A clear, transparent type of waste/recycle receptacle design is required. Waste/recycle receptacles shall be open installed outside of all Stations and at the bus platform areas. A minimum of one waste/recycle receptacle unit shall be required per Station entrance and shall be located such that it does not obstruct pedestrian and cycling traffic flow. Additional waste receptacles shall be provided as per drawings.
 - (iv) Benches shall be strategically placed at key gathering and waiting zones, be highly visible (CPTED) and clear of any pedestrian traffic. Benches shall be designed according to AODA and COADs standards.
 - (v) New Bicycle Racks shall be provided in accordance with the quantities noted in this Article 4. A minimum of 80% of bicycle racks, shall be sheltered. Clear access from the MUP to the bicycle parking shall be provided and additional area to accommodate dismounting and mounting of the bicycle beyond the width of the MUP. There shall be sufficient space to double the bicycle parking within the plaza or the adjacent turf, without the requirement for additional grading/retaining walls or elimination of streetscape elements and identified on the Landscape Plans.
 - (vi) All bicycle parking shall be consolidated in groups as per Article 4.1 of this Part 6, with the nearest bicycle rack provided within 9m of the Station Entry, unless otherwise approved by the City.

- (vii) Bicycle Repair stations shall be installed as indicated within this Part 6, as manufactured by [REDACTED], or approved equal. Each self-service bike repair station shall include a work stand, an air pump and the following tools:
 - A. Philips screwdriver and stand
 - B. two steel core tire levers
 - C. pedal wrench
 - D. two cone wrenches (8/10mm 9/11mm)
 - E. Torx T-25
 - F. Hex key set
- (c) Access Control
 - (i) Fencing barriers at all Stations shall be provided to prevent public access to the Tracks and Fare-Paid Zones. Fences shall also serve as dividers separating pedestrians and cyclists at specific areas and prevent customers from crossing the bus roadways.
 - (ii) Landscape handrails shall be designed to meet the OBC and the AODA and shall be integrated with the design of the stairways and ramps to meet the above codes. All handrails and fastenings shall be stainless steel, exterior grade.
 - (iii) Bollards shall be provided to control vehicular and cycling activities adjacent to the Stations. Bollards shall be designed to facilitate replacement as required.
- (d) Fencing
 - (i) The alignment shall be fenced to restrict public access to the Track and Fare Paid Zones, and shall meet the following criteria:
 - A. General:
 - i. Shall be within the Lands identified for the alignment and Stations;
 - ii. Shall be continuous along the alignment and Stations and connect to vertical walls and abutments at Stations and Bridges;
 - iii. Shall be a minimum of 1.8m high chain link fence except at Structures over the alignment;
 - iv. The height shall be measured from the publicly accessible side;

- v. Shall be offset a minimum of 1.2m from any Structures or built elements that would assist in facilitating public access to the Track or Fare Paid Zones;
 - vi. Shall be offset a minimum of 600mm from the base of any landform; and,
 - vii. All new fencing shall be black vinyl coated.
- B. Station fencing:
 - i. Shall encompass the Fare-Paid Zone, as required, to restrict access to the entry points at all Stations;
 - ii. Shall encompass the bus Stations to accommodate for unrestricted Passenger flow between the Train and the bus; and,
 - iii. Shall have one set of two lockable gates, each a minimum 1.8m in width, situated between any bus Station and Train Station to accommodate Passenger movements during Train Station closure.
- C. NCC/Federal Lands:
 - i. In addition to the above, all fencing, within, or adjacent to, NCC or Federal Lands, shall be black vinyl coated chain link fencing, with black powder coated posts.
- D. Track alignment fencing shall;
 - i. Extend continuously along the Track throughout the alignment;
 - ii. DB Co shall inspect the alignment, install new fencing as required and repair any damaged sections of the fence to meet the Requirements of this Article 2;
 - iii. Be located within the Lands;
 - iv. Have lockable service gates, as required for service and Emergency vehicle access, as per Schedule 15-2, Part 1, Article 2 – Physical Layout;
 - v. Each service gate shall be a minimum of 1.8m in width, with a lock box fixed to the adjacent fence fabric, for Emergency access; and,

- vi. Each service gate shall have a 1.8m wide paved pathway from the nearest MUP, roadway or service access road. There shall be sufficient paved surface to accommodate the turnaround of snow clearing equipment Schedule 15-2, Part 2, Article 1 - Introduction.

E. Bridge Structure Fencing:

- i. DB Co shall provide Guideway protection fencing on all new and existing Bridge Structures that span the alignment and have pedestrian or cyclist movements. The minimum height from the adjacent pedestrian accessible spaces shall be 2.4m clear as measured from the walking surface or accessible ledge of parapet wall;
 - 1 It shall be acceptable to include the height of a non-climbable parapet wall when measuring the required 2.4m height.
- ii. Shall be non-climbable;
- iii. Shall extend the full length of the Bridge structure and parapet walls where the Bridge spans only the alignment;
 - 1 Where Bridge Structures span the Guideway and other elements including roadways, parks, and streams, the full height fencing is required to extend across the Track limit to a distance of 6.0m beyond the most adjacent Track centre;
 - 2 From the location identified in Clause 1 above (6.0m beyond the most adjacent Track centre), DB Co shall provide a transition zone of fencing from the 2.4m height to the required Bridge guardrail height. Length of the transition zone shall be no less than 3.5m.
- iv. Shall be designed to be integrated within the structural requirements of the Bridge;
- v. Shall have vertical pickets, 100mm on centre, with 150mm extending above the top horizontal member, and 100mm below the bottom horizontal member;
- vi. Shall have a steel mesh, maximum 25mm openings, attached to the alignment side of the pickets, and extend from the bottom to top rail; and,

- vii. All elements shall have a black vinyl coated finish.
- viii. DB Co may propose alternative decorative designs for the vertical picket and rail design described above. Acceptance of any design not conforming to these requirements shall be at the sole discretion of the City.

(e) Bridge Guardrails

- (i) Bridge guardrails shall be designed to accommodate the requirements for raised cycling facilities at the back of roadway curb. Refer to Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements;
- (ii) Where Bridge guardrails are installed, there shall be minimum clearance, as indicated in Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements, and Clauses 4.1 and 4.4 of this Part 6;
- (iii) The guardrails shall splay outwards, at a minimum of 15 degrees, to enhance the comfort of the cyclist along the perimeter of the MUP on the bridge structure; and
- (iv) There shall be a continuous handrail along the inside of the guardrail, which is outside of the 4.2m clear MUP pathway.

(f) Site Lighting

- (i) All Station plazas, sidewalks, Platforms and other areas external and immediately adjacent to Stations that are accessible to the public shall be lit with an LED light source to provide improved safety and security, and meet the requirements of Schedule 15-2, Part 4, Article 6, Table 4-6.2.
- (ii) All pedestrian lighting shall be LED, downcast and have full cut-off to minimize light pollution. Additional shielding or cut-off fixture shall be provided adjacent to residential communities.
- (iii) All direct pathway connections from the adjacent street to the front entry plaza shall be lit, and provide a continuous light level with the front entry plaza, and as indicated in this Part 6.
- (iv) All pathway lights shall have a 4.3m height pole.
- (v) No pedestrian lighting of federal lands, pathways and trails shall be permitted, unless specifically identified elsewhere in Article 4 – Site Specific Desired Outcomes, of this Part 6.

(g) Wayfinding Signage

- (i) All signage, including temporary construction staging, shall be bilingual.
 - (ii) Refer to Schedule 15-2, Part 7 - Traffic and Transit Management and Construction Access, for construction staging signage requirements.
 - (iii) Permanent bilingual wayfinding signage shall be provided throughout the corridor, and directing the community along the MUPs and sidewalks to the individual Stations.
 - (iv) Wayfinding signage shall be carefully located to protect the high quality views towards the Ottawa River, Parliament Hill or other landmarks.
 - (v) Based upon the graphics provided by the NCC, within the SJAM lands, DB Co shall provide the following pathway signage:
 - A. 70 regulatory signs: 50mm x 50mm x 4,000mm black metal post with 600mm x 300mm aluminum signs;
 - B. 50 painted standard symbols on pavement (pedestrian, cyclist, arrow). Pathway signage content and locations to be provided by NCC
 - (vi) At each Station, wayfinding signage shall be provided at the interface between the Station plaza and MUP providing direction to the adjacent Station and key Ottawa landmarks.
 - (vii) Directional wayfinding signage shall also be provided at each MUP junction indicating the next Station in either direction.
 - (viii) Bilingual wayfinding signage shall indicate the following:
 - A. Station Name;
 - B. Approximate distance to station;
 - (ix) Wayfinding signage graphics shall meet and match the existing signage on the pathway system. The content and location of the signage shall be approved by the City.
 - (x) The location of the wayfinding signage shall take precedence over the location of street furniture, plant material or other items which may restrict clear access to the view the signage.
- (h) Existing Plant Material
- (i) Existing plant material shall be protected where feasible and as per the Tree Mitigation Plan(s).

- (ii) Provide an Existing Tree Protection/Monitoring Plan, developed by a Licensed Arborist, which defines the methodology for the protection and maintenance of the existing trees;
 - (iii) Protect plant material during construction as per City and NCC specifications and standards. Ensure protective fencing is inspected and repaired as required.
 - (iv) Any plant material required to be removed for the construction of the Project shall be replaced as per Article 2.11 (b) of this Part 6, and the shrubs shall be reinstated at an equal ratio: for each square metre of shrubs removed, instate with a square metre of shrubs. The shrub spacing in the planting beds shall have a maximum on centre spacing of 750mm.
 - (v) Any existing trees identified for protection, and proposed for removal during construction, shall be reviewed, and approved by the City prior to removal.
- (i) Proposed Planting
- (i) Planting outside of Stations shall be used to define spaces, provide shade and reduce wind speed on Platforms to help direct customers safely between public streets and Station entrances and assist in deterring pedestrian crossings through restricted access areas. Plant material shall be designed to be harmonious with the architecture and scale of the Station and coordinated with sight line locations for security cameras and Station lighting, in particular with respect to anticipated vegetation growth.
 - (ii) Planting shall adhere to CPTED requirements.
 - (iii) Street trees shall be integrated into the pedestrian plazas adjacent to the Stations to provide shade and comfort to the pedestrians. Where the trees are integrated within a paved plaza surface, a structural support system or a root control system below the paved surfaces shall be integrated into the overall design to provide a sufficient root growth to sustain growth. A minimum of 30m³ of soil volume shall be provided per tree. This may include 16m³ of direct soil, and 14m³ of shared soil with an adjacent tree.
 - (iv) Street trees shall be reinstated in all City ROW where tree removals have occurred as a result of the Work. Trees shall be installed with a maximum of 7m on centre spacing.
 - (v) Street trees shall be proven to grow in the Ottawa roadside environment, and located to maximize the offset distance between the vehicle travel lanes and proposed trees.
 - (vi) Monocultures of a single species shall not be permitted, and species shall be large canopy species to provide shade to the Roadway and pedestrian realm.

- (vii) Quality and source shall comply with the CNLA metric guide referring to size, development and rootball of plant material. Measure plants when branches are in their natural position. Use trees and shrubs of No.1 Grade. All plant material shall be hardy to the local urban conditions and native to the Ottawa area where possible. All plant material shall meet the requirements of “Canadian Standards for Nursery Stock.”
- (viii) Plant material shall be hardy to the urban conditions, winter maintenance requirements and be designed to be low-maintenance both in the short and long term. Plant material shall be salt tolerant when used in areas adjacent to bus facilities and in areas identified for snow storage. Local native species shall be selected wherever feasible. Supplemental watering to assist in establishment of the plant material shall be required.
- (ix) An irrigation system shall not be permitted.
- (x) The plant material palette shall include a variety of plant material to provide seasonal variety and colour.

Minimum Planting Criteria for Station and Guideway Landscapes

| Plant Material | Size | Spacing |
|--------------------------|--------------|------------|
| Deciduous Trees – large | 70 mm cal. | 5.0 metres |
| Deciduous Trees – medium | 45 mm cal. | 4.0 metres |
| Coniferous Trees | 1.5 m ht | 3.0 metres |
| Coniferous Shrubs | 45 cm spread | 900 mm |
| Deciduous Shrubs | 45 cm ht | 900 mm |

- (j) Refer to Appendix A and D of this Part 6 for specific requirements on species size, location and quantities for the Federal lands within the SJAM Parkway, Atlantis and Rochester Fields.
- (k) Topsoil
 - (i) All in-situ topsoil stripped for construction requirements shall be removed off-Site unless there is sufficient room to stockpile topsoil at no greater height than 1.2m. Stockpiled topsoil shall only be used in areas of seeding adjacent to the alignment.
 - (ii) All topsoil shall be fertile, friable, natural sandy loam containing not less than 4% of organic matter for sandy loams, with an acidity value ranging from pH 6.0 to pH 7.5 and capable of sustaining vigorous plant growth. It shall be free of stems or roots, stones and clods more than 50mm diameter or other extraneous matter. Topsoil shall be screened. Topsoil shall not be supplied in a frozen state.
- (l) Sod

- (i) All turf areas within 9m of pedestrian pathways, entry plazas and paved public spaces, shall be sodded, unless otherwise specified in this Article 2.
 - (ii) Nursery Sod: quality and source shall comply with standards outlined in 'Canadian Standards for Nursery Stock', most recent addition.
 - (iii) DB Co shall scarify the existing subgrade a minimum of 150mm, and apply a minimum of 150mm of topsoil prior to installation of sod.
- (m) Seed
- (i) The limits of construction and staging areas for some Stations and sections of the Track are expected to extend beyond the limits of sodding indicated above. Any disturbed areas extending beyond the limits identified for sod above shall be rehabilitated as per Schedule 15-2, Part 1, Article 4 – Design and Construction. A review of the adjacent land uses and Site development shall be completed for these locations and the most appropriate groundcover shall be selected.
 - (ii) Seed: to meet the requirements of the City specifications, unless otherwise noted in this Article 2.
 - (iii) DB Co shall scarify the existing subgrade 150mm, and apply a minimum of 150mm of topsoil prior to installation of seed.
- (n) For planting within Highway Corridor Lands, DB Co shall use the following plant list. Additional species may be considered, and subject to review and acceptance from MTO
- (i) Deciduous Trees:
 - A. *Acer Fremanii* "Jeffersred", (Freeman Maple);
 - B. *Gleditsa Triacnathos* "Shademaster" (Shademaster Honeylocust);
 - C. *Quercus rubra*, (Red Oak);
 - D. *Tilia Americana*, (American Linden);
 - E. *Ulmus* "Morton", (Accolade Elm); and,
 - F. *Celtis Occidentalis*, (Common Hackberry).
 - (ii) Coniferous Trees
 - A. *Picea Pungens*, (Colorado Green Spruce); and,
 - B. *Pinus strobus*, (White Pine).

- (iii) Shrubs
 - A. *Amelanchier Canadensis*, (Serviceberry);
 - B. *Aronia Melanocarpa*, (Black Chokeberry);
 - C. *Rhus Aromatica* “Low-Gro”, (Low-gro Fragrant Sumac);
 - D. *Rhus Typhina*, (Staghorn Sumac); and,
 - E. *Sorbaria Sorbifolia*, (False Spirea).
- (iv) Vines
 - A. *Parthenocissus Tricuspidata*, (Boston Ivy).
- (o) Earth Borrow
 - (i) All in-situ non-contaminated overburden, and topsoil not appropriate for reuse as topsoil, stripped for the construction requirements, may be utilized as Earth Borrow backfill over the Tunnel alignment;
 - (ii) All stripped overburden shall be allowed to be stockpiled; and,
 - (iii) Imported Earth Borrow shall consist of material as defined by OPSS 212.

2.8 Natural Channel Restoration

- (a) Refer to Schedule 15-2, Part 2, Article 5 - Drainage and Stormwater Management Design Criteria, for the SWM requirements for the channel design.
- (b) DB Co shall design all watercourse embankments that are to be reinstated in accordance with the following:
 - (i) Maximum of 3:1 slopes.
 - (ii) Any embankments where the proposed slopes would be less than 3:1, shall be constructed with a retaining wall at the base of the slope, to provide a 3:1 embankment for planting. The retaining walls shall be made of natural materials, such as armour stone rock wall, wood revetments, root wads, or other measures. All built features shall meet the flow analysis and Design Criteria to ensure the slope stability.
 - (iii) Use biodegradable materials to anchor the logs and root wads to the embankment.
 - (iv) Rip rap or gabion baskets shall not be permitted.

- (v) On all outside bends of the creek, DB Co shall reinforce the channel embankment with root wads. The reinforcement shall protect the embankment for the 2 year flows and be a minimum 0.75m height, or as per the detailed design analysis, completed as per Schedule 15-2, Part 2, Article 5 - Drainage and Stormwater Management Design Criteria.
- (vi) All slopes shall be vegetated with native species woody plant material;
- (vii) DB Co shall ensure the slope stabilization of the final planting beds during the 2 year warranty and establishment of the plant material to control wash-outs and sediment movement into the watercourse;
- (viii) The vegetation shall be a blend of 90% trees and 10% shrubs, and shall be of an appropriate species for the location on the embankment. DB Co shall identify species that are tolerant for locations within the seasonal flooding, 10 year flood, 100 year flood and upland planting.
- (ix) The trees shall consist of a blend of the following:
 - A. 25% Coniferous Trees;
 - B. 70% Reforestation Trees;
 - C. 5% Caliper Deciduous Trees;
- (x) The shrubs shall include:
 - A. 70% shrubs;
 - B. 30% live stakes; and
- (xi) Meet the following planting criteria;

Minimum Planting Criteria for Restoration Landscapes

| Plant Material | Size | Spacing |
|---------------------------------|--------------|------------|
| Caliper Deciduous Trees | 60 mm cal. | 5.0 metres |
| Reforestation Trees | 20 mm cal | 3.0 metres |
| Coniferous Trees | 900 mm | 2.4 metres |
| Deciduous Shrubs | 45 cm ht | 600 mm |
| Riparian Planting | 450 mm ht | 450 mm |
| Live Stake Planting (Deciduous) | 90 cm length | 100 mm |

- A. Any live stakes shall consist of native species, rhizome spreaders, and be tolerant of the Site specific conditions at the creek edge.

2.9 LID SWM Landscapes

- (a) Refer to Schedule 15-2, Part 2, Article 5 – Drainage and Stormwater Management Design Criteria, for the SWM requirements for the drainage requirements.
- (b) All surface drainage swales shall be landscaped to the following criteria:
 - (i) Flat-bottomed swales;
 - (ii) Varying side slopes, with a maximum slope of 3:1 and a minimum slope of 8:1;
 - (iii) Establish a ground cover consisting of perennials, grasses, shrubs and trees that accommodates the periodic wetting;
 - (iv) All bioswales adjacent to areas of vehicular traffic shall be protected by a raised concrete curb, with curb openings to accommodate surface drainage; and,
 - (v) All plant material utilized within the bioswales shall be salt tolerant.

2.10 Existing Tree Protection

- (a) DB Co shall submit a Tree Mitigation Report, as per Schedule 10 – Review Procedure, and Clause 2.6 of this Part 6, to delineate existing trees impacted by the Work. These drawings shall be reviewed, and appropriate agency approval received, prior to commencement of work;
- (b) Within the SJAM lands, between Cleary and Dominion, DB Co shall protect all the existing trees, as identified in Appendix E. In addition, for work beyond the works identified in Appendix E, DB Co shall identify all trees to be removed for approval prior to commencement of work;
- (c) All tree protection shall be installed prior to the commencement of any Works.
- (d) DB Co shall develop a construction plan that minimizes the removals and impacts on the adjacent trees to be protected;
- (e) DB Co shall work within the following construction restrictions with respect to the existing tree removals within the SJAM Parkway. Refer to Schedule 20- Lands.
 - (i) A 3m offset north from the temporary road works for the SJAM Parkway;
 - (ii) Protection of the existing trees adjacent to the Richmond Road row of Rochester Fields. DB Co shall be permitted to remove a maximum of one tree to accommodate construction access. The exact trees to be removed shall be in consultation with the NCC;

- (iii) To accommodate the construction road access, DB Co shall relocate one existing trees adjacent to Richmond Road, as identified in Appendix C of this Part 6. This tree shall be assessed for health to determine feasibility of relocation within Rochester Fields;
- (iv) Protection of the existing trees along the west property line of Rochester Fields;
- (v) Protection of the existing trees along the east property line of Rochester Fields, including the woodlot east of the storm sewer leading to the Ottawa River;
- (vi) Protection of the existing woodlot south of the pedestrian path, on the south side of the SJAM Parkway, west of Rochester Fields;
- (vii) Protection of the existing stand of mature trees south of the pedestrian footpath, east of Rochester Fields, leading to Dominion Station;
- (viii) Protection of the existing trees north of the MUP, north of the SJAM Parkway, with the exception of the work area required to complete the storm sewer outfall works at the Ottawa River;
- (ix) Protection of the existing deciduous trees, south of Richmond Road, east of the alignment;
- (x) DB Co shall submit a plan, and rationale for the limits of work for review and approval, prior to proceeding in areas where the limits of construction extend within the areas identified above.

2.11 Tree Compensation

- (a) Based upon the required removals to accommodate the construction requirements, DB Co shall complete the Tree Compensation Plan(s), and submit as consolidated package and in accordance with Schedule 10 – Review Procedure.
- (b) The Tree Compensation Plan(s) shall be based upon the following criteria:
 - (i) For every deciduous tree, over 100mm, DB Co shall replace with two 70mm caliper trees;
 - (ii) For every coniferous tree DB Co shall replace with two 1.8m height trees;
- (c) The Tree Mitigation Plan shall be prepared by a Licensed Arborist in conjunction with the Landscape Architect.
- (d) DB Co shall develop the Tree Compensation Plan(s) in conjunction with the overall planting plan for the Project, including Stations and Guideway to ensure sufficient compensation for the required removals.

- (e) The Tree Compensation Plan(s) shall conform to approved tree species list and FLUDTA requirements.
- (f) Existing trees (including crown, trunk and root system) in proximity or vulnerable to damage by the Work, shall be protected during all stages of Work. No material, construction equipment or vehicles shall be stored under the drip-line of trees at any time. Trees shall be protected and watered regularly as required by standard horticultural practice during the construction period.

2.12 Site Restoration

- (a) DB co shall complete the following:
 - (i) Removal of all temporary and permanent roadway works, including granular bases;
 - (ii) Scarification of compacted subgrade a minimum of 150mm prior to the placement of topsoil for planting, seeding or sodding;
 - (iii) Core aerate within the drip line of all existing trees where any construction activities have occurred;
 - (iv) Regrading and shaping of the Site to reinstate the original contours and drainage patterns. In areas where the roadway will be removed, the regrading shall eliminate the engineered roadway grades and profile; and,
 - (v) Install a minimum of 150mm topsoil prior to final seeding or sodding for turf areas, and 450mm topsoil for shrub beds.
 - (vi) Where the Alignment is below grade, install a minimum of 300mm of topsoil, and 1.2m of Earth Borrow over the Alignment to facilitate the growth of the vegetation.

ARTICLE 3 CONNECTIVITY REQUIREMENTS

3.1 General Requirements

- (a) Existing pathways, sidewalks and MUPs are critical community connections that shall be maintained throughout construction, unless specifically identified and agreed to by the City for closure or removal.
- (b) DB Co shall develop a TTMP to identify any potential safety concerns for pedestrians and cyclists during construction and measures for protection, as per Schedule 15-2, Part 7, Article 6 – Traffic and Transit Management Plan.
- (c) DB Co shall implement any required measures to alleviate these potential safety concerns and ensure the community connections identified in this Part 6, and Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access, are maintained. Sidewalks and pathways shall be installed as required to provide connection between the adjacent communities to the Station and as indicated elsewhere in Schedule 15-2, Part 4 – Stations, and this Part 6.

3.2 Connectivity Elements

- (a) Design and selection of construction materials and layout alignment shall be consistent with specific Site context and associated landscape type.
- (b) Pathways and MUPs shall be minimum 3.0m in width unless specified otherwise in this Article 3 and shall be a paved surface capable of commercial use, including access by maintenance and Emergency vehicles and shall not be used for calculating the requirements for loading or unloading of the buses.
- (c) All pathways and MUP's shall have a TWSI located at vehicular intersections, or where a sidewalk crosses a cycle track.
- (d) A sodded clearance strip shall be provided on each side of a MUP, as per Article 2 – Design Criteria, of this Part 6, except in the following conditions;
 - (i) Where MUPs are located beneath a Bridge, provide 0.6m paved shoulder on each side of MUP;
 - (ii) Where MUP traverses an open paved plaza, provide pavement markings, change in paving colors or change in hard surface material to identify the route of the MUP. This shall include a minimum of four bands of interlocking pavers in a double soldier course, centred 0.6m prior to the MUP traversing the plaza.
 - (iii) Where a MUP traverses the entry plaza to a Station, there shall be a minimum of 3m offset from the Station entry.

- (iv) Where a MUP is adjacent to an existing or a proposed vertical constructed surface or element such as a building, guardrail, retaining wall, fence, etc., a 0.6m “buffer” space shall be provided from the existing constructed surface in addition to the width of the MUP.
- (e) The MUPs and sidewalks at Stations shall be designed to ensure crossing locations to minimize the potential conflict between cyclists and pedestrians. This may include “T” intersections, small walls, planters or other design elements.
- (f) Install bollards at all roadway intersections to restrict vehicular access to the MUP. These bollards shall be collapsible, to accommodate service vehicles.
- (g) DB Co shall provide reflective tape on all bollards.
- (h) Depressed curbs shall be provided at all sidewalk roadway interfaces and shall be in proximity to bicycle parking areas to facilitate safe access from roadway to sidewalk.
- (i) The City has a long term plan to institute additional MUP connections at a future date, as per the TMP, Ultimate Cycling Network. Where future connections are identified by the City, DB Co shall maintain a 6m unencumbered width to access the MUP corridor that would prevent the connection from being made. A 6m-wide clear corridor shall be established that will allow a connection to be constructed and therefore shall not be encumbered with utility boxes, grade difference or other obstacle that would reasonably prevent construction of such a connection.

3.3 Accommodation of Pedestrians and Cyclists During Construction

- (a) All trails, pathways and MUPs shall remain open throughout construction unless specifically identified. DB Co shall install a temporary granular pathway for closures less than 7 days in duration. Where the trail, sidewalk, pathway or MUP is required to be closed for longer than 7 days, DB Co shall provide an alternate route with a minimum of a paved asphalt surface for the duration of the closure.
- (b) DB Co to provide an alternate route that minimizes any detours for the pedestrians and cyclists, and is a maximum of 20% additional length.
- (c) Proposed temporary closure or re-routing of pedestrian and cycling routes shall be submitted in accordance with Schedule 10 – Review Procedure, and shall conform to the construction Site Pedestrian Control Plan as required by City of Ottawa Special Provision D-005 and as documented in COADS. DB Co shall include a Pedestrian Access Plan/construction Site Pedestrian Control Plan in the TTMP submissions per Schedule 15-2, Part 7, Article 6 – Traffic and Transit Management Plan.
- (d) Multiple subsequent closures of less than seven days, shall not be permitted, and an alternate route shall be provided and shall include:

- (i) Smooth paved surface to meet Universal Design requirements;
 - (ii) Curb cuts as required to provide barrier-free routes from pathways and sidewalks to roadway crossings;
 - (iii) A minimum width of 1.8m for sidewalks, as per COADS;
 - (iv) A minimum width of 3m for MUP;
 - (v) Positive drainage to ensure no ponding on the travelled route; and
 - (vi) Temporary routes shall be lit to the same level as the original route.
- (e) All existing pedestrian walkways and cycling facilities shall be maintained to the City standards at all times, during the construction period. DB Co shall be responsible for all design, approvals, construction and maintenance, including cleaning, of the pedestrian walkways and cycling facilities for the duration of time the detour is in service.
- (f) DB Co shall provide and maintain way-finding signage for pedestrian walkways, MUP and cycling closures and detours in accordance with the TTMP. The signs shall include maps of the affected routes, and shall be posted at least at all access points, key decision points and intersections between the existing route and the alternate route, and, on the Pedestrian Walkway 50m in advance of each pedestrian walkway closure or relocation. The maps shall provide detailed directions to the alternate routes in order to travel to the original destination point.
- (g) DB Co shall not close any MUP or sidewalk identified to remain open during construction, and the TTMP shall identify all measures to ensure the safety of pedestrians and cyclists. DB Co shall modify the TTMP as required to accommodate the pedestrian and cyclists.
- (h) The Site pedestrian control design shall include all temporary bilingual pedestrian signing, directional signing, maintenance of sidewalk, relocation and any other delineation to provide safe environment for pedestrians and cyclists.

3.4 Roadway Crossings

- (a) General
- (i) DB Co shall be responsible for liaising and coordinating with the City with regard to all modifications that may be required at municipal traffic signals both during and after completion of the design and construction. Proposed modifications shall be supported by traffic engineering analysis and meet the City traffic signal requirements and standards.
 - (ii) On Federal Lands, DB Co shall install the crosswalks as per Appendix C and D;

- (iii) DB Co shall provide Crossrides where a proposed multi-use pathway or cycle track crosses an intersection.
- (iv) DB Co shall complete a traffic study to finalize the configuration and review with the City with respect to the type of controlled crossing device to be implemented (pedestrian signal, full traffic signal, or PXO Type B, C or D). DB Co shall implement the type of controlled crossing device selected by the City at each intersection where a new controlled crossing is required as per this Part 6
- (v) DB Co shall coordinate the work of this Article 3 with Schedule 15-2, Part 2 – Civil and Guideway, and Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access.

3.5 Winter Maintenance

- (a) DB Co shall design the Station plazas, pedestrian Emergency egress, PPUDO, Park and Rides and MUP to accommodate winter maintenance, including providing a route for equipment to manoeuvre along the corridor. This shall include locations to stockpile snow along the pathways as required, with sufficient space for equipment turn around, including a minimum of 5m x 5m at all egress points at the building façades;
- (b) DB Co shall indicate the snow storage locations on the layout drawings and fencing drawings;
- (c) Any snow storage locations shall be located on unencumbered City lands and outside of any ROW;
- (d) Any allocated snow storage locations shall be offset from the existing and proposed Site features, bioswales and plant material; and,
- (e) Any snow storage locations shall ensure the drainage pattern is integrated within the overall SWM plan.

ARTICLE 4 SITE SPECIFIC DESIRED OUTCOMES

4.1 Station Specific Design Criteria

(a) Montreal Station

- (i) DB Co shall provide a 2.5m continuous sidewalk, on both the north and south sides of Montreal Road, from the existing sidewalks east of Shefford Road to the east side of the OR174 EB off-ramp or on-ramp, with the following exceptions:
 - A. Under the bridge structures and Station, the sidewalk width shall be reduced to 2m; and,
 - B. On the south side on Montreal Road, the sidewalk, between Shefford Road and the bus shelter immediately east of Shefford, Road shall not be widened to 2.5m, and on the north side the existing sidewalk between Shefford Road and a point approximately 140m east of Shefford Road, shall not be widened to 2.5m.
- (ii) On the south side of Montreal Road, DB Co shall provide:
 - A. A 3m MUP, behind the curb and offset from the sidewalk by a 3m landscape buffer, with a crosswalk/crossride, at the OR174 WB on-ramp, and a Protected Intersection, including crosswalk and bi-directional crossride, at the signalized OR174 WB off-ramp/Montreal Road intersection to provide a continuous MUP connection, as identified in Clause 4.4 (a)(i) of this Part 6;
 - B. This MUP shall also serve as the EB cycling lane for Montreal Road and DB Co shall provide the depressed curb, paving markings and COADS requirements at the intersection at the OR174 WB on-ramp, to delineate the pedestrian and cycling routes; and,
 - C. The EB cycling route shall continue as a segregated cycle lane, east of the OR174 WB off-ramp/Montreal Road signalized intersection, under the Montreal Road bridges, to the OR174 EB off-ramp, with the City standard Protected Intersection and pavement markings to connect to the on-road cycle lane adjacent to the vehicle travel lane east of the intersection.
- (iii) On the north side of Montreal Road, DB Co shall provide:
 - A. A 3m MUP, immediately adjacent to the sidewalk, from the crosswalk/crossride at Montreal Road/OR174 WB off-ramp to the east-west MUP, to provide the continuous MUP connection, as identified in Clause 4.4 (a)(i) of this Part 6;

- B. A 3m MUP, continuing westerly, and connecting to the south end of Rainbow Street and connecting to a new sidewalk on the west side of Rainbow that shall extend to Canotek Road;
 - C. A segregated westbound cycle track commencing from the east side of the OR174 EB on-ramp to the west side of the OR174 WB off-ramp; and,
 - D. Provide Protected Intersections and pavement markings to connect to the on-road cycle lane adjacent to the vehicle travel lanes at each intersection.
- (iv) Under the OR174 Bridge Structures, there shall be a minimum of 8m of paving, from the front face of the curb, to the front face of the Bridge abutments to generally include:
- A. 2m width for the bus shelter or streetscape elements;
 - B. 2m sidewalk width for the pedestrians;
 - C. 2m width for the bus staging/access;
 - D. 1.5m width for the cycle track;
 - E. 0.5m width for buffer between the cycle track, curb and sidewalk; and,
 - F. With the exception of the asphalt paving for the cycle track, and the interlocking pavers for the buffer, all the paving shall be concrete.
- (v) DB Co shall provide continuous concrete paving from the outer limit of the bus staging area, 18m from the bus flag location, to the outside limit of the Station entry, to create a pedestrian/cycling mixing zone across the full extent of the bus stop and Station entry.
- (vi) The cycle track shall be developed behind the roadway curb. At the bus stop location, the alignment for the cycle track shall offset from the curb to accommodate a 2m bus staging/access area.
- (vii) The bicycle parking shall have equal quantities at each entry, offset from the Station entry and Montreal Road bus stops.
- (b) Jeanne d'Arc Station
- (i) The bicycle parking for the Station shall be located immediately north and south of the Bridge Structure, on the east side of the ROW.

- (ii) 50% of the bicycle parking shall be provided on the north side of the bridge, and 50% of the bicycle parking shall be provided on the south. Provide retaining walls as required for the bicycle parking.
 - (iii) There shall be a MUP leading to the bicycle parking from Fortune Drive.
 - (iv) Provide 2m wide sidewalk on the east and west sides of Jeanne d'Arc Boulevard on the Bridge Structure. Extend the 2m sidewalk to the bicycle parking to the north, and the MUP to the south, on the east side of the roadway.
- (c) Orléans Station
 - (i) The bicycle parking for the Station shall be located in equal quantities to the north and south, and immediately adjacent to the Bridge Structure with retaining walls and guards as required.
 - (ii) Widen the sidewalk, from Lumberman Way and Fortune Drive, to 2.5m to accommodate pedestrian movements to the Station, with the exception of the sidewalks on the bridge structure.
- (d) Place d'Orléans Station
 - (i) DB Co shall provide a Station entry plaza within the existing lands of the BRT Station, with access from Champlain Street, and ensuring the plaza accommodates the bus movements within the Station.
 - (ii) DB Co shall provide a fence between the Fare Paid Zone and unpaid zone, from 9m west of the crosswalk at Champlain to the north side of the Station entry, and extend the fence on the south side of the Station Entry to the existing jersey barrier on the north side of the Shopping Centre parking lot. The existing sidewalks shall be extended to reduce the access point to one lane for Emergency access, with a lockable gate.
 - (iii) DB Co shall provide a paved Station plaza on either side of the fare gates, with deciduous trees within the pavement.
 - (iv) The Park and Ride on the north side of OR174 shall be reconfigured to accommodate a minimum of three PPUDO spaces adjacent to north end of the existing pedestrian bridge.
 - (v) Provide 2.4m wide concrete sidewalk adjacent to PPUDO spaces.
 - (vi) Provide a Station entry plaza at the Champlain Street entrance.
 - (vii) Bicycle parking for the Station shall be provided as follows:

- A. 70% north, at the existing Park and Ride;
- B. 30% south, at the entry plaza adjacent to Place d'Orléans.

(e) Trim Station

- (i) Provide a Station entry plaza that encompasses the LRT and bus Station of approximately 1,500 m², with 60% paved.
- (ii) Provide a shared parking lot with one cell for the Universal Accessible Parking and one cell for the PPUDO immediately adjacent to the Station plaza.
- (iii) Provide a 2.4m continuous sidewalk, from each parking lot cell to the Station plaza, with crosswalks as required.
- (iv) Provide 3.0m wide concrete sidewalk along the north side of the parking lot linking parking areas to the Station plaza.
- (v) Provide a secure fenced perimeter around the bus facility, extending from the Station to the fare controlled entrance, to restrict any unauthorized access to the Station and bus Station.
- (vi) Provide pedestrian lighting on sidewalks and pathways from the perimeter of the Site on all sidewalks and MUPs.
- (vii) Bicycle parking for the Station shall be provided to the south of the Station, and shall service both the LRT and Transitway Stations.
- (viii) Prior to the removal of existing Redblacks forest on the east side of the Park and Ride facility, DB Co shall:
 - A. Plant the equal number of trees, with the same caliper and species in Cumberland Millennium Park, 100 Millennium Blvd, Orleans, relocate the existing signage, relocate the existing maple trees of the Redblacks Forest, affected by the reconfiguration of the facility to a site selected by the City, within a 5km radius of the existing site, including the maintenance and warranty of the trees for two years.

(f) Westboro Station

- (i) Provide a MUP connection from the existing pathway northwest of the Station, leading from Lanark Avenue to Scott Street.
- (ii) The Station plaza on the south side of the alignment shall be developed as a transition zone for pedestrians and cyclists.

- (iii) The Station plaza shall extend from the Station Entry to Scott Street, and between the bus access loop to the bus stop on the north side of the Station.
- (iv) The bicycle parking shall be provided in equal quantities at both the east and west end of the Station plaza.
- (v) Provide equal number of PPUDO's on both the north and south side of Scott Street, offset on either side of the front Station plaza, beyond the bus access loop.
- (vi) The sidewalks to the east and west of the plaza shall be widened to 3m wide MUPs.
- (vii) A crosswalk/Crossride shall be provided at the MUP crossing of the bus loop staging area.
- (g) Dominion Station
 - (i) There shall be a Station plaza extending between Dominion Avenue and the Station entry, with an approximate size of 200 m².
 - (ii) There shall be a minimum 4.2m wide direct public lit MUP connection between Workman Avenue and Dominion Avenue, connecting to the Station plaza over the alignment.
 - (iii) There shall be a 3m MUP connection from Workman Avenue to the at-grade pedestrian crossing of the SJAM. Provide pathway connections to the existing NCC pathways east of the at-grade crossing, on the north and south sides of the SJAM Parkway.
 - (iv) Construct the at-grade crossing as per Clause 4.4, of this Part 6.
 - (v) The bicycle parking shall be located with 50% of the bicycle parking on the south side of the Station, and 50% on the north side, within the Station plaza.
 - (vi) The Station plaza shall provide a direct connection to the NCC pathway on the SJAM Parkway west of the Station, and connect with the MUP on the south side of the LRT corridor, along the Scott Street corridor.
 - (vii) A PPUDO shall be provided to the south side of the Station, on Dominion Avenue.
 - (viii) A continuous sidewalk, commencing at Richmond Road shall be constructed on the east side of Berkley Avenue and north side of Dominion Avenue to the Station plaza. DB Co shall complete the design of the drainage to ensure adequate drainage is provided.

(h) Cleary Station

- (i) There shall be a Station plaza extending from the Station entry to the east side of the Cleary intersection crosswalk.
- (ii) There shall be a 3m MUP from the northeast intersection of Cleary Avenue/Richmond Road connecting directly to the NCC Pathway.
- (iii) The bicycle parking shall be located within the Station plaza.
- (iv) There shall be a raised intersection at Cleary Avenue/Richmond Road that encompasses both the east and west crosswalk/Crossride, and shall be constructed of 100mm x 200mm, 100mm depth interlocking pavers, with 100mm concrete base, Sierra colour, in a herringbone pattern as manufactured by [REDACTED].
- (v) Provide equal number of PPUDO's on both the north and south side of Byron Avenue, adjacent to the Station plaza to the east of the Station.
- (vi) Reinstate the lands in the northeast quadrant of Richmond Road/Cleary Avenue with topsoil and sod.

(i) New Orchard Station

- (i) There shall be a Station plaza between the west crosswalk of New Orchard Avenue/Richmond Road, and the front entry of the Station;
- (ii) There shall be a raised intersection at New Orchard/Richmond Road that encompasses both the east/west, and north/south crosswalk/Crossride, and shall be constructed of interlocking pavers, with a 100mm concrete base. Meet and match the pavers and details developed for the Cleary Avenue intersection.
- (iii) The Station plaza shall be a minimum of 50% paving, and provide a direct pedestrian connection between the intersection and the Station entry.
- (iv) The Station plaza shall include lighting to City standards, and in accordance with Article 2.7 of this Part 6.
- (v) There shall be a 2.4m wide concrete sidewalk on the south side of the Station, connecting the Station plaza to Byron Linear Park, with a minimum of 3m landscape buffer, with tree planting. There shall be a minimum 5m landscape buffer, with tree planting on the north side.
- (vi) Refer to Clause 4.4 of this Part 6, for Richmond Road Complete Street streetscape requirements.

- (vii) Provide the PPUDO on the north side of Byron Avenue, adjacent to the Station plaza
- (j) Lincoln Fields Station
 - (i) There shall be a direct lit MUP connection, between the signalized intersection on SJAM Parkway and the at-grade Station entry on the west side of the alignment.
 - (ii) The MUP connection shall be designed to elevations above the 100 year flood, and where the MUP crosses the floodplain, it shall be elevated with a Bridge.
 - (iii) There shall be a Station plaza at the west entrance of sufficient size to accommodate the pedestrian movement to the entry and 40% of the required bicycle parking spaces.
 - (iv) There shall be a Station plaza on the south end of the Station, connecting the Station Entry with Carling Avenue, of an approximate size of 100m², with a minimum of 60% paved.
 - (v) There shall be a Station plaza on the east side of the Station, connecting the PPUDO, paid entry gates, bus Platforms and Station entry. The Station plaza shall contain 20% of the bicycle parking spaces.
 - (vi) 40% of the required bicycle parking spaces shall be accommodated at the Station plaza leading from Carling Avenue.
 - (vii) The traffic islands within the bus Station shall include infiltration trenches with tree and shrub planting.
 - (viii) Provide permeable pavers at the Station entrance and a permeable paver strip along the pedestrian walkway (adjacent to bus Platform) to a dry pond.
 - (ix) The bus Station shall have trees in the plaza adjacent to the bus shelters to provide shade and shelter to the transit users.
 - (x) Provide a separate PPUDO, with access from the existing signalized intersection at Carling Avenue/Lincoln Fields Station and have a sidewalk connection from the PPUDO, and Carling Avenue, to the at-grade entrance to the east side of Station.
 - (xi) Provide retaining walls to allow direct access from the PPUDO to the fare controlled entrance.
 - (xii) Provide a secure fenced perimeter around the bus facility, extending from the Station to the fare controlled entrance for the PPUDO, to restrict any unauthorized access to the Train Station and bus Station.

- (xiii) Provide a 2m wide sidewalk and 1.8m cycle lane on both sides of Carling Ave. between existing signalized crossing and proposed 6m wide crosswalk/Crossride.
 - (xiv) Locate the pedestrian activated crosswalk/Crossride signalized intersection approximately 120m west of the existing Transitway entry on Carling Avenue to align with the MUP on the south side of Carling and with the Station entry Plaza.
- (k) Iris Station
- (i) There shall be a Station plaza on both the east and west side of the Station which delineates the pedestrian space.
 - (ii) The West Station plaza shall extend from the proposed stairs connecting the plaza to Iris Street Bridge to the south to encompass the bicycle parking.
 - (iii) There shall be a lit MUP connection from Iris Street to both Station plazas and fare control entry location.
 - (iv) There shall be a MUP on the west side of the Station, extending from Baseline Station to the NCC Capital Trail on the north side of Iris Street.
 - (v) DB Co shall provide a controlled crossing of Iris Street between Iris Station and Parkway Drive. DB Co shall complete a traffic study to finalize the configuration and review with the City with respect to the type of controlled crossing device to be implemented (pedestrian signal, full traffic signal, or PXO Type B, C or D). DB Co shall implement the type of controlled crossing device selected by the City.
 - (vi) Provide equal number of PPUDO's on both the north and south side of Iris Street, and coordinated with the bus stops and signalized pedestrian crossing.
 - (vii) The Emergency exits shall provide a direct connection from the Station to the walkways.
 - (viii) There shall be bicycle parking provided adjacent to the Station entry, with 50% provided at each entry.
- (l) Baseline Station
- (i) The bus Station plaza shall extend from the Station entry at College Avenue, and encompass the interior of the bus Station. It shall be a minimum of 60% soft landscape and 40% paved areas, with sidewalks a minimum of 3m. The soft landscape shall contain earth forms with 3:1 slopes that direct the Passengers between the bus stops and the LRT entry. There shall be a break in the landforms to provide a direct pedestrian access between the east and west sides of the Transitway to accommodate transfers between the local and express buses.

- (ii) Provide lighting throughout the Station plaza to City Standards, and in accordance with Clause 2.7 of this Part 6.
 - (iii) Provide a secure fenced perimeter around the bus facility, extending from the Station to the fare controlled entrance, to restrict any unauthorized access to the Station and bus Station.
 - (iv) Relocate the MUP to the west side of [REDACTED] plaza.
 - (v) 60% of bicycle parking shall be provided at the south entry to the Station and 40% at the north Station entry.
 - (vi) Provide a plaza entry at the north Station Entry, with the following:
 - A. Remove all the existing turf at the north Station entry and install concrete paving.
 - B. Relocate existing café tables to accommodate Station entry
 - C. On the north side of the Station entry, remove existing turf and extend concrete paving a minimum of 350m².
 - (vii) Reinstate the remaining plaza to the west of the [REDACTED] building to match existing paving and soft landscape areas.
 - (viii) Remove the bus stops and two lanes of the Transitway and reinstate with topsoil and sod. Maintain two lanes of the existing Transitway between Navaho Drive and College Avenue, as per Schedule 15-2, Part 1, Article 14 – Demolition, Removals and Disposal.
 - (ix) Provide a MUP on the west side of the Transitway, extending from the existing east-west MUP, to Pallister Private.
- (m) Queensview Station
- (i) The bicycle parking shall be provided at street level, with 30% of the spaces provided at each the south side and 70% on the north side of the Station.
 - (ii) Provide a PPUDO on the north side of Baxter Road near the Station entry/Pedestrian Bridge with a sidewalk connection between the PPUDO and the Station Entry.
 - (iii) Provide a MUP leading from the PPUDO on Queensview Drive to the Station entry ramp on the west side with tree planting and lighting to City standards.
 - (iv) Provide a lit MUP from the east Station Entry to Roman Avenue.

- (v) Provide a PPUDO to the north of the Station on Queensview Drive.
 - (vi) Provide a lit 2.4m wide sidewalk, with a roll curb along the existing parking lot, from the MUP north to the Queensview Drive, to the Station north entry Station Plaza.
 - (vii) Provide an entry plaza of approximately 300m² on the north side adjacent to the retail parking lot, with 80% paving, and 20% soft landscaping.
 - (viii) Provide a sidewalk on the west side of the Station, along the south and west side of the parking lot, extending to Queensview Drive.
 - (ix) Provide a 6m wide pedestrian walkway from the north Station entry plaza to the existing retail building, framed on either side with a 2.0m wide planting bed. The pedestrian walkway shall provide a smooth slope between the existing retail building and the Station, with a raised crosswalk at the drive aisle.
 - (x) Reconfigure the parking lot to accommodate the proposed modifications, including the traffic island, with the two trees.
 - (xi) DB Co shall provide a Station plaza at Baxter Road of sufficient size to accommodate the entry to the Station entry/Pedestrian Bridge and the bicycle parking.
 - (xii) Provide a sidewalk on the north/west side of Baxter Road, from the Station Entry to Iris Street.
- (n) Pinecrest Station
- (i) Provide a lit MUP from the southwest corner of the intersection of Pinecrest Road/Hwy 417 WB off-ramp to the Station plaza.
 - (ii) Provide a lit Station Plaza with a minimum of 9m width between the bus Platform and the Station entry to accommodate the Passenger movement, and the east-west MUP on the north side of the Station. Provide a sidewalk with a 3m landscape buffer, between the MUP along the bus Platform and connecting to the Station entry plaza.
 - (iii) Provide a 3m wide lit MUP connection from Dumaaurier Avenue to the Station plaza and a controlled crossing at Dumaaurier Avenue. DB Co shall complete a traffic study to finalize the configuration and review with the City with respect to the type of controlled crossing device to be implemented (pedestrian signal, full traffic signal, or PXO Type B, C or D). DB Co shall implement the type of controlled crossing device selected by the City.

- (iv) There shall be a PPUDO on Dumaaurier Avenue with a sidewalk connection to the MUP leading to the Station.
- (o) Bayshore Station
 - (i) There shall be a Station Plaza from the limit of the Fare-Paid Zone to the Bayshore access road.
 - (ii) Provide a fence enclosure from the paid fare entry around the bus Station to restrict access to the Station.
 - (iii) There shall be a MUP from the Station plaza to Woodridge Crescent on the west side of the bus access, with an at-grade controlled crossing between the MUP and the sidewalk on the north side of Woodridge Crescent.
 - (iv) DB Co shall complete a traffic study to finalize the configuration and review with the City with respect to the type of controlled crossing device to be implemented (pedestrian signal, full traffic signal, or PXO Type B, C or D). DB Co shall implement the type of controlled crossing device selected by the City.
 - (v) Provide a crosswalk from the Station plaza, east to the sidewalk along the north face of the shopping centre.
 - (vi) DB Co shall extend a 3.0m sidewalk along the north side of the alignment under Richmond Road, and connecting to the Richmond Road/417 off-ramp. DB Co shall maximize the width of the sidewalk under the Richmond Road Bridge and widen to 3m east and west of the Richmond Road Bridge. DB Co shall maximize the sidewalk width on Richmond Road up to 3.0m by modifying the lane widths, and protecting the existing retaining wall.
 - (vii) There shall be a PPUDO on the south side of Woodridge Crescent.
 - (viii) Provide infiltration trench with tree and shrub planting within central island of Transitway zone.
 - (ix) Provide crosswalk/Crossride on the south side of the signalized intersection of the Highway 417 WB off-ramp at Richmond Road.
 - (x) Provide a MUP from Woodridge Crescent to Holly Acres Drive, on the north side of the alignment.
- (p) Moodie Station
 - (i) DB Co shall provide a Station entry plaza of approximately 600m², connecting the BRT to the LRT;

- (ii) Provide lockable gates from the BRT Station to the entry plaza, to accommodate passenger movement when the LRT is not operational;
- (iii) Realign the current MUP from Moodie Drive to the east of the Station, as required to accommodate the Station and the realignment of Corkstown Road. Any MUP relocation shall be no closer to Stillwater Creek. Reinstall the existing PXO, as per the original conditions prior to commencement of the works. Modify the grading of the MUP at the Moodie intersection to eliminate ponding on the MUP. The existing MUP south of Corkstown Road and east of Moodie Station shall remain in its current position and no realignments of this portion shall be permitted;
- (iv) DB Co shall provide two PPUDOs accessed from Corkstown Road: one west of the Station, and one east of the Station entry. Each PPUDO shall be located as close as possible to the Station entry. Should the PPUDO be located on the north side of Corkstown Road, provide a crossing at the PPUDO and Corkstown Road. DB Co shall complete a traffic study to finalize the configuration and review with the City with respect to the type of controlled crossing device to be implemented (pedestrian signal, full traffic signal, or PXO Type B, C or D). DB Co shall implement the type of controlled crossing device selected by the City.
- (v) Provide a secured perimeter enclosing the LRT and BRT Platform, with lockable gates located between the bus Platform and the LRT Platform.
- (vi) There shall be a 2.4m sidewalk from Corkstown Road to the Station entry plaza, connecting to the existing sidewalk, and offset from the MUP with a landscape median.
- (vii) Extend a MUP from the existing sidewalk along the north side of Corkstown Road, as required to provide a continuous connection between the existing MUP south of Corkstown Road to Moodie Drive. The MUP shall be lit.
- (viii) Provide a pedestrian connection between the PPUDOs and the Station entry.
- (q) Tunney's Pasture
 - (i) DB Co shall increase the size of the Existing Confederation Line Station plaza to accommodate the modifications to the bus layby area, west of the Station.
 - (ii) DB shall provide a secured fence perimeter around the bus staging area and the entrance to the LRT Station to create one Fare Paid Zone, with an Emergency access at the northeast corner to Yarrow Drive.
 - (iii) The Site design includes the Streetscape, Station plaza and the Bus Loop Green Space, as per Appendix N, Tunney's Pasture Concept Reference Plan. DB Co

shall be responsible to finalize the design, and submit drawings, as per Schedule 10 – review Procedure, for the landscape.

(iv) DB Co shall provide the following elements for the design:

A. Tree Planting:

- i. Provide a soil trench a minimum of 3.0m in width for trees installed in narrow planting beds;
- ii. All trenches and boulevard planters shall contain a breakthrough to catch basin in a series of 4 trees; and,
- iii. Include 150mm drainage tiles with filter sock, encompassed in 20mm washed clear stone, enclosed in Class 1 non-woven geotextile.

B. Tree Planting in Paving:

- i. Trees shall provide shade to seating zones during the summer and shall not obstruct key sightlines and access routes;
- ii. Trees planted in hard surface pavements be installed with structural soil and shall include tree grates to protect tree roots in the walking surface; and,
- iii. Irrigation shall be provided for the trees in the structural cells.

C. Plant Material Sizes:

| Plant Material | Spacing | Size |
|---|---|--------------------|
| Deciduous trees, large | 7.5 m on centre, with 10m on centre adjacent to streets | 70-90 mm caliper * |
| Shrubs | 600-900 mm on centre | 60 cm ht. / 3 gal. |
| Grasses & Groundcovers and Vines | 300 mm on centre | 1 gal. pot |
| * No more than 30% of trees shall be at the lowest size in the specified range. | | |

D. Concrete unit pavers:

- i. Concrete unit pavers shall accommodate maintenance and Emergency vehicle access;

- ii. Concrete unit pavers shall be a minimum 100mm thick and shall be laid over a concrete base; and,
- iii. Concrete unit pavers shall be rectangular with a length at least three times the width, and a minimum of two contrasting shades of grey.

E. Benches

- i. Curved benches shall be provided and shall be 450mm high x 500mm wide, typical. Benches shall be integrated into the planting beds adjacent to provide curved, concave seating spaces beyond the main sidewalk or plaza spaces;
- ii. Bench base shall be cast-in-place concrete with integral colour pigment to achieve a consistent mid-grey colour and include full depth footings;
- iii. Wood seating shall be provided over concrete bench base integrated into the overall design to achieve a visually cohesive effect:
 - 1 30% of seating shall also provide backrests and armrests to suit universal accessibility;
 - 2 wood shall be highly durable & low-maintenance (will not require re-coating after a one-time sealer application);
 - 3 ipe or approved equivalent;
 - 4 concealed galvanized steel connection brackets throughout;
 - 5 stainless steel fasteners throughout; and,
- iv. Skateboard deterrents shall be provided along benches, to be located maximum 1000mm on centre, maximum 450mm from corners. Shall be Grade 316 stainless steel, concealed fixing using mounting pin/drill & epoxy installation; Skatestoppers G-05-SS or approved equivalent.

F. Roadway Lighting

- i. Streetscape lighting shall be provided along Yarrow Driveway, Goldenrod Driveway and Tunney's Pasture Driveway;

- ii. Pole spacing shall be coordinated with tree plantings to achieve an equal spacing between trees, while meeting required illumination levels. Fixtures shall be full cut-off in accordance with dark-sky friendly best practices; and,
- iii. Poles shall have a minimal clean-lined aesthetic: slender vertical tapered pole, modern LED luminaires located close (maximum 150mm) to the pole and shall be premium light grey or mid-grey finish colour.

G. Pedestrian-scale lighting

- i. Pedestrian-scale lighting fixtures shall combine on street lighting poles with a separate davit arm facing the sidewalk. Modern LED luminaires located close (maximum 150mm) to the pole; pedestrian fixtures shall be consistent height between 3.5m and 5m. Lighting shall be full cut-off in accordance with dark-sky friendly best practices; and,
- ii. Where separate poles are required, light poles shall have a minimal clean-lined aesthetic, slender vertical tapered pole, modern LED luminaire located close (maximum 150mm) to the pole. Shall be consistent height between 3.5m and 5m. Shall have consistent spacing between 12m and 20m and shall be premium light grey or mid-grey finish colour.

H. Services

- i. Electrical and water services shall be provided from 101 Tunney's Pasture Driveway; and,
- ii. Sanitary services shall connect to the existing sewer on Yarrow Driveway, Goldenrod Driveway or Tunney's Pasture Driveway.

I. Streets: Goldenrod Driveway, Yarrow Driveway and Tunney's Pasture Driveway

- i. The paving shall match the adjacent paving for Station plaza or bus loop green space;
- ii. 1.5m high stainless steel, 200mm diameter bollards shall be installed throughout the south side of Yarrow Drive;
- iii. The following street trees, shall be planted framing the roads within the proposed plaza paving and sidewalks:

- 1 24 trees on the south side of Yarrow Drive; and,
 - 2 Six trees on the east side of Goldenrod Driveway;
 - iv. The following street trees shall be planted, framing the road, within the soft landscape treatment;
 - 1 Five trees on the west side of Tunney's Pasture Driveway.
 - v. Three benches, with a total 18m length, shall be installed to provide curved, concave seating spaces beyond the main sidewalk; and,
 - vi. The streets shall be lit.
- J. Station Plaza
- i. The Station plaza shall occupy the east half of the site, bordered by the bus loop, bus loop green space, Yarrow Driveway and Tunney's Pasture Driveway;
 - ii. There shall be 75% paving and 25% planting beds;
 - iii. Benches:
 - 1 DB Co shall provide 13 curved benches, totalling 55m in length. A minimum of nine benches shall be integrated into the three Station plaza sodded planting beds and provide curved, concave seating spaces, with three benches facing the central water feature. A minimum of four free-standing benches shall be provided in the east half of the plaza.
 - iv. Planting Beds:
 - 1 DB Co shall provide a total of four planting beds within the Station plaza. Planting beds shall be organically shaped, with rounded corners and sides;
 - 2 All planting beds shall be defined by continuous, 200mm wide flush concrete curbs;
 - 3 Three sodded planting beds shall be provided west of the main building entrance and configured to provide visual interest, convenient pedestrian access, and a range of places to sit in sun or in shade;

- 4 Grading within sodded planting beds shall provide gently mounded landforms with min 10% and maximum 25% slope;
 - 5 Planting within the sodded planting beds shall include large deciduous shade trees as outlined below;
 - 6 One bioswale planting bed shall be provided at the west edge of the Station plaza. Planting bed shall extend along the bus loop fence line and provide visual screening from activities within the bus loop;
 - 7 Grading within bioswale planting bed shall provide gently sloping swale with a maximum 8% slope.
 - 8 Planting within the bioswale planting bed shall be a mix of deciduous trees, deciduous and coniferous shrubs, ornamental grasses, perennials, and ground covers that provide variation, texture and visual interest to the site through all seasons. Plants shall be non-invasive species that are drought-tolerant, salt tolerant and low maintenance.
- v. Tree Planting within the plaza paving
- 1 DB Co shall provide a minimum of 38 large deciduous trees within the Station plaza; and,
 - 2 Large deciduous trees within the Station plaza shall be planted on a skewed 7.5m grid with one axis parallel to Yarrow Driveway and one axis perpendicular to the Station building face. Grid shall be continuous over entire plaza, including paved areas and planting beds.
- vi. Lighting
- 1 Pedestrian lights shall be aligned with the tree planting grid axes and coordinated to achieve an equal spacing between the trees, and maintaining required illumination levels;
 - 2 Feature/accent lighting shall be provided to within sodded planting beds to accentuate seating area; Continuous LED lighting shall be integrated into benches;
 - 3 Up-lighting shall be integrated into the tree grates and planting beds to illuminate large deciduous trees in Station plaza; and,

- 4 Two light sources per tree shall be provided.

vii. Electrical

- 1 A minimum of three power sources shall be provided within the Station plaza for outdoor programming;
- 2 Each power source shall provide 200 amp electrical service with eight outlets;
- 3 Power sources shall have stainless steel enclosures, and shall be fully integrated into the landscape design;
- 4 The assembly shall be able to withstand normal water-condensation and other environmental influences; and,
- 5 Exposed plastic receptacles shall not be permitted.

K. Bus Loop Green Space:

i. Paving

- 1 The paving shall be cast in place concrete, with no tooled margins or stamped finish, and designed to accommodate service and Emergency vehicle access, or as indicated below;
- 2 A vehicular access shall be provided at the east edge of the bus loop green space, min 7m wide connecting the bus Loop to Yarrow Driveway. The concrete paving shall be able to accommodate heavyweight vehicular traffic;
- 3 A continuous central 2,4m wide pathway shall be provided. The pathway shall have meandering curves with a mid-point connection to Yarrow Driveway and diagonal connections to the northwest and southwest corners of the park at Goldenrod Driveway. The central pathway shall increase in width to 4m minimum at the intersection of the main pathway and mid-point connection.

ii. Tree Planting

- 1 A minimum of 23 large deciduous trees shall be planted within the bus loop green space.

- 2 Large deciduous trees within the greenspace north of bus loop shall be planted on a skewed 7.5m grid with one axis parallel to Yarrow Driveway and one axis perpendicular to the Station building face. Grid shall be continuous throughout the bus loop green space, including raised planters, planting beds and central pathway.

iii. Planting Beds

- 1 A total of four planting beds shall be provided within the bus loop green space. Planting beds shall be organically shaped, with rounded corners and sides.
- 2 All planting beds shall be defined by continuous flush 200mm wide concrete curbs.
- 3 Three sodded planting beds shall be provided north of the central pathway.
- 4 Grading within sodded planting beds shall provide gently mounded landforms with min 10% and maximum 25% slope.
- 5 Planting within the sodded planting beds shall include large deciduous shade trees as outlined below.

iv. Bioswale

- 1 One bioswale planting bed shall be provided along the south side of the pathway. The planter shall be continuous between Goldenrod Driveway and the Station plaza, and extend to the south edge of the bus loop green space.
- 2 Grading within bioswale planting bed shall provide a gently sloping swale with a maximum 8% slope.
- 3 Planting within the bioswale planting bed shall be a mix of deciduous trees, deciduous and coniferous shrubs, ornamental grasses, perennials, and ground covers that provide variation, texture and visual interest to the site through all seasons. Plants shall be non-invasive species that are drought-tolerant, salt tolerant and low maintenance.

v. Lighting

- 1 Pedestrian lights shall be located along the main central pathway.
- 2 Pole spacing shall be coordinated with tree plantings to achieve an equal spacing between trees, while meeting required illumination levels.

(r) Moodie LMSF

- (i) DB Co shall develop a site plan for the LMSF with the following parameters:
 - A. Provide a 3m wide tree/shrub hedgerow, with a minimum of 70% trees, as a buffer between Corkstown Road and a minimum of 60% of the overall length of the facility and the alignment;
 - B. Provide a fenced perimeter around the facility to control access to the facility and meet the MTO safety requirements for Highway 417. The existing fence at the west end of the perimeter shall be maintained or replaces in its current location.
 - C. Provide a lit sidewalk connection from Corkstown Road to the main entrance to the Administration Building;
 - D. Provide trees along the sidewalks within the LMSF to provide pedestrian comfort and safety; and,
 - E. Provide accent planting at the main entrance to the Administration Building.

4.2 Station Elements

- (a) DB Co shall provide the minimum quantities of following elements for each Station:

| Station | PPUDO parking spaces | Total Bicycle Parking Spaces | Current Bicycle Parking | Accessible Benches | Waste Receptacles |
|-----------------|----------------------|------------------------------|-------------------------|--------------------|-------------------|
| Montreal | 0 | 40 | - | 4 | 2 |
| Jeanne d'Arc | 0 | 20 | 12 | 0 | 2 |
| Orléans Station | 0 | 20 | - | 0 | 2 |
| Place d'Orléans | 3 | 40 | 28 | 0 | 2 |
| Trim | 6 | 60 | 12 | 7 | 2 |
| Westboro | 6 | 40 | 12 | 4 | 3 |

| | | | | | |
|------------------|---|----|----|----|---|
| Dominion | 3 | 60 | 48 | 3 | 1 |
| Cleary | 6 | 20 | - | 1 | 1 |
| New Orchard | 2 | 20 | - | 4 | 2 |
| Lincoln Fields | 9 | 60 | 36 | 4 | 4 |
| Iris | 6 | 40 | 12 | 2 | 4 |
| Baseline | 0 | 60 | 36 | 20 | 2 |
| Queensview | 6 | 20 | - | 3 | 2 |
| Pinecrest | 3 | 20 | 12 | 5 | 1 |
| Bayshore | 3 | 40 | 24 | 3 | 1 |
| Moodie | 4 | 30 | - | 4 | 2 |
| Tunney's Pasture | 0 | 40 | | 10 | 8 |

4.3 Station Plantings

- (a) DB Co shall provide the minimum quantities of plant material for each Station:

| Station | Deciduous Trees | Coniferous Trees | Deciduous Shrubs | Coniferous Shrubs |
|-----------------|-----------------|------------------|------------------|-------------------|
| Montreal | 17 | 0 | 0 | 0 |
| Jeanne d'Arc | 0 | 0 | 0 | 0 |
| Orléans Station | 0 | 0 | 0 | 0 |
| Place d'Orléans | 50 | 0 | 0 | 0 |
| Trim | 325 | 0 | 900 | 385 |
| Westboro | 5 | 0 | 260 | 100 |

4.4 Corridor Specific Design Requirements

- (a) Confederation East – Blair to Sir George-Étienne Cartier Parkway

- (i) DB Co shall provide a MUP continuous along north side of OR174 from Blair Station easterly to Montreal Road/OR174 EB off-ramp on the north side of the OR174. Continue the MUP easterly over Green's Creek, and connect to the existing NCC Greenbelt Pathway E, west of Sir George Etienne Cartier Parkway. Db Co shall design and construct the MUP to be limited to the Lands, as described in Schedule 20 – Lands.
 - (ii) DB Co shall provide MUP crossing of Green's Creek.
- (b) Confederation East - Sir George-Étienne Cartier Parkway to Jeanne d'Arc Boulevard
 - (i) No additional Connectivity requirements.
- (c) Confederation East - Jeanne d'Arc Boulevard to Trim Road
 - (i) DB Co shall provide 3.0m wide MUP continuous along the south side of OR174, from the north end of St. Pierre Street, easterly to Champlain Street and connecting to Place d'Orléans Drive, and south to Centrum Boulevard, including any Culverts required to maintain existing drainage.
- (d) Place d'Orléans Station
 - (i) DB Co shall add a crossride at Champlain Street on the north side of Place d'Orléans Drive to the existing signalized intersection.
 - (ii) DB Co shall widen existing footpath to the north of the Station between parking lot and Bilberry Drive to a 3m wide MUP and reconfigure parking lot to allow MUP access. Install collapsible bollards at MUP/parking lot interface to control vehicular movement.
 - (iii) DB Co shall widen existing pathway between Alpine Street and Champlain Street to 3m wide MUP and provide sufficient lighting to City of Ottawa standards.
 - (iv) DB Co shall add a crossride across Champlain Street linking Alpine Street MUP to Park and Ride to the north leg of the existing signalized intersection of Champlain Street and the OR174 WB off ramp.
- (e) Trim Station
 - (i) There shall be a MUP on the realigned Trim Road, connecting from the existing MUP at Dairy Drive, to the existing MUP on the north side of Jeanne d'Arc Boulevard, west of the existing Trim Road. The MUP shall be located on the west side of the realigned Trim Road, and the south side of Inlet Private, with crosswalks/crossrides at Trim/Jean d'Arc Boulevard.

- (ii) DB Co shall retain the two MUP connections from the existing MUPs to Cardinal Creek community, to the Station entry plaza and through to the Trim Road/OR174 intersection. The MUP connection to the north, shall cross at the OR174/Realigned Trim Road intersection, and the southern MUP shall cross the Roadway at the signalized intersection to the east access to the Park and Ride with a crosswalk/crossride.
- (f) Workman/Scott Street Bus Detour
 - (i) DB Co shall reinstate the Site, from Churchill Avenue to the SJAM, with the following:
 - A. Provide a continuous MUP from Churchill Avenue/Scott Street intersection to the Dominion Station plaza;
 - B. The centreline of the MUP shall be offset a minimum of 9m from the south abutment of the Roosevelt pedestrian bridge;
 - C. Provide a 100mm conduit, capped and sealed at each end, terminated at a hand hole, with a pull wire, on the south side of the MUP throughout the corridor to accommodate future City lighting requirements;
 - D. Provide and install plant material as per Appendix F for all City Lands. Appendix A, shall govern for all NCC lands;
 - E. Provide topsoil and seed to all areas disturbed by the construction activities, to City of Ottawa standards;
 - F. Provide a 1.2m high powder coated black fence, with vertical pickets, adjacent to the existing interlocking pathway leading to the entrance to 2100 Scott Street; and,
 - G. Reinstate the pathway connection between the interlocking pathway and the MUP.
 - (ii) DB Co shall protect the existing spruce trees immediately north of [REDACTED] wherever feasible. The Tree Mitigation Plan shall indicate the location of these trees, the BRT detours, and the limits of grading for approval, prior to commencement of Work.
- (g) Churchill Overpass
 - (i) DB Co shall design and construct the pathways, and provide a new MUP and connections within the SJAM Parkway lands to integrate the pathways with the proposed underpass, including the following:

- A. Provide a MUP from the north end of Churchill to the MUP and pathway on the north side of the SJAM Parkway, adjacent to the Ottawa River;
- B. The minimal clear width of the Structure shall be 5m;
- C. Modify the access point through the perimeter fence with the removal of one fence panel, and new termination posts on either side;
- D. Provide culvert(s) as required to provide a drainage swale on the west side of the proposed MUP to the Ottawa River;
- E. Realign the MUP on the north side of the SJAM Parkway to maintain the original elevations;
- F. Provide “Y” intersections for the MUP connections;
- G. Maintain the location of the existing pathway along the Ottawa River shoreline;
- H. Realign the pathway on the south side of the SJAM Parkway to minimize the impacts on the adjacent woodlots, and retain the original elevations;
- I. Upon the completion of the underpass, remove all the existing temporary works, including granular bases, scarify the sub-grade a minimum of 150mm, and regrade to original contours;
- J. Provide side slopes with an average of 6:1 for the MUP, and 4:1 for the drainage swale;
- K. Provide topsoil and seed to all areas disturbed by the construction activities, to City of Ottawa standards; and,
- L. The overall width of the pedestrian underpass shall be 5m, as per the NCC design drawings, with an exemption for the 0.5m offset from the MUP to the structural wall permitted.

(h) SJAM Parkway

- (i) The Site design including pathways, roadway crossings, grading, planting, seeding, and specifications have been developed by the NCC for SJAM Parkway and Rochester Fields. These include:
 - A. Appendix A: Landscape Plans and Details for SJAM, including Dominion at-grade crossing;
 - B. Appendix B: Landscape Specifications;

- C. Appendix C: Rochester Fields at-grade crossing, planting and grading; and
 - D. Appendix D: Rochester Fields Pedestrian Crossing Landscape.
- (ii) DB Co shall be responsible to finalize the design developed by the NCC and submit drawings as per Schedule 10 – Review Procedure, for the landscape including:
- A. Final grading to integrate the realigned SJAM Parkway with the parkway setting of the corridor;
 - B. Proposed asphalt pathway on the south side of the SJAM Parkway, from Woodroffe Avenue to Atlantis, including linkages to the community to the south, pathways under the underpass and connections to the existing pathway on the north side of the SJAM Parkway;
 - C. Supply and installation of the park furniture, including concrete bases, modifications to perimeter fence on south property line, line painting, signage and miscellaneous Site works to finalize the landscape on the south side of the SJAM Parkway and MUP connections to the existing MUP north;
 - D. Grading of Rochester Fields to accommodate the proposed pathway and crosswalk leading to the Ottawa River Promenade for the future development by the NCC. This shall include the granular bases for the pathway only, no pavers. Refer to Appendix A of this Part 6;
 - E. Final Site works for the pedestrian crossing at Rochester Fields and Dominion Station including the pavers, bollards, TWSI, line painting, plant material and miscellaneous works. Refer to Appendix C and D of this Part 6;
 - F. Contour grading, soil preparation, topsoil and seeding for the development of Rochester Fields. The berms identified adjacent to the Cleary Station Fan Plant shall be deleted, and the overall grading requirement for the SJAM shall be completed, as per Clause 4.4(h)(iii)A of this Part 6. Refer to Appendix A, of this Part 6;
 - G. Soil preparation, topsoil, planting bed preparation, installation of all plant material, within the median, south of the SJAM Parkway, including the two year warranty and maintenance. Refer to Appendix F of this Part 6 for the site works south of the NCC lands at Dominion Station;
 - H. Soil preparation, growing media, installation of plant material and seed mixes for the bioswales between the SJAM Parkway lanes, including the establishment, maintenance and warranty;

- I. Fine grading of all disturbed areas, soil preparation, topsoil, seeding, establishment, maintenance and warranty of the grass and meadow mixes.
- (iii) In addition to design drawings in Appendices A, C and D of this Part 6, the following design parameters shall be met during the design:
 - A. Site Grading
 - i. The gradient of the side slopes from the SJAM Parkway to the existing lands shall be a minimum of 6:1, and provide an even transition between the slope and the original grade.
 - ii. Side slopes of 3:1 from the SJAM Parkway to the existing lands shall be permitted in locations within 9m of existing trees to be protected. A 0.6m flat shoulder at the back of curb shall be provided prior to the commencement of the side slope.
 - iii. The grade transition between the tree protection locations and the general transition grading shall occur over a minimum of 15m.
 - iv. The pedestrian crossings shall meet and match the grades developed for the realigned SJAM Parkway.
 - v. The original drainage pattern of the SJAM lands south of the Parkway shall be maintained after the completion of the landscape works. DB Co shall install the proposed pathway at an elevation to provide overland drainage to the existing ditches and swales.
 - vi. The planting bed areas shall be excavated to the depths as required for the bed preparation. Raised beds for the plant material shall not be permitted.
 - vii. The overall width of the pedestrian underpass shall be 5m, as per the NCC design drawings, with an exemption for the 0.5m offset from the MUP to the structural wall permitted.
 - viii. The contouring grading for the proposed screening of the original fan plant adjacent to Cleary Station is required only if the fan plant is constructed within the SJAM parkway lands. Should the fan plant not be installed, the contour grading shall not be installed, and the grading criteria identified in this Article shall apply.
 - B. Reinstatement of all lands to the north of the realigned SJAM Parkway shall be completed with topsoil and City of Ottawa seed mix.

- C. Where there is a requirement for a depressed curb for the major storms, DB Co shall install a reinforced geogrid between the curb and the original grade. The width of the geogrid shall be no less than 5m and centred on the depressed curb location. This geogrid shall be of sufficient opening size to accommodate for the growth of turf.
 - D. Refer to Schedule 15-2, Part 2, Article 5 – Drainage and Stormwater Management Design Criteria, for the SWM requirements for the spillways from the roadway to the bioswales.
 - E. Catchbasins within the bioswales shall be centred on a riverwashed stone area, with a minimum of width of 1m, and length of 2m, with a filter fabric separation to subgrade.
 - F. The concrete headwall of the bioswales shall be delineated with an identification marker for visibility during maintenance, and grass cutting operations.
 - G. The bioswales to the north and south of the SJAM Parkway shall be planted with a blend of grasses and forbes;
 - H. Plant material as per Appendix A of this Part 6, shall be utilized within the median; and,
 - I. The clear width for the underpass shall be a minimum of 5m.
- (i) Pinecrest Creek Corridor – Richmond Road to Highway 417
- (i) Lawn Avenue Interface
 - A. DB Co shall protect the existing large deciduous trees at the east property line, south of Richmond Road, during construction of the alignment;
 - B. DB Co shall provide a berm and planting on the east side of the alignment, as per Appendix G;
 - C. DB Co shall provide a root barrier protection on all the underground utilities through the Lawn Avenue Parkette to accommodate planting within 1m of the realigned utilities;
 - D. DB Co shall complete the landscape plan for the Lawn Avenue Parkette including:
 - i. Provide an entrance plaza at Edgeworth with approximately 85m² of interlocking paving, two benches, and framed along the south side with a low natural stone wall, approximately 9m in length, and

- encompassing both crosswalks at Edgeworth Avenue/Lawn Avenue intersection;
- ii. Provide an interlocking sidewalk connection to the existing interlocking sidewalk, south of the parkette;
 - iii. Provide a 3m wide MUP connecting from the north intersection crosswalk to the NCC pathway, west of Lawn Avenue;
 - iv. The entrance plaza shall meet and match the grades of the Roadway, and a culvert shall be installed as required with the overall grading modifications to Edgeworth Avenue;
 - v. Provide bollards along the interface of the entry plaza, sidewalk and MUP to control vehicular movements into the parkette. There shall be lockable bollards at the MUP entry to provide service vehicle access to the corridor;
 - vi. The parkette shall be graded to ensure that overland drainage is towards the west, while providing a level terrain for a play area;
 - vii. Complete the planting plan including 13 deciduous trees, 190 deciduous shrubs and 50 coniferous shrubs to provide a buffer between the parkette and the adjacent home owners; and,
 - viii. The reinstatement of the turf areas shall be sod only, seeding shall not be permitted.
- E. DB Co shall remove the existing community garden, shed and auxiliary items and reinstate upon completion of the Work.
- (ii) DB Co shall complete the following MUP works adjacent to Lincoln Fields Station:
- A. Relocate the existing MUP north of the Woodroffe Pedestrian Bridge to between the SJAM and the alignment, with a connection to the at-grade signalized intersection at the SJAM and the MUP to the west Station Plaza.
 - B. Extend the MUP on the west side of alignment, north to connect to Richmond Road, the MUP on the east side of the alignment and the existing NCC pathway.
 - C. Provide a MUP on the east side of the alignment, from the signalized intersection at Carling to Richmond Road, with connection to Lawn Avenue Parkette, and the MUP west of the alignment.

- D. Realign the MUP on the east side of alignment to provide a continuous 3m wide MUP connection from Woodroffe Pedestrian Bridge to Woodroffe High School and Rosewood Avenue. Extend MUP to connect with proposed crosswalk/Crossride at Station entrance on Carling Avenue.
 - E. Provide a MUP connection from the intersection of Severn/Connaught to the Pinecrest Creek Pathway;
 - F. Provide a MUP connection from Roman Avenue to Pinecrest Creek Pathway.
- (iii) DB Co shall complete the overland Drainage swale from Carling Avenue to Richmond Road:
- A. Remove the existing Transitway connection at the SJAM Parkway, and reinstate the Parkway alignment with a concrete curb.
 - B. Remove all the existing infrastructure of the Transitway, including granular bases, scarify the subgrade and regrade to develop a swale between the alignment and the SJAM Parkway. Utilize earth borrow to raise the grade as required for the final landscape treatment.
 - C. Scarify the subgrade a minimum of 300mm to eliminate any hardpan.
 - D. Remove and cap existing catchbasins within the Transitway alignment to accommodate the overland drainage channel that commences at Carling Avenue and extends northerly to the ORPP inlet.
 - E. Create an overland swale with a minimum of 5 meanders between the SJAM Parkway and the alignment, with a channel to convey the local drainage from a 100 year flood between Carling Avenue and Richmond Road, and as per Schedule 15-2, Part 2, Article 5 – Drainage and Stormwater Management Design Criteria.
 - F. Commence the swale to the south of Carling Avenue, with a minimum of 20:1 side slopes.
 - G. North of Carling Avenue, vary the side slope between 3:1 and 8:1 to avoid existing manholes and structures identified to be protected. Maintain side slopes of 6:1 for 50% of the overall distance of the drainage swale on both sides. Refer to Appendix G.
- (iv) Connaught Fields

- A. DB Co shall provide two landforms to the north of the alignment to screen the alignment from the residential homes on Connaught Avenue with the following requirements:
- i. South landform:
 - 1 The landform shall be commencing at the north wall of the alignment, with a top of berm elevation of 71.00, and the drainage swale from the alignment at the eastern perimeter;
 - 2 Provide a berm with varying side slopes with a maximum of 3:1 at 30% of the berm;
 - 3 Provide surface drainage from the west to connect with the drainage swale from the pumping station on the south side of the alignment; and,
 - 4 Provide tree planting on the berm.
 - ii. North Landform:
 - 1 The landform shall be an extension of the berm located to the north of the MUP accessing Henley Street, with a top of berm elevation of 71.50;
 - 2 The toe of the berm shall be shaped to protect the existing trees to the north and west of the existing landform; and,
 - 3 There shall be a berm with 50% of the berm with side slopes of 3:1, 25% of the berm with 2:1 slopes to protect existing vegetation, and 25% of the slopes with 4:1 or greater.
- B. DB Co shall complete the overland Drainage:
- i. The overland drainage for the alignment shall drain to Pinecrest Creek, as per Schedule 15-2, Part 2, Article 5 – Drainage and Stormwater Management Design Criteria.
 - ii. The side slopes shall be a minimum of 4:1, and shall extend to the adjacent features, such as the MUPs and alignment.
- C. DB Co shall provide MUP connections from Connaught at Severn Avenue, and connect to the Pinecrest Creek north/south MUP.

- (v) DB Co shall provide a MUP connection from Roman Avenue to the north-south MUP on the west side of the alignment. Utilize the BRT on-ramp location to reduce potential impacts to the adjacent naturalized landscape.
- (vi) Environmental Passages
 - A. DB Co shall meet the requirements of Schedule 17 for the connectivity of small mammals to either side of the alignment.
- (vii) DB Co shall complete the following restoration work:
 - A. Remove all the original Transitway roadway, granular bases, catch basins, and infrastructure after the decommissioning of the Transitway.
 - B. Remove the existing jersey barrier at the east side of the SJAM at Lincoln Fields Station, and reinstate with a new concrete curb to delineate the roadway surface of the SJAM.
 - C. Remove the ramps from the 417 to the BRT at Queensway Station, and regrade to eliminate the surface contouring for the drainage and ramp configuration. Reshape the lands to meet and match the existing topography beyond the drainage swale, with the exception of rock cut locations. Regrade the areas within the rock cut to provide one central drainage swale, with a minimum of 6:1 side slopes.
 - D. Scarify the subgrade a minimum of 300mm to eliminate any hardpan.
 - E. Regrade all the disturbed lands to reinstate overland drainage to the Pinecrest Creek, and eliminate the landforms and shaping of the Transitway corridor.
 - F. Reinstate the existing sports field south of the alignment to City standards.
 - G. With the exception to the above works, the Pinecrest Creek corridor lands disturbed by the construction activities, shall be reinstated with the following seed mix. Refer to Appendix B of this Part 6:
 - i. 65% low maintenance lawn mix.
 - ii. 30% indigo-ultra (the blend of polinisation and melliferes).
 - iii. 5% custom seed mix (Type 1 cool) as accent.
 - H. Remove all the original Transitway roadway, granular bases, catchbasins, and infrastructure after the decommissioning of the Transitway. Refer to

Schedule 15-2, Part 1, Clause 14.1(c)(i), for the Queensway Station removal requirements.

- (viii) At Parkhaven Avenue DB Co shall:
 - A. At the south end of Parkhaven Avenue, provide a MUP through the NCC lands westerly to the Hanlon Baseball Diamond. This MUP shall connect the pedestrian access to the diamond, and be of sufficient alignment to accommodate service vehicles.
 - B. Provide a service vehicle lockable gate, at the northwest corner of the outfield. Provide bollards to control unauthorized vehicles entering into the NCC property.
- (j) Pinecrest Creek Corridor Highway 417 to Baseline Station
 - (i) DB Co shall realign the MUP to the west side of the alignment south of Iris Street to Baseline Station to eliminate the at-grade crossing of the alignment;
 - (ii) At Iris Street DB Co shall:
 - A. Maintain the MUP on the west side of the alignment, under the Iris Street Bridge.
 - B. On the north side of Iris Street, provide a MUP connection from the signalized intersection, northerly to the NCC Pinecrest Creek Pathway.
 - C. Provide a MUP on the south side of Iris Street from the signalized intersection, at Iris Street, including on the Iris Street Bridge, to the Pinecrest Creek Pathway on the east side of the alignment to provide an uninterrupted trail connection.
 - D. Provide a depressed curb, and 3m wide MUP, extending a minimum of 9m from the curb, on the northeast quadrant of Iris and the alignment to provide service vehicle access. This access route shall have bollards to control unauthorized vehicles entering into the NCC property.
 - (iii) DB Co shall complete the following restoration:
 - A. With the exception to the above works, the Pinecrest Creek corridor lands disturbed by the construction activities, shall be graded to provide overland drainage and reinstated with the following seed mix. Refer to Appendix B of this Part 6:
 - i. 65% low maintenance lawn mix;

- ii. 30% indigo-ultra (the blend of polinisation and melliferes);
 - B. Remove all the original Transitway roadway, granular bases, catchbasins, and infrastructure after the decommissioning of the Transitway. Refer to Schedule 15-2, Part 1, Clause 14.1(c)(i), for the Queensway Station removal requirements.
 - C. Remove the ramps from Highway 417 to the Transitway at Queensway Station, and regrade to eliminate the surface contouring for the drainage and ramp configuration. Reshape the lands to meet and match the existing topography beyond the Drainage swale, with the exception of rock cut locations. Regrade the areas within the rock cut to provide one central Drainage swale, with a minimum of 6:1 side slopes.
 - D. Scarify the subgrade a minimum of 300mm to eliminate any hardpan.
 - E. Regrade all the disturbed lands to reinstate overland Drainage to Pinecrest Creek, and eliminate the landforms and shaping of the Transitway corridor.
- (k) Pinecrest Creek Realignment
- (i) For the low flow channel design requirements, review to Schedule 15-2, Part 2 – Drainage and Stormwater Management Design Criteria.
 - (ii) For the channel embankment between the low flow and 2-year flow, the embankment shall consist of hydric soils or flood tolerant forbes and grasses, native to the Ottawa area.
 - (iii) For the channel embankments above the 2-year flows shall consist of a combination of reforestation trees, 70 % and shrubs, 30 %, as per Clause 2.8, of this Part 6. Within the 100 year flood elevation, all plant species shall be tolerant to the potential flooding. For the lands beyond the top of the embankment, install a minimum of 35 deciduous trees to provide a transition from the woodlot to Station.
 - (iv) On the outside meander of all sections of realigned Pinecrest Creek, the creek embankment up to the 2-year flow water level shall be constructed with a root wad retaining walls.
 - (v) Where required due to land and utility constraints, DB Co shall be permitted to construct an embankment to a maximum of 2:1. The extent of the 2:1 shall be minimized. Slope stabilization shall consist of natural materials as per Clause 2.8, of this Part 6.

- (vi) Provide tree planting to reinstate all woodlot removed for the implementation of the Pinecrest Creek alignment, temporary bus detours and Station construction.
- (vii) Environmental Passages
 - A. DB Co shall meet the requirements of Schedule 17 for the connectivity of small mammals to either side of the alignment.
- (l) Pinecrest Stormwater Management Facility
 - (i) DB Co shall finalize the Site design for the landscape works that have been developed for the Pinecrest Stormwater Management Facility, as per Schedule 15-2, Part 2, Appendix J.
 - (ii) DB Co shall be responsible to finalize the design development and complete the construction documents, as per Schedule 10 – Review Procedure, for the landscape including:
 - A. Final grading to integrate the stormwater facility within the adjacent landscape;
 - B. Development of the pathway systems;
 - C. Development of the pedestrian passages around and over the facility;
 - D. All final grading, topsoil and planting; and,
 - E. Miscellaneous items as per the design drawings to complete the site works.
 - (iii) DB Co shall salvage the tree stumps required for removal due to the works of this project and the alignment to be utilized as the root wads along the perimeter of the stormwater pond.
 - (iv) DB Co shall supply and install the hydric soil, to meet the following:
 - A. Provide the source of the hydric soil to the City for approval prior to commencement of work;
 - B. The hydric soil shall be handled a maximum of two times, including installation. The hydric soil may be stockpiled, with a maximum height of 3m, with no truck traffic on the stockpiles;
 - C. After installation, DB Co shall not move or operate equipment on the hydric soil. Should there be a requirement to move, the hydric soil shall be replaced with new material;

- D. There shall be a continuous goose barrier around the perimeter of the pond, at the limit of the bench on the pond side, to allow the hydric soils to establish. This barrier shall be installed prior to the commencement of the regeneration the soils, and maintained for the maintenance and warranty period for the adjacent plant material;
- E. The goose barrier shall be removed without damaging the vegetation established on the bench surrounding the pond; and,
- F. The plant material, seeding and hydric soil shall be installed in a timely manner to maximize the growing potential.

(m) Richmond Road Complete Street

- (i) Refer to Schedule 15-2, Part 2, Clause 6.19 for the technical civil requirements for the development of Richmond Road Complete Street.
- (ii) DB Co shall design and construct Richmond Road streetscape elements to create a high quality pedestrian environment on the north side of Richmond Road, with 2m segregated cycling facilities on both the north and south side of the Roadway, linking Cleary Station in the east with New Orchard Station to the west;
- (iii) There shall be a cohesive design selection of materials and products for the streetscape elements, strengthening the visual connection between the two Stations;
- (iv) The streetscape design shall be coordinated with the civil and Utility requirements, and develop specific details as required to provide the design within the constraints of the underground Utilities;
- (v) DB Co shall coordinate with the City to identify all proposed developments to ensure the streetscape design reflects the current conditions as well as the proposed developments;
- (vi) **On-Street Parking**
 - A. During the design development DB Co shall explore opportunities to include 20 on-street parking spaces on the north side of Richmond Road, in the form of parallel parking (parking pockets) in accordance with the City of Ottawa parking design standards and zoning. These will be established only where OC Transpo bus stops, SWM rain gardens, pedestrian, cycling and streetscape furniture, infrastructure and property access would not be compromised.
 - B. These locations shall be identified during the initial submission for review with the City prior to final integration within the roadway design.

(vii) Pathways, Sidewalks and MUPs

- A. Provide a concrete sidewalk on the north side of Richmond Road from east of the SJAM Parkway overpass to east of Cleary Station with a standard width of 3m, unless constrained by property requirements or intersection requirements.
- B. Provide a minimum 2m wide concrete sidewalk on the south side of Richmond Road from the SJAM Parkway overpass to the entrance of Byron Linear Park, at the Richardson Avenue ROW.
- C. Meet and match the east end of the sidewalk with the concrete pathway for Byron Linear Park. Refer to Article 3 – Connectivity Requirements of this Part 6.
- D. There shall be no sidewalk installed along the south side of Richmond Road adjacent to Byron Linear Park unless specifically outlined in this Article 4.
- E. A minimum of 200mm delineator strip shall be provided between all segregated cycle facilities and directly adjacent pathways, sidewalks or MUPs.
- F. Provide a separate material, texture and colour to distinguish the delineator strip between the sidewalk and the cycle track.
- G. Provide interlocking paving in boulevards less than 600mm width and sod in boulevards greater than 600mm width. Pavers to be 200mm x 100mm, 100mm depth Sierra pavers, installed in a herringbone pattern, as manufactured by [REDACTED], or approved equal.
- H. Provide interlocking paving installed at all bus stops, beyond the bus shelter pads, to distinguish from the concrete sidewalk. Interlock shall be installed in the sidewalk and within the adjacent boulevard. Pavers to match boulevard pavers.
- I. Refer to Schedule 15-2, Part 2, Clause 6.19 for cycle track requirements and pavement markings.
- J. Provide 3m concrete crosswalk for all pedestrian crossings of Richmond Road and the side streets.
- K. Provide a MUP on the south side of Richmond Road from the SJAM Parkway overpass to the entrance of Byron Linear Park. Extend the MUP to Byron Avenue, at the Richardson Avenue ROW, and extend the EB cycle track to the MUP.

- L. Provide a concrete sidewalk on the south side of Richmond Road to connect each bus stop to the nearest intersection.
 - M. Rain gardens shall be installed adjacent to the bus stops, as delineated under Schedule 15-2, Part 2, Article 5 – Drainage and Stormwater Management Design Criteria. Framing the rain garden at each end, shall be a 450mm height, 1.2m long seating height wall. The wall shall be centred on the rain garden to articulate the limits of the garden for pedestrians and cyclists. Each corner shall have a 314 grade stainless steel angle iron anchored in the wall to protect the wall from maintenance equipment and shadow lines, detailing to enhance the visual appearance
- (viii) Richmond/Cleary Intersection;
- A. Provide concrete paving for both the concrete sidewalk and the cycle track at Cleary intersection;
 - B. Provide interlocking paving between the concrete crosswalks and concrete curb on the south side of Richmond Road to connect with the Cleary plaza within Byron Linear Park.
 - C. Provide a raised intersection, which includes the crosswalks and Crossrides;
 - D. Provide interlocking pavers within the intersection; and,
 - E. Provide a MUP connection from the northeast corner of the Richmond Road/Cleary Avenue intersection northerly to the NCC pathway system in the SJAM Parkway, including a connection to the MUP underpass. The MUP shall have a minimum offset of 2m from the existing Cleary Avenue sidewalk.
- (ix) Richmond/New Orchard Intersection
- A. Provide a raised intersection, which includes the crosswalks and Crossrides;
 - B. Provide concrete paving for both the concrete sidewalk and the cycle track at New Orchard intersection;
 - C. Provide interlocking pavers within the intersection;
 - D. Provide interlocking paving between the concrete crosswalks and concrete curb on the south side of Richmond Road to connect with the Byron Linear Park and the New Orchard Station entrance plaza; and,

- E. Extend the concrete sidewalk, from the east cross walk, to the bus stop, located adjacent to the New Orchard Station.
- (x) Richmond Road shall be lit to City Standards. DB Co shall provide the lighting design for review with the City, with the following:
 - A. Tall Mount lights, alternating sides; and,
 - B. Pedestrian Lights, north side only.
- (xi) Street Tree Planting
 - A. All trees planted within the paving for the sidewalks and cycle lanes shall be planted in structural soil cell modules, with a conduit system to accommodate supplemental watering.
 - B. Openings for the tree trunks shall have a raised perimeter to ensure the sidewalk drainage does not enter into the soil.
 - C. Provide a minimum of 20m³ of soil per tree. Where utilities or services request a reduction in the soil volume of the trees, the City shall be notified for review and direction.
 - D. Where feasible, group trees together to share structural soil cell volumes.
 - E. Provide a trace wire around the perimeter of the structural soil cells.
 - F. Provide 33 trees along the north side of Richmond Road, east of New Orchard Avenue.
 - G. West of New Orchard Avenue, provide additional 25 street trees, on the south side of the roadway, and 30 street trees on the north side of the roadway, behind the concrete sidewalk.
 - H. Remove a minimum of 900mm depth of asphalt and granulars at the Richardson Road closure, and backfill with earth burrow and 300 mm of topsoil to accommodate the trees and landscape treatment.
- (xii) Street Furniture
 - A. Site furnishings shall be placed between the sidewalk and cycle track on the north side of Richmond Road to maximize their use and not encumber pedestrian or cyclist movement.

- B. Where required, benches may be placed at back of sidewalk, or in seating clusters, as reviewed and approved. All furniture shall be fastened to concrete paving to reduce vandalism.
- C. Provide the following street furniture along the north side of Richmond Road:
 - i. 50 Bicycle Racks;
 - ii. 21 Benches; and,
 - iii. 10 Recycling Units.
- D. Provide the following street furniture on the south side of Richmond Road, between the SJAM Parkway and Richardson Avenue:
 - i. 13 Bicycle Racks;
 - ii. 2 Benches; and,
 - iii. 2 Recycling Units.
- E. Provide bus shelters at each bus stop, as per OC Transpo standards.
- F. Site furnishings shall meet the City standard for roadways.

(n) Byron Linear Park

- (i) Approximately 17 m wide Byron Avenue Right-of-Way from the eastern edge of the Compton Avenue Right-of-Way to the western edge of the Woodroffe Avenue Right-of-Way (approximately 72 m) is existing road which is to be closed and converted to parkland. Approximately 15.6 m wide Byron Avenue Right-of-Way from the eastern edge of the Woodroffe Avenue Right-of-Way and the western edge of the Lockhart Avenue Right-of-Way (approximately 168 m) is also existing road which is to be closed and converted to parkland. In addition, Redwood Avenue, Hartleigh Avenue and Richardson Avenue through the Byron Linear Park shall be closed. As per Section 168.3.1 of the Environmental Protection Act and Ontario Regulation 153/04, DB Co Qualified Person shall, on behalf of the City of Ottawa, prepare the necessary documents and shall file for Record of Site Condition. Note that this will require, at a minimum, a Phase I ESA prepared in accordance with O. Reg. 153/04, and a plan of survey of the lands prepared by a licensed surveyor.
- (ii) This Park underlines the City's commitment to the importance of the urban design excellence for the Richmond/Byron corridor (Richmond Road Complete Street, Byron Linear Park and Byron Avenue). This shall be a transformative landscape

that creates a unique landscape for the community, and acts as a catalyst for community building. DB Co shall develop a design that creates a sense of place which welcomes the local community, and provides opportunities for the passive recreation, seating, park, and community programming, and a visual buffer between the communities to the south of Byron and Richmond Road.

- (iii) The community consultation response reinforced the requirement for Byron Linear Park to provide an environmentally sensitive design. DB Co shall design Byron Linear Park to be environmentally sustainable, and shall include LID SWM principles, diversity of native and ornamental species to provide biodiversity for both flora and fauna, use of natural materials, reuse of materials for built elements, and other elements identified during the design developments. No invasive species shall be permitted. Wet ponds for SWM shall not be permitted.
- (iv) DB Co shall develop a design for Byron Linear Park that integrates the diverse elements of pathways, gathering nodes, trees, SWM, land forms, seating walls and benches, lighting, and miscellaneous site works to create a landscape tapestry which connects to Byron Avenue and Richmond Road.
- (v) DB Co shall incorporate the following design elements within the park:
 - A. Cleary plaza, between Richmond Road and Byron Avenue, from the east side of the east crosswalk, and extending westerly to the front entry of the Station. This plaza shall consist of 50% hard surfacing and 50% soft landscape, and be configured to allow park programming including 10 market stalls, 3m x 3m, with 3m walking surface along the front of the stalls;
 - B. The Cleary plaza shall be provided with one 38mm water supply, complete with shut off value and three electrical outlets. The electrical outlets shall be stainless steel, weather proof to accommodate the exterior conditions;
 - C. The pedestrian sidewalks, connecting the crosswalks at Cleary intersection, through to Byron Avenue, shall be designed and constructed to include lighting;
 - D. Where the current land use changes from roadway and/or shoulders to Parkland, including Redwood Avenue, Hartleigh Avenue, Ancaster Avenue, Richardson Avenue and Byron Avenue use changes from roadway to Park, remove a minimum of 900mm of the original asphalt and granular base, scarify and backfill with Earth Borrow and topsoil to sustain the final landscape treatment. Granular bases shall be permitted to be retained where the hard surfacing is to remain, such as the cycling lanes along Richmond Road or Cleary plaza;

- E. New Orchard Station entry plaza shall be located west of the Station, and the park pathway shall extend on the north side of the Station to the entry plaza, and encompass the bus stop;
- F. A continuous 2.4m concrete pathway, meandering through the park, between New Orchard intersection and Cleary intersection, which connects Roadway intersections, pedestrian crossings, and bus stops;
- G. The concrete pathway shall be widened to a 3.0m asphalt MUP east between the Woodroffe Avenue intersection and Lockhart Avenue, and west between Woodroffe Avenue intersection and Compton Avenue;
- H. Provide two 38mm water supply lines, with a metered water chamber, and accessible drinking fountains, to be located within the Linear Park. The drinking fountains shall have a stainless steel basin, and be complimentary in design to the other park elements. One drinking fountain shall be installed west of Woodroffe Avenue, and one to the east. The exact location shall be determined and approved by the City during the design process;
- I. Pedestrian height lighting shall extend along the pathway throughout the park, and extend to the Roadway intersections;
- J. There shall be two ipe wood shade structures or trellises, with a minimum footprint of 6m x 9m integrated within the park, with one structure located near [REDACTED], and one structure located west of Woodroffe Avenue;
- K. There shall be a minimum of four gathering nodes within the park, excluding Cleary plaza and New Orchard plaza, along the pathway alignment, with a minimum size of 100m², and a maximum of 300m². Each gathering node shall have unique characteristics, which distinguishes the nodes including paving materials and patterns, walls, entry features, park elements, configuration, and lighting;
- L. A minimum of two of the nodes shall include an electrical outlet integrated into the site features;
- M. There shall be rain gardens designed and constructed in a natural configuration to accept the SWM requirements for the park only. Where the rain garden intersects with the pathway, a bridge over the rain garden shall be designed and constructed. There shall be a minimum of three bridges within the park. Galvanized or concrete culverts and rip rap side slopes shall not be permitted;

- N. There shall be a minimum of 18 low land forms to articulate the spaces and provide diversity of grades and contours. The land forms shall be a maximum of 1m in height, and have varying side slopes ranging from 3:1 to 10:1, with a minimum area of 100m² and the maximum of 1000m². The 3:1 slopes shall be placed inward towards the park. The land forms shall be balanced with the same overall area of open flat meadow areas to provide opportunity for recreational and community gathering opportunities;
 - O. The configuration of the land forms shall intersect with the pathway, creating opportunities for seating and viewing towards both Richmond Road and Byron Avenue at various locations throughout the Park;
 - P. Where the pathway intersects with the land forms, there shall be low seating height retaining walls. These walls shall be offset from the pathway by 600 mm, with the concrete paving extending to the base of the retaining wall. DB Co shall provide natural stone walls and finishes for review, and final selection by the City; and,
 - Q. DB Co shall install a bicycle repair station at the interface of the pathway and the entry plazas for both Cleary Station and New Orchard Station.
- (vi) Byron Linear Park shall provide a no net loss of greenspace from the original park to the final configuration and shall be a combination of park elements as described in Clause 4.4 (n) (v) of this Part 6. DB Co's design shall maintain the quantity of greenspace, based upon current turf areas, with the exception of the space required for the construction of the Cleary Station.
 - (vii) Byron Avenue, between Woodroffe Avenue and Lockhart Avenue, shall be converted from the existing roadway to the park, creating a gateway at the intersection of Richmond Road and Woodroffe Avenue.
 - (viii) A direct sidewalk connection from Allison Avenue to the PXO on Richmond Road shall be provided.
 - (ix) Park Planting
 - A. DB Co shall develop a planting palette and plan, that provides diversity of tree and shrub species to create seasonal interest and habitat throughout the year;
 - B. The deciduous trees shall provide the core element of the design, in a curvilinear patterning, providing the visual element that links the pathways, land forms and park elements, with Richmond Road and Byron Avenue;

- C. Deciduous shade trees shall be located to provide shade to the pathway and bench seating areas; and,
 - D. The planting plan shall be a range of deciduous and coniferous trees and shrubs, and plants to provide seasonal variety and colour and include the following:
 - i. 230 large deciduous trees;
 - ii. 80 coniferous trees;
 - iii. 70 small flowering deciduous trees;
 - iv. 1,000m² of shrubs; and,
 - v. Sufficient grasses, forbes and perennials for the rain gardens.
- (x) Park Furniture
- A. DB Co shall provide three park furniture alternatives for review, and final selection by the City, and based upon the following requirements:
 - i. 22 Benches to COADS; and,
 - ii. Seven Recycling Units with three streams.
 - B. Provide a minimum of one bench and one recycling unit in close proximity to each Roadway intersection abutting the Park; and,
 - C. DB Co shall not include play structures for children in the park furniture design.
 - D. All site furniture shall be suited for public use.
- (xi) DB Co shall complete the design and construction for [REDACTED] based upon the design drawing provided in Appendix M - [REDACTED] Parking Lot, of this Part 6, including the following:
- A. Layout and grading of the church parking lot and access;
 - B. Pedestrian sidewalks;
 - C. Landscape Plan;
 - D. Restoration of all disturbed areas; and,

- E. SWM. This drainage may be connected to the existing stormwater system within Byron Avenue.
- (o) Byron Avenue Modifications
- (i) DB Co shall reinstate Byron Avenue in accordance with the following:
 - A. A final travel width of 7m, commencing at the south side with the new concrete sidewalk/curb described in Clause 5.2 (f) of this Part 6;
 - B. All Roadway asphalt and granular bases, including the Roadway shoulders, shall be removed to a minimum of 900mm depth, and backfilled with Earth Borrow and topsoil to complete the final site design of the park beyond the final 7m Roadway width and on-street parking;
 - C. Curbs on both the north and south side of the Roadway;
 - D. West of Woodroffe Avenue, recessed on-street parking shall be provided on the north side of the roadway, and located between the hydro poles, with a total of 18 parking spaces, excluding the PPUDO. No on-street parking shall be permitted adjacent to Cleary Station;
 - E. On-street parking shall not be permitted:
 - i. between the hydro poles at Sherbourne intersection; and,
 - ii. on either side of Lockhart Avenue, at the north segment connecting Byron Avenue to Richmond Road.
 - F. A PPUDO, on the either side of Byron, adjacent to Cleary plaza, each with three parking spaces. The westbound PPUDO shall be located in close proximity to the Station Entry, and there shall be a sidewalk from the WB PPUDO to the Cleary plaza;
 - G. A PPUDO, on the north side of Byron, adjacent to the New Orchard Station plaza for two vehicle parking spaces;
 - H. Interlocking pavers shall be utilized for all the parking spaces;
 - I. LID SWM may be considered on the north side, at Lockhart, connecting with the LID SWM for the Park, upon review and approval by the City; and,
 - J. Roadway lighting shall meet the City standards.

- (ii) DB Co's design and construction of Byron Avenue corridor shall include the reinstatement of the 7m width of the impacted road pavement and as a minimum shall provide for an appropriate thickness of resurfacing pavement treatment so that the Byron Avenue's pavement will meet the requirements of Schedule 15-2, Part 2, Clause 6.10 – Pavement – Municipal Roads
- (p) Moodie Drive and Corkstown Road
 - (i) DB Co shall complete the following at Moodie Drive and Corkstown Road:
 - A. Provide a MUP connection from the existing TransCanada Trail south of Corkstown Road to the Corkstown/Moodie intersection on the north side of Corkstown Road;
 - B. Remove any portions of MUP that do not provide the continuous connection between the existing MUP east of the Station, and Moodie Drive;
 - C. Provide a crosswalk/crossride protected intersection at the Moodie/Corkstown intersection and extend the MUP to the existing TransCanada Trail;
 - D. Provide a lighted sidewalk on the north side of Corkstown, from the entrance to [REDACTED] to the pedestrian crossing/PPUDO at Moodie Station; and,
 - E. Provide a naturalized landscape along the corridor, extending across the Station and to the Moodie/Corkstown intersection.
 - (ii) DB Co shall complete the design and construction of the following on the west side of Moodie Drive, from the Corkstown Road intersection, southerly to the signalized intersection of the Highway 417 EB off-ramp;
 - A. A raised 2m width sidewalk, from the south side of Highway 417 WB on-ramp, southerly to the north side of Highway 417 EB off-ramp;
 - B. Realign the cycling lane to adjacent to the sidewalk, at the roadway elevation;
 - C. Paved shoulder north of the WB on-ramp to the Corkstown Road intersection; and,
 - D. Crosswalk/crossride at Highway 417 ramps, connecting to the facilities to the north and the south of the roadway.
- (q) Highway 417 - Highway Works

- (i) DB Co shall complete the Tree Compensation Plans for the Works identified in Schedule 15-2, Part 9 – Highway Works;
- (ii) In addition to the Tree Compensation requirements, DB Co shall reinstate the shrubs at an equal ratio: for each square metre of shrubs removed, reinstate with a square metre of shrubs. The shrub spacing in the planting beds shall have a maximum on centre spacing of 750mm;
- (iii) The plants shall be reinstated in approximately the same location within the corridor as those removed, while maintaining the MTO safety requirements;
- (iv) DB Co shall ensure a minimum of double the quantity of trees, and an equal area of shrubs, are reinstated for the plant material removed within an interchange;
- (v) The proposed planting shall be submitted in accordance with Schedule 10 – Review procedure, and shall reinforce the existing naturalized landscape of the Highway 417/Highway 416 interchange, commencing at the southwest quadrant of Richmond Road/Highway 417;
- (vi) Where, during the tree evaluation, trees greater than 500 mm diameter at breast height, or with environmental significance are identified, DB Co shall prove how the tree can be protected during construction, and develop compensation requirements, if removal is necessary;
- (vii) Where there is an existing watercourse, DB Co shall maintain a minimum of 10m offset from the top of the embankment. Should there be a requirement to reduce the construction offset, DB Co shall prove any encroachments and provide methodology for protection; and,
- (viii) Should there be a requirement for a SWM pond within MTO lands, DB Co shall include the following criteria in the design;
 - A. The pond shall be offset from the traffic safety zones;
 - B. The pond shall have varying side slopes with a blend of grasses and shrubs to naturalize the perimeter, and shall be able to withstand the varying water levels within the pond; and,
 - C. The maintenance requirements of the pond shall be integrated within overall design.

4.5 Corridor Planting

- (a) DB Co shall provide the minimum quantities of plant material for each Corridor Specific Section identified in this Article 4, in addition to the planting required within the SJAM

lands, the Pinecrest Creek realignment, the Richmond Road/Byron Park corridor and MTO Lands:

| Location | Deciduous Trees | Conifer Trees | Reforestation | Deciduous Shrubs | Conifer Shrubs | Riparian Shrubs |
|---------------------------------|------------------------|----------------------|----------------------|-------------------------|-----------------------|------------------------|
| Connaught Park | 110 | 125 | | 545 | 235 | |
| Dominion/Scott | 167 | 74 | | 1900 | 600 | |
| Lincoln Fields | 175 | 140 | | 300 | 130 | |
| Churchill Underpass | 21 | 11 | | - | - | |
| Woodroffe Stormwater Pond | 285 | 50 | 2000 | 9000 | 500 | 22000 |
| Moodie Drive and Corkstown Road | 75 | 50 | 1260 | 1000 | - | - |

ARTICLE 5 SITE SPECIFIC TEMPORARY REQUIREMENTS

5.1 Station Specific Temporary Requirements

(a) Westboro Station

- (i)** DB Co shall maintain pedestrian access from Lanark Avenue to Scott Street via the MUPs to the northeast and northwest of Westboro Station, at all times during construction.
- (ii)** DB Co shall maintain safe pedestrian/cyclist crossings at Westboro Station along the north side of Scott Street throughout construction.

(b) Dominion Station

- (i)** DB Co shall maintain the existing pedestrian connection for the existing or relocated Transitway from the community to the southwest of the Station throughout construction and Workman Avenue to the east. This may include the following:
 - A.** Flagperson at construction access route west of the alignment to accommodate the pedestrian movement at grade;
 - B.** Construction of the unpaid fare zone bridge adjacent the Station to allow public access to the Transitway Station;
- (ii)** DB Co shall maintain existing signalized crossings of the Transitway and SJAM Parkway at all times to accommodate pedestrian, cyclists and Transitway detour until pedestrian bridge at Station is available for public use;
- (iii)** DB Co shall remove the pedestrian connection from the southwest to the existing Dominion Transitway station, with a temporary relocation east to existing pedestrian overpass, temporary baily bridge for Transitway or Churchill Avenue, shall not be permitted.
- (iv)** DB Co shall maintain pathway located along the south side of the Transitway from Roosevelt Avenue to the at-grade signalized crossing of the Transitway in service at all times;

(c) Cleary Station

- (i)** DB Co shall provide a paved pathway connection between Cleary Avenue and the NCC trail to the west of the construction Site.

(d) Baseline Station

- (i) DB Co shall maintain the pedestrian and cycling connection between the pathway within the hydro corridor and Woodroffe Avenue.
 - (ii) DB Co shall maintain the Transitway access to [REDACTED].
- (e) Queensway Station
 - (i) DB Co shall maintain the MUP access from Queensway Station to Roman Avenue at all times throughout construction.

5.2 Corridor Specific Temporary Requirements

- (a) SJAM Parkway
 - (i) During construction, the pathway on the south side of the SJAM shall be closed from Cleary Avenue to the signalized intersection of the Transitway. DB Co shall provide a temporary pathway connection between Cleary Avenue and the pathway west of the point of closure.
 - (ii) The temporary closure signage to occur at each end of the pathway closure and at each community connection from the south, including one at Woodroffe Avenue and the pathway.
 - (iii) The MUP on the north side of the SJAM Parkway shall remain operational throughout construction.
- (b) Lincoln Fields Station to Highway 417
 - (i) DB Co shall maintain the pathway connection on the south side of Carling Avenue to Rosewood Avenue and construct a MUP to Woodroffe High School.
 - (ii) DB Co shall retain the MUP on the west side of the Pinecrest Creek corridor, from Lincoln Fields under Highway 417 to Iris Street throughout construction. The MUP alignment may vary to accommodate the construction requirements of the alignment.
- (c) Pedestrian Bridge at Woodroffe High School
 - (i) The existing Pedestrian Bridge, and connecting MUPs shall be replaced due to the requirements of the alignment. Refer to Schedule 17 – Environmental Obligations for approval requirements.
 - (ii) The new Pedestrian Bridge and MUPs shall be constructed to connect to:
 - A. Existing pathway Sackville Connaught Avenue intersection;

- B. Woodroffe High School.
- (iii) The new Pedestrian Bridge shall be constructed within 50m of the existing alignment at the west end, and 80m of the east end of the alignment.
- (iv) The new Pedestrian Bridge and connections to the MUPs shall be constructed and in service prior to the decommissioning of the existing Pedestrian Bridge. All the adjacent Site works shall be completed including the installation of the MUP connections, to provide an uninterrupted service between the communities to the east and west of the Pinecrest Creek corridor.
- (v) Connections to be retained throughout construction include:
 - A. Pathway to Woodroffe High School; and,
 - B. MUP to Connaught Avenue.
- (d) Pinecrest Creek Corridor, Highway 417 to Baseline Station
 - (i) DB Co shall retain the MUP connection from Baseline Station, and the NCC Pinecrest Creek Pathway from Woodroffe Avenue, through to Lincoln Fields throughout construction. The alignment may vary to accommodate the construction requirements of the alignment. Refer to Article 3 – Connectivity Requirements, of this Part 6, for temporary construction requirements.
 - (ii) The existing alignment of the MUP, and the unsignalized crossing of the Transitway, south of Iris Station shall remain operational until the proposed MUP on the west side of the alignment, between Iris and Baseline, is complete and in service.
- (e) Bayshore Station
 - (i) DB Co shall be permitted to close the pathway on the north side of the transit corridor, between Holly Acres Drive and Bayshore Station as required to construct the alignment.
 - (ii) Temporary closure signage shall be placed at each end of the pathway closure, at Woodridge Avenue, and with additional signage through the parking lot to the MUP connection, and Bayshore Station, clearly delineating the alternate route.
- (f) Byron Avenue
 - (i) Prior to the closure of Byron Linear Park, DB Co shall install a raised 2m wide concrete sidewalk, with a curb, on the south side of Byron Avenue, throughout the total length of the park closure.

- (ii) On the east side of Woodroffe Avenue, DB Co shall:
 - A. Install the concrete sidewalk on the north side of the existing concrete curb to minimize any impacts on the existing landscape behind the curb; and,
 - B. Remove the existing concrete curb and relocate the existing catch basins as required to accommodate the new sidewalk.
 - (iii) On the west side of Woodroffe Avenue, DB Co shall install a concrete sidewalk north of the existing swale. Refer to Schedule 15-2, Part 2, Clause 5.7 (n).
- (g) TransCanada Trail/Corkstown Road
- (i) DB Co shall maintain the TransCanada Trail west of Holly Acres Drive throughout construction.

CITY OF OTTAWA
ROAD MODIFICATION
APPROVAL UNDER DELEGATED AUTHORITY

DATE: 10 March 2015

RMA-2015-DRI-001

SUBJECT

- Modifications to St. Joseph Boulevard, 270 metres west of Tenth Line Road to accommodate a proposed sales center (developer- [REDACTED]).

LOCATION

- St. Joseph Boulevard, 270 metres west of Tenth Line Road, Ward 1, see Attachment 1.

PURPOSE

- The purpose of the proposed modifications is to accommodate traffic generated by a proposed sales center.

BACKGROUND

- The proposed sales center is bounded by undeveloped land to the north, residential lands to the east and west and St. Joseph Boulevard to the south.
- The proposed development is a sales center for a future [REDACTED] subdivision. The proposed subdivision will be located in the same general area as the sales center.
- The road modifications are for the sole purpose of the sales center and will be modified to accommodate the future subdivision.

EXISTING CONDITIONS

- **Road Cross-Sections**

St. Joseph Boulevard – 4-lane, urban, divided arterial road.

- **Street Lighting**

St. Joseph Boulevard – Both sides along center median.

- **Traffic Control**

The closest major intersection of St. Joseph Boulevard and Tenth Line Road is signalized.

- **Speed Limits**

St. Joseph Boulevard – posted at 60 kph.

- **Pedestrians**

There are asphalt sidewalks present on both sides of St. Joseph Boulevard. During an 8-hour period on Friday, 20 July 2012 at the intersection of St. Joseph Boulevard and Tenth Line

Road, 39 pedestrians crossed in the north-south direction on Tenth Line Road and 63 pedestrians crossed in the east-west direction on St. Joseph Boulevard.

- **Cycling**

There are no dedicated cycling lanes on St. Joseph Boulevard. During the same 8-hour survey mentioned above, 35 cyclists were observed travelling in the north-south direction and 24 cyclists travelling in the east-west direction.

- **Transit**

OC Transpo routes 120 and 136 (regular) serve St. Joseph Boulevard in this area.

- **Highest Hourly Volume**

During the same 8-hour survey mentioned above, between 4:00 pm and 5:00 pm, 421 eastbound and 395 westbound vehicles were recorded on St. Joseph Boulevard in proximity of the proposed development, respectively.

- **Heavy Vehicles**

St. Joseph Boulevard is designated as an unrestricted truck route. Heavy vehicles comprised 2.5% and 5.8% of the total traffic in the eastbound and westbound directions, respectively, during the same 8-hour survey mentioned above.

- **Collision History**

Collisions for the period from 1 January 2009 to 1 January 2014 (5 years):

St. Joseph Boulevard from Prestone Drive to Tenth Line Road: 2 collisions- 1 single vehicle and 1 sideswipe.

PROJECTED VOLUMES

- Not applicable.

PROPOSED ROAD MODIFICATIONS

- It must be emphasized that the following road modifications (see Attachment 2) are conceptual and intended only to illustrate the proposed function. The approval of any detailed design of the road modifications stemming from this report will be subject to the City's detailed design review process.
- The detailed design review process will include requirements for roadside safety provisions, center medians, utility relocations, street lighting and other needs as deemed appropriate by the City.
- Any required easements or property requirements identified to implement the project as a result of the approved design review process will be the responsibility of the applicant to secure at their cost, to the satisfaction of the City of Ottawa.

Proposed road modifications:

- Proposed access on St. Joseph Boulevard.
- Modifications to the center median on St. Joseph Boulevard to restrict left-turn movements out of the site.

MODIFICATION OUTCOMES – BENEFIT AND IMPACTS

- **Pedestrians**
No additional sidewalk infrastructure on St. Joseph Boulevard.
- **Cyclists**
No changes to the existing cycling infrastructure on St. Joseph Boulevard.
- **Transit**
No changes to the existing transit infrastructure on St. Joseph Boulevard.
- **Vehicles**
The modifications to the center median will prevent vehicles from turning left out of the sales center access.
- **Adjacent Land Uses**
No negative impacts are anticipated for the lands adjacent to the proposed road modifications.

PROJECTED IMPLEMENTATION DATES

- This is a privately funded project in which the property owner will establish the construction schedule.

TOTAL ESTIMATED CONSTRUCTION COSTS

- The total estimated cost for the proposed road modifications, which includes construction, engineering and contingencies, is [REDACTED].

FINANCIAL COMMENTS

- There is no cost to the City for the proposed modifications listed in the previous sections estimated at [REDACTED] (construction, engineering, and contingencies).
- [REDACTED] must provide financial guarantees acceptable to the City of Ottawa to cover the above-noted roadwork.
- [REDACTED] will be required to enter into a Road Modification Agreement with the City of Ottawa, which will include but not be limited to, [REDACTED] funding all costs associated with the design and construction of the above-noted road modifications.
- Total additional annual operating costs are estimated to be [REDACTED] (surface operations at [REDACTED], signs and pavement markings at [REDACTED]) and will be requested in the year following completion of construction.

COMPLIANCE WITH TRANSPORTATION MASTER PLAN

- The proposed roadway modifications comply with 7.3 (Maximize Road Network Efficiency) and 7.4 (Maximize Road Safety for All Users) of the Transportation Master Plan (2013).

CONSULTATIONS

- Via e-mail on 20 February 2015, [REDACTED] was given notice of the intention to advertise the proposed road modifications.
- The proposed road modifications were advertised on the City's website from 20 February 2015 until 6 March 2015 with a deadline for public input on 13 March 2015.

- Preliminary/technical approval was granted by the Program Manager of Design Review and Implementation on 5 March 2015.
- Via e-mail on 6 March 2015, [REDACTED] was given five business days to advise of his concurrence or non-concurrence with the Manager of Development Review (Suburban Services) having delegated authority to approve the proposed roadway modifications.
- Via e-mail on 6 March 2015, [REDACTED] provided his concurrence with the Manager of Development Review (Suburban Services) having delegated authority to approve the proposed roadway modifications.

RESULTS OF ADVERTISING

- No comments were received as a result of the online advertisement.

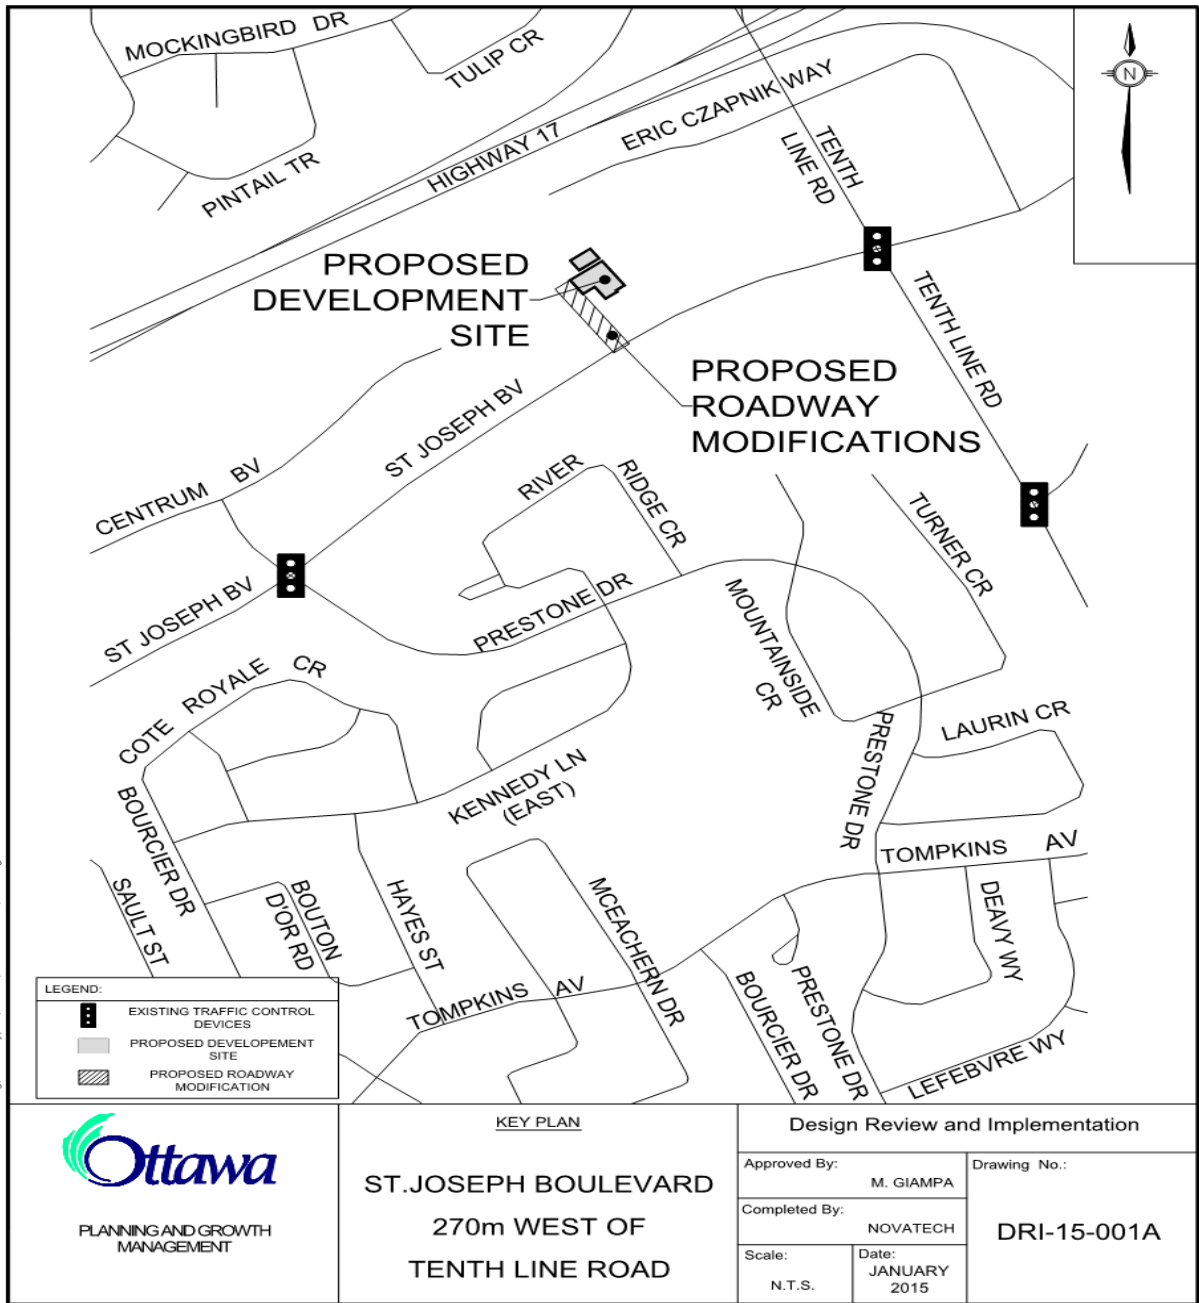

CURRENT STATUS

- Final approval was granted by the Manager of Development Review (Suburban Services) on 9 March 2015.

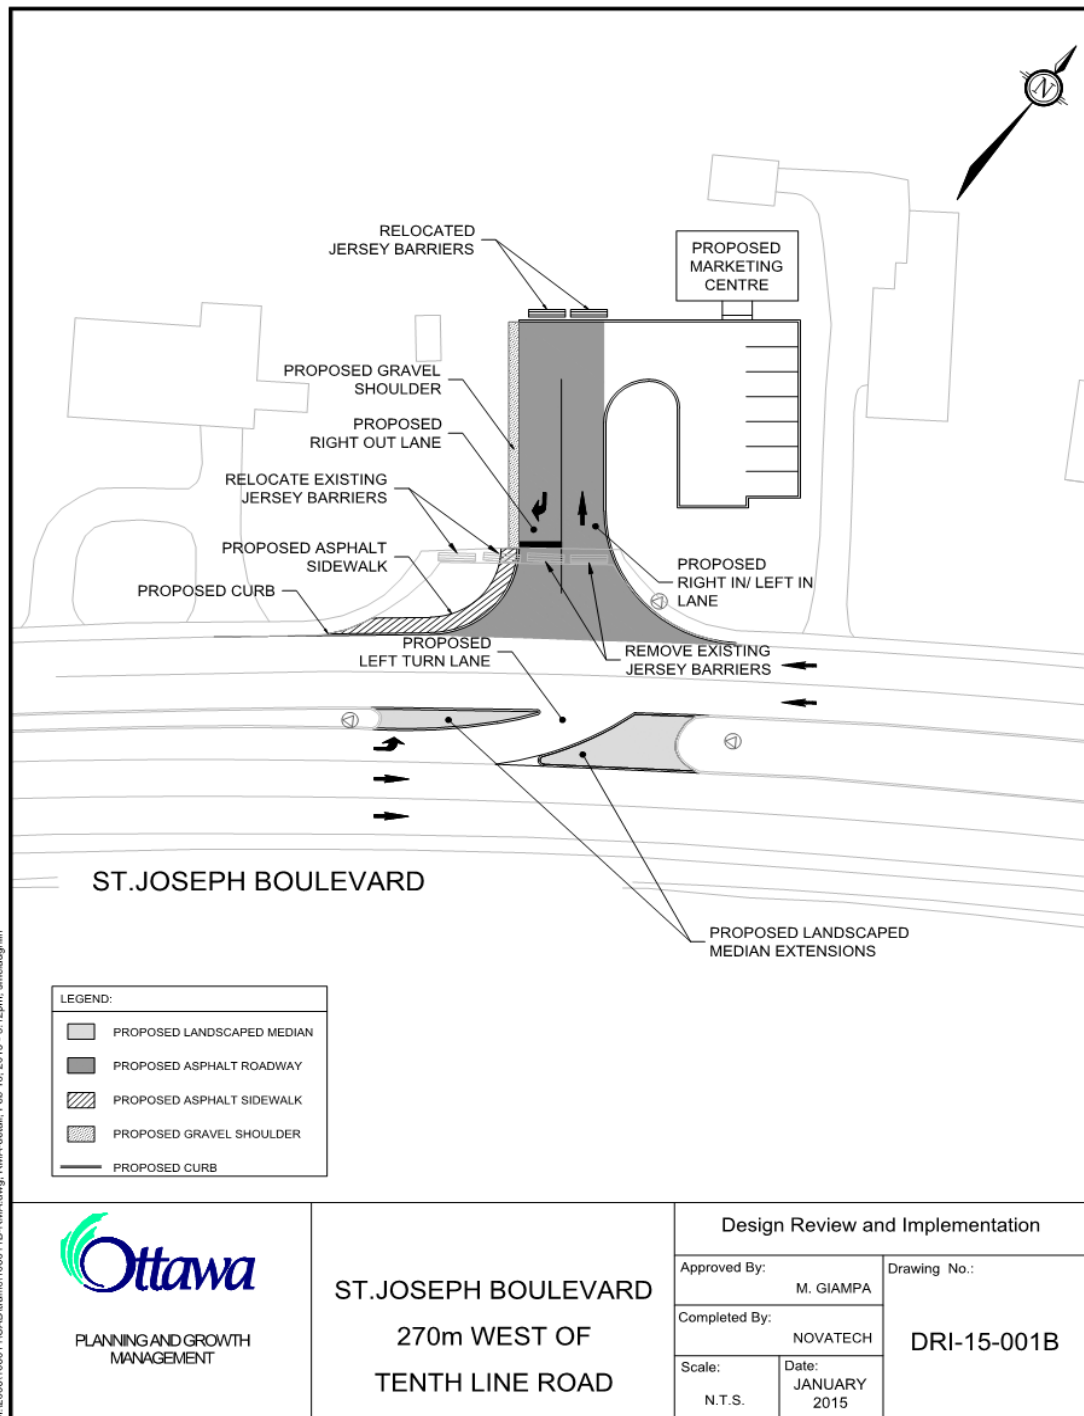

ATTACHMENTS

- Attachment 1 – Key Plan DRI-2015-001A
- Attachment 2 – Proposed Road Modifications DRI-2015-001B

Attachment 1

ATTACHMENT 2

APPENDIX B

Daily Traffic Management Site Record

- (a) DB Co shall create a Daily Traffic Management Site Record to document the status of the traffic control measures for the Project. The header of the document shall include but not be limited to headings for the Project Segment and number, date, day of week, location, time of the observations, name of observer and the signature of the observer. The Daily Traffic Management Site Record may be either a hard copy document or an electronic form in a format compatible with City systems.
- (b) Each day (weekdays and weekends, and statutory and civic holidays), DB Co shall carry out at least one site inspection with a focus on the efficacy of the Traffic and Transit Management Plan for the entire Project. The observations shall be recorded on the Daily Traffic Management Site Record, the original of which shall be retained by DB Co until the Project warranty period is complete.
- (c) In instances where traffic control measures change during the day (or night), such as but not limited to temporary lane closures, diversions, etc, DB Co shall carry out site inspection of all of the traffic controls relevant to the changes at the start of each change-over of the traffic control measures and record the inspection on the Daily Traffic Management Site Record.
- (d) Each day, DB Co shall review the information on the Daily Traffic Management Site Record, and assess the functionality of the traffic control measures, noting instances where the measures are not meeting the expectations of the TTMP and TTMP sub-plans, and identify the remedial action required such that the expectations for traffic control as set out in the TTMP and TTMP sub-plans shall be met.
- (e) DB Co shall take immediate action to effect the requisite remedial measures needed in order to attend to the noted matters. DB Co shall document in the Daily Traffic Management Site Record the issue, the remedy and the action taken.
- (f) DB Co shall continue to inspect a matter of traffic management concern until the issue is resolved.
- (g) Within 48 hours of the preparation of the Daily Traffic Management Site Record, copies of the Site Record shall be forwarded to the City, and to the Lead Traffic and Mobility.
- (h) DB Co shall produce a Monthly Summary of the Daily Traffic Management Site Records, noting the number of issues identified, the location and nature of the issues, the remedies for the issues, the actions taken and the results achieved. Trends in issues shall be identified, remedies for the trends ascertained, and remedial action implemented. All of this information shall be documented in a Monthly Summary of the Daily Traffic Management site Records, and a copy of the summary shall be brought to the weekly Traffic Management Committee meeting for review and discussion, with copy to the City and the Lead Traffic and Mobility.

- (i) The site visits and Daily Traffic Management Site Records, shall include, but not be limited to observations taken by a DB Co designated Traffic Control Supervisor, with respect to each of the following topics of traffic control information as relates to and in accordance with the current accepted TTMP and current accepted TTMP sub-plans. Note that where requirements of this section can be fulfilled by the provision of a video recording, the video can be referenced as proof that the requirements have been fulfilled:
- There are accepted TTMP and all of the TTMP sub-plans in place for the portion of the Project site under review;
 - All requirements, site locations, situations, conditions or other circumstances which are identified in the accepted TTMP and in each of the accepted TTMP sub-plans as potentially impacting traffic flow of any kind as may be related to/caused by the Project. DB Co shall prepare checklists of the identified items for consideration from the TTMP and from each of the TTMP sub-plans, and attach them to the Daily Traffic Management Site Record, thence to be reviewed on site and recorded as an integral part of the Daily Traffic Management Site Record;
 - Works listed in the Traffic and Transit Schedule of the TTMP are progressing in accordance with the start and finish dates set out therein for each work element;
 - Upon City request: Transit service travel time and frequency between existing or temporary BRT stations and/or and stops;
 - Prohibitions to any part of the traveling public;
 - Upon City request: Diverted traffic volumes, speeds and travel times for all modes of travel on all roads effected by the Project;
 - Impacts on residential streets and associated temporary and permanent traffic calming measures;
 - Upon City request: Traffic detour follow-up study data for traffic volumes, speeds and travel times for all modes of travel using a detour route, as well as the queue lengths for vehicle traffic;
 - Third party works in the vicinity of the Project;
 - The placement of all traffic control devices;
 - Equipment or material which constitutes a hazard to traffic, pedestrians and cyclists;
 - Storage of equipment or materials external to identified storage areas;
 - Dirt and debris on paved and concrete surfaces;
 - Closure periods;
 - Vehicle queues related to Construction activities, closure, detours, lane shifts and diversions, exceeding the length predicted by the analysis of the TCP for the work;

- Multiple construction zones such that traffic encounters multiple disruptions and/or discontinuity in lane geometrics;
- Construction activity and access points or traffic detour/diversion on private roads or lands;
- Construction activity and access points or traffic detour/diversion on public use lands or roadways controlled by an agency
- Access for transit users to all adjacent existing Transitway facilities, BRT lanes, and Transit Priority lanes and non-transitway routes;
- Open excavations adjacent to traffic lanes (including cyclist) during darkness or non-working days;
- Sight distance obstructions;
- Haul routes identified, and, clean and free of Construction dust and debris;
- Access by buses, pedestrians and cyclists to all existing bus stops;
- Passenger facilities are provided at relocated or temporary bus stops;
- Closures and minimization of traffic disruptions on Holidays and during Special Events;
- Detour routes, lane shifts and diversions paved, with pavement markings and signs in place;
- Milled surfaces, if present, are uniform in texture, not raveled, no standing water on the surface, and have been in place for less than three days;
- Detour routes, lane shifts and diversions drained such that there is no standing water or water flow across the roadway, busway, cycling and pedestrian facilities;
- Closure, detour, lane shift or diversion identified in Schedule 37 Mobility Matters;
- All signs are bilingual English/ French;
- Temporary barriers at required locations, with appropriate flare offsets, end treatments, crash cushions, reflectors and anti-glare screens, and, provision for drainage, and removal of snow, ice and debris;
- Pavement drop-offs exposed to traffic, pedestrians and cyclists are to specifications per height, protection, ramping, etc;
- All Work meets AODA requirements;
- Redundant pavement markings are eradicated as specified;
- Lane widths and clearance offset to specifications in reduced speed zones;
- Floodlighting adjusted so as not to interfere with driver's vision, nor directed toward residences or businesses;

- Streetlighting in accordance with Schedule 15-2, Part 2 – Civil and Guideway;
- All closures, detours, diversions, lane shifts, pathways and sidewalks being maintained and repaired to City and industry standards;
- School crossings appropriately addressed in order to maintain safe and efficient operation;
- Temporary closure and/or re-routing of pedestrian and cycling routes conform to Pedestrian Access Plan and Construction Site Pedestrian Control Plan
- Directional signing for pedestrians and cyclists;
- Sidewalk detours conforms to accepted TCP;
- Lighting provided for pedestrian and cyclist users is functional;
- OPS on duty for Work within 20m of traffic control signal:
- Alternate parking or designated usage zones provided to replace those impacted by Construction;
- Temporary traffic control signal installations;
- Date, time and content of the PVMS message changes;
- Date and time of lane closures;
- Successive intersections on either side of a closed intersection open to two-way traffic;
- Transit given priority on the road system via temporary busways or bus-only lanes;
- Transit priority measures operational at key intersections on detour routes;
- When BRT lane closures are in place during the permitted hours, an alternative is made available for transit;
- Interference or interruption of operations of BRT, Bus Only Lanes or BRT detours by Project transport vehicles;
- All traffic controls are operational before commencing Works affecting operation of BRT, Bus Only Lanes or BRT detour operations;
- Barrier free pedestrian and cycling access to active Stations and across all pedestrian bridges maintained at all times;
- Pedestrian and cycling access maintained across the local bus route lanes at all times;
- A new or relocated alternate route pathway, sidewalk or MUP leading to a station connection is provided in place of a closed pathway, sidewalk or MUP;
- Way-finding signage including maps showing routes and destinations is provided at all times for pathways, sidewalks and MUP closures and detours at all access

points and intersections and on pathways or MUPs 50 m in advance of closure or relocation points;

- Generally, public traffic, transit, and construction traffic is managed in accordance with the TTMP;
- Pedestrian facilities are in accordance with the Pedestrian Access Plan and Construction Site Pedestrian Control Plan;
- All traffic control and protective devices identified in the approved TTMP are provided, installed and are being maintained;
- Traffic Control Supervisor on the Project site full time when Construction activities are underway;

APPENDIX C

Daily Traffic Monitoring Report

- (a) DB Co shall create a Daily Traffic Monitoring Report to document the status of all of the various traffic conditions for all modes of transportation throughout the Project. The Daily Traffic Monitoring Report may be either a hard copy document or an electronic form in a format compatible with City systems.
- (a) The Traffic Monitoring Report shall be a field sheet format. The header of the document shall include but not be limited to headings for the Project Segment and number, date, day of week, location, time of the observations, name of observer and the signature of the observer. There shall be columns on the form for observation number, item of observation with explanation, an indication of compliance – yes, no, not applicable -, notes/comments, action taken, and follow up.
- (b) Each day (weekdays and weekends, and statutory and civic holidays), DB Co shall carry out at least one site inspection with a focus on the traffic conditions observed throughout the entire Project. The observations shall be recorded on the Daily Traffic Monitoring Report, the original of which shall be retained by DB Co until the Project warranty period is complete.
- (c) In instances where traffic control measures change during the day (or night), such as but not limited to temporary lane closures, diversions, etc, DB Co shall carry out site inspection of all of the traffic conditions relevant to the changes at the start of each change-over of the traffic control measures and record the inspection on the Daily Traffic Monitoring Report.
- (d) Each day, DB Co shall review the information on the Daily Traffic Monitoring Report, and assess the functionality of the traffic control measures, noting instances where the traffic flow is not meeting the expectations of the TTMP and TTMP sub-plans, and identify the remedial action required such that the expectations for traffic flow as set out in the TTMP and TTMP sub-plans shall be met.
- (e) DB Co shall take immediate action to effect the requisite remedial measures needed in order to attend to the noted matters. DB Co shall document in the Daily Traffic Monitoring Report the issue, the remedy and the action taken.
- (f) DB Co shall continue to inspect a matter of traffic management concern until the issue is resolved.
- (g) Each day, copies of the current Daily Traffic Monitoring Report shall be forwarded to the City, and to the Lead Traffic and Mobility.
- (h) DB Co shall produce a Monthly Summary of the Daily Traffic Monitoring Reports, noting the number of issues identified, the location and nature of the issues, the remedies for the issues, the actions taken and the results achieved. Trends in issues shall be

identified, remedies for the trends ascertained, and remedial action implemented. All of this information shall be documented in a Monthly Summary of the Daily Traffic Monitoring Reports, and a copy of the summary shall be brought to the weekly Traffic Management Committee meeting for review and discussion, with copy to the City and the Lead Traffic and Mobility.

(i) The Daily Traffic Monitoring Report shall include, but not be limited to, observations taken during personal site visits and/or via electronic/camera surveillance by a DB Co designated Traffic Control Supervisor, with respect to each of the following topics of traffic flow information as relates to and in accordance with the current accepted TTMP and current accepted TTMP sub-plans:

- Duration of temporary Lane (traffic, BRT, bike) closures in place;
- Long duration full lane (traffic, BRT, bike) closures in place;
- Sidewalk, pathway, MUP temporary closures in place;
- Sidewalk, pathway, MUP long duration closures in place;
- Detours, Lane shifts, diversions in place;
- Traffic delays observed (vehicles, buses, duration, likely cause?);
- Traffic queues observed (vehicles, buses, duration, likely cause?);
- Apparent LOS for critical movements at intersections;
- Quality of service for transit passengers;
- Pedestrian service (behavior, issues?)
- Unauthorized Construction loading/unloading;
- Parking and special use zones issues;
- Cyclist service (behavior, issues?);
- Pedestrian and vehicular access to adjacent properties and businesses;
- Vehicle travel times;
- Transit travel times, headways;
- Transit operational issues;
- Transit route continuity;
- Flag personnel on site;
- Site security presence;
- Major incident;
- Traffic Incident Management Group activated;
- Police point duty;

- TCPs and ETPs as per OTM Book 7;
 - All traffic signs and features in place;
 - Traffic issues noted by field Engineer, flag person;
 - Comments from OC Transpo Supervisor; and
 - Other traffic items as applicable from any requirements from any other Schedules which pertain to or affect traffic management.
- (j) If traffic issues are noted, or if the monitoring effort is specifically undertaken following implementation of, or alteration of the TTMP or a TTMP sub-plan, then additional data collection shall be required in terms of traffic volumes, queue lengths, and/or other measurements commensurate with the issue at hand in order to calculate performance indicators such as level of service or other applicable evaluation measures.

APPENDIX D

Daily Lane Closure Report

- (a) DB Co shall create a Daily Lane Closure Report for each lane closure on the Project. The purpose is to document the status of all of the various lane closures for all modes of transportation throughout the Project. The Daily Lane Closure Report may be either a hard copy document or an electronic form in a format compatible with City systems.
- (b) The Daily Lane Closure Report shall be a field sheet format. The header of the document shall include but not be limited to headings for the Project Segment and number, date, day of week, location, time of the observations, name of observer, the signature of the observer, and whether the lane closure is a General Traffic Lane Closure, or a BRT Lane Closure.
- (c) Each day (weekdays and weekends, and statutory and civic holidays), DB Co shall carry out site inspections, in person or via electronic surveillance, with a focus on both the temporary and long term lane closures in effect for both general traffic and BRT vehicles throughout the entire Project. The data shall be recorded on the Daily Lane Closure Report, the original of which shall be retained by DB Co until the Project warranty period is complete.
- (d) In instances where lane closures change during the day (or night), DB Co shall carry out site confirmation of the lane closures relevant to the changes at the start and end of each change-over of the lane closures and record the inspection on a Daily Lane Closure Report. The observations shall be taken at a frequency so as to confirm with an accuracy of + - [REDACTED], the actual start and end times for each of the temporary lane closures.
- (e) Each day, DB Co shall review the information recorded on the Daily Lane Closure Reports, and assess the execution of the lane closures, noting instances where the timing of the lane closure implementation/removal is not meeting the expectations of the TTMP and TTMP sub-plans, and identify the remedial action required such that the expectations for lane closures as set out in the TTMP and TTMP sub-plans shall be met.
- (f) DB Co shall take immediate action to effect the requisite remedial measures needed in order to attend to the noted matters. DB Co shall document in the Daily Lane Closure Report the issue, the remedy and the action taken.
- (g) DB Co shall continue to inspect a matter of traffic management concern until the issue is resolved.
- (h) Each day, copies of the current Daily Lane Closure Report shall be forwarded by DB Co to the City, and to the Lead Traffic and Mobility.

- (i) DB Co shall produce a Monthly Summary of the Daily Lane Closure Reports, noting the number of issues identified, the location and nature of the issues, the remedies for the issues, the actions taken and the results achieved. Trends in issues shall be identified, remedies for the trends ascertained, and remedial action implemented. All of this information shall be documented in the Monthly Summary of the Daily Lane Closure Reports, and a copy of the summary shall be brought to the weekly Traffic Management Committee meeting for review and discussion, with copy to the City and the Lead Traffic and Mobility.
- (j) The Daily Lane Closure Reports shall include, but not be limited to, observations taken during personal site visits and/or via electronic/camera surveillance, carried out by a DB Co designated Traffic Control Supervisor, with respect to each of the following topics of lane closure information as relates to and in accordance with the current accepted TTMP and current accepted TTMP sub-plans.
- Lane closure required (Yes/no);
 - Planned lane closure (yes/no);
 - Scheduled lane closure time (Military Time – 24 hr clock);
 - Scheduled lane opening time (Military Time);
 - Actual lane closure time (Military Time);
 - Actual lane opening time (Military Time);
 - Period of the day (peak, off-peak, night, weekend, holiday);
 - Lane description:
 - A. Street name;
 - B. Direction of traffic flow
 - C. Name of upstream cross street
 - D. Name of downstream cross street;
 - E. Number of lanes closed;
 - F. No of blocks lane(s) is closed; and
 - G. Lanes closed – Right turn, Through and right turn, Right through, Left through, through and left turn, left turn
 - Comments/other observations;
 - Equivalent lane closure hours for current observation;
 - Location Map to scale showing relevant lane configuration with closed lane(s) shown as hatched area;
 - Checked by (print name then signature); and
 - Signed off by (print name then signature).

APPENDIX E

Temporary Bus Terminal Requirements

| Station | Description | Location | Temporary Bus Terminal Requirements | | | | | | | | | | | | | | | | | |
|----------------|--|--|-------------------------------------|------------------------------|---------------------|----------|-----------------|---------------|-----------|---|------------|------------|---------|------------------|--------------|------------------------------|-----------------------|--|-----------------|------------|
| | | | Platforms (length) | Shelters (type) ¹ | Sidewalk/curb type | Lighting | Station signage | Route signage | Map Frame | Passenger Information Displays ² | Bike Racks | Waste bins | Benches | Emergency phones | CCTV cameras | Operator Washroom Facilities | Supervisor Facilities | Sales and Ticket Office, including Washrooms | Retail Facility | Bus Lay-up |
| Westboro | Temporary eastbound Transitway Platform | On Scott St, west of Athlone Ave | 55m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | x | ✓ | ✓ | ✓ | ✓ | ✓ | x | x | x | x | x |
| Lincoln Fields | Temporary local bus Platforms | In temporary local Station and lay-up area, west of existing Transitway Station | 140m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ |
| Queensway | Temporary eastbound Platform | On Highway 417 / Woodroffe Ave W-N/S ramp, east of existing Platform | 20m | ✓ | SC11 | ✓ | ✓ | ✓ | ✓ | x | x | ✓ | ✓ | ✓ | ✓ | x | x | x | x | x |
| | Temporary westbound Platform | On Highway 417 / Transitway N-W ramp, west of existing Platform, south of MUP crossing | 20m | ✓ | SC11 | ✓ | ✓ | ✓ | ✓ | x | ✓ | ✓ | ✓ | ✓ | ✓ | x | x | x | x | x |
| Iris | Temporary northbound Platform | On east side of Transitway, no more than 70m north of Iris St | 20m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | x | ✓ | ✓ | ✓ | x | x | x | x | x | x | x |
| | Temporary southbound Platform | On west side of Transitway, no more than 70m north of Iris St | 20m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | x | x | ✓ | ✓ | x | x | x | x | x | x | x |
| | Temporary westbound Platform | On north side of Iris St, between the Transitway and Parkway Dr | 15m | ✓ | SC11.3 ⁴ | ✓ | x | ✓ | ✓ | x | x | ✓ | ✓ | x | x | x | x | x | x | x |
| Pinecrest | Temporary eastbound stop | On Highway 417 / Greenbank Rd S-E ramp | 15m | ✓ | SC11 | ✓ | ✓ | ✓ | ✓ | x | ✓ | ✓ | ✓ | x | x | x | x | x | x | x |
| Bayshore | Temporary eastbound local Platforms | In local Station, west of the existing westbound local Platform | 45m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | x | x | ✓ |
| | Temporary eastbound Transitway Platforms | In local Station, west of the existing eastbound local Platform | 35m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ |
| | Temporary westbound Transitway Platforms | In local Station, west of the existing westbound local Platform | 35m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ |
| Trim | Temporary westbound Station Platforms | East of existing eastbound Platforms and existing Park and Ride access | 50m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | x | x | ✓ |
| Moodie | Temporary Transitway Station | In the ultimate bus lay-by area for Moodie LRT Station | 55m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | x | ✓ | ✓ | ✓ | ✓ | ✓ | x | x | x | x | ✓ |
| | Temporary local Station | | 20m | ✓ | Note ³ | ✓ | ✓ | ✓ | ✓ | x | ✓ | ✓ | ✓ | ✓ | ✓ | x | x | x | x | ✓ |

¹ All Temporary Transitway bus stops (i.e. those replacing the functionality of a Transitway stop) shall be provided with a Transitway style shelter (i.e. 8’ x 20’). For temporary on-street bus stops, a standard flat roof 5’ x 10’ shelter shall be provided.
² Passenger Information Display infrastructure shall be moved by OC Transpo at no cost to DB Co, however DB Co shall provide the ducts/feeds to the bus stops at cost to DB Co
³ As per OC Transpo Transitway and Station Design Guidelines
⁴ Sidewalk between platform and shelter

APPENDIX F

Protected Intersection Plan

DRAFT CONCEPT FOR DISCUSSION

PREFERRED

CONSTRAINED

NOTES:

1. Pedestrian crossing of cycling facility to be designed in accordance with relevant pedestrian crossing guidance (OTM and local practices). Typically, crossings are a minimum of 2.5m wide with a concrete or asphalt surface.
2. The decision to include truck aprons should consider potential noise impacts in residential areas.

**SCHEDULE 15-2
DESIGN AND CONSTRUCTION REQUIREMENTS**

**PART 7
TRAFFIC AND TRANSIT MANAGEMENT AND CONSTRUCTION ACCESS**

**ARTICLE 1 GENERAL TRAFFIC AND TRANSIT MANAGEMENT
REQUIREMENTS**

1.1 Order of Precedence

- (a) DB Co's TTMP and traffic control operations shall comply with the criteria contained in this Part 7, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between the criteria, commitments or requirements contained within one document when compared with another, the more stringent shall apply:
- (i) OC Transpo Transitway and Station Design Guidelines;
 - (ii) City of Ottawa Transportation Master Plan;
 - (iii) City of Ottawa Road Corridor Planning & Design Guidelines, Urban & Village Collectors / Rural Arterials & Collectors;
 - (iv) Region of Ottawa-Carleton Regional Road Corridor Design Guidelines, July 2000, Region of Ottawa-Carleton;
 - (v) City of Ottawa Right of way Lighting Policy;
 - (vi) City of Ottawa Pedestrian Plan;
 - (vii) City of Ottawa Cycling Plan;
 - (viii) City of Ottawa Traffic and Parking By-Laws;
 - (ix) The City of Ottawa, Department of Public Works and Environmental Services, Infrastructure Services Branch, Standard tender documents for Unit Price Contracts (Volume No.1- Construction Specifications; Volume No. 2 - Materials Specifications & Standard Detail Drawings);
 - (x) City of Ottawa Area Traffic Management Principles and Guidelines;
 - (xi) City of Ottawa Emergency Management Plan;
 - (xii) City of Ottawa Maintenance and Quality Standards for Roads, Sidewalks and Pathways

- (xiii) Geometric Design Guide for Canadian Roads (TAC);
- (xiv) Urban Supplement to the Geometric Design Guidelines for Canadian Roadways (TAC);
- (xv) Guidelines for the Design of Roadway Lighting (TAC);
- (xvi) Turning Vehicle Templates (TAC);
- (xvii) Geometric Design Standards for Ontario Highways (MTO);
- (xviii) City of Ottawa Transportation Impact Assessment Guidelines;
- (xix) City of Ottawa Delivery Standards for CADD Drawing Files
- (xx) Roadside Safety Manual (MTO);
- (xxi) Ontario Traffic Manuals;
- (xxii) Sign Sheeting Memorandum, February 21, 2008 (MTO)
- (xxiii) Contract Design, Estimating and Documentation Manual (MTO)
- (xxiv) [REDACTED];
- (xxv) Electrical Engineering Manual (MTO)
- (xxvi) Policy – Municipal Work on MTO Traffic Signals, September 2008;
- (xxvii) MTO Policy – Roadway Lighting on Municipal Crossroads, October 24, 2003;
- (xxviii) Portable Variable Message Signs – Best Practices Manual (MTO)
- (xxix) Bikeways Design Manual;
- (xxx) Guidelines for Reducing Speed Limits in Construction Work Zones
- (xxxi) Ontario Provincial Standards Specifications and Standard Drawings (OPSS and OPSD);
- (xxxii) Ministry of Transportation Ontario Drawings (MTOD's)
- (xxxiii) Other relevant MTO Policy, Procedures and Guidelines;
- (xxxiv) Accessibility for Ontarians with Disabilities Act (AODA):
- (xxxv) Ottawa Accessibility Design Standards;
- (xxxvi) City of Ottawa Operation Policy, Procedures and Guidelines;

- (xxxvii) City Operating Policy and Procedures;
- (xxxviii) City of Ottawa Park and Pathway Development Manual;
- (xxxix) Multi-Modal Level of Service (MMLOS) Guidelines; and,
- (xl) NCC Standard Sign System Manual.

1.2 General Requirements

- (a) DB Co shall manage the traffic and transit impacts of the Project and shall develop a TTMP for the Project work to meet the requirements of this Part 7. DB Co shall manage and coordinate the TTMP developed under this Part 7 with DB Co's requirement to manage and develop the TTMP required for the Highway Works as prescribed in Schedule 15-2, Part 9, Part C – Traffic Management and Construction Access. The management and development of the TTMPs shall complement the requirements of the other respective TTMP and for further certainty neither TTMP shall diminish the other nor the requirements prescribed in this Part 7 and Schedule 15-2, Part 9 – Highway 417 Works.
 - (i) The TTMP for the Highway 417/416 MTO Work shall be applicable to the construction of the Highway Works only. The TTMP for the Confederation Line Extension and the TTMP for the Highway 417/416 MTO Work shall be complementary to one another.
- (b) DB Co shall develop and submit a traffic and transit management strategy and TTMP in accordance with Schedule 10 – Review Procedure that is acceptable to the City. DB Co shall cooperate with the City and OC Transpo with respect to the development of the traffic management strategy.
- (c) Further to the requirements of Schedule 15-2, Part 1, Article 10 – Construction Safety Management, DB Co shall identify in each Site Specific Safety Plan, the safety concerns and mitigation measures associated with each Work Site as pertains to the health and safety of the traveling public, from the perspectives of pedestrians, cyclists, general vehicle traffic, transit traffic, and transit customers. DB Co shall include a copy of each relevant Site Specific Safety Plan as an Annex to the TCP submission in accordance with Schedule 10 – Review Procedure. DB Co shall keep the Site Specific Safety Plan and the TCP current to the changes on Site, and resubmit the TCP accordingly. DB Co shall not proceed with any Work on Site without an accepted TCP which is current to the present-day Site Conditions.
- (d) DB Co shall work collaboratively and diligently in a reasonable manner with the City and OC Transpo, Stakeholders, ESP, other City service providers and the Relevant Authorities so that transit service is maintained during the performance of the construction in terms of travel time and frequency.

- (e) Construction shall be scheduled so that the duration and extent of the proposed Work and traffic control measures minimize the impact to all modes of transportation and adjacent land owners, and shall not prohibit any part of the traveling public access prior to receiving the required authorization to do so.
- (f) DB Co shall collect, record, document and file with the City, the travel times between existing Transitway Stations and stops for all bus routes and Facilities, prior to the commencement of any Work activity which would alter bus travel times. DB Co is advised to coordinate their collection of this data in advance with OC Transpo, as OC Transpo may be able to facilitate the collection of the data using their bus tracking system. This information shall be used by DB Co as the baseline travel times for comparison/evaluation of alternate/temporary bus routes. Baseline data shall be validated by the City to ensure that it is representative of normal operations and not affected by other road works.
- (g) All traffic data used for analysis for traffic management purposes shall be based on the most current data and shall be no older than two years. The information to be collected shall include, but not be limited to, all of the hourly traffic volumes and AADTs for all modes of travel on all Roadways, bus Facilities, bike facilities and pedestrian facilities which will be affected by the Project, including any potential detour routes. DB Co shall be responsible for obtaining or collecting all traffic data necessary for its traffic analysis, if traffic data less than two years old is not relevant to the traffic management analysis due to temporary conditions that existed at the time the data was collected. DB Co shall confirm with the City that the data is appropriate prior to conducting an analysis using said data.
- (h) DB Co shall undertake a traffic management study, where road capacity or LOS is reduced, to determine the impact of the construction on other routes and to determine appropriate mitigation measures. The traffic management study shall involve area wide traffic modeling to determine impacts to all modes of transportation including adjacent corridors impacted by the construction. The study shall include DB Co's forecast for, but not limited to, routes, diverted traffic volumes, speeds and travel times for all modes of travel on all routes subject to the study. The traffic management study shall be submitted as a part of the TTMP document in accordance with Schedule 10 – Review Procedure.
- (i) The traffic management strategy shall address the impact on residential streets of any diverted traffic through appropriate temporary and permanent traffic calming measures in accordance with City of Ottawa Area Traffic Management Principles and Guidelines and in consultation with OC Transpo along any detoured bus routes.
- (j) The OTM supersedes all reference in this contract document to the MTO MUTCD. The supply and placement of all necessary temporary TCDs shall be performed under the sole direction of DB Co and in accordance with DB Co's submitted/reviewed TTMP and associated TCP, prior to commencing any construction on or adjacent to a City street or Provincial Highway/freeway. The TCP shall be developed in accordance with guidelines established by the most recent version of the OTM, the OHSa and this Part 7 which details the required contents and submission of the TTMP and associated TCPs.

- (k) Vehicular and pedestrian/cyclist traffic control within the Project shall remain the sole responsibility of DB Co as the City delegates this authority to DB Co in accordance with the submitted/reviewed TTMP. Notwithstanding the foregoing, DB Co shall, at its own expense, remove any equipment or material, which in the City's opinion, constitute a Hazard to traffic, pedestrians and cyclists.
- (l) DB Co shall be fully and solely responsible to ensure the development and implementation of a submitted/reviewed TTMP as required in this Part 7. The TTMP, its sub-plans, and all required TCDs shall be designed/installed, monitored, operated/maintained and removed, utilizing only competent persons and workers as defined under the OHSA. DB Co shall be responsible for coordination of this Work with the City.
- (m) DB Co shall not store any equipment or materials on a federal, provincial or municipal road or the Roadway shoulders, Transitway, Park and Rides or boulevards, unless the storage areas are identified in the TCP and appropriate TCDs have been implemented to protect the equipment or materials. The City shall review and approve any storage of equipment and/or materials within the Lands. DB Co shall be permitted to use temporary closed lanes as a construction laydown and staging area, where temporary lane closures are permitted and approved by the City. Construction shall be scheduled so that the duration and extent of the proposed Work and traffic control measures minimize the impact on the traveling public. DB Co shall remove all dirt and debris from all paved or concrete surfaces outside of the staging area at the close of each workday, and shall be responsible for any repairs or maintenance associated with the construction activity, to the City standards.
- (n) The Permitted Periods for Closures outlined in this Part 7 shall be the basis for the development of the TTMP. Variations to the applicable Permitted Periods for Closures, at specific locations, may be permitted for such specific locations, but only if substantiated through a plan by DB Co that addresses, at a minimum, traffic requirements, analyses and Stakeholder consultation, where applicable, and such plan is submitted to and accepted by the City in accordance with Schedule 10 – Review Procedure.
- (o) All vehicle, transit, transit customer activity, pedestrian and cycling data used for analysis for traffic management purposes shall be based on the most current data, and no older than two years with growth factors acceptable to the City. DB Co shall be responsible for obtaining any vehicle, pedestrian and cycling data necessary for its traffic management analysis, where the City does not already have the data or cannot provide the data within DB Co's required timelines.
- (p) Implementation and removal of any closure, full closures, detour routes, Lane Shifts, and diversions and/or other changes in traffic patterns shall not be permitted outside of the applicable Permitted Periods for Closures as defined in this Part 7 and elsewhere in this Project Agreement. The City may, acting in a reasonable manner, temporarily adjust the applicable permitted periods for any closure in circumstances considered appropriate by the City including but not limited to, holidays, as further addressed in Clause 1.4 - Holidays and Special Events of this Part 7, incidents, and maintenance.

- (q) The City may direct DB Co, on 7 Business Days advance notice, to eliminate or modify any or all closures and restore free-flow traffic for a 24-hour period on the day of any event other than a holiday, as per this Part 7.
- (r) DB Co shall temporarily cease any relevant construction activities that are affecting traffic and make all the necessary travel lanes available to traffic as quickly as possible if the City determines that vehicular queues related to closure, full closures, detour routes, Lane Shifts and/or diversions are excessive. For example, where the extent of vehicular queues affect traffic operations such as at intersections or interchanges or the ability of vehicles on a highway mainline to exit at upstream interchange ramps.
- (s) At any time during the Project, the City Representative may, acting in a reasonable manner, temporarily adjust the applicable Permitted Periods for Closures identified in this Part 7, including but not limited to holidays (as further addressed in Clause 1.4 of this Part 7), incidents, and maintenance.
- (t) Any proposed DB Co initiated closure, full closures, detour routes, Lane Shifts, and diversions, not included in DB Co's accepted TCP, shall be submitted to the City in an updated TCP in accordance with Schedule 10 - Review Procedure. DB Co shall not proceed with implementation of the closure, full closure, detour, Lane Shift or diversion without an accepted TCP. DB Co shall not commence any Work on Site without an applicable current accepted TCP.
- (u) All Transitway, bus lanes, Roadway (excluding Highway 417 and Highway 416 with associated ramps), cycle and pedestrian facility permanent modifications not specifically described or depicted in the EA for the Project, or specifically referenced or shown in the Project Agreement, require Council approval prior to their construction. DB Co shall provide to the City a RMA report for the proposed modifications in accordance with requirements of the City's Transportation Impact Assessment Guidelines. A sample RMA report has been provided in Appendix A of this Part 7. The RMA shall be submitted to the City in accordance with Schedule 10 - Review Procedure. DB Co shall attend committee and Council meetings with the City, and provide assistance to the City in preparing a presentation for committee and Council, and assisting the City in answering any questions which arise at the meetings. Given that modifications vary in size and complexity, and that committee and Council agendas may become full, DB Co shall confirm with the City regarding the lead time required to have each particular item prepared and placed on a committee agenda for consideration, thence, forwarded to Council agenda for approval and final disposition, and allow for this time in their scheduling of the Project Work.
- (v) Multiple Work zones that impact each other along existing Provincial Highways, existing Major Municipal Roads, existing Minor Municipal Roads, existing Transitway, and other affected municipal or federal Roadways or routes between them, such that traffic encounters multiple disruptions and/or discontinuity in the lane geometries, shall not be permitted.

- (w) Access to/from Work zones along existing Provincial Highways, existing Transitway, and existing Major Municipal Roads shall not be permitted outside of the applicable Permitted Periods for Closures, unless separate acceleration and deceleration lanes are provided to/from such construction zones. Acceleration and deceleration lanes shall be designed in accordance with the Reference Documents and Applicable Codes and design standards taking into account all construction vehicle/equipment types.
- (x) Construction vehicles/equipment shall only use accesses to/from Work zones in the same direction of traffic thereby diverging/merging with the flow of traffic, in order to avoid crossing opposing traffic. The City reserves the right to close any access to/from any Work zone that it deems to be unsafe or which constitutes a Hazard to the public.
- (y) There shall be no open excavation adjacent to a lane carrying traffic including cyclists at any time, except where a barrier designed to restrain errant vehicles or cyclists is located between the traffic and the excavation.
- (z) DB Co shall remove materials and construction vehicles/equipment which, in the opinion of the City, constitute a Hazard or sight distance obstruction.
- (aa) DB Co shall be responsible for identifying to the City in advance all Roadways being utilized for haul routes. DB Co shall be responsible for ensuring haul routes are kept clean and free of construction dust and debris. DB Co shall submit a plan for the cleaning of haul routes in accordance with Schedule 10 – Review Procedure. Haul routes shall comply with City’s by-laws for goods movement and use of truck routes.
 - (i) DB Co shall be responsible for the cleaning and maintenance of any and all haul routes used to complete the Highway Work to the satisfaction of the City and MTO.
 - (ii) DB Co shall inventory and photograph road conditions before and after construction for the following locations:
 - A. SJAM Parkway;
 - B. Richmond Road;
 - C. OR174; and,
 - D. Any road which may be impacted due to debris from the Parkway Tunnel.
 - (iii) Road condition shall be restored to original or better condition than prior to construction, and to the satisfaction of the City.
 - (iv) DB Co shall determine the haul route and applicable load restrictions after consultation with the City, and shall comply with their requirements.
 - (v) DB Co shall submit a construction Haul Route Plan a minimum of 90 days prior to start of any construction activities. The Haul Route Plan shall be reviewed by

the City under the Review Procedure. The Haul Route Plan shall include the inventoried road conditions and photographs taken by DB Co prior to construction.

- (vi) The Haul Route Plan shall include, at a minimum, the following:
- A. Existing condition of municipal roads that will be used as haul routes;
 - B. A schematic of the general construction haul routes undertaken immediately adjacent to the Work;
 - C. A description of the construction equipment or vehicles, including type and quantities, as applicable that will be travelling on the identified haul routes;
 - D. DB Co's plan and approach to maintaining municipal haul routes as per requirements in this Article.

(bb) Seasonal Load Restriction Period

- (i) DB Co shall abide by the City's SLR period. If DB Co's schedule requires that an ODV exceeding the half-load limit be used on a non-full load truck route during the SLR period, DB Co shall conduct non-destructive Pavement deflection testing (such as falling weight deflectometer) during the summer prior to the SLR period, and again during the SLR period, and submit the results to the City a minimum of five calendar days prior to the required vehicle movement. The City will not issue an ODV permit during the SLR period without receipt of this data demonstrating that the road can accommodate vehicle loads exceeding the half-load limit.
- (cc) The City shall be granted access to the Work zone to install portable cameras or other devices required for monitoring, audit, public communication, data collection or other purposes.
- (dd) DB Co shall be responsible for providing, installing and maintaining all TCDs and protective devices identified in the approved TTMP.

1.3 Accommodation of Transit Services

- (a) DB Co shall be responsible for liaising and coordinating with all applicable municipal transit agencies for any modifications to bus routes and/or bus stops that may be required due to closures, full closures, detour routes, Lane Shifts and diversions and/or other changes in traffic patterns.
- (b) DB Co shall maintain access for transit customers to all adjacent existing and temporary Transitway and transit facilities, bus lanes, Transit Priority Lanes and non-Transitway routes through detours or otherwise as detailed elsewhere in this Part 7 and elsewhere in this Project Agreement, unless exceptions have been approved.

- (c) DB Co shall provide the City and OC Transpo at least 35 calendar days' notice to coordinate adjustments required to their facilities as a result of construction. Access by buses, pedestrians and cyclists to all existing bus stops or Platforms located within the Work zone shall be maintained at all times, except where otherwise stated in this Part 7, elsewhere in this Project Agreement, or as agreed upon by the City and OC Transpo. Where access cannot be maintained and temporary facilities are required, these facilities shall be comparable to the existing facilities in form/function, to the satisfaction of OC Transpo.
- (d) Proposed modifications to bus routes and/or bus stops shall be submitted in accordance with Schedule 10 – Review Procedure.
- (e) Any relocation of bus stops or shelters shall be preceded with signage prepared and posted by DB Co at the existing bus stops, Station or Platform indicating the location of the re-located bus stops, Station or Platforms with advance notification to the public of at least 35 calendar days subsequent to the review and acceptance of the relocation proposal by the applicable authority. Any relocation of bus stops shall include the provision of appropriate customer or operational facilities or infrastructure including but not limited to the requirements in Part 7, Appendix E of this Part 7, to City and OC Transpo standards and specifications. DB Co shall be responsible for liaising and coordinating with all applicable municipal transit agencies.
- (f) DB Co shall contact OC Transpo Transit Planning Staff at least 5 Business Days prior to starting construction where the TTMP has indicated that the proposed Work will interfere with bus or pedestrian access to/from a transit stop, in order to coordinate the temporary relocation of the affected transit stop(s) as may be required.
 - (i) DB Co shall contact OC Transpo Transit Planning Staff at least 20 Business Days prior to the relocation or removal of a bus shelter.
 - (ii) A temporary concrete shelter pad shall be required for the relocation of a bus shelter if the planned duration of Work is longer than 30 calendar days, unless otherwise indicated by OC Transpo staff.

1.4 Holidays and Special Events

- (a) DB Co shall comply with the following requirements when scheduling hours of Work or DB Co initiated closures during the holidays identified in Tables 7-1.1 and 7-1.2:
 - (i) DB Co shall not commence the implementation of any closures on any of the holidays, after 12:00 hrs on Fridays or a day proceeding a holiday weekend, and before 12:00 hrs on a day following a holiday or on the first Business Day following a holiday weekend.

TABLE 7-1.1 – ONTARIO STATUTORY HOLIDAYS

| | |
|----------------|------------------|
| New Year's Day | Civic Holiday |
| Family Day | Labour Day |
| Good Friday | Thanksgiving Day |
| Victoria Day | Christmas Day |
| Canada Day | Boxing Day |

TABLE 7-1.2 –OTHER HOLIDAYS

| | |
|--------------------------------------|-----------------|
| Easter Monday | Remembrance Day |
| St. Jean Baptiste (Highway 417 only) | |

- (b) DB Co shall minimize traffic disruptions on existing Provincial Highways, existing Major Municipal Roads, existing or detoured Transitway, bus detour routes and federal roads, existing Minor Municipal Roads and other affected Municipal and federal Roadways during special events. DB Co shall be responsible for obtaining a listing of planned special events on an as required basis from the City of Ottawa Events Central Office, the Traffic Management Special Events office, and the NCC, recognizing that the special events calendar is updated by the City and the NCC on a regular basis.

1.5 Detour Route, Lane Shift, Diversion, Closure and Construction Requirements

- (a) General
- (i) DB Co shall not implement any closure, detour, Lane Shift or diversion without an applicable current accepted TTMP and TTMP sub-plans.
 - (ii) DB Co shall pave all detour routes, Lane Shifts and diversions and have appropriate Pavement Markings and signs placed in accordance with the OTM, King's Highway Guide Signing Policy Manual (MTO Roadways) and City of Ottawa Operation Policies, Procedures and Transitway and Station Design Guidelines.
 - (iii) DB Co shall be responsible for all Pavement markings and non-regulatory signage on all detour routes, in preparation for the detour and during detour operations.
 - (iv) DB Co shall ensure that the Pavement structure and condition of any new, existing or temporary Roadway, bus lanes, bus detours routes, cycling facility and pedestrian facility used for all detour routes, Lane Shifts and diversions, including detour routes prescribed by the City, is designed and constructed for its intended

purpose in accordance with the requirements set out in Schedule 15-2, Part 2, Clause 6.10, and Schedule 15-2, Part 9, Part B, Clause 3.3, and does not adversely impact the safety and intended function of such detour routes, Lane Shifts and diversions for all road users of the facilities.

- (v) DB Co shall schedule construction activities such that no milled surface shall remain for more than five calendar days or over weekends. Each milled surface shall have a uniform texture, not be raveled, and not allow standing water on the surface.
- (vi) DB Co shall prepare an engineered design for each detour route, Lane Shift and diversion that shall conform to the Design Criteria requirements in the Reference Documents identified in Clause 1.1 of this Part 7.
- (vii) DB Co shall provide detour routes, Lane Shifts and diversions with Drainage facilities to prevent standing water and flow of water across the Roadway, bus lanes, cycling facilities and pedestrian facilities, including bus stops and Platforms.
- (viii) DB Co shall replace all on-street catch basins with curb inlet catch basins, in accordance with City standards, on transit detour routes where buses will be travelling in the curbside lane.
- (ix) Implementation and removal of any closure, full closures, detour routes, Lane Shifts and diversions and/or other changes in traffic patterns shall not be permitted outside of the applicable Permitted Periods for Closures.
- (x) Lane closure duration shall be limited to the time required to execute the necessary construction activities. DB Co shall not close a lane for purposes other than actual construction activities, such as, but not limited to, material and equipment storage, and staff parking, unless approved by the City.
- (xi) DB Co shall maintain access to all adjacent properties through all partial closures, full closures, detour routes, Lane Shifts and diversions.
- (xii) Detour routes, Lane Shifts and diversion requirements and any modifications thereto, shall be submitted in accordance with Schedule 10 – Review Procedure. The Work Submittal shall in addition include modifications to the various TTMP sub-plans as applicable.
- (xiii) All Project related closures associated with traffic of any kind shall be the responsibility of DB Co, as well as any associated requirements for traffic control (such as but not limited to signage, temporary Pavement markings, line painting, TCD, barriers, flag persons, point duty police, etc.). Closures and their ancillary requirements shall be submitted in accordance with Schedule 10 – Review Procedure.

- (xiv) DB Co shall prepare and submit Record Drawings to the City in accordance with the requirements of Schedule 15-2, Part 1, Article 16 – Record Drawings where new traffic signals, temporary traffic signals or modifications are being made to existing traffic signals, within 30 calendar days of signal activation.
 - (xv) All closures, detour routes, Lane Shifts and diversions shall be identified and included in Schedule 34 – Mobility Matters
 - (xvi) DB Co shall have independent Road Safety Audits and Road Safety Design Reviews completed for any temporary or permanent Roadway, Roadway detour, Transitway or Transitway detour, in accordance with the criteria set out in Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-Bys.
 - (xvii) DB Co shall reinstate to original condition, unless otherwise indicated elsewhere in the documents, and at DB Co expense, all Lands, Roadways, MUPs and assets affected by the implementation of the Confederation Line Extension.
- (b) Traffic Control Devices
- (i) DB Co shall supply, install and maintain PVMS as required to supplement the TCP and shall use the same to provide advance notification and advance warning of traffic pattern changes and other operational changes for traffic and/or transit. Sign locations and messages shall be as shown in the TTMP which shall be submitted to the City in accordance with Schedule 10 – Review Procedure. The City retains the right to require DB Co to provide additional PVMS in support of the TCP.
 - (ii) DB Co shall provide PVMS(s) to provide advance notification and advance warning of incidents as deemed necessary by the Emergency Traffic Plan. Sign messages and the duration that the PVMS is deployed and displayed shall be submitted to the City for acceptance prior to being implemented, and the TTMP shall be updated to record the messages which were used.
 - (iii) PVMS signs shall meet the following requirements:
 - A. Be capable of displaying a sequence of up to 6 panels;
 - B. Each display panel shall be capable of displaying up to three lines;
 - C. Each line of text shall accommodate up to 12 characters; and,
 - D. Messages shall be legible from 50 to 300 m.
 - (iv) DB Co shall utilize bilingual messages on all PVMS signs and message boards.
- (c) Traffic Counting Equipment

- (i) DB Co shall be responsible for the replacement of any counting loops or any other traffic counting equipment negatively impacted or damaged by the construction Work.
- (d) Temporary Barrier Requirements
 - (i) DB Co shall supply and install temporary barriers based on the requirements of the OTM, OHSA and the Roadside Safety Manual.
 - (ii) DB Co shall show the temporary barriers in the TCP which shall be submitted in accordance with Schedule 10 – Review Procedure.
 - (iii) Temporary barriers used for closures, full closures, detour routes, Lane Shifts and diversions, including those along the Transitway, shall meet the OPSS and have appropriate flare offsets, end treatments and crash cushions. Temporary barriers shall have reflectors installed. DB Co shall make adequate provision for Drainage and removal of snow, ice and debris where temporary barriers are used.
 - (iv) DB Co shall install anti-glare screens, on or adjacent to barriers, in order to avoid driver distraction and headlight glare in locations adjacent to existing Provincial Highways, existing Major Municipal Roads, existing Transitway, existing Minor Municipal Roads and other affected municipal, provincial and federal Roadways. Anti-glare screen requirements shall also be applicable during construction in these areas and driver protection shall be provided. DB Co shall submit the documentation and product samples proposed for anti-glare screens in accordance with Schedule 10 – Review Procedure.
- (e) Signage
 - (i) DB Co shall be responsible for the design, supply, installation, relocation, maintenance and removal of all temporary signage and Pavement markings, including warning, guide, advisory and directional signs in accordance with this Part 7, Schedule 15-2, Part 2 – Civil and Guideway, and City Special Provision D-005.
 - (ii) DB Co shall provide all temporary signage in accordance with the City of Ottawa, OTM and MTO standards. The location, size and type of each sign shall be indicated on the TCP.
 - (iii) DB Co shall supply and install bilingual signs, with translations accepted by the City and MTO for Highway 417/416.
 - (iv) There shall be no temporary signage placed between the bullnose of an off-ramp and the bullnose of a downstream on-ramp with the exceptions noted below:
 - A. Wa-33LR Object Marker Sign;
 - B. Wa-132 Ramp Speed km/h Sign;

- C. Wa-109 Chevron;
 - D. Post-mounted Delineators;
 - E. Wa-175 Truck Overturning Sign & Wa-32t km/h Sign; and
 - F. G.f-104 Ground Mounted Exit Sign.
- (v) DB Co shall prepare and submit as a part of the TTMP sub-plans a temporary signing plan and a temporary signing table a minimum of 30 calendar days prior to the implementation of the plan. The temporary signing table shall include, but, not be limited to information detailing sign location (station of final location, removal location and on which side of the road to be installed in relation to the direction of travel), height to bottom of sign, lateral offset to post #1, support type with dimensions, alpha-numeric sign code with dimensions and the message/description. The temporary signing plan for Highway 417/416 shall be combined into one drawing at a scale of 1:1000.
- (vi) DB Co shall be responsible during construction to identify to the City any requirements to remove, install or modify any necessary regulatory signage due to the requirements of the TCP sub-plans (except for Highway 417/416). DB Co shall notify the City 14 calendar days prior to requiring any modifications of signage. DB Co and the City shall provide and install regulatory signage in accordance with their respective responsibilities per this Part 7, Schedule 15-2, Part 2 – Civil and Guideway, and City Special Provision D-005.
- (vii) DB Co shall be responsible to install and remove all necessary construction signage for any proposed detour routes. DB Co shall notify the City a minimum of 14 calendar days in advance of the requirement for the detour.
- A. 20 Business Days shall be required where a detour requires bus shelter relocation.
- (viii) After the completion of construction, the City will provide and install all required regulatory signage (except for the Highway 417/416 corridor including crossing roads).
- (ix) Project information signage will be provided by the City. DB Co shall install project information signage at locations designated by the City.
- (x) DB Co shall be responsible for contacting the appropriate City representative to confirm, in writing, the official municipal road names as well as Civic Address Signs (911 Identification Numbers and signing) requirements and incorporate such signs in the permanent and temporary Pavement and signing design drawings. The location, size, and type of each sign shall be also indicated on DB Co's TCP.

- A. DB Co shall ensure that the above noted signs are in place at all times.
 - B. Temporary relocation due to construction operations shall be permitted but the address numbers shall be in the proximity of the entrance and be made visible throughout the duration of construction.
 - C. DB Co shall replace any damaged signs immediately.
- (xi) The temporary signing plan and temporary signing table shall be submitted to the City in accordance with Schedule 10 - Review Procedure, 30 calendar days prior to implementation of the plan.
- (f) Temporary lighting during construction (except Highway 417/416)
- (i) DB Co shall be responsible for all temporary street light relocation.
 - (ii) All existing lighting in each staging phase shall be maintained in operational order to applicable standards during construction on the relevant construction phase until such time as replacement temporary or permanent lighting is energized.
 - (iii) Temporary illumination shall be provided to applicable standards for the roads to accommodate traffic detours and diversions in accordance with City of Ottawa's Right of Way Lighting Policy Guidelines and standards, the OPSS 601.
 - (iv) DB Co shall ensure existing street light levels are maintained at all times. Where existing lighting needs to be removed as part of the Work DB Co shall install replacement temporary lighting until such time as the new permanent lighting is energized.
- (g) Pavement Drop-Offs
- (i) DB Co shall perform all construction activities so as to minimize any drop-offs (abrupt changes in Roadway elevation) left exposed to traffic, pedestrians and cyclists during non-working hours. Work shall be performed in accordance with Schedule 15-2, Part 2 – Civil and Guideway. Drop-offs left exposed to traffic, pedestrians and cyclists during non-working hours shall be delineated as follows:
 - A. Drop-offs up to 40mm may remain exposed with appropriate TCDs alerting motorists of the condition. However, no drop-offs shall be allowed between adjacent lanes of traffic;
 - B. Drop-offs greater than 40mm that are in the Roadway or shoulder shall be delineated with appropriate TCDs and further delineated as described in Clauses C and D below;
 - C. Drop-offs greater than 40mm shall be protected based on the OHS/CCOHS requirements;

- D. Ramping shall be provided for vehicular traffic at a slope of 10:1 if the elevation difference, where unavoidable.
 - i. The provisions for temporary ramping shall also meet the requirements of OPSS 313.
 - ii. DB Co shall ensure that adequate and positive Drainage is maintained along and across the Roadway at all times and during all construction stages.
 - iii. Temporary ramp downs of the longitudinal joint shall not be permitted between travel lanes in the same direction. Transverse and longitudinal ramp downs shall not form part of the permanent Pavement, and shall be cut back to its full depth and width on a straight line to expose a vertical face prior to placing the adjacent lane.
- E. All transverse edge drops located on roads utilized by transit shall be ramped at a slope of 10:1.
- (ii) All areas of excavation near areas of traffic and their proposed safety measures shall be shown in the TTMP.
- (iii) All Work shall meet AODA requirements at all times.
- (h) Pavement markings, symbols and devices
 - (i) DB Co shall be responsible for the execution of all Pavement markings and symbols in accordance with this Part 7 and Schedule 15-2, Part 2 – Civil and Guideway.
 - (ii) DB Co shall be responsible for the installation, application, maintenance and removal of all temporary Pavement markings, symbols, Roadway Pavement markers, channelizing devices, barricades, reflective devices, etc., in accordance with the OTM, and all of which shall be specified and detailed in the TTMP which shall be submitted to the City in accordance with Schedule 10 – Review Procedure.
 - (iii) DB Co shall eradicate all redundant temporary or permanent Pavement Markings that are not required for the intended traffic pattern when traffic lanes will be redefined for a duration of more than an Intermittent Period.
- A. Eradication of Pavement markings shall be in accordance with City of Ottawa Special Provision D-005, such that removal of Pavement markings, when necessary, shall be by means of asphalt grinding, sandblasting, soda blasting or some other form of mechanical removal and not by the use of black paint.

- B. On arterial roads or on OR174, the City may specify that soda blasting be the means of Pavement marking eradication, in the event that clear Pavement marking visibility is seen to be essential to the safe operation of the roadway.
- C. DB Co shall resurface all locations where scarring of Pavement occurs due to the removal of Pavement Markings for construction staging. Resurfacing requirement shall apply to all locations where more than one Lane Shift or diversion occurs. DB Co shall provide full width paving throughout the limits of the scarring prior to the application of permanent Pavement Markings
- (iv) Temporary Pavement markings materials shall be in accordance with OPSS 710, and shall be specified and detailed in the TTMP.
- (v) DB Co shall apply all temporary Pavement markings in accordance with OPSS 710 and the accepted Signing and Pavement Markings drawings and the closure, detour route, Lane Shift and diversion drawings as submitted to the City in accordance with Schedule 10 – Review Procedure.
- (i) Speed limits and safe passage through Work zones
 - (i) The City reserves the right to determine speed limits through the Work zones. Unless specified in this Part 7 or agreed to in writing by the City, the existing regulatory speed limits shall be maintained.
 - (ii) Speed limits on all existing Provincial Highways, existing Major Municipal Roads, existing Transitway, Minor Municipal Roads and other affected municipal, provincial and federal Roadways shall remain unchanged outside of construction zones. DB Co shall prepare the necessary designation of MTO construction zone forms, (PH-M-101), if Work occurs on a Provincial Highway, and submit them to the Governmental Authority.
 - (iii) Construction activities on all existing Provincial Highways, existing Major Municipal Roads, existing Transitway, Minor Municipal Roads, and other affected municipal and federal Roadways shall maintain the following lane widths at all times during construction activities, unless specified elsewhere in this Part 7 or in Schedule 15-2, Part 2 – Civil and Guideway:

Table 7-1.3

| | Speed Limit = 50 km/h or less | | Speed Limit = greater than 50 km/h | |
|-----------------|-------------------------------|--------------|------------------------------------|--------------|
| | Not Shared | Shared Lane* | Not Shared | Shared Lane* |
| General Traffic | 3.0 m | 3.75 m | 3.2 m | 3.75 m |

| | | | | |
|--|---|--------|--------|--------|
| Truck Route | 3.2 m | 3.75 m | 3.5 m | 3.75 m |
| Transit Operating in Lane** | 3.5 m | 4.0 m | 3.5 m | 4.0 m |
| Lanes Adjacent to Transit Platforms | As per Transitway and Station Design Guidelines | - | - | - |
| Lateral Offsets between Traffic and Temporary Barriers | 0.25 m | | 0.50 m | |

** Shared lanes are all right-most traffic lanes that are not adjacent to an on-road cycling facility.*

***Where BOL are constructed and physically separated from other roadways (i.e. Transitway), a 1m wide maintenance strip shall be provided on the outside of each lane, in addition to the standard minimum lane width.*

- (iv) Floodlighting used to illuminate areas of the Work during construction, shall be adjusted so as to not interfere with the vision of drivers on the affected or opposing lane and also so as to not be directed towards residences or businesses near the construction zone. DB Co shall design floodlighting in accordance with Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys.
- (v) All street lighting design and performance shall be in accordance with Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys.
- (j) Maintenance of closures, detours, diversions, Lane Shifts, pathways and sidewalks
 - (i) DB Co shall keep existing Roadways open to traffic, and DB Co shall be responsible for providing and maintaining a road through the Work for the duration of the Work, whether along an existing Roadway, including the road under construction, or on detours, diversions or Lane Shifts.
 - (ii) DB Co shall maintain and repair closures, detours, diversions, Lane Shifts, pathways and sidewalks and their appurtenances, which are built as permanent infrastructure, as per the maintenance provisions set out in this Part 7 for temporary infrastructure until such time as they are turned over to the City and accepted by the City.
 - (iii) DB Co shall be responsible for all aspects of maintenance and repair for all temporary closures, detours, diversions, Lane Shifts, pathways and sidewalks and their appurtenances throughout their duration of use.
 - (iv) DB Co shall execute the maintenance on temporary infrastructure, including Platforms, pathways and sidewalks, throughout its duration of use:
 - A. in accordance with Applicable Law and Good Industry Practice;

- B. in accordance with the accepted TTMP;
 - C. to ensure that the condition of the DB Co temporary infrastructure is sufficient to meet the design, construction and operational requirements for the intended use; and
 - D. in coordination with the City, so as to permit the City to operate City infrastructure, while minimizing any adverse impact on third parties.
- (v) DB Co shall convene a meeting with the City, including but not limited to, City Road Services Department and City Traffic Services Department, in order to coordinate maintenance activities at the interface between existing City infrastructure and the DB Co temporary or permanent infrastructure, prior to putting a piece of temporary or permanent transportation infrastructure into service. DB Co shall take minutes of the meeting and, distribute the documented proceedings and conclusions to the participants.
- (vi) On the first Monday after Thanksgiving each year, DB Co shall convene a meeting with the City, including but not limited to, City Road Services Department and City Traffic Services Department, to discuss “winter readiness”, so that all parties know their respective roles prior to a sudden onset of winter weather. DB Co shall take minutes of the meeting and distribute the documented proceedings and conclusions to the participants.
- A. The City shall be responsible for winter maintenance on all public roads, including bus detour routes, as per the City of Ottawa Maintenance and Quality Standards for Roads, Sidewalks and Pathways. DB Co shall be responsible for winter maintenance at locations where construction conditions do not allow for the City to provide this maintenance without changing their means/methods.
 - B. DB Co shall be responsible for the winter maintenance of any construction Roadways or accesses to construction Sites.
 - C. DB Co shall provide to the City a map indicating the DB Co contact person for each construction Site.

1.6 Accommodation of Pedestrians and Cyclists During Construction

- (a) DB Co shall not close or relocate any pedestrian walkway without a TTMP that has been accepted by the City. The TTMP and TCP sub-plans shall identify any pedestrian walkway closure, relocation and alternate route in accordance with Schedule 10 - Review Procedure, complete with a detailed explanation of why the Pedestrian Walkway is required to be closed or relocated and the signs which shall be installed as a part of the closure or relocation.

- (b) All pedestrian and cyclist accommodations during construction shall be in accordance with Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
- (c) DB Co shall identify all school crossings within a detour route, Lane Shift or diversion, and determine appropriate measures to maintain safe and efficient operation of the crossings as may be affected by increased vehicle traffic on the detour, Lane Shift or diversion.
- (d) DB Co shall ensure that pedestrian access at and approaching intersections is maintained at all times at least on one side to accommodate the north-south and east-west crossings, and extending to the adjacent intersections.
- (e) DB Co shall ensure that pedestrian access at least on one side across any Bridge Structures is maintained at all times, and extend to the nearest intersection.
- (f) DB Co shall install a TC-68 “Bike Lane Closed” at a location where cyclists can safely merge with traffic, and provide the following signage should it be necessary to close a bike lane or cycle track:
 - (i) For lane widths greater than 4m: a WC-19 and WC-19S “Car and Bike Share the Road”; and
 - (ii) For lane widths 4m or less: a WC- 24 and WC-24T “Shared Use Lane Single File”.
- (g) DB Co shall post advanced on-Site notification for any closures or relocation of pedestrian and cycling routes at least 15 Business Days prior to the closure, subsequent to the review and acceptance of the proposed closure by the Governmental Authority. Signage shall indicate the dates and duration of any closure as well as a map of alternative routes available.
- (h) DB Co shall undertake a safety study for situations where a construction access must cross a sidewalk, pathway, MUP or cycling facility, in order to evaluate the potential conflict between pedestrian/cyclist versus construction traffic, and develop appropriate safety measures in order to maintain a safe and efficient crossing at all times. DB Co shall incorporate the safety study and measures into the TTMP, TCPs and the Site Pedestrian Control Plan.
- (i) Detour routes for pedestrians and cyclists shall be designed in accordance with City standards including but not limited to those set out below;
 - (i) The detour route shall be illuminated to at least the level of lighting either direct or indirect, which was in existence on the original sidewalk, pathway, cycling facility, or MUP;

- (ii) The vertical and horizontal separation from vehicle traffic shall be as per the original sidewalk.

1.7 Working within Vicinity of a Traffic Control Signal

- (a) DB Co shall notify and be responsible for all costs associated with OPS being on duty to control traffic, when DB Co is required to work within 30m of a traffic control signal, and there is a need to control traffic within this area that would contradict the traffic control display. Advanced notice of 48 hours shall be provided to OPS. No traffic control person shall be permitted to direct traffic in this area, nor may they direct traffic from more than one direction at any time. DB Co shall notify the City of this situation prior to OPS contact.
 - (i) DB Co shall provide OPS if the visibility of the signal display will be blocked by equipment, lanes are skewed through the intersection or traffic control persons are required within 30m of a signalized intersection.

1.8 Parking and Designated Use Zones

- (a) Parking regulations on City streets in the vicinity of the construction zone will be enforced and shall be subject to the City's Parking By-Law.
- (b) DB Co shall designate safe parking areas suitably located so as to facilitate practical Site inspections related to traffic monitoring, and attendance at Project meetings, in the TTMP. These areas shall be for the use of the City for the duration of the construction. Each parking area shall accommodate a minimum of two vehicles and be reserved for City staff.
- (c) DB Co shall be responsible for identifying in their TCPs any locations where existing parking or designated usage zones will be impacted by its construction activities. DB Co shall develop and submit in conjunction with their TCP submittals, a plan to provide alternative parking location(s) and usage zones, in accordance with Schedule 10 – Review Procedure, for review and acceptance a minimum of 30 calendar days in advance of impacting any parking locations.

1.9 Temporary Traffic Control Signals

- (a) All traffic signal design and performance requirements shall be in accordance with Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys.
- (b) Where required to complete the Work, the City will supply temporary traffic control signals, for existing and new locations identified in DB Co's approved TTMP. Following the completion and acceptance of civil and traffic signal designs, DB Co shall contact the City's designated traffic control signal contact person at least 30 calendar days in advance to arrange for a mutually acceptable date and time to have City forces available to perform the installation, relocation, modification, and connection of the traffic control signal.

- (c) DB Co shall complete the related civil Work at least 14 calendar days prior to the date when City forces are available in order for appropriate inspections to occur. Prior to the crew arriving on Site, DB Co shall provide adequate space and time for the Work to be completed.
- (d) Where there is active ongoing construction Work and DB Co personnel are present within an intersection where there are existing traffic control signals to be temporarily modified, or new temporary traffic control signals to be installed, DB Co shall arrange and pay for OPS paid-duty officers to provide point duty within an intersection while the City modifies or installs the traffic control signals.
- (e) At an intersection where there are existing traffic control signals to be modified temporarily, or there are temporary traffic control signals to be installed, and only City forces will be working at the intersection, then the City will arrange for the OPS services and charge the costs back to the DB Co as part of the costs for the signal modifications/installation where DB Co personnel are not present.

1.10 Record Keeping of Traffic Control Devices/Collisions

- (a) DB Co shall maintain accurate records of the traffic controls that are in place within DB Co's construction Work areas.
- (b) DB Co shall maintain an accurate daily record of the inspection of the traffic accommodations, and provide copies of the information to the City immediately upon request. The daily record shall include the following:
 - (i) A semiweekly video (hand held, dash-cam, etc.) in both or all directions as applicable, such that all portions of the Work are recorded in sufficient detail to accurately see and distinguish/read all of the TCDs in place on Site;
 - A. On Highway 417 and the OR174, these videos shall be twice daily.
 - (ii) Condition and placement including changes, additions and removals of all TCDs;
 - (iii) Confirmation of compliance with the TTMP and its sub-plans;
 - (iv) All traffic collisions;
 - (v) The dates, times and content of all messages on all PVMS;
 - (vi) The date and time of lane closures; and
 - (vii) All other information required for accurate reconciliation of the lane closures adjustments pursuant to Schedule 34 - Mobility Matters.

1.11 Traffic Systems Management Provisions

- (a) DB Co shall be responsible for costs related to City forces supplying and installing traffic camera monitoring systems for the Project corridors and Stations, and also any temporary facilities/infrastructure operated during construction. The City shall procure the equipment and provide labour, however, for clarity, DB Co shall reimburse the City for these costs. DB Co shall be responsible for providing power and system connectivity to the specific locations selected by the City. Traffic cameras shall be required within the Project corridors, Stations and temporary facilities/infrastructure at the City's discretion, for the purposes of observing traffic flow with the capability of zooming in for more specific detail where required to monitor a specific incident. The cameras shall be linked into the City of Ottawa Traffic Control Centre for monitoring purposes. Cameras shall comply with City specifications.
- (b) DB Co shall develop and execute a monitoring plan, as per the TTMP, that utilizes new and existing City traffic camera systems that provides full coverage of the Project corridors, Stations and temporary facilities/infrastructure. DB Co's plan shall include strategically located cameras to achieve this goal. The City will provide DB Co with an inventory of existing City traffic camera coverage within the Project corridors.
- (c) New traffic camera locations shall include, but not be limited to, the following signalized intersections: St. Joseph Boulevard at Bearbrook Road, Trim Road at the Trim Road Park and Ride Entrance, Scott Street at Churchill Avenue, SJAM Parkway at Remic Rapids, SJAM at Dominion Station, Iris Street at Transitway, Bayshore Drive at Woodridge Crescent, Holly Acres Road at Bayshore Station Entrance / Highway 417 ramps, Woodroffe Avenue at Highway 417 E-N ramp, Scott Street at Goldenrod Driveway/Tunney's Pasture Station entrance, Carling Avenue at Richmond Road, Richmond Road at Edgeworth Avenue.
- (d) DB Co shall consult with the City to prepare an inventory of the location of existing traffic cameras and ITS devices that will be impacted by road construction. DB Co shall provide the City with 30 calendar days' notice prior to the impact on the devices and shall work with the City to relocate the devices.
 - (i) DB Co shall be responsible for providing a new location and utility hook ups where required.
 - (ii) The City shall be responsible for equipment relocation and connections.

1.12 Communications

- (a) DB Co shall ensure that all communications and Stakeholder engagements in relation to the TTMP are in accordance with Schedule 18 – Communications and Stakeholder Engagement Obligations and as further detailed in this Clause 1.12 of this Part 7.
- (b) DB Co shall be responsible for providing road closure and detour information to the City for the purposes of public notification.

- (c) DB Co shall schedule and attend TTMP meetings and workshops with the City in order to obtain TTMP approvals and with key Stakeholders prior to implementation. The frequency of the meetings shall vary at the City's discretion. DB Co shall record and distribute minutes for these meetings to the City within five Business Days of the meeting, including but not limited to attendance sheets, agenda, record copy of material presented, comments received, issues raised, and the follow up action proposed by DB Co to resolve each issue. Resolution of the issues shall be raised and recorded by DB Co at the regularly scheduled TTMP meetings.
- (d) DB Co shall attend any public meetings that are held prior to detour implementation, and shall be responsible for addressing issues raised at the public meetings in the forum of the technical TTMP meetings.
- (e) DB Co shall provide the City with a process as part of the Communication and Stakeholder Engagement Plan detailed in Schedule 18 – Communications and Stakeholder Engagement Obligations, and a contact person to whom the City can rely on to respond to any Stakeholder relations obligations pertaining to traffic management. Issues and the resolutions thereto shall be raised and recorded by DB Co at the regularly scheduled Traffic Management Committee meetings.
- (f) DB Co shall assist the City and attend Stakeholder events and Stakeholder outreach meetings in relation to the TTMP in accordance with Schedule 18, Part 4 Communications and Stakeholder Engagement Activities. At these events and meetings, DB Co shall explain in terms easily communicated to the public, the process of how the specific segment of the Project will be built, with a focus on an overview of the proposed traffic closures and detours/alternate routes for pedestrians, cyclists and vehicles, and how the related traffic/transit management staging is proposed to be performed.
- (g) DB Co shall provide design illustrations, display boards and narratives to the City for the traffic related information such as traffic volumes, traffic detours/alternate routes, traffic Emergency/contingency plans, collision data, truck routes, construction traffic routes, etc. All material provided shall be dated and include a contact name and contact coordinates (DB Co & City jointly). All materials shall be provided in quantity for distribution in both hard copy and electronically, in both official languages.
- (h) DB Co shall provide timely e-mail content for the City's distribution regarding traffic/transit updates, including major cycling route impacts.
- (i) DB Co shall provide to the City, content for weekly traffic/transit information/forecast updates, for release to the City's website.
- (j) DB Co shall provide a quarterly newsletter reflecting key traffic milestones and forecast traffic events to the City for release to the public.
- (k) DB Co shall provide timely content for social media updates to the City for release on the City's social media accounts so as to inform followers as to quick updates about on-the-ground traffic control implementation.

- (l) DB Co's Director of Communications and Stakeholder Engagement shall be the spokesperson whom the City will contact to address all Project related complaints pertaining to traffic/transit management issues which are reported to the City, unless an alternate spokesperson has been agreed to by the City. The spokesperson shall provide pertinent and timely information to the City in response to the complaint.

ARTICLE 2 EXISTING MUNICIPAL ROADWAYS

2.1 General Requirements - Municipal Roadways

- (a) DB Co shall not perform any Work on Municipal Roadways during the following Peak Periods unless noted as an exception in this Part 7:
 - (i) Monday to Friday inclusive: 06:30 to 09:30 hrs and 15:00 to 18:30 hrs
- (b) DB Co shall not close the reserved transit priority lanes from 06:00 to 18:30 hrs, Monday to Friday.
- (c) DB Co shall be permitted to partially close portions of Municipal arterial and collector Roadways due to construction activities while always maintaining local traffic access. There shall be at least one lane per direction (or two lanes per direction for segments with three existing lanes in each direction) and sufficient lane widths to accommodate bus travel.
- (d) DB Co shall schedule intersection disruptions during Off Peak Periods, Night Periods or Weekend Periods only. During those periods, there shall be at least one lane of traffic per street permitted at all times. Flagging shall be required if a single lane of traffic is in operation during construction activities. No active Work shall be performed in an intersection during Peak Periods.
- (e) DB Co shall develop a sequencing plan to minimize the length of the Municipal Roadway that is closed at any one time.

2.2 Conditions of Work on Municipal Roadways

- (a) DB Co shall provide at least 28 Business Days advance notice in the form of an e-mail to the designated City representative for all closures, detours and diversions.
- (b) DB Co shall only be permitted to close any existing Municipal Roadways for purposes of carrying out Work under this Project after all other safe and reasonable methods of construction have been investigated by DB Co and deemed not to be feasible or practicable.
- (c) DB Co shall maintain two-way traffic at successive intersections on either side of a closed intersection at times of the closure.
- (d) DB Co shall maintain a pedestrian sidewalk in accordance with City Design standards at all times during the construction. DB Co shall be responsible for all design, approvals, construction and maintenance of the sidewalk for the duration of the detour.
- (e) DB Co shall not use accesses to/from Work zones, shoulder closures, and the loading and unloading of materials and construction vehicles/equipment to/from the travelled portion of existing Municipal Roadways during Peak Periods on any weekday. Exceptions to this shall be made for the delivery of concrete.

- (f) DB Co shall accommodate all turning movements at intersections at all times, unless specified elsewhere in this Schedule 15-2 – Design and Construction Requirements. This includes all protected auxiliary turn lanes.
- (g) DB Co shall make all travel lanes available during non-work times unless construction activities has rendered them temporarily unsuitable for traffic use, or unless a closure was approved by the City.

2.3 Permits from the City of Ottawa

- (a) DB Co shall follow the approach, with regards to obtaining the relevant permits and approvals, outlined in the City of Ottawa Permits, Business Licenses and Applications – Right of Way.
- (b) Road Cut Permit
 - (i) DB Co shall obtain a Road Cut Permit prior to the start of Work on any municipal Roadway. The requirements of the Road Cut Permit are outlined in City of Ottawa By-Law — Road Activity By-Law No. 2003-445.
 - (ii) DB Co shall ensure that an application for a Road Cut Permit contains a reference to the Project and shall include the TCP sub-plan (as submitted to and accepted by the City in accordance with Schedule 10 – Review Procedure) with their application. If as a result of the Road Cut Permit approval process the TCP is revised, DB Co shall submit the revised TCP to the City in accordance with Schedule 10 - Review Procedure for re-acceptance, and, shall update and resubmit the TCP sub-plans to reflect the changes found in the approved Road Cut Permit version of the TCP.
- (c) Road Close Permit
 - (i) DB Co is required to obtain Road Close Permits prior to closing municipal Roadways as specified elsewhere. DB Co shall submit the road closure request forms no later than 4 weeks prior to each closure event.
 - (ii) DB Co shall ensure that an application for Road Close Permit contains a reference to the Project and shall include in their application, the relevant portion of the TTMP as submitted to and accepted by the City in accordance with Schedule 10 – Review Procedure. If as a result of the Road Close Permit approval process the TCP is revised, DB Co shall submit the revised TCP to the City in accordance with Schedule 10 – Review Procedure for re-acceptance. It shall include the updated TCP and sub-plans to reflect the changes found in the approved Road Close Permit version of the TCP.
- (d) Private Approach Permit

- (i) DB Co shall obtain a Private Approach Permit for any Site access from municipal Roadways.
 - (ii) DB Co shall ensure that an application for a Private Approach Permit contains a reference to the Project and shall include in their application, the relevant portion of the TTMP as submitted to and accepted by the City in accordance with Schedule 10 – Review Procedure. If as a result of the Private Approach Permit approval process the TTMP is revised, DB Co shall submit the revised TTMP to the City in accordance with Schedule 10 – Review Procedure, for re-acceptance. It shall include the updated TTMP and sub-plans to reflect the changes found in the approved Private Approach Permit version of the TTMP.
- (e) OC Transpo Permits
 - (i) DB Co shall not carry out any Work on bus-only lanes, the Transitway, or any bus facilities, without completing the Transitway Access Permits and receiving approval from the City and OC Transpo.
 - (ii) When an application for an OC Transpo Permit is made for the Project or any portion thereof, DB Co shall ensure that an application for an OC Transpo Permit contains a reference to the Project and shall include in their application, the TCP as submitted to and accepted by the City in accordance with Schedule 10 – Review Procedure. If as a result of the OC Transpo approval process the TCP is revised, the DB Co shall submit the revised TCP to City in accordance with Schedule 10 - Review Procedure for re-acceptance, and, shall update and resubmit the TTMP and sub-plans to reflect the changes found in the approved OC Transpo version of the TCP.
 - A. The TCP shall be approved by the City at least 14 calendar days prior to any detour or construction activity that has operational impacts on transit service. If the action is an extended detour or requires a shelter relocation, notification shall be provided as otherwise specified in this Part 7.
 - B. The submission of a TCP does not constitute advance notice, which does not include timelines for potential revisions to the TCP.
- (f) Noise Bylaw Exemption
 - (i) DB Co shall apply and obtain an exemption to the City Noise Bylaw if required for evening/night Work. Note: a Noise Bylaw exemption is not required for Work conducted Monday through Saturday between 07:00 and 22:00 hrs and Sunday between 09:00 and 22:00 hrs.

2.4 Richmond Road (Arterial)

- (a) Within the Richmond Road corridor, from Pinecrest Road to Churchill Avenue, the following constraints shall be followed:

- (i) DB Co shall be permitted to perform partial closures of Richmond Road (or portions thereof while always maintaining local traffic access). Access shall be maintained for local vehicle, ESP, garbage removal and pedestrians to buildings and loading areas/docks/bays. Provisions for on street loading for local businesses on each block shall be maintained at all times during the closure. DB Co shall develop a sequencing plan to minimize the length of Richmond Road that is closed at any one time.
- (ii) DB Co shall be permitted to utilize single lane closures as construction access and/or staging areas during Station and Tunnel construction activities within the Richmond Road ROW from Cleary Avenue to McEwen Avenue, provided that two-way traffic is maintained on Richmond Road.
 - A. The lane closures on Richmond Road shall not be permitted at intersections within the Richmond Road ROW.
 - B. DB Co shall be permitted to use decking where required to maintain two-way traffic on Richmond Road, however every effort should be made to reduce the amount of decking used.
 - C. The use of the temporary closed lane for construction access and staging is subject to satisfying all of the transit, traffic, private access and pedestrian requirements identified elsewhere in this Part 7.
 - D. The construction access and staging area shall be protected and separated from transit, traffic and pedestrians by a physical barrier.
 - E. DB Co shall identify all proposed construction access and staging areas and incorporate them into the TTMP.
 - F. The construction lay-by and staging areas shall be removed and lanes restored for traffic purposes when there are no active construction activities.
- (iii) DB Co shall maintain a continuous east to west pedestrian sidewalk, that is a minimum 1.8m clear width, at all times during the construction along the north side of the Richmond Road corridor from Cleary Avenue to McEwen Avenue. DB Co shall be responsible for all maintenance of the sidewalk for the duration of time the detour is in service, with the exclusion of winter maintenance, which will be the responsibility of the City.
- (iv) The full closure of the intersections of Woodroffe Avenue/Richmond Road and Cleary Avenue/Richmond Road shall not be permitted at any time. Work at these locations shall be decked to maintain full traffic and pedestrian movements in all directions at all times.

- (v) The partial closure of the Richmond Road/Woodroffe Avenue intersection shall be scheduled during Off Peak Periods only. All movements must be maintained during partial closures of the Richmond Road/Woodroffe Avenue intersection. Pedestrian access at, and approaching, the intersection shall be maintained on a minimum one side, at all times to accommodate the north-south and east-west crossings.
 - (vi) Transit vehicle and Emergency vehicle access shall be maintained within Richmond Road at all times; and
 - (vii) Customer access to existing and/or temporarily relocated bus stops or transit facilities shall be maintained at all times.
 - (viii) Closures of Richmond Road within the jurisdiction (ROW) of MTO shall be as detailed in Article 5 - Existing Provincial Highways and Municipal Roadways Within MTO ROW, of this Part 7.
- (b) Within the Richmond Road corridor, from Pinecrest Road to Holly Acres Road, the following constraints shall be followed:
- (i) DB Co shall ensure all lanes on Richmond Road are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during the following times:
 - A. weekdays between 6:00 and 20:00 hrs; and,
 - B. weekends between 10:00 and 20:00 hrs.
 - (ii) DB Co shall ensure that a minimum of one lane in each direction on Richmond Road shall remain open at all times.
 - (iii) Access across Highway 417 on Richmond Road shall be maintained at all times for vehicles, transit services, Emergency services, pedestrians, and cyclists.
 - (iv) Uninterrupted access to all MTO Highway 417 ramps shall be maintained at all times, except for MTO authorized ramp closure times obtained in accordance with the provisions of this Part 7.
 - A. DB Co shall temporarily close the N-E Richmond Road on-ramp to the eastbound Highway 417 to the satisfaction of the City and MTO upon the opening of the new temporary N/S-E bus-only on-ramp at Holly Acres. Upon West Substantial Completion and upon notice by the City, DB Co shall re-open the N-E ramp at this location

2.5 Cleary Avenue (Local)

- (a) DB Co shall follow the following constraints within the Cleary Avenue corridor:

- (i) DB Co shall provide full pedestrian access to Cleary Avenue at all times during construction.
- (ii) DB Co shall maintain two-way traffic for the full extent of Cleary Avenue at all times during construction

2.6 Scott Street (Arterial)

- (a) Within the Scott Street corridor, the following constraints shall be followed:
 - (i) DB Co shall maintain a single general traffic lane in each direction at all times for vehicles, Emergency services, and cyclists. DB Co shall maintain a pedestrian sidewalk at all times.
 - (ii) Intersection disruptions shall be scheduled during Off Peak Periods only. Pedestrian and cyclist access at and approaching intersections shall be maintained such that all four quadrants of each intersection remain accessible at all times.
 - (iii) DB Co shall identify a location acceptable to the City for relocated bus stops, if required. DB Co shall be responsible for the design and construction of the relocated bus stop to OC Transpo design and construction standards.

2.7 Iris Street (Major Collector)

- (a) Within the Iris Street corridor, the following constraints shall be followed:
 - (i) DB Co shall maintain a single traffic lane in each direction at all times for vehicles, bus service, emergency services, pedestrians, and cyclists.
 - (ii) The full closure of the intersection of Iris Street and the Transitway shall not be permitted at any time. Iris Street shall be detoured to a location outside the limits of the construction to maintain traffic lanes in both directions on Iris Street as well at the Transitway prior to the full closure of the Iris Street/Transitway to construct the new Iris Street/LRT grade separation Bridge. The detour shall include a temporary signalized Transitway intersection.
 - (iii) Intersection disruptions shall be scheduled during Off Peak Periods only. Pedestrian and cyclist access at and approaching the intersection shall be maintained, at least on one side, at all times to accommodate the north-south and east-west crossings. DB Co shall ensure that transit vehicles approaching this intersection during the Peak Periods from all directions maintain a frequency of transit service matching that of the 2018 Post-LRT Stage 1 Transit Service Plan. Transit priority measures shall be considered in order to ensure that this frequency of transit service is maintained. DB Co is responsible for contacting OC Transpo prior to the service change dates identified in Table 7-3.1 to identify any changes to the transit service plans and how they may impact the frequency of service for transit.

- (iv) DB Co shall relocate the Station Platforms to the satisfaction of the City prior to closing the Station platforms. The temporary Station shall be designed and constructed to OC Transpo standards for Transitway Stations, as per Transitway and Station Design Guidelines. The temporary Platforms shall be connected to local pathways and sidewalks for pedestrian access and reduce any negative impacts for customers, such as walking distance.
- (v) DB Co shall identify a location acceptable to the City for the relocated bus stops. DB Co shall be responsible for the design and construction of the relocated bus stop to OC Transpo design and construction standards.

2.8 Pinecrest Road (Arterial)

- (a) The following constraints shall be followed within the Pinecrest Road corridor:
 - (i) DB Co shall ensure all lanes on Pinecrest Road are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during the following times:
 - A. weekdays between 6:00 and 20:00 hrs; and,
 - B. weekends between 10:00 and 20:00 hrs.
 - (ii) DB Co shall ensure that a minimum of one lane in each direction on Pinecrest Road shall remain open at all times.
 - (iii) Access across Highway 417 on Pinecrest Road shall be maintained at all times for vehicles, transit services, emergency services, pedestrians and cyclists, with the exception of Clause (v) below. All existing travel lanes on Pinecrest Road shall be maintained at all times during the Peak Periods throughout construction.
 - (iv) Uninterrupted access to all MTO Highway 417 ramps shall be maintained at all times, except for MTO authorized ramp closures obtained in accordance with the provisions of this Part 7.
 - (v) The Pinecrest Road LRT Bridge shall be constructed without any reduction in the number and capacity of traffic lanes on Pinecrest Road during Peak Periods with the exception of following scheduled full closures:
 - A. Three day weekend closure to install Roadway decking (from 20:00 hrs on a Friday to 06:00 hrs on a Monday).
 - B. Overnight closure to install Bridge deck waterproofing and base course asphalt.
 - (vi) Notice of the scheduled dates of the above noted full closures shall be identified to the City and MTO a minimum 30 Business Days in advance of each of the

schedule closures for approval. The closure dates shall not be scheduled during events identified in Clause 1.4 of this Part 7.

- (vii) The modifications to the S-W ramp described in Schedule 15-2, Part 9, Part B shall be constructed and connected to the existing ramp prior to the closure and decommissioning of the existing S-W ramp terminal, as well as the decommissioning of the existing N-W ramp, to the satisfaction of the City. DB Co shall restrict public access to the reconstructed ramp during construction. DB Co shall Commission the new ramp with the City prior to being put into service.
- (viii) The N-W ramp shall be constructed and Commissioned to the satisfaction of the City prior to being put into service. DB Co shall restrict public access to the new ramp during construction. The existing ramp if it is open at the point in time that the new ramp is put into service, shall be taken out of service immediately upon putting the new ramp into service by placing temporary concrete barriers at each end of the decommissioned ramp.
 - A. DB Co shall be permitted to stage construction such that the existing N-W ramp is closed, with the traffic demand accommodated via the S-W ramp, provided that traffic analysis demonstrates that this is operationally feasible. Any closure of the existing N-W ramp shall be subject to approval from MTO and the City, and shall be minimized in terms of duration.
- (ix) Intersection disruptions to the Pinecrest Road/Transitway/Highway 417 North terminal intersection shall be scheduled during Off Peak Periods only. Pedestrian and cyclist access at and approaching the intersection shall be maintained, at least on one side, at all times to accommodate the north-south and east-west crossings. Transit services (vehicles and stops) approaching this intersection from the east-west and north-south shall maintain OC Transpo's services levels at all times.

2.9 Woodroffe Avenue (Arterial)

- (a) The following constraints shall be followed within the Woodroffe Avenue corridor:
 - (i) DB Co shall ensure all lanes on Woodroffe Avenue are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during the following times:
 - A. weekdays between 6:00 and 20:00 hrs; and,
 - B. weekends between 10:00 and 20:00 hrs.
 - (ii) DB Co shall ensure that a minimum of one lane in each direction on Woodroffe Avenue shall remain open at all times.

- (iii) Access across Highway 417 on Woodroffe Avenue shall be maintained at all times for vehicles, transit services, Emergency services, pedestrians, and cyclists.
- (iv) Uninterrupted access to all MTO Highway 417 ramps shall be maintained at all times, except for MTO authorized ramp closure times obtained in accordance with the provisions of this Part 7.

2.10 Holly Acres Road (Arterial)

- (a) The following constraints shall be followed within the Holly Acres Road corridor:
 - (i) DB Co shall ensure all northbound lanes on Holly Acres Road are open and available for vehicles, transit services, Emergency services, pedestrians and cyclists during the following times:
 - A. Weekdays between 6:00 and 20:00 hrs; and,
 - B. Weekends between 10:00 and 20:00 hrs.
 - (ii) DB Co shall ensure that a minimum of one lane in the northbound direction shall remain open at all times, in addition to any auxiliary lanes at intersections on Holly Acres Road.
 - (iii) DB Co shall ensure that at least one southbound lane on Holly Acres Road is open and available for vehicles, transit services, Emergency services, pedestrians and cyclists at all times.
 - (iv) Uninterrupted access to and from all Highway 417 and 416 ramps shall be maintained at all times, except for MTO authorized ramp closure times obtained in accordance with the provisions of this Part 7.

2.11 Moodie Drive (Arterial)

- (a) The following constraints shall be followed within the Moodie Drive corridor:
 - (i) DB Co shall ensure all northbound lanes on Moodie Drive are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during the following times:
 - A. weekdays between 6:00 and 9:30 hrs.
 - (ii) DB Co shall ensure all southbound lanes on Moodie Drive are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during the following times:
 - A. weekdays between 15:00 and 18:30 hrs; and,

- (iii) DB Co shall ensure that a minimum of one lane in each direction on Moodie Drive shall remain open at all times, in addition to any auxiliary lanes at intersections
- (iv) Uninterrupted access to and from all Highway 417 ramps shall be maintained at all times, except for MTO authorized ramp closure times obtained in accordance with the provisions of this Part 7.
 - A. DB Co shall be permitted to close the S-W ramp for the purposes of constructing the grade separation for the Confederation Line for a period not exceeding one construction season. This closure shall require public notification in accordance with Article 5 of this Part 7, and shall be supported by a traffic analysis. Detour signage shall be provided as required.
- (v) The conditions in items (i) and (ii) above permit that DB use a three-lane cross section, with a center lane that changes direction. Should it not be possible to achieve this staging concept while remaining compliant with OTM Book 7, DB Co shall use decking to maintain a four-lane cross section.

2.12 Corkstown Road (Collector)

- (a) The following constraints shall be followed within the Corkstown Road corridor:
 - (i) DB Co shall ensure all westbound lanes on Corkstown Road are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during weekday Peak Periods, and a minimum of one lane during all other times, except for the periods noted below:
 - A. DB Co shall be permitted to fully close all westbound lanes on Corkstown Road on two consecutive Weekend Periods in order to tie the re-aligned westbound Corkstown Road into the existing Corkstown Road alignment.
 - (ii) DB Co shall ensure all eastbound lanes on Corkstown Road are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during weekday Peak Periods, and a minimum of one lane during all other times.
 - A. DB Co shall be permitted to permanently close all eastbound lanes on Corkstown Road to general traffic at the same time that Transitway Segment W-9 (Holly Acres Road to Moodie Station) is permanently closed.
 - B. Notwithstanding Schedule 34, Part B, Section 1.11 (f), Mobility Matters lane closures for the eastbound lane of Corkstown Road shall cease to apply upon the re-opening of the eastbound lane between Moodie Drive and the newly constructed bus loop.

2.13 Blair Road (Arterial)

- (a) The following constraints shall be followed within the Blair Road corridor:
- (i) DB Co shall ensure all lanes on Blair Road over OR174 are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during the following times:
 - A. weekdays between 6:00 and 20:00 hrs; and,
 - B. weekends between 10:00 and 18:00 hrs.
 - (ii) DB Co shall ensure that a minimum of one lane in each direction on Blair Road shall remain open at all times
 - (iii) DB Co shall maintain uninterrupted access to all OR174 ramps at all times, except for City authorized ramp closure times obtained in accordance with the provisions of this Part 7.
 - (iv) DB Co shall maintain full operation of the Blair Road/OR174 EB intersection during construction. DB Co shall stage all Works at this intersection in a manner that maintains all intersection movements at all times.
 - (v) DB Co shall stage construction of modifications to the Blair Road/Gloucester Centre intersection in a manner that maintains full traffic and transit operations of this intersection during construction.

2.14 Montreal Road (Arterial)

- (a) Within the Montreal Road corridor, the following constraints shall be followed:
- (i) DB Co shall ensure all lanes on Montreal Road under OR174 are open and available for vehicles, transit services, Emergency services, pedestrians, cyclists during the following times:
 - A. weekdays from 06:00 to 09:30 hrs and 15:00 to 18:30 hrs; and,
 - B. weekends between 10:00 and 18:00 hrs; and,
 - (ii) DB Co shall ensure that a minimum of one lane in each direction on Montreal Road shall remain open at all times.
 - (iii) During the following construction operations, DB Co shall be permitted to reduce Montreal Road under the OR174 to one lane in each direction for all time periods, from June 1st until Labour Day of a given year:
 - A. Demolition of existing bridge piers; and,

- B. Construction of new bridge piers.
- (iv) During the following construction operations, DB Co shall be permitted to reduce Montreal Road under the OR174 to one lane in each direction for an entire weekend period:
 - A. Demolition of existing bridge piers; and,
 - B. Construction of new bridge piers.
- (v) DB Co shall maintain uninterrupted access to all OR174 ramps at all times except for City authorized ramp closure times obtained in accordance with the provisions of this Part 7.
- (vi) DB Co shall maintain full operation of the Montreal Road/OR174 ramp intersections during construction. DB Co shall stage the Work in a manner that maintains all intersection movements at all times.
 - A. Where two left turn lanes are provided at a Montreal Road / OR174 intersection ramp, DB Co may close one of the two lanes when only one lane on Montreal Road is available to receive turning traffic.
- (vii) DB Co shall stage the Work for the modification to bus only ramp accesses to and from OR174 including bus Platforms so that full transit operations of the bus only ramps and Platforms including pedestrian facilities accessing the Platforms is maintained.
- (viii) Transit priority measures on the on/off ramps shall be maintained, including the demand for service indicator signal, through construction, to provide a consistent frequency of service as per construction conditions.

2.15 Jeanne d'Arc Boulevard (Arterial)

- (a) The following constraints shall be followed within the Jeanne d'Arc Boulevard corridor:
 - (i) DB Co shall maintain all existing transit operations including but not limited to access and functionality of all bus stops, including shelters and benches.
 - (ii) DB Co shall maintain uninterrupted access to all OR174 ramps at all times except for City authorized ramp closure times obtained in accordance with the provisions of this Part 7.
 - (iii) DB Co shall stage the Work for the modifications to the Jeanne d'Arc Boulevard/OR174 ramp north of OR174 in a manner that maintains the full operation of this intersection.

2.16 Orleans Boulevard (Major Collector)

- (a) The following constraints shall be followed within the Orleans Boulevard corridor:
 - (i) DB Co shall maintain all existing transit operations including but not limited to access and functionality of all bus stops, including shelters and benches.

2.17 Champlain Street (Major Collector)

- (a) The following constraints shall be followed within the Champlain Street corridor:
 - (i) DB Co shall maintain all existing transit operations including but not limited to access and functionality of all bus stops, including shelters and benches.
 - (ii) DB Co shall maintain uninterrupted access to all OR174 ramps at all times except for City authorized ramp closure times obtained in accordance with the provisions of this Part 7.

2.18 Trim Road (Major Collector / Arterial)

- (a) DB Co shall maintain the intersection of Trim Road and OR174 fully open and operational until such time as the replacement intersection located to the east (as described in Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-Bys) has been opened.
 - (i) DB Co shall design, construct and Commission the ultimate W-S ramp from OR174 to Trim Road prior to the closure of the existing Trim Road and OR174 intersection.
 - A. The W-S ramp shall remain open to general traffic upon completion. DB Co shall maintain Trim Road open between the W-S ramp and the intersection of Trim Road at Dairy Drive / Taylor Creek Boulevard.
 - (ii) DB Co shall maintain Trim Road open between the intersections of Trim Road at Dairy Drive / Taylor Creek Boulevard and Trim Road / South Frontage.

2.19 OR174 (City Freeway)

- (a) The following restrictions on construction operations shall be followed within the OR174 Freeway corridor:
 - (i) DB Co shall not use construction access/egress, shoulder closures and the loading and unloading of materials and construction equipment onto and from the traveled portion of OR174 and OR174 interchange ramps on days identified as holidays and Special Events in Clause 1.4 of this Part 7, or during Peak Periods.

- (ii) Construction operations shall not be carried out during the four hours preceding or three hours after any scheduled events at the [REDACTED]. DB Co shall obtain the schedule of events from the [REDACTED] and schedule Work accordingly.
 - A. Events with fewer than 10,000 attendees, or “all-day” events that do not have a specific peak traffic demand period associated with them are exempt from this requirement.
- (iii) Construction operations shall not be carried out during the two hours preceding or two hours after any [REDACTED], or other major events at [REDACTED], as identified by the City. DB Co shall obtain the schedule of [REDACTED] and schedule Work accordingly.
- (iv) DB Co shall provide 15 Business Days’ notice prior to construction requiring OR174 lane encroachments. DB Co shall provide any assistance required by the City to enact the lane encroachments.
- (v) The following requirements shall apply to Work on the outside of OR174 platform that requires construction access across bus only lanes on OR174:
 - A. At least a 1km separation between access point crossings shall be maintained between Montreal Road and Jeanne d’Arc Boulevard;
 - B. In the direction of travel conflicting with the crossing point, warning of each crossing point shall be provided using PVMS signs and fixed signage. Fixed signage shall include a flashing amber light shall be used when the crossing is in operation;
 - C. Crossings shall be permitted during the periods outlined in Table 7-2.1A and Table 7-2.1B, for the EB and WB directions, respectively;
 - D. Construction traffic shall be controlled via flag persons, Bus traffic shall have priority over construction traffic during flagging operations; and,
 - E. Notification to OC Transpo shall be provided.
- (vi) Open Excavations
 - A. There shall be no open excavations adjacent to a lane carrying traffic at any time, except where a traffic control barrier designed to restrain errant vehicles is located between the traffic and the excavation. Excavations within 4m of lanes carrying traffic shall be backfilled with the specified material up to profile grade and compacted prior to the completion of Work each day.
- (vii) Location and Storage of Materials and Equipment
 - A. Materials and equipment shall be stored as per Clause 1.2 of this Part 7.

- B. Notwithstanding the foregoing, DB Co shall, at its own expense, remove any vehicle, equipment or material which, in the opinion of the City, constitutes a Hazard or obstruction to maintenance operations.

(viii) Delivery and Trucking

- A. DB Co shall plan and schedule the routes of vehicles transporting all materials so that vehicular movements are accomplished with minimum interference and interruptions to traffic according to the Clause 5.2 related to Restrictions on Construction Operations and Permitted Times for Lane and Ramp Closures. This shall necessitate vehicles to merge via exits and entrances (“slip-off” or “slip-on”) in the direction of traffic, in order to merge with and thereby avoid crossing traffic lanes.
- B. Access to and from the highway ROW shall be restricted to ramps at the interchanges unless otherwise provided for in this Project Agreement.
- C. Median cross-overs shall not be used except where single axle vehicles are entering a passing lane that is closed to traffic.
- D. DB Co shall obtain the City’s prior approval for the location of any exit and entrance (“slip-off” or “slip-on”) locations. The City reserves the right to alter, reject or close same as considered necessary. DB Co shall notify suppliers of materials and equipment of the above requirements.
- E. Construction vehicles/equipment shall only use accesses to/from construction zones in the same direction of traffic thereby diverging/merging with the flow of traffic, in order to avoid crossing opposing traffic. Minimum 1,000m shall be maintained between construction egress and access locations. The City acting reasonably reserves the right to close any access to/from any construction zone.

(b) Lane Closures on OR174:

- (i) DB Co shall ensure all bus only lanes remain in service at all times on OR174 unless otherwise noted in the Part 7, until after East Substantial Completion and upon notice by the City. The final configuration of OR174 shall be considered Remaining Works.
- (ii) During the Permitted Periods for Closure, as outlined in Tables 7-2.1A through D below, DB Co shall be permitted to close bus lanes in lieu of a general traffic lane. During this period transit shall operate in the remaining general traffic lanes on the OR174. DB Co shall coordinate the closure of the bus lane with the City.
 - A. When DB Co closes a single general traffic lane in either direction, the City may require that DB Co use temporary signage and/or PVMS to convert the bus lane in the same direction of travel to a general traffic

lane, such that two general traffic lanes are maintained through the work zone, with transit operating in mixed general traffic.

- B. When the bus lane is converted to a general traffic lane, it shall be considered a BRT Lane Closure for the purposes of Schedule 34 Mobility Matters.
- (iii) DB Co shall coordinate all general traffic lane closures with the City Traffic Management Inspector assigned to the affected zone.
- (iv) Construction zones shall have a minimum separation of 1,000m.
- (v) The Permitted Periods for Closures outlined in this 2.20 (b) shall be the basis for the development of the TTMP and TCP sub-plans. Variations to the applicable Permitted Periods for Closures, at specific locations, may be permitted for such specific locations, but only if substantiated through a plan by DB Co that addresses, at a minimum, traffic requirements, analyses and Stakeholder consultation, where applicable, and such plan is submitted to the City Representative in accordance with the Review Procedure.
- (vi) Permitted Periods for Closures on OR174
 - A. Long Term Lane Closures
 - i. Lane closures shall only be permitted where required to facilitate Work or worker/driver safety.
 - ii. All lane closures shall be managed by qualified Traffic Control Personnel.
 - iii. The minimum lane width open to traffic shall be 3.5m.
 - iv. DB Co shall ensure that all traffic controls according to OTM Book 7 are operational before commencing Work affecting OR174 traffic.
 - v. Permitted lane closure periods for OR174 are included in Tables 7-2.1A-D and are subject to the additional restrictions covered in this Part 7.

Table 7-2.1A - Section Description: Existing OR174 EB from Blair Road to Jeanne d'Arc Boulevard including all interchange ramps

| Closure | Monday to Thursday* | Friday* | Saturday | Holiday or Sunday |

| Full Closure***** | 01:00 - 04:00 hrs | 01:00 - 04:00 hrs | 01:00 - 04:00 hrs | 01:00 - 04:00 hrs |

* With exceptions from June OC Transpo service change to September OC Transpo service change (as outlined in Table 7-3.1), when lane closure times from Blair Road to Jeanne d’Arc Boulevard are the same as Table 7-2.1B (for EB) and Table 7-2.1D (for WB).

** With exceptions as noted in Clause 2.19(d) of this Part 7. These times for single lane closures are applicable only to sections of OR 174 where there are a minimum of two general traffic lanes and a bus-only lane. Where there is no bus lane, and only two general traffic lanes, the hours indicated for “two lane closures” apply to a single lane closure.

*** No two successive on or off ramps shall be closed at the same time. Ramp closures require the mandatory use of PVMS.

**** Two lane closures are only permitted on sections of the OR 174 where two general traffic lanes and a bus lane are present. Where there are only two general traffic lanes and no bus lane, the hours indicated for “two lane closures” apply to a single lane closure.

***** Applications for full closures are subject to acceptance by the City in accordance with Schedule 10 – Review Procedure.

(vii) Lane and Ramp Closures - General

A. The following shall apply to all times other than those for the permitted closures:

i. Full mainline closures shall be permitted for installation of overhead sign structures, bridge girders, hydro wire installations/modifications and removal of concrete panels during Bridge demolition by saw cutting methods only. Closure of a full set of lanes shall only be performed as follows:

- 1 OPS shall be employed to perform the full closures;
- 2 Lane closures and ramp closures for construction shall only be permitted between 01:00 and 04:00 hrs, subject to the additional restrictions covered under Clause 1.4 of this Part 7; and
- 3 The duration of the closures are restricted to 15 minutes per any 1 hour period or until the end of the traffic queue passes.

(viii) Lane and Ramp Closures – Rapid Removal Operations

A. Lane and ramp closures associated with the closures permitted for Bridge rapid removal are subject to the additional restrictions covered under Clause 1.4 of this Part 7 and the following.

i. Lane Closures:

Table 7-2.2

| Closure | Saturday | Sunday | Monday |
|----------------------------|--|--|--|
| One Lane Closure | 00:00 - 10:00 hrs 17:00 - 23:59 hrs | 00:00 - 23:59 hrs | 00:00 - 05:00 hrs 20:00 - 23:59 hrs |
| Two Lane Closure | 17:00 - 23:59 hrs | 00:00 - 12:00 hrs 22:00 - 23:59 hrs | 00:00 - 05:00 hrs 22:00 - 23:59 hrs |
| Three Lane or Full Closure | 18:00 - 23:59 hrs | 00:00 - 11:00 hrs | N/A |

ii. Ramp Closures:

- 1 Ramp closures shall be in effect from Saturday 17:00 hrs to Sunday 12:00 hrs for Bridge rapid removal only.

(ix) General Notes – Lane and Ramp Closures

- A. DB Co shall use the lane and ramp closure notification process as per the MTO guideline titled "Steps for Ottawa Area Lane and Ramp Closure Notification Process".
- B. DB Co shall arrange closure times as outlined in this Part 7 and the accepted TTMP .
- C. The City reserves the right to deny permission for lane closures due to incomplete or late application, inclement weather, statutory holidays, or conflict with events identified in Clause 1.4 of this Part 7.

(c) Closure Notification

(i) DB Co shall perform the following prior to closing lanes and/or shoulders:

- A. DB Co shall provide 5 Business Days advance notice for lane closures or 28 Business Days advance notice where a detour is required;
- B. DB Co shall contact the City Traffic Management Inspector, a minimum of 72 hours prior to commencing construction to coordinate Work zone location, review the associated TTMP, and coordinate PVMS as may be required;
- C. DB Co shall contact the OC Transpo Control Centre half an hour prior to setup each day that they are working in or adjacent to a bus lane;
- D. Inform the City of any closure lasting more than one week, at least 2 weeks prior to the start date of the closure;
- E. Inform the City of Emergency closures as soon as any details are known;
- F. Obtain a closure notification number from the City for each closure;
- G. Inform the City of any closure that is being cancelled subsequent to A. and B. above;
- H. Notify the City Traffic Communications Centre by phone immediately prior to the set-up of any closure stating the closure notification number and details of the closure;

- I. Notify the City Traffic Communications Centre immediately of any changes to the closure or anticipated problems that may delay the opening time, stating the closure notification number and details of the changes to and/or problems with the closure; and
- J. Notify the City Traffic Communications Centre immediately upon removing the closure stating the closure notification number and details of the closure.

(d) Construction Sequencing

- (i) DB Co shall install TCBs on the median side of the OR174 during Night Periods or Weekend Periods only.
- (ii) DB Co shall widen the OR174 into the median prior to any other construction that takes place in the median.
- (iii) DB Co shall conduct a micro-simulation evaluation for construction sequencing and staging alternatives on the OR174. The limit of the micro-simulation model shall be discussed and agreed upon at the start of the Project, but shall extend as a minimum one interchange on both sides from the study limit.
 - A. DB Co shall include additional analysis of the area road network to assess impact of potential traffic diversion to other local routes due to construction staging, if required;
 - B. DB Co shall model traffic for the Off Peak Period. The model shall provide a reliable estimate of the entire study area operation. DB Co shall simulate the staging approach, and demonstrate that it maintains an acceptable LOS by City Standards;
 - C. DB Co shall provide the simulation model input and output files, assumptions used in the models, calibration results, documentation of any model limitation, snapshots (with road name labels) and traffic operation summaries of key simulation findings under various scenarios; and,
 - D. DB Co shall include in the traffic operation summaries at a minimum, documentation of the average vehicle speed along various sections of the network, travel time, average delay, levels of service, weaving, queuing or slow moving vehicles (due to difficult lane changes) that are observed on the network, etc. under the various scenarios.

(e) TC-54 on OR174

- (i) All TC-54s used shall be equipped with 2 sets of rubber tire ballast rings.
- (ii) DB Co shall remove all TC-54s from OR174, within the limits of the Project, at the conclusion of any traffic control requiring their use.

- (iii) TC-54s can remain in place when the Work is completed over the duration of a weekend. At the end of the weekend the TC-54s shall be removed from OR174.
- (f) Work on or Adjacent to [REDACTED] ROW
 - (i) DB Co shall not be permitted to access the [REDACTED] properties adjacent to the south side of the OR174 fenced ROW.
- (g) OR174 Full Closure
 - (i) Interim Fixed Completion Time
 - A. Full closure of OR174 for the Transitway Bridge demolition and removal shall be scheduled on a weekend by DB Co. Notice of the scheduled dates of the full closure shall be identified to the City a minimum 30 Business Days in advance the schedule closures for approval. The closure dates shall not be scheduled during events identified in Clause 1.4 of this Part 7.
 - B. DB Co shall not commence closing down lanes, in excess of the allowable closures specified elsewhere, until 17:00 hrs on the Saturday of the closure event, with full closure at 18:00 hrs. All EB and WB vehicles shall exit and re-enter the highway as identified in the TTMP and TCP sub-plan. Early full closure shall not be permitted.
 - C. The median lane and the exterior bus only lane in each direction shall be re-opened by 11:00 hrs on the Sunday of the closure event and the lane adjacent to the median or exterior lane shall re-open by noon on the Sunday of the closure event.
 - D. The remaining lane, median or exterior, shall be open by 06:00 hrs on the Monday following the closure event.
 - E. Ramps shall be opened in-conjunction-with the adjoining lanes or by 06:00 hrs on the Monday following the closure event.
- (h) Winter Shutdown
 - (i) DB Co shall perform all maintenance Work during the Winter Season except for snow, ice, and frost control as defined elsewhere.
 - (ii) DB Co shall submit a Winter Season Plan for each year to the City for review and approval by the first Monday in October each year. The plan shall detail any and all construction Work to continue during the Winter Season, as well as any changes to the current TTMP during the Winter Season, including the signing and Pavement marking changes, and document the shoulder widths available for snow storage during the Winter Season.

- (iii) All permanent OR174 and sideroad lanes, shoulders, Pavement markings, signs, structures and interchange ramps that were in place prior to the start of construction, or their reconstructed counterparts, shall be paved, and/or reinstated prior to the Winter Season. All lanes (highway and sideroad) and interchange ramps shall be opened to traffic and shall remain unrestricted at all times to public traffic during the Winter Season.
- (iv) DB Co shall complete all of the following Work, prior to Winter Season, in areas where the Work was initiated in the same year:
 - A. Construction of all Drainage courses, Culverts and storm sewers/catch basin grates (temporary and/or permanent) to elevations and provision of positive Drainage of the Roadway, sub-base, ditches and ROW in any areas where the existing road/median ditches or Drainage system has been altered from its pre-contract state;
 - B. Installation of new barriers or temporary barriers, with appropriate end treatments, in locations where existing roadside barriers have been removed;
 - C. Installation of all erosion and sedimentation control measures as required;
 - D. Completion of all permanent and/or temporary Pavement markings, Pavement marking obliterating and installation of all guiderail systems;
 - E. All construction related signs and supports that may impede winter plowing shall be removed from the Site and permanent signing shall be reinstated;
 - F. All of DB Co's equipment and material shall be removed from within the Project limits consistent with the DB Co's Winter Season Plan;
 - G. All Temporary Flexible Guide Posts shall be removed prior to Winter Season;
 - H. All median construction access locations shall be closed off using temporary concrete barrier in accordance with DB Co's Winter Season Plan deflected at 40:1;
 - I. Temporary Pavement markings shall be painted and receive a second application of paint each calendar year if they will be left in place during the Winter Season;
 - J. All Pavement marking obliterating that is required to remove temporary Pavement markings that are not part of DB Co's Winter Season Plan Pavement marking scheme and were placed for Work during the construction season shall be completed using approved removal methods;

- K. All new guiderail systems installed prior to Winter Season shall be installed to the grades required for the final top of Pavement elevation; and
 - L. Shoulder widths/offsets to barriers shall be provided on OR174 on the right side and the left hand side of the lanes (in the direction of traffic) during Winter Season.
- (v) DB Co shall be responsible for preparing the Site each spring including, but not limited to:
- A. Re-instatement of all necessary construction related signs;
 - B. Re-instatement to the design cross-fall all granular shoulders on the contract, including any material that is required; and
 - C. Carrying out a detailed inspection of the binder course, identification of any deficiencies, and carrying out repairs as required to the satisfaction of the City.
- (vi) Winter Season requirements, as contained in this Article 2, shall not relieve DB Co of any other requirements. All hot mix paving Work performed by DB Co to meet Winter Shutdown requirements, that do not meet the full requirements as specified elsewhere, shall be considered temporary paving and DB Co shall be responsible for the placement and subsequent removal of the temporary Pavement.
- (vii) DB Co's Critical Path Schedule shall at all times reflect the Winter Season contract requirements as defined in this Article 2.
- (i) Daily Backfilling to Subgrade Level
- (i) At locations where temporary concrete barrier is present, excavation for the roadworks, placement of granulars, and any other operation which will result in an excavation greater than 300mm in depth measured from the original ground, shall only be completed to within 0.5m of the backface of the barriers when the barriers are positioned in their temporary configuration. The remainder of the excavation, granulars and asphalt Pavement shall be completed by shifting the barrier and implementing a lane closure in accordance with the timing constraints specified elsewhere in this Article 2. The barrier shall then be returned to its un-shifted position.
 - (ii) DB Co shall ensure that prior to completion of Work each day, areas that are excavated below a subgrade level are backfilled to the subgrade level in accordance with methods specified elsewhere within the Contract.
 - (iii) DB Co shall ensure measures are taken against undermining of the adjacent Pavement structure at open excavations throughout the contract limits, where

traffic is protected by temporary concrete barrier. This shall be done by backfilling with the specified material up to profile grade within 2m of the back of barrier prior to ceasing operations each weekend.

(j) Guide Rail Construction Operations

- (i) DB Co shall ensure that the existing guide rail system or an approved barrier system shall remain in place at all times or the removed guide rail is replaced with the new guide rail or an approved barrier system within the same working day at all locations of existing guiderail or barrier system.

(k) Ramp and Side Street Closures

- (i) DB Co shall provide notice of one-time ramp and side street closures consistent with requirements detailed elsewhere.

(ii) Ramp and Side Street Closures – Short Duration

- A. DB Co shall comply with conditions covered elsewhere in the Project Agreement for all nightly closures of ramps and/or lane closures on side streets. Ramps shall only be closed if Work is directly located on the ramp or on OR174 or side street at the ramp junction, or if closure is required to implement other lane closures in accordance with OTM Book 7. Short term ramp closures are restricted to one ramp at a time per interchange per direction.

(iii) Ramp and Side Street Closures – Long Duration

- A. DB Co shall only close ramps if Work is directly located on the ramp, or on the highway or side street at the ramp junction, or if closure is required to implement other lane closures in accordance with OTM Book 7.

| RAMP / SIDE STREET | DURATION |
|--------------------------|---|
| Montreal Road N-E Ramp | To be closed in conjunction with the OR174 Bridge replacement and OR174 realignment in this area. The ramp shall be closed from 23:00 hrs Friday and shall re-open no later than Monday at 05:00 hrs of the same weekend. |
| Montreal Road S-W Ramp | To be closed in conjunction with the OR174 Bridge replacement and OR174 realignment in this area. The ramp shall be closed from 23:00 hrs Friday and shall re-open no later than Monday at 05:00 hrs of the same weekend. |
| Montreal Road W-N/S Ramp | To be closed in conjunction with the OR174 Bridge replacement and OR174 realignment in this area. The ramp shall be closed from 23:00 hrs Friday and shall re-open no later than Monday at 05:00 hrs of the same weekend. |

| RAMP / SIDE STREET | DURATION |
|---------------------------------------|--|
| Montreal Road E-N/S Ramp | To be closed in conjunction with the OR174 Bridge replacement and OR174 realignment in this area. The ramp shall be closed from 23:00 hrs Friday and shall re-open no later than Monday at 05:00 hrs of the same weekend. |
| Jeanne d'Arc Boulevard S-W Ramp | To be closed in conjunction with OR174 widening and ramp realignment in this area. The ramp shall be closed from 23:00 hrs Friday and shall re-open no later than Monday at 05:00 hrs of the same weekend. |
| Jeanne d'Arc Boulevard N-W Ramp | To be closed in conjunction with OR174 widening and ramp realignment in this area. The ramp shall be closed from 23:00 hrs Friday and shall re-open no later than Monday at 05:00 hrs of the same weekend. |
| OR174/Trim Road At Grade Intersection | To be closed in conjunction with the construction and replacement intersection to the east of the Park and Ride/Trim Road LRT Station construction in this area. The intersection shall remain fully open and operational until such time as the replacement OR174 Access to Trim Road is constructed. |

(l) OR174 Illumination

- (i) Refer to Schedule 15-2, Part 2, Article 10 – OR174 Street Lighting for requirements for street lighting on OR174.

(m) Existing Roadway Illumination

- (i) DB Co shall ensure all existing Roadway illumination remains fully operational during the hours of darkness until such time as a temporary and/or permanent lighting system is installed and operational during hours of darkness. For instances where the Roadway is closed to traffic to accommodate construction, the existing Roadway illumination may be turned off within the limits of the road closure only. Any temporary and/or permanent lighting system must have equivalent lighting levels to the existing lighting levels.

(n) Underpass Illumination

- (i) DB Co shall ensure that existing underpass illumination is fully operational at all times during the hours of darkness until such time as the temporary or permanent underpass lighting is installed and operational during the hours of darkness. Any temporary and/or permanent lighting system must have equivalent lighting levels to the existing lighting levels.

- (o) Rapid Structure Removal Operations – OR174 Transitway Overpass Structure/OR174/Montreal Road Bridges
 - (i) DB Co shall be responsible for all additional protection systems, traffic control, and temporary Works required to suit DB Co's selected construction sequencing.
 - (ii) The above noted Rapid Structure Removals shall be sequenced and scheduled to meet the OR174 Roadway Works and associated operational constraints as specified elsewhere in the Contract. The removal of the OR174 Transitway Bridge shall not commence until the Transitway detour from Blair Station to the Transitway Bridge is Commissioned, operational and OC Transpo has diverted the Transitway onto the detour route.
- (p) Taylor Creek Culvert Crossing
 - (i) DB Co shall develop detour staging plans in order to maintain uninterrupted bus service lanes at all times, and uninterrupted general traffic lanes during Peak Periods, during repairs to the Taylor Creek Culvert under OR174,

ARTICLE 3 EXISTING TRANSITWAY SYSTEM

3.1 General Requirements

- (a) The requirements in this Article 3 are applicable to the following Transitway sections of the relevant phase of the Project:
 - (i) West Transitway-Tunney's Pasture Station to Moodie Station
 - A. West Transitway Segment W-1 (Tunney's Pasture Station to Dominion Station)
 - B. SJAM Parkway Segment W-2 (Dominion Station to SJAM Parkway 400m west of Dominion Station)
 - C. SJAM Parkway Segment W-3 (400m west of Dominion Station to SJAM Parkway 550m north of Lincoln Fields Station)
 - D. SJAM Parkway Segment W-4 (SJAM Parkway 550m north of Lincoln Fields Station to Lincoln Fields Station)
 - E. West Transitway Segment W-5 (Lincoln Fields Station to Queensway Station)
 - F. Highway 417 Segment W-6 (Queensway Station to Pinecrest Station)
 - G. West Transitway Segment W-7 (Pinecrest Station to Bayshore Station)
 - H. West Transitway Segment W-8 (Bayshore Station to Holly Acres Road)
 - I. West Transitway Segment W-9 (Holly Acres Road to Moodie Station)
 - (ii) Southwest Transitway-Lincoln Fields Station to Baseline Station
 - A. Southwest Transitway Segment SW-2 (Lincoln Fields Station to Iris Station)
 - B. Southwest Transitway Segment SW-1 (Iris Station to Baseline Station)
 - (iii) East Transitway - Blair Station to Trim Station
 - A. East Transitway Segment E-1 (Blair Station to OR174 500m east of Transitway Overpass)
 - B. OR174 Segment E-2 (500m east of Transitway Overpass to 800m east of Montreal Road)

- C. OR174 Segment E-3 (800m east of Montreal Road to 800m east of Jeanne d'Arc Boulevard)
 - D. OR174 Segment E-4 (800m east of Jeanne d'Arc Blvd to Place d'Orleans Station)
 - E. OR174 Segment E-5 (Place d'Orleans Station to Trim Road)
- (b) DB Co shall maintain all bus services by utilizing staging and detouring of transit services and other traffic away from the various Sites under construction. DB Co shall include the Transitway detouring and staging in the TTMP to the satisfaction of the City and in accordance with the provisions of this Part 7, Schedule 34 - Mobility Matters, Schedule 17 – Environmental Obligations, Schedule 15-2, Part 1, Article 5 – Implementation Constraints and Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys.
- (c) DB Co shall reimburse the City for any additional operational or maintenance costs incurred by the City occasioned as a result of any changes required to City operations, due to changes or revisions to the TTMP made by DB Co after the TTMP has been reviewed and accepted by the City.
- (d) DB Co shall apply the following key Transit performance principles to the TTMP:
- (i) Safety of all users of the Work shall be the paramount principle;
 - (ii) Maintain existing local and rapid transit services as closely as possible to the frequency of service of the 2018 Post-LRT Stage 1 Transit Service Plan. DB Co shall be responsible for contacting the City prior to the service change dates identified in Table 7-3.1 to identify any changes to the transit service plans and how they may impact the frequency of service for transit;
 - (iii) Maximize the continued transit services use of the existing Transitway and Stations during construction;
 - (iv) Minimize the travel time variability on transit routes;
 - (v) Minimize additional transit customer travel times, including walking distances to and from bus stops, Stations and Platforms;
 - (vi) Minimize additional transfers points for transit customers;
 - (vii) Minimize additional OC Transpo resources required (buses, kms travelled, lay-bys, disruption of services, service changes, temporary Fitups);
 - (viii) Minimize redundancies;
 - (ix) Minimize disruption to other road users;

- (x) Minimize and mitigate impact on adjacent lands and occupants thereof; and
- (xi) Minimize additional bus traffic in residential areas.
- (e) DB Co shall develop Transitway staging and detour plans subject to the requirements in this Part 7. DB Co's Transitway staging and detour plans shall be submitted in accordance with Schedule 10 – Review Procedure and subject to evaluation and acceptance by the City.
- (f) DB Co may schedule Work within the existing Transitway utilizing one lane closures during Off Peak Periods and Night Periods as detailed elsewhere in this Article 3. DB Co shall be responsible for obtaining the required City approvals and permits to undertake this Work. A suitable alternative location shall be required if the closure of one lane impacts a bus stop or Platform or access thereto.
- (g) DB Co shall provide 35 calendar days' notice to the City for construction access to any component of the existing Transitway. Notice shall be provided in the form of a document explaining the request for construction access to the relevant component of the existing Transitway, submitted by DB Co to the City in accordance with Schedule 10 – Review Procedure, and, the simultaneous transmission of an electronic message sent to the City's Lead Traffic and Mobility and the designated OC Transpo representative, informing them that the request Notice has been submitted.
- (h) DB Co shall be responsible for minimizing the overall duration required for the closure of any parts of the existing Transitway.
- (i) DB Co's TTMP Transitway staging and detour plans shall be founded upon the following key principles and constraints:
 - (i) Safety of all users shall be the primary principle;
 - (ii) Transit shall be given priority on the road system to the greatest extent possible (e.g. temporary bus-only lanes shall be provided);
 - (iii) Transit priority measures shall be implemented at key intersections on transit detour routes to reduce transit delays;
 - (iv) Construction Work shall be staged and phased to minimize disruption to public transit and general traffic throughout design, construction and implementation;
 - (v) DB Co's Transitway staging and detours for the Transitway Sections identified in Clause 3.1 of this Part 7 shall be designed, constructed, monitored, and maintained in accordance with the requirements of Clauses 3.6 through 3.14, of this Part 7, and be in compliance with all requirements of this Part 7, including the transit performance principles outlined in Clause 3.1(d) of this Part 7 and the design provisions set out in Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys.

- (vi) DB Co's approved Transitway staging and detour plans for any segment of the existing Transitway shall be Commissioned and operational to the satisfaction of the City prior to full closure of any portion of the Transitway.
- (vii) DB Co's Transitway staging and detour plans shall be developed to ensure continuity of transit route origins and destinations and Station locations for all transit services that utilize either portions of the Transitway or Stations in the context of access for buses and pedestrians and network coverage;
- (viii) Bus only lanes on OR174 (East Transitway) and Highway 417 (West Transitway) shall remain in service at all times, until after West Substantial Completion and upon notice by the City;
- (ix) DB Co shall not close any component of the Transitway prior to Commissioning the detour route for the corresponding Transitway closure, and when Transitway lane closures are in place during the permitted hours, an alternative shall be made available for transit.
- (j) DB Co shall provide at least six months advance notice to the City for all closures, detour routes and diversions impacting the existing Transitway, including any impacts to local service affecting service to Transitway Stations.
- (k) Implementation of full closure of any segment of Transitway and or Station shall be restricted to occur at one of the regularly scheduled OC Transpo service change dates, which occur four times per year, which are forecasted to occur at the times in the table below.

Table 7-3.1–Tentative Transit Route Schedule Change Dates

| Year | April | June | September | December |
|-------------|--------------|-------------|------------------|-----------------|
| 2018 | 22 | 24 | 2 | 23 |
| 2019 | 21 | 23 | 1 | 22 |
| 2020 | 19 | 21 | 6 | 20 |
| 2021 | 18 | 20 | 5 | 19 |
| 2022 | 17 | 26 | 4 | 25 |
| 2023 | 23 | 25 | 3 | 24 |

Note: The dates in Table 7-3.1 are subject to change by the City. DB Co shall confirm the dates with the City prior to using the data for the purpose of preparing construction schedules.

- (i) If DB Co fails to execute a segment closure on one of the annual transit route schedule change dates, DB Co shall reimburse the City for costs incurred by OC

Transpo relating to OC Transpo scheduling/booking requirements as a result of the DB Co non-compliance with this Clause 3.1 (k) of this Part 7.

- (ii) DB Co shall coordinate with OC Transpo to ensure that all TTMP and TCP submissions and updates to those submissions reflect the most current OC Transpo transit operations.
- (iii) DB Co shall coordinate the proposed closure, and timing of the closure, of each segment, or segments, with the City including OC Transpo, and to the satisfaction of the City and OC Transpo, such that OC Transpo may adequately administer the closure.
- (iv) DB Co shall design and construct all Transitway staging and detour routes according to the Reference Documents listed in Clause 1.1 of this Part 7.
- (l) For all infrastructure changes, including those associated with a service change, DB Co shall provide access for OC Transpo staff to all facilities after West Substantial Completion and upon notice by the City, in order to conduct all necessary reviews, tours, walk-throughs, and operational tests.
- (m) DB Co shall design and construct all permanent and temporary bus stops during all the construction staging, including safe and secure pedestrian access to and from bus stops, and all shelters and COADS requirements that meet the requirements of the City and OC Transpo's standard drawings and specifications as per Appendix E of this Part 7. DB Co shall coordinate the design and locations of the temporary bus stops and shall obtain approval from the City and OC Transpo prior to implementation.

3.2 Construction On or Adjacent To the Existing Transitway

- (a) DB Co shall provide 35 calendar days' notice to the City for access to the Transitway. DB Co shall obtain all required approvals and permits from the City and OC Transpo. DB Co shall complete the required submissions in accordance with Schedule 10 – Review Procedure and subject to evaluation and acceptance by the City, prior to submitting permit applications.
- (b) All required traffic control and protection systems identified in the approved TTMP shall be installed, operated, maintained and removed by DB Co to the satisfaction of the City .
- (c) DB Co shall perform the required traffic control for the lane closure(s) identified in the approved TTMP to the satisfaction of the City, where construction requires Transitway lane closure(s).
 - (i) DB Co shall provide the temporary Station/stop and the temporary Station/stop facilities in kind, such as shelters or benches, as well as the accesses to/from the Station/stop, operational features such as bike racks, lighting, supervisor's office, etc., and including traffic camera/OC Transpo security camera coverage of the temporary Station/stop and its surrounds, where construction shall require any

change to, or relocation of an existing Transitway Station or bus stop, to the satisfaction of the City. This shall include staff washrooms equipped with key access system to the satisfaction of the City.

- (ii) DB Co shall include all alterations to existing Stations or bus stops, and all temporary Station or bus stop designs in the TTMP submission to the City in accordance with Schedule 10 - Review Procedure.
- (d) DB Co shall provide 15 Business Days' notice to the City prior to the day on which any changes to existing signage or new sign placement required for construction shall be required.
- (e) Loading or unloading of materials or construction equipment that will adversely affect the existing Transitway, bus only lanes or Transitway detour traffic, shall not be performed during the following periods:
 - (i) On Transitway bus only lanes or Transitway detour:
 - A. 06:00 to 18:30 hrs
 - (ii) Adjacent to Transitway:
 - A. 06:00 to 09:30 hrs
 - B. 15:00 to 18:30 hrs
- (f) Where loading or unloading of materials is done by means of lifting overhead, overhead protection shall be provided to all impacted pathways, sidewalks, and Platforms.
- (g) DB Co shall not store any equipment or materials on the travelled portion of the Transitway, bus only lanes or Transitway detour, or its shoulders or boulevards, unless the equipment or materials are protected by traffic control and protection systems previously approved by the City and OC Transpo.
- (h) DB Co shall ensure that vehicles transporting materials to, from, or on the Transitway, bus only lanes or Transitway detours do not interfere with or interrupt Transitway, bus only lanes, or Transitway detour operations. Where the transportation of materials to or from construction Sites cannot be accomplished without interfering or interrupting Transitway operations, a separate dedicated construction access shall be established at DB Co's cost.
- (i) DB Co shall require construction vehicles to enter and/or exit in the same direction as buses so that vehicles merge with the bus traffic without crossing traffic lanes, unless specified otherwise.
- (j) DB Co shall ensure that vehicles shall at all times use the access point on the Transitway, bus only lanes, or Transitway detour operations, that is closest to the Work Site.

- (k) DB Co shall ensure that all traffic controls are operational before commencing Works affecting Transitway, bus only lanes, or Transitway detour operations.
- (l) DB Co shall contact the OC Transpo Control Centre 30 minutes prior to setup each day that they are working in or adjacent to a Transitway lane.

3.3 Pedestrian and Cycling Access to the Transitway During Construction

- (a) DB Co shall maintain barrier free pedestrian and cycling access, associated with active and temporary Stations and across all pedestrian Bridges, at all times.
- (b) DB Co shall maintain pedestrian and cycling access across the local route lanes at all times.
- (c) DB Co shall provide a new alternate route pathway, sidewalk or MUP of equivalent length, or within 20% additional length, to current City standards in the event that a pathway, sidewalk or MUP leading to a Station connection is to be closed or relocated due to construction, unless prescribed otherwise by the City.
- (d) Any disruption of a pathway, sidewalk, or MUP that impacts the accessibility to a Transitway Station shall be done in accordance with the provisions of Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.

3.4 Transitway Lane Closures

- (a) Permitted lane closure periods for Transitway Segments shall be as follows:

Table 7-3.2

| Closure | Monday to Friday | Saturday | Holiday or Sunday |
|--|--|--|--|
| One Lane Closure (All Transitway Segments) | 18:30 - 06:00 hrs 9:30 - 15:00 hrs | 00:01 - 24:00 hrs | 00:01 - 24:00 hrs |
| Full Closure* (All Transitway Segments exclusive of OR174 and Highway 417 bus only lanes) | Not permitted until Transitway Detour Commissioned and in Transpo services are operational | Not permitted until Transitway Detour Commissioned and in Transpo services are operational | Not permitted until Transitway Detour Commissioned and in Transpo services are operational |
| OR174 EB and WB bus only lanes** | Not Permitted | Not Permitted | Not Permitted |

| | | | |
|--------------------------------------|---------------|---------------|---------------|
| Highway 417 EB and WB bus only lanes | Not Permitted | Not Permitted | Not Permitted |
|--------------------------------------|---------------|---------------|---------------|

** Applications for full closures shall be submitted as part of the Works Submittals in accordance with Schedule 10 – Review Procedure.*

**Transitway Detour requirements as defined for each Segment of Transitway to be closed are completed and accepted by the City and OC TranspoBus*

*** Exceptions shall be permitted as per Clause 2.17 of this Part 7.*

3.5 Circulation Roadway Closures within Transitway Stations

- (a) DB Co shall maintain the continuance of all of the operational functions of the existing Transitway Stations throughout the construction and commissioning period. DB Co shall develop a TCP identifying all changes to operational functions and submit to the City in accordance with Schedule 10 – Review Procedure for areas where construction requires lane closures to bus circulation Roadways, Platforms, or bus lay-by areas within Transitway Stations. DB Co shall provide 35 calendar days’ notice prior to the day on which the closures shall be required.
 - (i) DB Co shall perform all modifications required for the temporary bus terminal with no interruption to the regular bus service.
 - (ii) Where changes to the operational function of a Transitway Station results in a routing for buses that causes additional travel time to be incurred, six months’ notice shall be provided.
- (b) DB Co shall ensure the continuance of all operational functions of detoured transit services throughout construction and Commissioning periods.
- (c) DB Co shall coordinate all closures with the City. The following conditions shall apply:
 - (i) Monday to Friday inclusive:
 - A. 06:00 to 09:30 hrs and 15:00 to 18:30 hrs: Bus circulation Roadways shall be fully operational; and,
 - B. 09:30 to 15:00 hrs and 18:30 to 06:00 hrs: One-way bus circulation Roadways may be reduced to one lane. Two-way bus circulation Roadways may be reduced to one lane only in each direction providing that all appropriate approvals and plans are in place.
 - (ii) Saturday, Sunday and holiday:

- A. 00:01 to 24:00 hrs: One-way bus circulation Roadways may be reduced to one lane. Two-way bus circulation Roadways may be reduced to one lane only in each direction
- (d) DB Co shall simulate the operation of the Station, including but not limited to VISSIM modeling, to demonstrate to the City and OC Transpo that any modified Stations will function in an acceptable manner. This information shall be included in the TTMP submissions in accordance with Schedule 10 - Review Procedure. DB Co shall monitor and make adjustments to the Station if the switchover is not performing in accordance with that forecast in the TTMP and sub-plans as reviewed and accepted by the City.

3.6 West Transitway Segment W-1 - Tunney's Pasture Station to Dominion Station

- (a) DB Co shall design and implement a Transitway detour alignment along Scott Street from Tunney's Pasture Station to Dominion Station. The alignment shall utilize the existing Scott Street from Goldenrod Driveway to Churchill Avenue with localized Roadway improvements as described below. DB Co shall design and construct an extension of Scott Street for bus services only, west of Churchill Avenue to Roosevelt Avenue. At Roosevelt Avenue, DB Co shall design and construct the Transitway detour alignment shall cross over the existing West Transitway utilizing a temporary Bridge structure and continue westerly adjacent to the West Transitway and connect to the existing Transitway at Dominion Station.
- (b) DB Co shall be responsible for the design, construction and implementation of the W-1 Transitway staging and detour prior to full closure of any component of the existing W-1 Transitway Segment.
- (c) DB Co shall design and construct the W-1 Transitway detour within the prescribed Scott Street ROW including the detour extension to SJAM Parkway. DB Co shall not implement the W-1 detour until the following are designed and constructed:
 - (i) Widen Scott Street between Clifton Road and Oakdale Avenue as follows:
 - A. DB Co shall widen EB Scott Street from Clifton Road through the Lanark Ave/Scott Street intersection to accommodate a 3.2m left turn lane, 3.5m general purpose through lane and a 3.5m bus only lane. The EB bus only lane shall be shared with right turning general purpose traffic. DB Co shall undertake a traffic operational analysis to design the bus only/right turn lane storage and taper length requirements. DB Co shall remove and reconstruct the existing sidewalk from a point approximately 47m west of Clifton Road to Lanark Avenue to include a 2.0m sidewalk and 1.5m raised EB cycle track.
 - B. DB Co shall widen EB Scott Street from Lanark Avenue to east of Island Park Drive to accommodate a 3.5m general traffic lane, 3.5m bus only lane, and 1.5m EB cycling lane. For clarity, the cycling lane only needs to be provided where a cycle track is not provided. The existing EB left turn

lane at Island Park Drive shall be maintained. The EB right turn lane at Island Park Drive shall be shared with the bus only lane within the limits of the existing right turn lane. DB Co shall undertake a traffic operational analysis for the EB bus only lane to design the required lane length east of Island Park Drive, including taper. DB Co shall remove and reconstruct sidewalk to the limits necessary as required to accommodate Roadway widenings. DB Co shall build a raised EB cycle track from the Lanark Avenue intersection to a point approximately 60m east of Lanark Avenue. DB Co shall build a raised EB cycle track from a point approximately 65m west of Island Park Drive to a point approximately 65m east of Island Park Drive.

- i. DB Co shall relocate the existing Scott Street EB bus stop from west of Island Park Drive to east of Island Park Drive. The relocated bus stop shall maintain all features of the existing bus stop, and be in accordance with the features required in Schedule 15-2, Part 4, Appendix E.
 - C. DB Co shall widen WB Scott Street at Island Park Drive to accommodate at 3.3m left turn lane, a 3.5m general purpose through lane and a 3.3m right turn lane. DB Co shall undertake a traffic operational analysis for the design of the right turn lane storage and taper.
 - D. DB Co shall modify the traffic signal infrastructure at Lanark Avenue and Island Park Drive as required to accommodate Protected Intersection design, including Crossrides on all four legs of the intersections as per the description in Schedule 15-2, Part 2, Clause 6.6, and the conceptual images in Appendix F of this Part 7.
 - E. When the Transitway detour is no longer in service, DB Co shall reinstate the general traffic lanes on Scott Street to existing conditions, including the removal of the EB bus lane and the WB right turn lane. DB Co shall realign the cycle tracks at Lanark Avenue and Island Park Drive with the new permanent Protected Intersection configuration. This work shall be completed after West Substantial Completion and upon notice by the City, and shall be considered Remaining Works.
- (ii) Modifications to the cycling and pedestrian facilities as follows:
- A. DB Co shall relocate the WB cycling lane on Scott Street from Smirle Avenue to Churchill Avenue to the MUP north of Scott Street. At unsignalized intersections, painted Crossrides shall be provided for the MUP.
 - B. DB Co shall reconstruct and widen the existing MUP on the north side of Scott Street between Smirle Avenue and Churchill Avenue. The new MUP

shall be 4.0m wide, and the space shall be allocated as a 2.0m WB-only cycling facility with a 2.0m pedestrian space.

- i. At the signalized intersections of Scott Street and Smirle Avenue, Island Park Drive, Lanark Avenue and Churchill Avenue, the 4.0m wide north side MUP shall be split into a 2.0m wide asphalt surface for cyclists and a 2.0m wide concrete surface for pedestrians at a distance of approximately 25m from the north-east and north-west corners of the intersections.
- C. A painted on-road eastbound cycling lane, with a minimum width of 1.8m, with a minimum width 0.2m buffer, shall be provided on Scott Street from Smirle Avenue to Churchill Avenue at all locations where an eastbound cycle track has not been prescribed.
 - i. DB Co shall provide and install flex-post delineators along the on-road eastbound cycling lane where curbside land uses do not prevent such installations (i.e. driveways, parking spaces, etc.). The initial installation of these flex-posts shall be the responsibility of DB Co. The City shall be responsibility for the seasonal removal and reinstallation of the flex-posts.
 - ii. Where adjacent to on-street parking, the cycling lane may be reduced in width to 1.5m. In such locations, the minimum buffer on the left side of the cycling lane shall be increased to 0.5m, and a 0.5m buffer on the right side of the cycling lane shall also be provided.
 - iii. Appropriate transitions between the cycling facilities to the east of Smirle Avenue and to the west of Churchill Avenue shall be provided.
- D. DB Co shall construct the following infrastructure to facilitate the installation of two cyclist-pedestrian counters on Scott Street, one approximately 100m east of Lanark Avenue, and one 20m west of Grange Avenue:
 - i. Two custom hand holes at each location: one on each of the north and south sides of the road. Hand holes and lids shall be procured by DB Co from [REDACTED] as per the specifications provided in Appendix G of this Part 7;
 - ii. A 50mm rigid PVC conduit under the road connecting the hand holes at each location. DB Co shall leave a fish rope in place in the conduit between the two hand holes;

- iii. DB Co shall install pre-formed loops on the MUP (before paving) to the BC2 specification provided in Appendix G of this Part 7. These loops shall be procured by DB Co from Eco-Counter as per the specification provided in Appendix G of this Part 7;
 - iv. DB Co shall cut a bicycle lane loop in the eastbound bicycle lane to the BC3 specification provided in Appendix G of this Part 7, with the loop cable connected to the nearest hand hole via a 25mm flexible conduit;
 - v. DB Co shall install a wooden post in a concrete foundation suitable to support the pole on the north side of Scott Street. This wooden post shall be procured by DB Co from [REDACTED] as per the specification provided in Appendix G of this Part 7. A 25mm flexible conduit shall connect the north side hand hole to the wooden post's foundation. DB Co shall leave a fish rope in place in this conduit;
 - vi. Specific locations of each of these elements will be provided to DB Co by the City prior to the PFDD design;
 - vii. DB Co's scope shall not include providing operating counter stations, but rather to provide the civil infrastructure required for the City to be able to install the remaining equipment needed to operate the counter stations. DB Co's responsibility shall be limited to: the provision and installation of 50mm rigid PVC conduit, 25mm flexible conduit, hand holes and lids, the loop in the eastbound bicycle lane, the wooden post and concrete foundation, and the pre-formed loops on the MUP.
- (iii) Scott Street extension from Churchill Avenue to Roosevelt Avenue as follows:
- i. DB Co shall design and construct a new bus only detour from the terminus cul-de-sac west of Churchill Avenue to Roosevelt Avenue. The bus detour shall consist of 4.0m EB and WB lanes with 1.0m paved shoulders. The Pavement shall be superelevated as outlined in Schedule 15-2, Part 2 – Civil and Guideway;
 - B. DB Co shall relocate the existing 3.0m MUP from the north side of the detour to the south side. Connect the relocated MUP to the existing MUP at Roosevelt Avenue;
 - C. DB Co shall supply and install continuous temporary concrete barriers on both sides of the entire length of the bus detour, with a 1.2m high chain link fence mounted on top of the temporary concrete barrier on the south side of the bus detour;

- D. DB Co shall modify the intersection of Scott Street/Churchill Avenue as follows;
- i. DB Co shall design and construct a new, permanent, traffic signal in accordance with the requirements of Schedule 15-2 Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys, at the intersection. DB Co shall be responsible for providing a Protected Intersection design, including Crossrides on all four legs of the intersection.
 - ii. DB Co shall undertake a traffic operational analysis for the design and construction of a new WB left turn lane to determine the storage lane length, plus taper. DB Co shall undertake a traffic operational analysis to determine the storage lane length required after the commissioning of the Confederation Line, and implement any changes recommended from the analysis. The implementation of the changes shall be completed after West Substantial Completion and upon notice by the City, and shall be considered Remaining Works.
 - iii. DB Co shall not impact on-street parking on the north side of Scott Street. Removal of on-street parking on the south side of Scott Street between Churchill Avenue and Athlone Avenue shall be permitted during the W-1 detour, but shall be reinstated after West Substantial Completion and upon notice by the City, and shall be considered Remaining Works.
 - iv. DB Co shall undertake a traffic operational analysis for the design and construction of a new northbound right turn lane to determine the storage lane length, plus taper. Construction of the new lane shall not impact any existing curb, however the removal of existing on-street parking on the west side of Churchill Avenue to the limits necessary to accommodate the new turn lane are acceptable. DB Co shall prepare a traffic operational analysis report to determine if this lane is required after the commissioning of the Confederation Line, and implement any changes recommended from said analysis. Modifications to the east curb in order to incorporate elements of the Protected Intersection are acceptable. The implementation of the changes shall be completed after West Substantial Completion and upon notice by the City and shall be considered Remaining Works.
 - v. DB Co shall remove the existing sidewalk on the south side of Scott Street from Churchill Avenue to a point approximately 30m east of Churchill Avenue, and reinstate with a 1.5m raised cycle track and a 2.0m pedestrian sidewalk.

- E. DB Co shall maintain uninterrupted access to existing properties within the cul-de-sac at all times, including but not limited to: [REDACTED];
 - F. DB Co shall maintain on-street parking between Churchill Avenue and the cul-de-sac throughout construction and W-1 Transitway detour implementation period, including temporarily reconfiguring the existing five perpendicular parking spaces on the north side of the cul-de-sac with five parallel parking spaces and maintaining the two parallel parking spaces on the south side; and
 - G. DB Co shall remove the detour and reinstate the Scott Street extension west of Churchill Avenue to existing conditions after the detour is out of service, including restoration of MUP to its existing general alignment with the exception that the Pavement shall end no closer than 1.0m from the near face of the guideway parapet wall. This shall be completed after West Substantial Completion and upon notice by the City and shall be considered Remaining Works.
- (iv) DB Co shall design, supply and install a temporary Bridge over the Transitway and construct the Transitway detour west of the temporary Bridge to connect the Transitway detour to the existing Transitway at Dominion Station as follows:
- A. DB Co shall remove the existing pedestrian Bridge over the Transitway. DB Co shall delay removal of the pedestrian Bridge as long as possible in order to maintain pedestrian connectivity for the community. The Bridge shall be replaced when the Transitway detour service is complete in accordance with Schedule 15-2, Part 2 – Civil and Guideway. DB Co shall provide the City and OC Transpo with 35 calendar days' notice of the schedule for the removal. The removal over the traveled portion of the Transitway shall require the stoppage of transit vehicles across the full width of the affected Transitway lanes. Closure of all lanes shall only be performed as follows:
 - i. If the full closure is scheduled between Victoria Day and Labour Day, the full closure shall take place during the NCC's Sunday Bikedays closure of the SJAM Parkway.
 - ii. If the full closure is scheduled between Labour Day and Victoria Day, the closure shall take place between 02:00 and 05:00 hrs:
 - 1. Nightly closures of the Transitway during this period shall be restricted to 15 consecutive minutes, after which time DB Co shall reopen the Transitway until such a time as the end of the transit vehicle queue passes. After the transit vehicle queue has cleared, DB Co may close the Transitway again for a further 15 minute period, repeating

this process until the job is complete or it is 05:00 hrs and the Transitway shall be reopened.

- B. DB Co shall construct the bus only detour from temporary Bridge to Dominion Station. The bus detour shall consist of 4.0m EB and WB lanes with 1.0m paved shoulders. The Pavement shall be superelevated as outlined in Schedule 15-2, Part 2 – Civil and Guideway;
- C. DB Co shall construct a temporary portable prefabricated Bridge over the existing Transitway to accommodate two 4.0m wide bus lanes. The temporary Bridge shall be a minimum width of 9.1m. DB Co shall submit a detailed Bridge erection plan to the City 60 calendar days in advance of undertaking the installation. The plan shall identify any requirements for installing Bridge components over the Transitway during transit services. DB Co shall be permitted to perform full closures for installation of Bridge girders, prefabricated Bridge components, falsework and overhead electrical wiring installations. The installation of the traveled portion of the Transitway shall require the stoppage of transit vehicles across the full width of the affected Transitway lanes. Closure of all lanes shall only be performed as follows:
 - i. If the full closure is scheduled between Victoria Day and Labour Day, the full closure shall take place during the NCC's Sunday Bikedays closure of the SJAM Parkway
 - ii. If the full closure is scheduled between Labour Day and Victoria Day, the closure shall take place between 02:00 and 05:00 hrs:
 - 1 Nightly closures of the Transitway during this period shall be restricted to 15 consecutive minutes, after which time DB Co shall reopen the Transitway until such a time as the end of the transit vehicle queue passes. After the transit vehicle queue has cleared, DB Co may close the Transitway again for a further 15 minute period, repeating this process until the job is complete or it is 05:00 hrs and the Transitway shall reopen.
- D. DB Co shall supply and install temporary concrete barriers on the south side of the entire length of the detour;
- E. DB Co shall ensure the existing Dominion Transitway Station services remain in service at all times during the construction of the detour and while the detour is in service, including all pedestrian connections; and,
- F. DB Co shall remove the detour and Bridge and reinstate to existing conditions including restoration of Roosevelt Avenue pedestrian Bridge crossing when the Transitway detour is no longer in service. The new

pedestrian Bridge shall include the installation of a cyclist/pedestrian counter, as approved by the City. DB Co shall submit a detailed Bridge removal and erection plan to the City 60 calendar days in advance of undertaking the removal of the temporary detour Bridge and reinstatement of the pedestrian Bridge. The plan shall identify any requirements for installing Bridge components for the Guideway during transit services. This work shall be completed after West Substantial Completion and upon notice by the City and shall be considered Remaining Works.

- (v) When the W-1 detour is in operation, OC Transpo will be routing their deadhead buses between Dominion and Tunney's Station on SJAM Parkway and Goldenrod Driveway (within Tunney's Pasture campus) and access the SJAM Parkway at the existing signalized intersections at Goldenrod Driveway/SJAM Parkway.
 - A. DB Co shall design and construct a temporary detour for deadhead buses from Tunney's Pasture Station to Goldenrod Driveway as part of the W-1 Transitway detour.
 - B. DB Co shall undertake a structural analysis of existing structures under the SJAM Parkway as outlined in Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements.
- (vi) DB Co shall resurface Scott Street, from Churchill Avenue to Goldenrod Driveway / Smirle Avenue, prior to the implementation of the W-1 detour.
- (d) DB Co shall ensure that the existing Tunney's Pasture Station bus service facilities including Platforms, Roadways, lay-bys and Bus Operator's facilities are available for OC Transpo services at all times including the following requirements:
 - (i) The existing Tunney's Pasture Station bus facility shall remain in full service until after West Substantial Completion and upon notice by the City.
 - (ii) DB Co shall stage the decommissioning of existing Tunney's Station bus platforms, bus lay-by and Operator's building facilities in a manner that maintains OC Transpo transit bus services at all times. Work that is required after the OC Transpo bus service is removed shall be completed after West Substantial Completion and upon notice by the City, and shall be considered Remaining Works.
 - (iii) DB Co shall ensure any required temporary bus lay-by areas shall be equivalent in capacity to the existing bus lay-by area and be fully integrated to the Station access roads. The bus lay-by area shall maintain the Operator's building facilities with all services.
 - (iv) DB Co shall ensure that the existing temporary bus only connection from the Tunney's Pasture bus facility to Scott Street shall remain in full service until such time as the new Goldenrod Driveway Bridge and signalized Protected Intersection

at Scott Street are constructed and Commissioned for service. The following sequence of Work shall be followed:

- A. The W-1 detour shall not be implemented until the new Goldenrod Driveway Bridge is constructed, Commissioned and operational.
 - B. No work on the Tunney's Pasture bus facility shall begin until the new Goldenrod Driveway Bridge and Scott Street at Goldenrod Driveway Protected Intersection are constructed, Commissioned, and operational.
 - C. Transfer of Transit services to the Goldenrod Driveway Bridge shall be scheduled during a non-Peak Period subject to review and approval by the City.
 - D. The existing temporary bus connection and intersection to Scott Street shall be removed immediately after the Goldenrod Driveway Bridge is Commissioned including the realignment of the MUP to the new intersection crossing.
- (e) DB Co shall maintain transit services at Westboro Station at all times. DB Co shall complete the following prior to Commissioning the W-1 Transitway detour:
- (i) DB Co shall construct temporary Transitway Station facilities on Scott Street for EB transit services. The temporary facilities shall include all transit service facilities features currently present at Westboro Station, including but not limited to the requirements in Appendix E of this Part 7. The temporary Station facilities shall be within 200 metres of the existing Station to maintain existing transit user connectivity. The temporary Station facilities shall be designed and constructed to safely accommodate the EB cycling facility passing through the Station.
 - (ii) DB Co shall construct temporary Transitway Station facilities at the southern platform at Westboro Station for WB transit services. The temporary facilities shall include any features currently present at Westboro Station, including but not limited to the requirements in Appendix E of this Part 7. DB Co shall maintain safe pedestrian access from the north side of Westboro Station to the temporary Transitway facilities on Scott Street at all times, including but not limited to the two pathways connecting to Lanark Avenue. Pedestrian access shall be separated from construction activities and construction accesses in a safe manner. DB Co shall construct the temporary Transitway Station facilities so as to accommodate the safe passage of WB cyclists through the Station.
 - (iii) DB Co shall, during design, investigate with the City and OC Transpo to determine if it is beneficial to modify the two pedestrian signals at Athlone Avenue and Tweedsmuir Avenue to provide Transit Priority. This investigation shall also consider the addition of Crossrides for cyclists.

- (iv) DB Co shall maintain the connection from Westboro Station to the Transitway trench until such a time that construction begins on the Westboro bus lay-up loop. Until that time, the Transitway trench access shall be left open to be used as a potential construction access.
- (f) DB Co shall not construct the pedestrian plaza on the south side of Westboro Station until the W-1 Transitway detour is no longer in use, since this area shall be used as the WB Platform for detoured Transitway buses.
- (g) DB Co shall ensure any construction activity undertaken by DB Co at intersections in the Scott St corridor shall not impact the W-1 Transitway detour, or shall take place as Remaining Works (completed after West Substantial Completion and upon notice by the City) so as to not impact the W-1 Transitway detour.
- (h) DB Co shall not allow lighting to spill into wooded areas around W-1 construction zones between May 15th and July 15th construction periods.

3.7 SJAM Parkway Segments W-2, W-3 & W-4 – Dominion Station to Lincoln Fields Station

- (a) OC Transpo bus services within Segments W-2, W-3 & W-4 are located on the SJAM Parkway from Dominion Station to Lincoln Fields Station. The bus services on SJAM shall remain in service at all times during construction.
- (b) A section of the SJAM Parkway shall be reconstructed in this contract. DB Co shall be responsible for undertaking traffic staging and construction sequencing of the SJAM Parkway road reconstruction in a manner that maintains uninterrupted general traffic services and bus services.

3.8 Southwest Transitway Segment SW-2 - Lincoln Fields Station to Iris Station

- (a) OC Transpo bus services within Segment SW-2 are located on the Southwest Transitway from Lincoln Fields Station to Iris Station. The bus services on the Southwest Transitway including the Transitway ramps to and from Highway 417 and the dedicated bus access roads to and from Lincoln Fields Station shall remain in service at all times until after West Substantial Completion and upon notice by the City, unless specified otherwise. Any work required after this date shall be considered Remaining Works.
- (b) DB Co shall maintain a minimum of two traffic lanes in each direction on Carling Avenue at all times between Lincoln Fields Station and the existing Transitway Bridge during construction of the new Carling Avenue Bridge.
- (c) DB Co shall maintain the pedestrian Bridge connection from Lincoln Fields Station to Carling Avenue for as long as possible. DB Co shall not decommission the pedestrian Bridge until the temporary ramp, MUP and signalized intersection, as described in Clause 3.8(d) of this Part 7, are constructed and Commissioned.

- (d) DB Co shall maintain transit services at Lincoln Fields Station at all times. Prior to decommissioning any component of the existing Lincoln Fields Transitway Station, DB Co shall provide the following:
- (i) DB Co shall be responsible for the design, construction and maintenance of temporary facilities to the City and OC Transpo standards and specifications, including but not limited to the requirements in Appendix E of this Part 7.
 - (ii) DB Co shall ensure dedicated bus access roads are available to and from Lincoln Fields Station temporary facilities. Where required, DB Co shall provide detours to the City and OC Transpo standards and specifications.
 - (iii) DB Co shall provide a temporary bus-only ramp on the south side of Carling Avenue connecting to the existing Transitway:
 - A. The temporary bus-only ramp shall connect with Carling Avenue at a signalized intersection, located west of the new Carling Avenue Bridge and east of the existing Carling Avenue Bridge;
 - B. The ramp shall be constructed prior to the closure of direct vehicular access from Carling Avenue to Lincoln Fields Station and prior to the closure of the pedestrian Bridge from Carling Avenue to Lincoln Fields Station; and
 - C. DB Co shall provide a MUP on the west side of the bus ramp, connecting to the existing MUP on the east side of the Transitway. The MUP shall meet all standards as outlined in Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.
 - D. The ramp shall connect to the Transitway south of Carling Avenue, at a three leg intersection, with a stop control on the approach from the ramp.
 - E. The provision of this temporary bus-only ramp shall not increase the number of blocks on this segment of Carling Avenue for the purposes of Schedule 34 Mobility Matters calculations.
 - (iv) DB Co shall be responsible to provide bus lay-by areas to facilitate Lincoln Fields Station operations at all times. The lay-up areas shall be equivalent in capacity to the existing bus lay-up area (minimum 10 articulated buses) and be fully integrated into access roads and to the satisfaction of the City and OC Transpo. The existing bus lay-up areas consist of six articulated bus spaces (4.5m x 30m marked spaces) in the lay-up area east of the station, and approximately four articulated bus spaces on the perimeter of the main Platform area. In the event that the Lincoln Fields lay-up area cannot fully serve the OC Transpo route(s) scheduled start times of the 2018 Post-LRT Stage 1 Transit Service Plan when the new Lincoln Fields Station is being constructed, a temporary lay-up in closer proximity to the Transitway shall be provided by DB Co. Such a lay-up shall be

established to enable buses to start their route on time and on schedule. This temporary lay-up area will be required, in a location to be determined by DB Co, in consultation with the City and OC Transpo, and be in close proximity to temporary platforms and bus bays. The temporary lay-up area is considered to be a component of DB Co's Transitway detour requirements, and all Station facilities shall be as required in Appendix E of this Part 7.

- (v) Temporary bus facilities shall remain in service at all times until after West Substantial Completion and upon notice by the City.
- (vi) DB Co shall be responsible for the decommissioning and removal of the temporary bus facilities in accordance with Schedule 15-2, Part 1 – General. This work shall be completed after West Substantial Completion and upon notice by the City, and shall be considered Remaining Works.
- (e) DB Co shall provide a signalized pedestrian crossing of Carling Avenue in close proximity to Lincoln Fields Station, east of the temporary signalized intersection prior to decommissioning the temporary bus ramp and signalized intersection.
- (f) DB Co shall maintain the pedestrian and cycling access from the Lincoln Fields Station or any temporary Lincoln Fields Station facilities to the signalized pedestrian crossing of the SJAM Parkway northwest of Lincoln Fields Station throughout construction.
- (g) Within the Segment SW-2 the Transitway services shall remain in service at all times until West Substantial Completion and upon notice by the City. South of Lincoln Fields Station, DB Co shall, as required to accommodate both the Guideway and the Transitway, design, construct and commission the realignment of the existing Transitway facility to Iris Station. The realigned sections of the Transitway shall match the existing Transitway by maintaining one lane in each direction at all times. The realignment of the Transitway shall also connect to the existing N-W and W-N/S Transitway ramps at Highway 417. The construction of the realignments shall be staged in a manner that maintains uninterrupted Transit services at all times.

3.9 Southwest Transitway Segment SW-1 - Iris Station to Baseline Station

- (a) DB Co's approved Transitway staging and detour plans for SW-1 from Iris Station to Baseline Station shall be commissioned and in operation prior to full closure of any component of the SW-1 Transitway from Iris Station to Baseline Station
- (b) Prior to the closure of Iris Street to construct the Iris Street overpass, DB Co shall design, construct and commission the following:
 - (i) DB Co shall construct an Iris Street detour to the extents required to construct the Iris Street Bridge structure. The Iris Street detour shall be located north of the existing Iris Street. The Iris Street detour shall connect to the Transitway north of Iris Street at a three-leg signalized intersection. DB Co shall provide crosswalks on the north and east legs of this intersection;

- (ii) DB Co shall design and construct a second Transitway/Iris Street detour intersection to facilitate the continuation of the Transitway bus services south of Iris Street to the Baseline Station. DB Co shall provide a crosswalk on the west leg of this intersection. The Iris Street to Baseline Station Transitway connection shall remain in service until such time as the SW-1 detour is not required;
- (iii) DB Co shall design the temporary Iris Street detour and Transitway connections in such a manner that the footprint of these facilities does not impact the ultimate alignment of the realigned Pinecrest Creek low-flow channel, as per the Pinecrest Creek details in Schedule 15-2, Part 2, Article 5 – Drainage and Stormwater Management Design Criteria.
- (iv) DB Co shall maintain transit services at the Iris Station at all times until West Substantial Completion and upon notice by the City. Prior to decommissioning any component of the existing Iris Transitway Station, DB Co shall provide the following:
 - A. DB Co shall relocate the existing Iris Station Transitway facilities in a location that is approved by OC Transpo and the City. DB Co's temporary facilities shall include any features currently present at the Iris Station, including but not limited to: the requirements in Appendix E of this Part 7. The temporary Station facilities shall be located within 100 metres of the Iris Street detour/Transitway intersection to maintain existing transit user connectivity. The temporary Station shall meet the following requirements:
 - B. DB Co shall consolidate the existing bus stop on the west side of the Transitway, and the bus stop on the south side of Iris Street, locate the consolidated bus stop on the west side of the Transitway, north of Iris Street.
 - C. DB Co shall relocate the bus stop on the north side of Iris Street further to the west and remain on the north side of Iris Street.
 - D. DB Co shall relocate the bus stop on the east side of the Transitway further north and remain on the east side of the Transitway.
- (v) DB Co shall construct a temporary MUP along the south side of the Iris Street detour in order to maintain connectivity of the Pinecrest Creek Pathway.
- (c) After completion and commissioning of the Iris Street Bridge, DB Co shall not close the Iris Street detour or Transitway connections and facilities until the following are designed, constructed and commissioned:
 - (i) DB Co shall construct a temporary Transitway/Iris Street intersection from north of Iris Street to a location west of the Iris Street Bridge. The Transitway intersection shall include a connection to Iris Street at a temporary signalized

intersection, with one lane in each direction at each approach and crosswalks on all three legs of the intersection.

- (ii) DB Co shall relocate the Iris Station Transitway facilities in a location that is approved by OC Transpo and the City. DB Co's temporary facilities shall include any features currently present at the Iris Station, including but not limited to the requirements in Appendix E of this Part 7. The temporary Station facilities shall be located within 100 metres of the Iris Street/Transitway intersection to maintain existing transit user connectivity. The temporary Station shall meet the following requirements:
 - A. DB Co shall consolidate the existing bus stop on the west side of the Transitway, and the bus stop on the south side of Iris Street, locate the consolidated bus stop on the west side of the Transitway, north of Iris Street.
 - B. DB Co shall relocate the bus stop on the north side of Iris Street further to the west and remain on the north side of Iris Street.
 - C. DB Co shall relocate the bus stop on the east side of the Transitway further north and remain on the east side of the Transitway.
- (iii) DB Co shall decommission the temporary Iris Station facilities after West Substantial Completion and upon notice by the City, and shall be considered Remaining Works
- (iv) DB Co's SW-1 transit detour shall be located on Iris Street and Woodroffe Avenue. DB Co shall be responsible for design and implementation of the detour requirements, which shall include the addition of a northbound bus only lane on Woodroffe Avenue, between Baseline Road and Iris Street. DB Co's design shall widen Woodroffe Avenue on the east side and shall maintain sidewalks on both sides of Woodroffe Avenue throughout construction. DB Co's design shall also address the following:
 - A. Provide for a 3.5m wide northbound bus lane located adjacent to the center median/centre line. Two northbound general traffic lanes shall also be provided, with the curbside lane being 3.5m wide and the adjacent lane being 3.25m wide. The bus lane shall begin at the Baseline Road/Woodroffe Ave intersection and continue north and connect to the existing northbound left turn lane at Iris Street, which shall be widened to 3.4m. The northbound left turn movement at Woodroffe Avenue and Iris Street shall be shared between buses and general traffic.
 - i. To accommodate the above lane widths, lane widths in the southbound direction on Woodroffe Avenue between Iris Street and Baseline Road shall be 3.5m for the curb lane and 3.25m for the median lane.

- B. Provide for a 3.5m wide southbound queue jump lane for buses at the intersection of Woodroffe Avenue and Baseline Road. The queue jump lane shall replace one of the existing southbound general traffic lanes, adjacent to the southbound right turn lane. DB Co shall construct the lane so that it does not impact the ability of southbound vehicles to make a right turn onto Baseline Road.
 - C. Provide for a southbound cycle track and boulevard on the west side of Woodroffe Avenue, from north of Iris Street to south of the signalized intersection with the Pinecrest Creek Pathway, as per Schedule 15-2, Part 2, Clause 6.19. At the signalized intersection, DB Co shall ensure that the cycle track ties into the existing Pinecrest Creek Pathway in an acceptable manner to the City.
 - D. Provide for a northbound cycle track and boulevard on the east side of Woodroffe Avenue, beginning at a point 35m south of Iris Street, and transitioning back to on-road cycling lanes in front of [REDACTED], as per Schedule 15-2, Part 2, Clause 6.19.
 - E. Provide for crossrides in the northbound and southbound directions at the intersection of Woodroffe Avenue and Iris Street.
 - F. Provide minimum sidewalk, boulevard and buffer widths as per Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys.
 - G. Reinstate Woodroffe Avenue after West Substantial Completion as per Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys.
- (v) DB Co shall analyze the traffic operations on the prescribed detour route and recommend any modifications to traffic controls along that route that would serve to improve the operations of the transit detour as part of the TCP sub-plan submitted for this detour, including but not limited to, the intersection of Iris Street and Adirondack Drive.
- (d) DB Co's approved Transitway staging and detour plans for the West Transitway from Lincoln Fields Station to Queensway Station shall be Commissioned and in operation prior to full closure of any component of the West Transitway from Lincoln Fields Station to Queensway Station.
- (e) Transit Access and Circulation Roadway Closures – Baseline Station:
- (i) DB Co shall only allow construction vehicles to enter Baseline Station via the southernmost access on Woodroffe Avenue. DB Co shall restrict construction vehicles to a right-in, right-out movement only at this access during Peak Periods. In Baseline Station, construction vehicles shall only be permitted to drive between Woodroffe Avenue and the construction access point. This access shall be subject to monitoring and review and may be further restricted to Off Peak Periods only if

operations are not conducive to maintain transit operations to OC Transpo's satisfaction.

- (ii) DB Co shall not decommission any of the existing lay-up berths or transit operator facilities at Baseline Station until the new, permanent lay-up berths and transit operator facilities are designed, constructed and Commissioned.
- (iii) DB Co shall not close any of the existing platforms or roadways at Baseline Station, or the existing northern lay-up area, until the new, permanent Baseline Transitway Station has been designed, constructed, and Commissioned.
- (iv) DB Co shall maintain use of the existing Transitway from Baseline Station to Iris Station as long as possible.
- (v) DB Co shall develop a TCP identifying all changes to operational functions and submit to the City as part of the Works Submittals in accordance with Schedule 10 – Review Procedure for review, where construction pursuant to this Project requires lane closures to bus circulation Roadways within Baseline Station. DB Co shall provide 35 calendar days' notice prior to the day on which the closures shall be required.
- (vi) DB Co shall decommission the existing Baseline Station after West Substantial Completion and upon notice by the City, as per Schedule 15-2, Part 1, Article 14 - Demolition, Removals and Disposal.
 - A. DB Co shall maintain two lanes at the existing Baseline Station after West Substantial Completion.
- (vii) College Avenue and Navaho Drive west of Woodroffe Avenue shall be considered bus circulation Roadways within Baseline Station and shall be subject to Clause 3.5 of this Part 7.

3.10 West Transitway Segment W-5 – Lincoln Fields Station to Queensway Station

- (a) OC Transpo bus services within Segment W-5 are located on the Southwest Transitway from Lincoln Fields Station to Queensway Station. The bus services on the Southwest Transitway including the Transitway ramps to and from Highway 417 and the dedicated bus access roads to and from Lincoln Fields Station shall remain in services at all times until West Substantial Completion and upon notice by the City, unless specified otherwise.
 - (i) DB Co shall be permitted to close the W-N/S ramp between Highway 417 and the Southwest Transitway once construction of the Track alignment eliminates the feasibility of this connection. The connection is to be maintained as long as possible prior to closure. Upon closure, Transitway services shall be re-routed via Woodroffe Avenue and Iris Street to rejoin the Southwest Transitway. Advance

notification and restrictions shall apply as described in Article 3.1 – General Requirements, of this Part 7.

3.11 West Transitway Segment W-6 - Queensway Station to Pinecrest Station

- (a) OC Transpo bus services within Segment W-6 are located on Highway 417 from Queensway Station to Pinecrest Station. Access to Highway 417 from the SW-2 Transitway is via dedicated bus only ramps that are to remain in service at all times during construction.
- (b) Bus Circulation, Pedestrian Circulation and Roadway Closures – Queensway Station:
 - (i) DB Co shall maintain all stairways and access to all stairways from upper to lower level platforms and MUPs at Queensway Station at all times throughout construction to ensure pedestrian connectivity, with the following exception:
 - A. The east side stairways shall remain open until construction has advanced to the point that pedestrian access to the east side of the Transitway is no longer possible. DB Co shall provide a minimum of 90 days advance notice of this closure. Once the east side stairways have closed, DB Co shall implement a controlled crossing of the Transitway between the stops to the satisfaction of the City. The City shall confirm with DB Co the type of crossing to be implemented (e.g., PXO Type C, temporary pedestrian signal, etc.) a minimum of 75 days prior to the closure of the east side stairways.
 - (ii) DB Co shall ensure the N-W ramp from the Southwest Transitway to Highway 417 remains open throughout the duration of construction.
 - (iii) DB Co shall ensure the W-N/S ramp from Highway 417 to the Southwest Transitway remains open until after implementation of the SW-2 detour, at such a time that the construction of the LRT Track inhibits buses on the ramp from accessing the Transitway.
 - (iv) DB Co shall decommission the N-W ramp from the Southwest Transitway to Highway 417, the W-N/S ramp from Highway 417 to the Southwest Transitway, and the remainder of Queensway Station after West Substantial Completion and upon notice by the City, and shall be considered Remaining Works. DB Co shall submit their design for the removal of these ramps and the Station in accordance with Schedule 10 – Review Procedure. The design shall require the approval of the City and MTO.
 - (v) DB Co shall maintain the bus-only lane on the 417 E-N/S off ramp at Pinecrest Road until after West Substantial Completion and upon notice by the City. Removal of this lane shall be considered Remaining Works.

3.12 West Transitway Segment W-7 - Pinecrest Station to Bayshore Station

- (a) DB Co's approved Transitway staging and detour plans for W-7 from Pinecrest Station to Bayshore Station shall be commissioned and in operation prior to full closure of any component of the W-7 Transitway from Pinecrest Station to Bayshore Station.
- (b) DB Co shall implement a W-7 Transitway detour along Highway 417 from Pinecrest Station to Bayshore Station.
 - (i) DB Co's W-7 Transitway detour route is to remain in operation until after West Substantial Completion and upon notice by the City.
 - (ii) DB Co's WB W-7 Transitway detour shall utilize a route from Pinecrest Station, southbound on Pinecrest Road westerly on the new Highway 417 N-W ramp, WB Highway 417 shared lanes from Pinecrest Road to Bayshore Drive, WB on Woodridge Crescent via Bayshore Drive to the westernmost Bayshore Shopping Centre entrance southbound into Bayshore Station.
 - (iii) DB Co's EB W-7 Transitway detour shall utilize a route from Bayshore Station westerly on the Bayshore Station access road to Holly Acres Road, southbound on Holly Acres Road to the new temporary Highway 417 N/S-E bus-only ramp, EB on Highway 417 shared lanes from Holly Acres Road to Greenbank Road EB off ramp, where buses will travel through the intersection of Greenbank Road/Iris Street to access the temporary station on Greenbank Road/Highway 417 S-E ramp, then continue EB on Highway 417.
- (c) The prescribed detour route, in Clause 3.12 (b) (iii), of this Part 7, requires Roadway modifications and access modification that are described in Clause 3.12 (d), of this Part 7. DB Co shall conduct a PIC, in accordance with the provisions of Schedule 18 – Communication and Stakeholder Engagement Obligations, at least 90 calendar days prior to the start of the W-7 Transitway detour to inform and consult with the public on the details of the detour. In addition to general information regarding the traffic and transit management measures to be used and the timelines associated with the detour, the PIC shall provide specific information concerning: the temporary closure of the Richmond Road N-E ramp, the opening of the temporary Holly Acres N/S-E bus-only ramp, the potential addition of a third eastbound left turn lane to the Highway 417 W-N/S ramp terminal at Greenbank, and the closure of the Ashley Street connection to the Highway 417 W-N/S ramp terminal at Greenbank. DB Co shall prepare a report following the PIC, to be submitted to the City and MTO, summarizing the feedback received from the public, as well as any resultant recommended revisions to DB Co's detour plan.
- (d) Transit Access and Circulation Roadway Closures – Pinecrest Station:
 - (i) DB Co shall maintain the full use of both Station platforms at Pinecrest Station for the full duration of construction until the following are designed, constructed and commissioned or unless approval from the City and OC Transpo is otherwise obtained.

- A. DB Co shall design and construct the new N-W ramp from Pinecrest Road to Highway 417, as part of the Pinecrest interchange project outlined in Schedule 15-2, Part 9 – Highway Works;
- B. DB Co shall design and construct a bus loop west of Pinecrest Station to be used for a bus turnaround when the West Transitway from Pinecrest Station to Bayshore Station is closed. The bus loop shall accommodate the turnaround radius for all bus types used by OC Transpo;
- C. DB Co shall design and construct a temporary bus platform on the S-E ramp from Greenbank Road to Highway 417, to accommodate detoured EB Transitway buses. The temporary facilities shall include any features currently present at Pinecrest Station, including but not limited to the requirements in Appendix E of this Part 7;
 - i. DB Co shall decommission the temporary Pinecrest Station facilities at the S-E ramp from Greenbank Road to Highway 417 after West Substantial Completion and upon notice by the City, and shall be considered Remaining Works.
 - ii. DB Co shall evaluate whether modifying the W-N/S ramp terminal intersection at Greenbank Road/Iris Street to include a third eastbound left turn lane (transit-only) on the outside of the existing dual left turn lanes would provide a travel time benefit to eastbound OC Transpo buses while on detour. If the study finds this to be beneficial, DB Co shall modify the intersection to provide such a third eastbound left turn lane with maximized storage length, to the satisfaction of the City and MTO. DB Co shall include this analysis in their TTMP submission. The modification shall be temporary in nature, and DB Co shall restore the intersection to its pre-existing condition as Remaining Works.
- D. DB Co shall design and construct a widening of the west side of the intersection of Greenbank Road and Lisa Avenue to accommodate two EB lanes;
 - i. Upon completion of the widening, DB Co shall coordinate the temporary closure of Ashley Street to the W-N/S ramp with MTO and the City of Ottawa. The closure shall not impact the northernmost access to the property at [REDACTED].
- E. DB Co shall design and construct the new temporary N/S-E bus-only ramp from Holly Acres Road onto Highway 417, as part of the MTO Highway 417 widening project, in accordance with the provisions of Schedule 15-2, Part 9 – Highway Works. The design of this on-ramp shall be to the satisfaction of MTO and shall include:

- i. An on-ramp that is a single lane at the intersection with Holly Acres Road, allowing transit traffic only. The temporary on-ramp shall allow for the following traffic movements: southbound left turn, northbound right turn, eastbound through (from the S/W-N/S off-ramp).
 - ii. An eastbound lane on the existing Highway 417/Highway 416 off-ramp that shall terminate at a point 160m west of Holly Acres Road. DB Co shall conduct a traffic analysis of the intersection with Holly Acres Road to determine the recommended eastbound lane configuration at this intersection. This analysis shall consider that OC Transpo buses must be able to make both the eastbound left turn and eastbound through movements at this intersection, in addition to the southbound left turn movement; and,
 - iii. The existing median southbound through lane shall be temporarily converted into a southbound left turn lane.
 - iv. The existing Richmond Road N-E on-ramp shall be temporarily closed upon the opening of the Holly Acres N/S-E ramp and the commencement of the W-7 Transitway detour.
 - v. The temporary Holly Acres N/S-E on-ramp shall be closed and the Richmond N-E on-ramp shall be re-opened upon notice by the City as part of the Remaining Works.
- (ii) Construction vehicles shall not be permitted on the West Transitway west of Pinecrest Road, until such a time that the N-W ramp from Pinecrest Road to Highway 417 has been closed. When permitted on the Transitway, construction vehicles shall be restricted to travel between Pinecrest Road and the construction access point.
 - A. Construction vehicles shall not be permitted in Pinecrest Station during Peak Periods.
- (e) Transit Access, Pedestrian Circulation and Roadway Closures – Bayshore Station:
 - (i) Construction vehicles shall enter the Bayshore Station area directly from Holly Acres Road into the construction staging area, located at the southeast corner of Holly Acres Road / Highway 417 N/S-W ramp.
 - A. If access further east into Bayshore Station is required, it shall be made directly from the construction staging area.
 - B. Construction vehicles shall exit from the Bayshore Station area via the signalized intersection of Holly Acres Road / Highway 417 N/S-W ramp. Permitted hours of access shall be established based on a review by OC

Transpo and may be limited to Off Peak Periods in order to maintain an acceptable frequency of service to the Transitway detour operation in peak hours.

- C. The construction access onto the Bayshore Station access road shall be provided as far west as possible to avoid potential conflicts with Bayshore Station operations.
- (ii) DB Co shall maintain the full use of all Station platforms at Bayshore Station for the full duration of construction until the following are designed, constructed and Commissioned or unless approval from the City and OC Transpo is otherwise obtained.
 - A. Construction of the LRT bridge over Holly Acres Road. DB Co shall stage construction of the bridge in the following order:
 - i. Required construction west of Holly Acres Road, including but not limited to the west bridge abutment and the new N/S-W on-ramp from Holly Acres Road to Highway 417. DB Co shall not be permitted to close the existing N/S-W on-ramp until the new N/S-W on-ramp is constructed.
 - ii. Required construction in the median of Holly Acres Road, including but not limited to the median pier. Prior to construction in the median on Holly Acres Road, DB Co shall ensure the new S-W on-ramp is open and operational. This will permit DB Co to use the available space of the former northbound left turn lane and hatched northbound lane on Holly Acres Road as part of its construction zone.
 - 1 DB Co shall undertake a traffic study for the temporary and ultimate intersection of Holly Acres Road at Bayshore Station access, including the new N/S-W on-ramp, to ensure the intersection operates acceptably, and that vehicles can safely make the northbound left turn from Holly Acres Road onto the N/S-W ramp.
 - iii. Required construction east of Holly Acres Road, including but not limited to the east bridge abutment.
 - B. Construction within Bayshore Station to accommodate the temporary Bayshore Station arrangement, including:
 - i. A separate two-way access to the Transitway east of the existing Bayshore Station. This access shall be located far enough east that it will not be impacted by construction on the ultimate Bayshore Station;

- ii. A temporary lay-up and temporary bus Platform area west of the existing local bus Platforms. The lay-up area shall match the capacity of the existing lay-up area at Bayshore Station, and the Transitway Platforms shall match the lengths provided today for the existing Transitway Platforms;
- (f) DB Co shall complete the following as Remaining Works:
 - (i) Designate the additional eastbound lane on the Highway 416/Highway 417 off-ramp at Holly Acres Road as a general traffic left turn lane. Re-assign the lanes on the eastbound approach to accommodate two left turn and two right turn lanes;
 - (ii) Construct the ultimate alignment for the intersection of Holly Acres Road at Bayshore Station, as outlined in Schedule 15-2, Part 2, Article 6 - Roadways, Bus Terminals and Lay-bys;
 - (iii) Construct the ultimate layout for Bayshore Station, and reinstate the temporary lay-up and Transitway platform area of Bayshore Station to existing conditions.
 - (iv) Re-open the temporarily closed Richmond Road N-E ramp and close the Holly Acres N/S-E bus-only on-ramp.

3.13 West Transitway Segments W-8 & W-9 - Bayshore Station to Moodie Station

- (a) DB Co's approved Transitway staging and detour plans for W-8 (from Bayshore Station to Holly Acres Road) and W-9 (from Holly Acres Road to Moodie Station) shall be commissioned and in operation prior to full closure of any component of the Transitway from Bayshore Station to Moodie Station.
- (b) DB Co shall stage the construction of the LRT from Bayshore Station to Moodie Station in such a manner that minimizes the duration of the closure of the Transitway between Bayshore Station and Moodie Station.
- (c) Upon closure of the Transitway between Bayshore Station and Moodie Station, DB Co shall implement a transit detour along Highway 417 from Bayshore Station to Moodie Station.
 - (i) DB Co's W-8 and W-9 transit detour routes shall remain in operation until after West Substantial Completion.
 - (ii) DB Co's WB W-8 and W-9 transit detour shall utilize a route from Bayshore Station, WB along the Bayshore Station access road to Holly Acres, WB onto the Highway 417 N/S-W ramp at Holly Acres Road, WB Highway 417 shared lanes from Holly Acres Road to Moodie Drive, WB through the intersection of Moodie Drive at Highway 417 E-N/S ramp, and continue WB on its standard route.
 - (iii) DB Co's EB W-8 and W-9 transit detour shall utilize a route from Highway 417 EB, EB on the Highway 417 W-N/S ramp at Moodie Drive, EB through the

intersection of Moodie Drive at Highway 417 W-N/S ramp, EB on Highway 417, EB on the Highway 417 W/S-N/S ramp at Holly Acres Road, and then across Holly Acres Road onto the Highway 417 N/S-E ramp or NB on Holly Acres Road and EB into Bayshore Station via the Bayshore Station Access Road.

- A. DB Co shall work with OC Transpo to ensure at least one EB bus route from Kanata serves the intersection of Moodie Drive and Corkstown Road.
 - B. DB Co shall ensure that the EB detour provides for both access to Bayshore Station, as well as bypassing of Bayshore Station.
- (iv) DB Co shall maintain the existing OC Transpo stops located on the W-N/S and E-N/S off-ramps at Moodie Drive, to be used by Transitway buses during the detour period.
- (d) DB Co shall maintain the full use of the West Transitway Extension from Bayshore Station to Moodie Station, the full use of both Station platforms at the existing Corkstown BRT Station, the existing PPUDO, as well as the EB transit-only ramp from Moodie Drive, until the following are designed, constructed and commissioned unless approval from the City is otherwise obtained:
- (i) The N/S-E ramp from Holly Acres Road onto Highway 417, as part of the Highway Work, in accordance with the provisions of Schedule 15-2, Part 9 – Highway Works, and as described in Clause 3.12 of this Part 7.
 - (ii) Bus shelter pads and bus shelters are installed on:
 - A. The east side of Moodie Drive, immediately north of the Highway 417 E-S ramp signalized intersection; and,
 - B. The south side of the Highway 417 W-N ramp, immediately west of the Moodie Drive signalized intersection.
- (e) Construction vehicles shall not be permitted in the Corkstown BRT Station or on the Transitway in the vicinity of Corkstown BRT Station, until such a time that the West Transitway Extension is fully closed for construction.
- (f) DB Co shall stage construction of the Highway 417 N-W ramp at Moodie Drive so that it remains open at all times to accommodate OC Transpo service westbound to Kanata.

3.14 East Transitway Segment E-1 - Blair Station to OR174 Transitway Bridge

- (a) DB Co's approved Transitway staging and detour plans for E-1 from Blair Station to OR174 Transitway Bridge shall be commissioned and in operation prior to full closure of any component of the E-1 Transitway from Blair Station to OR174 Transitway Bridge

- (b) Prior to any partial closure of the WB bus lanes from OR174 Transitway Bridge to Blair Station, DB Co shall design, construct and commission the following:
 - (i) Reconstruct the east side of the intersection of Blair Road / OR174 E-N/S ramp to accommodate a WB through bus-only lane, and replace the existing northeast island and channelized WB right-turn lane with a right-turn lane at the traffic signal, as well as any modifications required to the intersection (including the north median) to accommodate the noted changes;
 - (ii) Repurpose the southernmost lane on the west side of the intersection of Blair Road / OR174 E-N/S ramp to accommodate an EB right turn bus-only curbside lane. The existing general traffic lanes on the west side of the intersection shall be maintained;
 - (iii) Implementation of a transit signal priority for the EB right turn movement at the intersection of Blair Road / OR174 E-N/S ramp; and
 - (iv) Extend the WB OR174 bus-only lane to the start of the E-N/S ramp.
 - (v) Undertake a traffic study including a detailed intersection operation and level of service analysis, considering vehicular and non-vehicular road user needs at the intersection of Blair Road and OR174 E-N/S ramps. DB Co shall demonstrate that the traffic and transit operations and associated levels of service are acceptable and feasible using projected traffic volumes and expected transit operations for 2031 horizon year, including pedestrian and cyclist movements.
 - A. DB Co shall submit to the City the results of the above-noted traffic analysis report and seek approval from the City at least 20 calendar days prior to initiating the development of geometric design.
 - (vi) No reinstatement is required to the Roadway at this location after East Substantial Completion.
- (c) Prior to the full closure of the Transitway from Blair Station to OR174 Transitway Bridge, DB Co shall design, construct and Commission the following:
 - (i) Widen Blair Road at the intersection with OR174 W-N/S to accommodate a dedicated southbound left turn lane for general traffic. Southbound lane configuration at this intersection shall be two southbound through lanes and a southbound left turn lane, with all lanes having a 3.5m width;
 - A. The widening of Blair Road shall preserve a 4m space on the west side of Blair Road, between the edge of the southbound lane and the guard rail, to accommodate a future cycling facility; and,

- B. Widening shall take place on the east side of Blair Road, as required to accommodate all lanes, and will require the relocation of two streetlights and adjustment of traffic signal poles.
- (ii) Repurpose the existing WB bus-only right turn lane at the Blair Road / OR174 W-N/S intersection to accommodate a WB general purpose left turn lane;
- (iii) Widen the OR174 N/S-E ramp at Blair Road to accommodate two lanes at a point 180m east of Blair Road. At this point, the southernmost lane shall be a bus-only lane. This bus-only lane shall continue onto OR174 EB, and connect with the existing OR174 EB bus-only lane further east;
- (iv) Remove the crosswalk on the southern leg of the intersection of Blair Road at OR174 N/S-E Ramp.
- (v) Undertake a traffic study including a detailed intersection operation and level of service analysis, considering vehicular and non-vehicular road user needs at the intersection of Blair Road and OR174 W-N/S ramps. DB Co shall demonstrate that the traffic and transit operations and associated levels of service are acceptable and feasible using projected traffic volumes and expected transit operations for 2031 horizon year, including pedestrian and cyclist movements;
- A. DB Co shall submit to the City the results of the above-noted traffic analysis report and seek approval from the City at least 20 calendar days prior to initiating the development of geometric design; and,
- (vi) No reinstatement shall be required to intersection of Blair Road at OR174 W-N/S ramps, however the EB bus lane located on the N/S-E ramp shall be removed as Remaining Works.

3.15 East Transitway Segment E-2 to E-5 - OR174 Transitway Bridge to Trim Road Station

- (a) OC Transpo bus services within Segments E-2 to E-5 are currently located on OR174 bus only lanes from OR174 Transitway Bridge to Trim Road Station. These shall remain in service at all times during construction, unless otherwise permitted in this Part 7.
- (b) Transit Access and Circulation Roadway Closures – Montreal Station:
 - (i) DB Co shall maintain access to bus stops, Platforms and Stations for pedestrians and buses at all times. Provisions for access to transit shall be demonstrated in all TCPs prior to any sidewalk and/or pathway closures.
- (c) Transit Access and Circulation Roadway Closures – Jeanne d’Arc / OR174 interchange:
 - (i) Where construction pursuant to this Project requires lane closures within the vicinity of the Jeanne d’Arc / OR174 interchange, DB Co shall provide 35

calendar days' notice prior to the day on which the lane closures will be required. DB Co shall coordinate all lane closures with the City and OC Transpo.

- (ii) One sidewalk on Jeanne d'Arc Boulevard shall remain accessible to the public at all times during construction.
 - (iii) DB Co shall maintain access to bus stops, platforms and Stations for pedestrians and buses at all times. Provisions for access to transit shall be demonstrated in all TCPs prior to any sidewalk and/or pathway closures.
- (d) Orleans Boulevard
 - (i) Both sidewalks on Orléans Boulevard shall remain accessible to the public at all times during construction.
 - (ii) DB Co shall maintain access to bus stops, platforms and Stations for pedestrians and buses at all times. Provisions for access to transit shall be demonstrated in all TCPs prior to any sidewalk and/or pathway closures.
- (e) Transit Access and Circulation Roadway Closures – Place d'Orléans Station:
 - (i) Except as specified below, DB Co shall maintain public access between the Place d'Orléans bus terminals and the Park & Ride (north of OR174) via the pedestrian Bridge at all times during construction, as well as maintain public access to the bus terminal at ground level from the shopping center. Provisions for access to transit facilities shall be demonstrated in all TCPs prior to any sidewalk/pathway closures.
 - (ii) Access via the pedestrian Bridge may be interrupted during two 48-hour Weekend Periods to enable construction of interfaces between new Station facilities and the existing Bridge. Any hoarding required within the pedestrian Bridge to protect from construction zones shall not take up more than one metre of width inside the pedestrian Bridge. Provisions for access to transit facilities shall be demonstrated in all TCP sub-plans prior to any sidewalk/pathway closures.
 - (iii) The west sidewalk on Champlain Street shall remain accessible to the public at all times during construction both on the overpass and into the shopping center, with the exception of one 1-week permissible interruption to enable construction of interfaces between new Station facilities and the existing Bridge. This Work cannot occur simultaneously with the closure of the pedestrian Bridge described in (ii) above. The east sidewalk shall remain accessible to the public at all times.
 - (iv) DB Co shall design and construct three temporary lay-by spaces in the curbside lane of Place d'Orleans Drive during staged construction, and prior to any reduction in lay-up capacity at Place d'Orléans Station. DB Co shall confirm the location of the temporary lay-by spaces with the City and submit the design in accordance with Schedule 10 – Review Procedure.

- A. DB Co shall provide an unobstructed opening in the concrete barrier wall between Place d'Orleans Drive and Place d'Orleans Station to provide bus operators with access to the Station. The location of the opening shall provide unobstructed sightlines and be visible to vehicles approaching west of the opening. DB Co shall confirm the location of the opening with the City.
 - B. DB Co shall design and construct an energy attenuator crash cushion system at the downstream edge of the opening in the concrete barrier.
 - C. Following the staged construction of Place d'Orleans Station, DB Co shall reinstate a continuous concrete barrier wall. This shall be completed as Remaining Works.
- (f) Transit Access and Circulation Roadway Closures – Trim Road Station:
- (i) DB Co shall maintain the existing quantity of parking stalls at the Trim Road Park and Ride (1067) throughout all stages of construction on the Trim Road Park and Ride and the intersection of realigned Trim Road at OR174 interchange. Notwithstanding the above, any request for a reduction of available stalls during a particular stage of construction shall be submitted to the City for approval. Any requests to reduce the number of stalls to fewer than 900 will not be granted.
 - (ii) DB Co shall construct the new bus loop, Station platforms, bus operator facilities and PPUDO prior to decommissioning the existing bus lay-up, Platform area, and bus operator facilities.

ARTICLE 4 EXISTING FEDERAL ROADWAYS

4.1 Permitted Periods of Closures on Federal Roadways

- (a) Construction on federal Roadways shall not be performed during the following Peak Periods unless noted as an exception in this Part 7:
 - (i) Monday to Friday inclusive: 06:30 to 09:30 hrs and 15:00 to 18:30 hrs.
- (b) DB Co shall develop a sequencing plan to minimize the length of the federal Roadway that is closed at any one time.

4.2 Restrictions on Construction Operations on Federal Roadways

- (a) DB Co shall liaise with the City, and the Governmental Authority that has governance over the subject federal Roadway and arrange all Work on the federal Roadway to the written satisfaction of said Governmental Authority, and, DB Co shall include in their Work submission of the TTMP and TTMP sub-plans in accordance with Schedule 10 – Review Procedure, all of the documentation and drawings relevant to traffic management prepared in accordance with this Article 4, as accepted by the Governmental Authority, and include as well a copy of Governmental Authority acceptance of all of the Work proposed on the federal Roadway.
- (b) DB Co shall not proceed with any Work on federal Roadways without an accepted TTMP and TTMP sub-plans applicable to said Work.
- (c) Protection of Public Traffic
 - (i) DB Co shall comply with requirements of Acts, Regulations and By-Laws in force for regulation of traffic or use of Roadways upon or over which it is necessary to carry out Work or haul materials or equipment.
 - (ii) When working on traveled way, DB Co shall:
 - A. Place equipment in position to present minimum of interference and Hazard to traveling public.
 - B. Keep equipment units as close together as working conditions permit and preferably on same side of traveled way.
 - C. Not leave equipment on traveled way overnight.
 - (iii) DB Co shall erect suitable signs and devices in accordance with instructions contained in the OTM before re-routing traffic.
 - (iv) DB Co shall keep the traveled way graded, free of pot holes, and of sufficient width for required number of lanes of traffic. DB Co shall provide a minimum

Roadway width of 7.0m in each direction of travel through the Work and on detours.

- (v) DB Co shall provide and maintain road access and egress to properties fronting along Work and in other areas as indicated, unless other means of road access exist that meet approval of the City and the applicable Governmental Authority. Access to and from the Transitway shall be maintained during the construction of the SJAM Parkway.
- (d) Informational and Warning Devices
 - (i) DB Co shall provide and maintain signs, flashing warning lights, temporary signals, and other devices required to indicate construction activities or other temporary and unusual conditions resulting from Project Work which requires road user response.
 - (ii) DB Co shall supply and erect signs, delineators, barricades, and miscellaneous warning devices as specified in the OTM. All signs shall be bilingual.
 - (iii) DB Co shall arrange and attend a meeting with the City and the Governmental Authority at least five working days prior to commencement of Work to review list of signs and other devices required for the Project. If the situation on Site changes, DB Co shall revise the list to the approval of the City and Governmental Authority, and, resubmit the TTMP and applicable TTMP sub-plan Work Submittals in accordance with Schedule 10- Review Procedure.
 - (iv) DB Co shall continually maintain TCDs in use by:
 - A. Checking signs daily for legibility, damage, suitability, and location. Clean, repair, or replace to ensure clarity and reflectance.
 - B. Removing or covering signs which do not apply to conditions existing from day to day.
- (e) Control of Public Traffic
 - (i) DB Co shall provide flag persons, trained in accordance with, and properly equipped as specified in the OTM in the following situations:
 - A. When public traffic is required to pass working vehicles or equipment which block all or part of traveled Roadway.
 - B. When it is necessary to institute one-way traffic system through a construction area or other blockage where traffic volumes are heavy, approach speeds are high, and traffic signal system is not in use. Flag persons shall be provided (one at each access point to the Site) during Peak Periods when one-way traffic is operational.

- C. When workmen or equipment are employed on traveled way over brow of hills, around sharp curves, or at other locations where oncoming traffic would not otherwise have adequate warning.
 - D. Where temporary protection is required while other TCDs are being erected or taken down.
 - E. For emergency protection when other TCDs are not readily available.
 - F. In situations where complete protection for workmen, working equipment, and public traffic is not provided by other TCDs.
- (ii) DB Co shall submit a proposal in writing to the City four weeks before the anticipated date of construction, should DB Co plan to proceed with Work between November 15th of any calendar year and May 15th of the subsequent year. The proposal will be evaluated against such issues as, but not limited to, road maintenance activities and impacts on public traffic.
 - (iii) DB Co shall not be entitled to claim for any costs (direct or indirect) or extensions of time if the Governmental Authority refuses to allow Work between November 15th of any calendar year and May 15th of the subsequent year. The Governmental Authority reserves the right to restrict DB Co from working on days when inclement weather conditions are forecasted that will impact road conditions. The Governmental Authority will provide DB Co with 24 hours' notice to vacate the Work area and no Work shall commence until the Governmental Authority provides written notice for Work to resume.
 - (iv) DB Co shall keep the City informed of all ongoing Work related discussions with Governmental Authority, and shall via Work submittals made in accordance with Schedule 10 - Review Procedure, maintain all applicable TTMP and TTMP sub-plans current with respect to the Work as accepted by the federal Governmental Authority.

4.3 Construction on or Adjacent to Federal Roadways

- (a) The SJAM Parkway may be reduced to one lane of traffic in each direction using partial lane closures in accordance with the OTM for short duration Work during Off Peak Periods, Night Periods, and/or as detailed in this Part 7.
- (b) All short duration Works shall be re-opened to two general traffic travel lanes in each direction c prior to the Peak Periods each Work day.
- (c) DB Co shall maintain positive Drainage along SJAM Parkway during all staged construction at all times.
- (d) DB Co shall schedule its operations such that vehicles shall not travel on a gravel or milled surface for more than three days.

- (e) DB Co shall retain the City's Street Light Maintenance Provider for the supply, installation and maintenance of all temporary lighting as required to maintain the existing illumination levels during the construction, and for the removal of temporary lighting upon completion of the work, at their cost. DB Co shall be responsible for coordinating the scheduling of the disconnections and reconnections with the Utility Company.
- (f) DB Co shall maintain the existing or provide appropriate temporary vehicular, pedestrian and cycling accesses to and from the parking lots that serve the Kitchissippi Lookout and Westboro Beach at all times, until such a time that DB Co has provided adequate replacement facilities, as per Schedule 15-2, Part 2, Clause 6.21, that have been approved by the City.

4.4 Transitway, Detours, and Stations

- (a) Transitway services from Dominion Station to Lincoln Fields Station shall remain on the SJAM Parkway, and the bus-only lanes shall remain in service at all times, until after West Substantial Completion and upon notice by the City.

4.5 Accommodation of Pedestrians and Cyclists

- (a) Pedestrian and cycling access and egress to the existing sidewalks, pedestrian pathways, and MUPs shall be as outlined in Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements.

4.6 Ground Mounted Signs

- (a) DB Co shall provide bilingual information signs as follows:
 - (i) Along the SJAM Parkway, 0.5km east of Dominion Station, 0.5km West of the Cleary Underpass, and on Island Park Drive north and south of SJAM Parkway; 120 x 240cm sign with message "Lane Closure on Parkway, Expect Delays" together with the pertinent dates and times.
 - (ii) The locations of all signage shall be shown on the DB Co's TCP. The text to appear on the signs shall be approved by the City and the federal Authority prior to fabrication of the signs.
 - (iii) The locations of all signage shall be shown on the DB Co's TCP. The text to appear on the signs shall be submitted to the City for approval prior to fabrication of the signs.
- (b) Signs shall remain in place for the duration of the construction period in the area affected by the Work.

4.7 Portable Variable Message Signs

- (a) DB Co shall provide 35 calendar days advanced notice to the City of Roadway closures.

- (b) DB Co shall use lighted, changeable, bilingual message signs, and shall be used in accordance with Clause 1.5(b) of this Part 7.
- (c) DB Co shall provide two signs located along SJAM Parkway at locations to be approved by the City.
- (d) These signs shall be removed at the start of construction.

4.8 Traffic Control Plan Sub-Plan

- (a) DB Co shall prepare a specific TCP sub-plan for SJAM in accordance with the requirements of this Part 7.

**ARTICLE 5 EXISTING PROVINCIAL HIGHWAYS AND MUNICIPAL
ROADWAYS WITHIN MTO ROW**

5.1 General Requirements

- (a) The requirements in this Article 5 are applicable to the following Roadways:
- (i) Existing Provincial Highway 417 and Highway 416 including all interchange ramps; and
 - (ii) Existing Municipal Roadways connecting or spanning over Highway 417 within MTO's designated jurisdiction, including but not limited to:
 - A. Holly Acres Road;
 - B. Richmond Road;
 - C. Pinecrest Road / Greenbank Road;
 - D. Moodie Drive.
- (b) DB Co shall liaise with the City and the MTO, which has governance over the subject Provincial Highway, and arrange all Work on the Provincial Highway to the written satisfaction of the MTO, and, DB Co shall include in their Work submission of the TTMP and TTMP sub-plans in accordance with Schedule 10 – Review Procedure, all of the documentation and drawings prepared in accordance with this Article 5, as accepted by the MTO.
- (c) DB Co shall not proceed with any construction activities on Provincial Highways without an accepted TTMP and TTMP sub-plans applicable to said construction activities.
- (d) DB Co shall ensure that there is coordination between the TTMP required for the West Works and the Highway Works as per Schedule 15-2, Part 1, Article 5 – Implementation Constraints.
- (e) DB Co shall provide and use PVMS for all closures, detour routes and diversions including ramps. PVMS shall be placed at strategic upstream locations to allow motorists the opportunity to divert prior to reaching the closure, detour route or diversion location. The PVMS location shall be submitted to and approved by the City in accordance with Schedule 10 – Review Procedure, as well as accepted by the MTO. PVMS placed in support of Highway Works shall be controlled by the OTOC.
- (f) PVMS shall be equipped with modems active on the MTO communications network to allow OTOC to operate. DB Co shall be responsible for modem procurement and activation from the modem supplier at least two weeks prior to requiring the signs. DB Co shall be responsible for all fees associated with the procurement of the modem including but not limited to activation of service, modem rental and monthly data communication fees.

- (g) DB Co shall provide at least 35 calendar days advance notice to the City and MTO for all closures, detour routes, and diversions.
- (h) Transit facilities on Highway 417 (West Transitway) shall remain in service until after West Substantial Completion and upon notice by the City.
- (i) DB Co failure to abide by the requirements set out in this Article 5 shall result in shutdown of the relevant Works until the requirements have been met.

5.2 Restrictions on Construction Operations on Provincial Highways

- (a) DB Co shall not use construction access/egress, shoulder closures or load and unload materials and construction equipment onto and from the traveled portion of Highway 417, Highway 416 and Highway 417 or Highway 416 interchange ramps on days identified under Clause 1.4 of this Part 7, or outside of the Permitted Periods for Closures as detailed in Tables 7-5.1A and 7-5.1B:
- (b) Construction operations shall not be carried out during the four hours preceding or three hours after any scheduled events at the [REDACTED]. DB Co shall obtain the schedule of events from the [REDACTED] website ([REDACTED]) and schedule Work accordingly.
 - (i) Events with fewer than 10,000 attendees, or “all-day” events that do not have a specific peak traffic demand period associated with them are exempted from this requirement.
- (c) Construction operations shall not be carried out during the two hours preceding or two hours after any [REDACTED], or other major events at [REDACTED], as identified by the City. DB Co shall obtain the schedule of [REDACTED] and be aware of other major events at [REDACTED] ([REDACTED]) and schedule Work accordingly.

5.3 Permitted Periods for Closures on Provincial Highways

- (a) Lane Closures and ramp closures for construction will only be allowed during the following times, subject to the additional restrictions covered under Clause 1.4 of this Part 7. Any Closures proposed by DB Co outside of the times indicated in Tables 5-1A and 5-1B shall be subject to review and approval by the City in accordance with Schedule 10 – Review Procedure. Applications by DB Co shall be supported by a traffic analysis.
- (b) Weekend Lane Closures
 - (i) All weekend lane closures shall be subject to the following conditions:
 - A. DB Co shall adhere to all traffic timing restrictions identified elsewhere in the PA, including holiday restrictions and [REDACTED] Events and [REDACTED].

- B. The exact weekend lane closure dates shall be subject to approval by the City and MTO.
- C. DB Co shall notify the Stakeholders and ESP of the Closure(s), as specified elsewhere in the PA.
- (c) Permitted lane closure periods for Provincial Highways included in Table 7-5.1A and 7-5.1B:

Table 7-5.1A – Section Description: Existing Highway 417 EB from Moodie Drive to Woodroffe Avenue

| Closure | Monday to Wednesday | Thursday | Friday | Saturday | Holiday or Sunday |
|---|--|---|---|--|--|
| One Lane Closure/ Construction access/egress; shoulder closures; load and unload of materials and construction equipment | 00:00 – 05:00 hrs 10:00 - 14:30 hrs 21:00 - 23:59 hrs | 00:00 – 05:00 hrs 10:00 - 14:30 hrs 22:00 - 23:59 hrs | 00:00 – 05:00 hrs 10:00 - 14:00 hrs 22:00 - 23:59 hrs | 00:00 – 10:00 hrs 22:00 - 23:59 hrs | 00:00 – 10:00 hrs 21:00 - 23:59 hrs |
| Two Lane Closure | 00:00 – 05:00 hrs 22:00 – 23:59 hrs | 00:00 – 05:00 hrs 23:00 – 23:59 hrs | 00:00 – 05:00 hrs 23:00 – 23:59 hrs | 00:00 – 08:00 hrs 23:00 – 23:59 hrs | 00:00 – 08:00 hrs 22:00 – 23:59 hrs |
| Three Lane or Full Closure** | 1:00 – 4:00 hrs for a max of 15 minutes each hour with mandatory use of OPP and PVMS | | | | |

Table 7-5.1B – Section Description: Existing Highway 417 WB from Woodroffe Avenue to Moodie Drive

| Closure | Monday to Wednesday | Thursday | Friday | Saturday | Holiday or Sunday |
|---|--|------------------------------|------------------------------|------------------------------------|------------------------------------|
| One Lane Closure/ Construction access/egress; shoulder | 00:00 – 06:00 hrs 10:00 - 14:30 hrs | 00:00 – 05:00 hrs 10:00 - | 00:00 – 05:00 hrs 10:00 - | 00:00 – 10:00 hrs 22:00 - 23:59 | 00:00 – 10:00 hrs 22:00 - 23:59 |

| | | | | | |
|---|--|--|--|--|--|
| closures; load and unload of materials and construction equipment | 21:00 - 23:59 hrs | 14:30 hrs 22:00 - 23:59 hrs | 14:00 hrs 22:00 - 23:59 hrs | hrs | hrs |
| Two Lane Closure | 00:00 – 06:00 hrs 22:00 – 23:59 hrs | 00:00 – 06:00 hrs 23:00 – 23:59 hrs | 00:00 – 06:00 hrs 23:00 – 23:59 hrs | 00:00 – 08:00 hrs 23:00 – 23:59 hrs | 00:00 – 08:00 hrs 22:00 – 23:59 hrs |
| Three Lane or Full Closure** | 1:00 – 4:00 hrs for a max of 15 minutes each hour with mandatory use of OPP and PVMS | | | | |

Applications for full closures are subject to acceptance by the City as part of the Works Submittals in accordance with Schedule 10 – Review Procedure and the MTO. *No two successive on or off ramps shall be closed at the same time.

(d) Construction Period Quality Failures deductions shall be applied as detailed in Schedule 21, Part B - Construction Period Failures.

(e) Closure Notification

(i) DB Co shall perform the following prior to lane, ramp and/or shoulder closures:

- A. Inform the City and MTO of any closure one week prior to the start date of the closure;
- B. Inform the City and MTO of any closure lasting more than one week at least two weeks prior to the start date of the closure;
- C. Inform the City and MTO of Emergency closures as soon as any details are known;
- D. Obtain a closure notification number from City and MTO for each closure;
- E. Inform the City and MTO of any closure that is being cancelled subsequent to A. and B. above;
- F. Notify the MTO Ottawa Area Communications Centre by phone (613-742-5319) immediately prior to the set-up of any closure stating the closure notification number and details of the closure;
- G. Notify the MTO Ottawa Area Communications Centre immediately of any changes to the closure or anticipated problems that may delay the opening time, stating the closure notification number and details of the changes to and/or problems with the closure; and

- H. Notify the MTO Ottawa Area Communications Centre immediately upon removing the closure stating the closure notification number and details of the closure.
- (f) Lane and Ramp Closures by OPP Officers (Paid Duty)
 - (i) DB Co shall incorporate OPP assistance into all lane and ramp closures. DB Co shall be responsible arrange for the OPP-assisted lane closures.
 - (ii) Lane/ramp closures on Highway 417 shall be subject to MTO's lane/ramp closure protocol restrictions.
- (g) Lane Closures and Full Closures for Queensview Pedestrian Bridge
 - (i) DB Co shall be permitted to fully close all lanes of Highway 417 between Pinecrest Road / Greenbank Road and Woodroffe Avenue on a weekend for 17 consecutive hours, from 18:00 hrs on the Saturday until 11:00 hours on the Sunday.
 - (ii) Lane reductions on Highway 417 associated with the full closure shall be permitted to commence at 16:00 hrs on the Saturday.
 - (iii) During the full closure period noted above, the following Highway 417 ramps shall be exempt from the restrictions of Clause 5.4 of this Part 7:
 - A. Pinecrest Road at Highway 417 E-N/S ramp;
 - B. Greenbank Road at Highway 417 S-E ramp;
 - C. Greenbank Road at Highway 417 N-E ramp;
 - D. Woodroffe Avenue at Highway 417 W-N/S ramp; and,
 - E. Woodroffe Avenue at Highway 417 N/S-W ramp.
 - (iv) DB Co shall provide advanced notice to the City and MTO as early as possible, or a minimum of 30 Business Days in advance of the scheduled closure. The dates scheduled by DB Co shall be subject to approval by the City and MTO. These closure dates shall not be scheduled during events identified in Clause 5.2 of this Part 7.

5.4 Ramp Closures

- (a) DB Co shall keep all ramps on Highway 417 fully open at all times, with exceptions noted in Table 7-5.2 below. Where a ramp has a single lane, only the shoulder may be closed. Where a ramp has more than one lane, only a single lane may be closed.

- (i) Any ramp closures proposed by DB Co outside of the times indicated in Table 7-5.2 shall be subject to review and approval by the City and MTO. Applications by DB Co shall be supported by a traffic analysis. DB Co shall be required to provide notification to the public a minimum of 30 business days prior to the closure.

Table 7-5.2

| CLOSURE | Monday to Wednesday | Thursday | Friday | Saturday | Holiday or Sunday |
|------------------------------|--|--|--|--|--|
| One Lane/Shoulder Closure | 00:00 - 6:00 hrs 10:00 - 14:30 hrs 22:00 - 23:59 hrs | 00:00 - 6:00 hrs 10:00 - 14:30 hrs 23:00 - 23:59 hrs | 00:00 - 6:00 hrs 10:00 - 14:00 hrs 23:00 - 23:59 hrs | 00:00 - 10:00 hrs 23:00 - 23:59 hrs | 00:00 - 10:00 hrs 22:00 - 23:59 hrs |
| Full Closure | 23:00 – 5:00 hrs (with mandatory use of PVMSs) | | | | |

- (b) DB Co shall not close two successive on and / or off ramps at the same time.
- (c) Temporary short term closure shall be permitted for one ramp at a time per interchange per direction.
- (d) DB Co shall utilize PVMS for all full ramp closures.
- (e) DB Co may utilize existing MTO PVMS for full closure of ramps, subject to approval of the City and MTO.

5.5 Construction on or Adjacent to Highway 417

- (a) The supply and placement of all traffic control required by the MTO shall be performed by DB Co in accordance with the Ontario Traffic Manual Book 7, “Temporary Conditions Manual”, latest edition, where construction is being carried out on or adjacent to Highway 417 or its ramps. This requirement is in addition to the MTO’s requirement for deployment of PVMS.
- (b) DB Co shall follow the requirements of the City’s Special Provision – General D-001, in addition to MTO requirements for construction on or adjacent to Highway 417.
- (c) Traffic Signal construction Start-Up Meeting

- (i) DB Co shall arrange a start-up meeting to confirm the protocol for the traffic signals at all affected intersections. The meeting shall also be used to confirm communication protocols with the MTO, DB Co, and the City of Ottawa Traffic Operations for dealing with traffic signal timing changes if required during construction. DB Co shall create a contact list and distribute it to all parties involved for any non-routine and/or emergency repairs to the traffic signals.
 - (ii) DB Co shall invite MTO Regional Traffic Office, MTO Electrical Coordinator, and City of Ottawa Traffic Operations to attend this meeting.
- (d) Advanced Notice of Work
 - (i) DB Co shall provide a minimum of 30 Business days advance notice to City and MTO of all Work that may impact the traffic signals, unless a signal design is required, in which case DB Co shall abide by the requirements set out in Schedule 15-2, Part 2, Clause 6.14.
- (e) Access to the Traffic Signal Controller Cabinets
 - (i) For any Emergency Work at any of the impacted traffic control signals, DB Co shall coordinate with the City of Ottawa Traffic Operations:
 - City of Ottawa
 - Transportation Services Department
 - Program Manager,
 - Signal Installation and Field Program (or the individual responsible for this function)
- (f) Construction Access to Moodie LMSF
 - (i) DB Co shall not be permitted to have a construction access to the LMSF site directly from Highway 417.

5.6 Transitway Detours

- (a) The City, in consultation with MTO, has developed a preliminary Transitway detour that utilizes Highway 417 from Southwest Transitway interchange to the Moodie Drive interchange when the Western Transitway from Pinecrest Station to Moodie Station are taken out of service during this contract. The following MTO constraints shall apply to DB Co's TTMP:
 - (i) DB Co shall be responsible for the design, coordination of the Highway 417 transit detour segments to the satisfaction and acceptance of MTO and the City.

5.7 MTO Encroachment Permits

- (a) DB Co shall obtain MTO Encroachment Permits prior to working within the Highway 417 ROW or on any Roadways adjacent to Highway 417 within MTO's designated

jurisdiction. DB Co shall provide the City with copies of the approved MTO Encroachment Permits immediately upon receipt of same.

5.8 Delivery and Trucking

- (a) DB Co shall plan and schedule the routes of vehicles transporting all Materials to, from or within the Site, so that vehicular movements are accomplished with minimum interference and interruptions to traffic according to Clauses 5.2, 5.4 and 5.5. This will necessitate vehicles to “slip-off” or “slip-on” in the direction of traffic, in order to merge with and thereby avoid crossing traffic lanes.
- (b) Access to and from the Highway ROW shall be restricted to ramps at the interchanges unless otherwise provided for in the Project Agreement.
- (c) Median cross-overs shall not be used except where single axle vehicles are entering a passing lane that is closed to traffic.
- (d) DB Co shall obtain the City's prior approval for the location of any "slip-off" or "slip-ons". The City reserves the right to alter, reject or close same as considered necessary. DB Co shall notify suppliers of materials and equipment of the above requirements.

ARTICLE 6 TRAFFIC AND TRANSIT MANAGEMENT PLAN

6.1 General Requirements

- (a) DB Co shall submit an initial TTMP to the City in accordance with Schedule 10 – Review Procedure no later than 60 calendar days following Commercial Close, and at least 30 calendar days in advance of the start of any construction activity, and in accordance with the requirements of this Part 7. Following the acceptance of the initial TTMP by the City, DB Co shall submit all subsequent proposed updates and changes to the TTMP to the City in accordance with Schedule 10 – Review Procedure. As a minimum, the initial TTMP shall be updated and submitted on an annual basis in accordance with Schedule 10 – Review Procedure. The initial TTMP is required to demonstrate DB Co's:
 - (i) general plan for achieving specific TTMP and TTMP sub-plan requirements for all construction elements having significant traffic impacts, as well as all transit detours, in coordination with DB Co's planned Project Schedule; and,
 - (ii) specific plan for managing traffic during the Initial Works.
- (b) The TTMP shall outline how public traffic, transit, transit customers, pedestrians, and cyclists as well as the traffic generated by construction activities, are to be managed. It shall include all aspects of traffic management as set out in this Part 7, as well as any traffic management related matters which may arise as a result of the execution of any aspect of the Work.
- (c) The TTMP and all updates thereto shall be consistent with and comply with all of the requirements set forth in this Part 7 and all other relevant provisions of this Project Agreement, the OTM, and City of Ottawa Operation Policies, Procedures and Guidelines.
- (d) The final submission of the TTMP or TTMP sub-plans shall be stamped by DB Co's designated Traffic Engineer, and signed off by DB Co's designated Traffic Manager, both of whom shall be as identified in Article 6.3 – DB Co Responsibilities, of this Part 7.
- (e) The TTMP and all updates thereto shall include a traffic and transit schedule which shall be adapted from the Project Schedule. The traffic and transit schedule shall show start and finish dates for all the information pertinent to traffic management for the Project, such as but not limited to, segment and Station closures, detours and diversions, and relevant submissions.
- (f) The TTMP shall show proof of constructability in terms of schedule (traffic and transit schedule versus Project schedule), and, in terms of on Site construction activities and physical Work area requirements versus spatial accommodations for TTMP and TTMP sub-plan traffic management requirements.
- (g) DB Co's TTMP shall consider all direct and indirect impacts relating to the construction that pertain to the existing operations of the City and the street network within, and

include impacts on all road users, pedestrians, cyclists, transit vehicles, and private vehicles of all types.

- (h) DB Co's TTMP shall reference and interface with DB Co's Traffic QMP as described in Schedule 11 – Integrated Management System, DB Co's Emergency Traffic Plan as described in this Part 7, the OTM, and City of Ottawa Operation Policy and Procedures.
- (i) DB Co's updates to the TTMP shall be prepared and submitted in accordance with Schedule 10 – Review Procedure for any and all Project activities which may result in changes to the traffic management strategies set out in the TTMP. The initial TTMP shall be updated and submitted on an annual basis in accordance with Schedule 10 – Review Procedure.
- (j) DB Co shall not conduct any construction activity that affects traffic without a signed and sealed TTMP that is current to the activities on Site, and has been accepted by the City.
- (k) DB Co's TTMP shall comply with the definitions and guidelines provided in the OTM and City of Ottawa Operation Policy, Procedures and Guidelines.
- (l) DB Co's TTMP shall include the Pedestrian Access Plan as outlined in Schedule 15-2, Part 1, Article 5 – Implementation Constraints, the construction Site Pedestrian Control Plan as required by City of Ottawa Special Provision D-005, the specific requirements as identified in Schedule 15-2, Part 6 – Urban Design, Landscape Architecture and Connectivity Requirements, and as documented in COADS.
- (m) DB Co shall prepare detailed TCPs complete with traffic control layout drawings and fully integrated with the approved Project Schedule, outlining the provision of all forms of traffic control required throughout the duration of the Project. The plans shall be consistent with the TTMP and submitted in accordance with Schedule 10 – Review Procedure.
- (n) DB Co shall prepare drawings that address stage-specific activities and requirements for each stage of the Work that affects traffic. These drawings shall accompany the TTMP submissions in accordance with Schedule 10 – Review Procedure.
- (o) Any lane closure shall be approved in writing by the Governmental Authority and the City, and, that closure and the Governmental Authority shall be identified in the approved TTMP.
- (p) DB Co shall not perform any Work on Site without a TTMP and TTMP sub-plans which are current to the activities on Site, and, are accepted by the City.
- (q) The TTMP shall provide detailed drawings for Project-related designated truck access and egress points, the applicable haul and heavy vehicle routes through the City and applicable staging areas. The drawings shall be consistent with the TTMP and submitted in accordance with Schedule 10 – Review Procedure. As a minimum the designated truck route drawings shall be updated and submitted on an annual basis in accordance with

Schedule 10 – Review Procedure. The City may, at its discretion, require that DB Co’s Lands, where contiguous with an active construction Site, be utilized for haul and heavy vehicle routes in order to reach the City’s truck route network in a manner acceptable to the City.

- (r) The following TTMP sub-plans for DB Co’s TTMP are required and shall be submitted in accordance with Schedule 10 – Review Procedure. There shall be two distinct parts for each sub-plan – Confederation Line east and Confederation Line west – corresponding with the two geographic portions of the Project. The TTMP sub-plans shall be:
- (i) Traffic Control Plan;
 - (ii) Emergency Traffic Plan;
 - (iii) Traffic Incident Management Plan;
 - (iv) Traffic Management Implementation Plan;
 - (v) Transit Management Plan;
 - (vi) Traffic Advisory Temporary Signage Plan;
 - (vii) Traffic Risk Assessment Plan;
 - (viii) Traffic and Transit Management Communications Plan;
 - (ix) Traffic and Transit Management Monitoring Plan;
 - (x) Lane Closure Measurement and Verification Plan;
 - (xi) Transitway Lane Closure Measurement and Verification Plan; and,
 - (xii) Property Access and Business Continuity Plan.

6.2 Traffic and Transit Management Sub-Plans

- (a) Traffic Control Plans
- (i) DB Co shall prepare and submit Project specific TCPs in accordance with Schedule 10 – Review Procedure. The TCPs shall be prepared in accordance with the OTM, City of Ottawa Policies, Procedures and Guidelines and other Reference Documents for all activities that affect traffic operations, and shall include the following:
 - A. start and completion dates of Work;

- B. hours of Work and also indicate if there is a requirement to Work during peak hours;
- C. Work zone locations and direction and distance to nearest landmarks and survey stations;
- D. size of the Work zone;
- E. lanes affected by the Works;
- F. lane configuration in the Work zone;
- G. confirmation of whether accesses or intersections will be affected by the Work zone or by TCD;
- H. traffic volume capacity during the Project;
- I. proposed delays or closure times;
- J. show that local traffic access is maintained;
- K. scale drawing(s) in CADD identifying:
 - i. the location of the Work zone using landmarks and LKI where applicable;
 - ii. accesses or intersections affected by the Work zone or by TCDs;
 - iii. traveled lanes affected;
 - iv. resultant lane configuration including widths;
 - v. location of restricted width lanes;
 - vi. required closures;
 - vii. lane use requirements;
 - viii. posted speeds;
 - ix. requirements for road closure;
 - x. on-street parking spaces and parking meters/paystation affected by the Work;
 - xi. replacement strategy for affected on-street parking spaces;
 - xii. requirement for temporary no stopping signs;

- xiii. handicap, bus, taxi, loading, hotel, diplomat, tour bus or other zones affected by the Work, and the replacement strategy for each zone;
 - xiv. any bus routes and bus stops affected by Work activity;
 - xv. traffic and transit routing and detour requirements;
 - xvi. location of hazardous areas created by road geometry or local geography;
 - xvii. the location of vehicle storage areas if delays are anticipated;
 - xviii. any local roads used for a detour route;
 - xix. the design speed and the design vehicle for each road used as a detour route;
 - xx. any traffic signal changes required by the detour route or Project Works;
 - xxi. any signing impacted by the Work;
 - xxii. location of construction accesses, and safety provisions applied in instances where a construction access crosses a sidewalk, pathway, MUP or cycling facility;
 - xxiii. pedestrian and cyclist facilities, which shall be in conformance with the requirements of the Pedestrian Access Plan as required in Schedule 15-2, Part 1, Article 5 – Implementation Constraints, the construction Site Pedestrian Control Plan as required by City of Ottawa Special Provision D-005, and the requirements set out elsewhere in this Part 7.
- L. Should DB Co adopt a traffic control layout exactly as shown in OTM Book 7 with no changes, DB Co shall provide a reference to the OTM Book 7 layout. For any deviations to OTM Book 7, DB Co shall submit a custom traffic control layout as described in (ii) below;
- M. include scale custom traffic control layouts showing the placement of all TCD and Traffic Control Persons;
- N. be sealed by a Professional Engineer; and,
- O. include a summary description of the public notification undertaken wherein the subject matter of this specific TCP is mentioned.

- (ii) Custom traffic control layouts shall:

- A. be in CADD format and submitted to the City in PDF format;
 - B. be signed and sealed custom traffic control layouts;
 - C. show schematically the placement of all TCDs;
 - D. place all TCDs in accordance with the standards contained in the OTM;
 - E. follow symbol conventions for identifying TCDs as per the OTM;
 - F. show on the drawings the locations and details of all signs, PVMS, Pavement markings, barriers, and protective Works;
 - G. have all dimensions and explanatory notes on the drawing; and
 - H. show traffic operations at all phases of the Project.
- (iii) DB Co shall document any proposed DB Co-initiated closures, full closures, detour routes, Lane Shifts and diversions in the TCP. The TCP shall be updated and amended as required such that it is current at all times with respect to the existing and proposed traffic control measures in the field.
- (iv) DB Co shall conduct traffic analysis including modelling on the TCP for each construction stage and construction within each phase where traffic operations are affected. The traffic analysis shall determine the effect of each TCP on the capacity and operation, including the resulting vehicle delays, queue lengths, and traffic signal timing. The traffic analysis shall be conducted for the representative hour(s) and day(s) that each TCP is in operation. The analysis and the results and recommendations shall be provided to the City in accordance with Schedule 10 – Review Procedure.
- (v) DB Co shall be responsible for including construction generated traffic in the TCP and any associated analysis such as but not limited to the potential for conflict between construction generated traffic and pedestrian and cyclist movements.
- (vi) DB Co shall continuously measure the effectiveness of TCPs and, if those measurements indicate a TCP is non-compliant with the OTM, accepted TCPs and other Reference Documents, DB Co shall immediately adjust the TCP to bring it into compliance.
- (vii) Auxiliary lane lengths at existing signalized intersections shall not be reduced unless analysis confirms operation is acceptable to the City.
- (viii) DB Co shall implement the accepted TCPs and accepted revisions thereto.
- (b) Emergency Traffic Plan

- (i) DB Co shall prepare and submit an Emergency Traffic Plan in accordance with Schedule 10 – Review Procedure. The Emergency Traffic Plan shall specify how DB Co shall facilitate access for Emergency vehicles to and through affected Sites. DB Co shall consult with local municipalities and ESP in developing the Emergency Traffic Plan, and liaise closely with them throughout the design and construction as it evaluates and updates the plan on an annual basis, or, whenever there is a change in the Site conditions which materially alters the ability to execute the accepted Emergency Traffic Plan.
 - (ii) DB Co shall provide specific scenarios for Emergency vehicle access to and through the Site for each of the cases identified in the Traffic Incident Management Plan and the Traffic Risk Assessment Plan.
 - (iii) DB Co shall implement the accepted Emergency Traffic Plan and accepted revisions thereto.
 - (iv) DB Co shall update the plan such that the information therein is kept current with the upcoming and ongoing construction activities. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
 - (v) DB Co shall not commence any Work on Site without an applicable current accepted Emergency Traffic Plan.
- (c) Traffic Incident Management Plan
 - (i) DB Co shall prepare and submit a TIMP in accordance with Schedule 10 – Review Procedure. It shall be in accordance with the City of Ottawa Emergency Management Plan. The TIMP shall include a process flow chart which covers but is not limited to occurrence of the incident, nature and timing of notifications to partner agencies, names and coordinates of contacts, actions to address the incident, post incident review of process, and revisions thereto to the TIMP as appropriate. The primary objectives are to support the City in facilitating incident response and moving traffic safely and expeditiously around the incident. The plan shall specify how DB Co will provide access for Emergency vehicles and assistance to ESP, and how DB Co shall work with the City’s Traffic Incident Management Group in responding to the incident.
 - (ii) A traffic incident includes, but is not limited to, any of the following occurrences on or adjacent to a construction Site or detour route:
 - A. motor vehicle accidents;
 - B. pedestrian and cycling accidents;
 - C. Emergency road repairs;

- D. Emergency utility repairs;
 - E. Emergency road closures for fire, gas leak, etc.;
 - F. disabled vehicles; and
 - G. debris on the road.
- (iii) DB Co's TIMP shall:
- A. Work closely and effectively deal with major incidents with partner agencies including City, OPS, OC Transpo, STO, RCMP, OPP, MTO, City of Gatineau, Sureté du Québec, and the Ministry of Transportation of Québec;
 - i. These efforts shall include the provision of temporary TCDs and/or OPS in the vicinity of DB Co's construction Sites or detour routes as requested by the City's Traffic Incident Management Group.
 - B. Coordinate with the City of Ottawa Office of Emergency Management the communications to the public regarding the impacts to the road network of the incident, via the City, media, and VMSs, and in accordance with established communication protocols; and
 - C. Define a process to review incidents and propose modifications to the Project that shall reduce the severity and frequency of incidents.
- (iv) DB Co shall document all incidents, including but not limited to, date location, details of the incident, comments of the incident reporter, actions taken, partner agency and agency representatives contacted, follow-up action recommended to be taken and by whom, signed and dated. A copy of the document shall be given to the City within 48 hours of the occurrence of the incident.
- (v) DB Co shall implement the accepted TIMP and accepted revisions thereto.
- (vi) DB Co shall update the plan such that the information therein is kept current with the upcoming and ongoing construction activities. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
- (vii) DB Co shall not commence any Work on Site without an applicable current accepted TIMP.
- (d) Traffic Management Implementation Plan
- (i) DB Co shall prepare and submit a TMIP in accordance with Schedule 10 – Review Procedure. The TMIP shall identify the Traffic Control Supervisor, Traffic Engineer, and Traffic Manager, along with the qualifications and

experience of those named individuals demonstrating they meet the qualifications and experience identified in this Part 7.

- (ii) The TMIP shall define processes to ensure that the TTMP and each of the individual TTMP sub-plans are developed and implemented efficiently and appropriately, and that they are kept up-to-date with necessary modifications during the Project. In addition, the processes shall be set out in flow charts, one for the TTMP and one for each of the sub-plans, with an accompanying explanation provided to describe the activities represented by each box in each of the flow charts.
 - (iii) DB Co shall implement the accepted TMIP and accepted revisions thereto.
 - (iv) DB Co shall update the plan such that the information therein is kept current with the upcoming and ongoing construction activities. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
 - (v) DB Co shall not commence any Work on Site without an applicable current accepted TMIP.
- (e) Transit Management Plan
- (i) DB Co shall develop a Transit Management Plan that is integrated with the TTMP.
 - (ii) DB Co shall prepare and submit the Transit Management Plan in accordance with Schedule 10 – Review Procedure. It shall outline how the quality of transit services shall be maintained during all phases of construction. The Transit Management Plan shall contain the following information with respect to how DB Co intends to maintain transit service routes and comply with the requirements:
 - A. Accommodation of transit service routes as detailed in this Part 7;
 - B. Accommodation of the requirements in Article 3 – Existing Transitway System, of this Part 7;
 - C. Overall strategy and approach that DB Co intends to implement to maintain the quality of transit service routes throughout the construction period and minimize disruption to the Passengers;
 - D. Identify DB Co’s scheduled construction activities, closures, detour routes, Lane Shifts and diversions that have an impact on the existing transit service;
 - E. Overall strategy for administering the Transit Management Plan with the City that as a minimum demonstrates how DB Co will manage the notice requirements, reviews and approvals, Permits, and Commissioning that

shall be completed prior to implementing lane closures, diversions, or detours; and,

- F. Minimize the travel time for the pedestrians to access the existing Transit facilities.
- (iii) DB Co shall implement the accepted Transit Management Plan and accepted revisions thereto.
- (iv) DB Co shall update the plan such that the information therein is kept current with the upcoming and ongoing construction activities. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
- (v) DB Co shall not commence any Work on Site without an applicable current accepted Transit Management Plan.
- (f) Traffic Advisory Temporary Signage Plan
 - (i) DB Co shall prepare and submit a Traffic Advisory Temporary Signage Plan in accordance with Schedule 10 – Review Procedure. The primary objective of the Plan is to notify the City and other Stakeholders in advance of scheduled construction activities, closures, full closures, detour routes, Lane Shifts, and diversions.
 - (ii) The Traffic Advisory Temporary Signage Plan shall be prepared in accordance with the requirements set out in Schedule 15-2, Part 2, Article 6 – Roadways, Bus Terminals and Lay-bys.
 - (iii) The DB Co shall update the plan such that the information therein is kept current with the upcoming and ongoing construction activities. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
 - (iv) DB Co shall implement the accepted Traffic Advisory Temporary Signage Plan and accepted revisions thereto.
 - (v) DB Co shall not commence any Work on Site without an applicable current accepted Traffic Advisory Temporary Signage Plan.
- (g) Traffic Risk Assessment Plan
 - (i) DB Co shall prepare and submit a Traffic Risk Assessment Plan in accordance with Schedule 10- Review Procedure. DB Co shall identify all risks which may have an impact on traffic and state the measures to be implemented to manage, reduce, or eliminate the risks.

- (ii) DB Co shall perform an independent assessment to identify any risks that could have an impact on traffic management or special conditions that shall be addressed through DB Co's Traffic Risk Assessment Plan.
 - (iii) DB Co shall update the plan such that the information therein is kept current with the upcoming and ongoing construction activities. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
 - (iv) DB Co shall implement the accepted Traffic Risk Assessment Plan and accepted revisions thereto.
 - (v) DB Co shall not commence any Work on Site without an applicable current accepted Traffic Risk Assessment Plan.
- (h) Traffic and Transit Management Communications Plan
 - (i) DB Co shall prepare and submit a Traffic and Transit Management Communications Plan in accordance with Schedule 10 – Review Procedure. It shall describe clearly how DB Co shall communicate to the City and other Stakeholders about all matters relating to traffic flow, including specifically, how it shall provide timely notice of construction related delays, closures, detours, traffic incidents, and emergencies.
 - (ii) DB Co shall craft the Traffic and Transit Management Communications Plan to show how DB Co shall incorporate and carry out each of the requirements set out in Clause 1.12 of this Part 7.
 - (iii) DB Co shall implement the Traffic and Transit Management Communications Plan to apply throughout the Project Term.
 - (iv) DB Co shall ensure that the plan is maintained current as related to the activities on Site. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
 - (v) DB Co shall not commence any Work or Site preparations for same without an accepted Traffic and Transit Management Communications Plan.
 - (vi) DB Co shall consult with the City to identify the major user groups affected by the Project. Major user groups may include, but are not limited to, the following:
 - A. emergency and police services;
 - B. transit operating companies;
 - C. motorists;
 - D. cyclists;

- E. pedestrians;
 - F. transport and tour bus companies;
 - G. taxi and limousine companies;
 - H. MTO;
 - I. NCC;
 - J. PSPC;
 - K. property owners and businesses;
 - L. community organizers; and
 - M. special event organizers.
- (vii) DB Co shall develop and document a process which shall be integrated with the City's communication procedures for traffic management (such as the City Traffic Report and Public Service Announcements) to keep major user groups informed of planned traffic pattern changes, including, but not limited to the following: hauling and truck routes, transit impacts, detours, Lane Shifts, lane closures, sidewalk/MUP closures, access restrictions, schedule changes, and other traffic control procedures. Procedures for disseminating information related to unplanned traffic pattern changes shall be addressed in the Traffic Incident Management Plan. DB Co shall ensure that this process is acceptable to the Relevant Authorities.
- (viii) All public inquiries or complaints that DB Co receives shall be documented and handled immediately in the field and forwarded simultaneously to the City, 24-hours a day, seven days a week.
- (i) Traffic and Transit Management Monitoring Plan
- (i) DB Co shall prepare and submit a Traffic and Transit Management Monitoring Plan in accordance with Schedule 10 – Review Procedure. DB Co shall demonstrate how they will ascertain whether or not the TTMP Plan and the TTMP sub-plans are working as forecast. In cases where the forecasts are not being met, DB Co shall describe the means to adjust the plans such that the forecasts are met or exceeded.
 - (ii) Within each TTMP sub-plan submission, DB Co shall identify performance indicators tailored to the specifics of the sub-plan including but not limited to traffic volumes, travel times, and peak hour queue lengths. Upon acceptance of the sub-plan by the City, DB Co shall use those indicators on an ongoing basis to assess the effectiveness of the subject sub-plan. DB Co shall review the parameters of performance indication, and adjust the indicators accordingly in the

event that a sub-plan undergoes an update due to changes in Project as a result of any and all Project activities which may result in changes to the traffic management strategies set out in the TTMP.

- (iii) DB Co shall identify in their TTMP and their TTMP sub-plans, the acceptable level of performance achievable for each of the performance indicators, based on the calculations used in support of the accepted TTMP and TTMP sub-plans.
- (iv) The performance of the TTMP or TTMP sub-plan shall be deemed to be acceptable from each of a) a general traffic perspective, b) a transit perspective, c) a cycling perspective, and d) a pedestrian perspective, if the level of performance measured in the field during the execution of the TTMP traffic management measures meets or exceeds the level forecast in the TTMP for each of the respective perspectives. If the performance of any one or more of the perspectives is less than that forecast in the TTMP, then DB Co shall immediately formulate mitigation measures to bring the performance of that perspective up to the forecast standard.
- (v) DB Co shall perform field monitoring in advance of and during each stage or closure.
- (vi) DB Co shall be responsible for all means, methods and techniques used to undertake the monitoring services and shall provide all aspects necessary for the performance of the monitoring services, including labour, supervision, management, plant, equipment, tools, and materials.
- (vii) The field monitoring shall include as a minimum, Peak Period traffic volumes, travel time surveys, queue and delays and intersection operational performance within the impacted Roadway network. The monitoring plan shall include travel time and delay data specific to transit vehicles, if impacts to transit routes are anticipated.
- (viii) Field monitoring shall occur five Business Days after stage, detour implementation, or closure implementation, and every 20 Business Days thereafter for the duration of the Work. The frequency of monitoring post-implementation may be increased at the request of the City should issues be noted as a result of the field monitoring or the daily Site reviews.
- (ix) Within five Business Days of conducting the field monitoring, DB Co shall evaluate the data and submit a report summarizing the monitoring results and evaluating the performance of the stage, detour implementation, or closure implementation compared to DB Co's current TTMP and TTMP sub-plan.
- (x) Where applicable, the data collected shall include, but not be limited to:
 - A. General Traffic

- i. Traffic volumes – Peak Periods and AM and PM peak hour, at major intersections and other locations representative of the Roadway network impacted by the execution of the Project;
 - ii. Travel times – AM and PM peak hour along major Roadways or Project Segments, and other streets representative of the Roadway network impacted by the execution of the Project; and,
 - iii. AM and PM queue lengths for traffic movements at signalized intersections and other intersections representative of the Roadway network impacted by the execution of the Project;
 - B. Transit
 - i. Travel times - AM and PM peak hour travel times, as determined from OC Transpo GPS data, to be provided to DB Co upon request
 - C. Cyclists
 - i. Volumes – AM and PM Peak Periods; and,
 - ii. Condition of surface of cycling lanes and MUPs.
 - D. Pedestrians
 - i. Volumes – AM and PM Peak Periods; and,
 - ii. Surface condition of sidewalks.
- (xi) DB Co shall ensure that the plan is maintained current as related to the activities on Site. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
- (xii) DB Co shall create and execute a Daily Traffic Management Site Record as set out in Appendix B of this Part 7.
- (xiii) DB Co shall create and execute a Daily Traffic Monitoring Report as set out in Appendix C of this Part 7.
- (xiv) DB Co shall create and execute a Daily Lane Closure Report as set out in Appendix D of this Part 7.
- (j) Lane Closure Measurement and Verification Plan
 - (i) DB Co shall prepare and implement a Lane Closure Measurement and Verification Plan prior to implementation of any planned lane closures. The Lane Closure Measurement and Verification Plan shall describe how DB Co will evaluate their performance on lane closure progress in relation to the lane closure

plan it has submitted based on the requirements in Schedule 34 – Mobility Matters. This plan shall also describe the verification process through which the City can audit DB Co’s lane closure performance.

(k) Transitway Lane Closure Measurement and Verification Plan

- (i) DB Co shall prepare and implement a Transitway Lane Closure Measurement and Verification Plan prior to implementation of any planned lane closures. The Transitway Lane Closure Measurement and Verification Plan shall describe how DB Co will evaluate their performance on lane closure progress in relation to the lane closure plan it has submitted based on the requirements in Schedule 34 – Mobility Matters. This plan shall also describe the verification process through which the City can audit DB Co’s lane closure performance.

(l) Property Access and Business Continuity Plan

- (i) DB Co shall prepare and submit a Property Access and Business Continuity Plan, in accordance with Schedule 10 - Review Procedure. The goal of the plan is to support the business community in the construction Work zone and to maintain existing or equivalent vehicle and pedestrian access to all buildings and properties. This plan shall address elements of ensuring accessibility to business (for customers as well as deliveries) as well as promotion of the businesses in the affected corridors to assist them during the construction period.
- (ii) The Property Access and Business Continuity Plan shall address the following elements:
 - A. Maintaining effective access for all relevant modes currently available to all properties, including but not limited to, vehicles, deliveries, pedestrians and cyclists;
 - B. To the extent possible, maintain visual sight lines and facilitate maintenance of a clean and attractive environment despite construction;
 - C. A strategy for implementing temporary replacement of parking which is unavailable during construction. This strategy shall address provision of temporary parking lots and changes to on-street parking regimes; and
 - D. City and DB Co responsibilities for communication and Stakeholder engagement shall be defined in Schedule 18 – Communications and Stakeholder Engagement Obligations.
- (iii) The plan shall demonstrate how DB Co shall achieve the following property access requirements;
 - A. Maintain front door pedestrian access to all properties;

- B. When front door pedestrian access cannot be maintained, provide a minimum of 60 calendar days' notice to the affected property owner and tenants;
 - C. Maintain existing or provide equivalent vehicle access (i.e. maintain existing driveway location and width, maintain rear laneway width and configuration);
 - D. Identify when OPS traffic assistance shall be provided in accordance with City requirements;
 - E. Minimize delay for vehicles and pedestrians accessing retail stores; and
 - F. Provide Traffic Control Personnel where appropriate to maintain safe and adequate vehicle and pedestrian access.
- (iv) The plan shall demonstrate how DB Co shall achieve the following wayfinding and visibility requirements:
- A. Maximize the visibility of business frontages, including front doors;
 - B. Maintain locations and visibility of current business signage;
 - C. Where locations and/or visibility of current business signage cannot be maintained, relocate or design, supply and install new signs at locations which continue to provide high visibility and clear sightlines. These shall be conducted in consultation with the affected businesses;
 - D. Design, supply, and install additional signs to direct pedestrians and vehicles to business access routes; and
 - E. Maintain all signage as described above throughout the construction period.
- (v) The plan shall demonstrate how DB Co shall achieve the following communications requirements:
- A. Conduct ongoing community liaison during construction;
 - B. Provide adequate and specific notice to affected property owners and tenants for each stage of construction, including anticipated impacts and durations;
 - C. Provide sufficient notice and description of impacts to allow businesses to take actions to offset and/or mitigate business loss;
 - D. Maintain records of all notices;

- E. Provide prompt, formal written responses to complaints and provide document specific follow-up actions; and
 - F. Provide contacts for construction or a Community Liaison staff member outside normal business hours.
- (vi) DB Co shall support the City in accordance with Schedule 18 – Communications and Stakeholder Engagement Obligations, to engage with property owners and tenants throughout the corridor and BIAs throughout the Project, to inform them of upcoming changes in construction activity, facilitate mitigation of any construction-related access or parking issues between the properties and DB Co, and assist in ensuring that DB Co maintains access for each relevant mode and keeps the street clean to the extent possible.
 - (vii) DB Co shall update the plan such that the information therein is kept current with the upcoming and ongoing construction activities. DB Co shall submit the updated plan for review/acceptance in accordance with Schedule 10 – Review Procedure.
 - (viii) DB Co shall implement the accepted Property Access and Business Continuity Plan and accepted revisions thereto.
 - (ix) DB Co shall not commence any Work on Site without an applicable current accepted Property Access and Business Continuity Plan.

6.3 DB Co Responsibilities

- (a) DB Co shall accept full responsibility for quality control and quality assurance of all activities affecting the TTMP. The TTMP quality control process shall be included in the TTMP. DB Co shall ensure that all personnel identified in the TTMP are suitably qualified and licensed.
- (b) Traffic Manager
 - (i) DB Co shall designate a Traffic Manager, with the qualifications identified in Schedule 9 – Key Individuals, who shall be responsible for the following:
 - A. development, implementation, and management of the TTMP;
 - B. ensuring the City is kept informed of all upcoming traffic activities and any revisions to the TTMP;
 - C. ensuring that appropriate modifications are made to the TTMP if the specified traffic control measures are not achieving the requirements;
 - D. coordinating with persons carrying out Work in areas adjacent to the Project;

- E. co-chairing with the City the Traffic Management Committee;
- F. ensuring the timing and organized delivery of public and Stakeholder communication information;
- G. participating as DB Co's representative in coordinating with the City's Traffic Demand Management program and the Traffic Incident Management Group;
- H. sign-off of each and every TTMP and TTMP sub-plan prior to their submission to the City;
- I. review and sign off the Lane Closure Analysis Report required in Schedule 34 – Mobility Matters; and,
- J. Attend the Mobility Matters Review Meetings described in Schedule 34 – Mobility Matters.

(c) Traffic Engineer

- (i) DB Co shall designate a Traffic Engineer who is a Professional Engineer and has DB Co's authority to review, and shall seal, the TTMP and associated sub-plans and take responsibility for ensuring that all traffic engineering issues and requirements are taken into account.
 - (ii) The Traffic Engineer shall attend the Project's regularly scheduled Traffic Management Committee meetings and be DB Co's representative at the City's Traffic Control Centre when required.
 - (iii) The Traffic Engineer shall have the following qualifications:
 - A. 15 years of experience overall in the traffic engineering field
 - B. 10 years of experience specifically related to traffic modeling, intersection design, construction staging, and traffic signal infrastructure; and,
 - C. Experience in design/build type projects where Roadways and/or highways were constructed within an existing urban area.
 - D. Ensures all traffic signal notifications timelines as detailed in this Part 7 are met.
- (i) The Traffic Engineer shall oversee and direct record keeping, reporting and accounting of temporary and permanent traffic signal installations.

- (ii) The Traffic Engineer shall ensure all traffic signal notification timelines as detailed in Schedule 15-2, Part 2 – Civil and Guideway, and this Part 7 are met.
- (d) Traffic Control Supervisors
 - (i) DB Co shall designate Traffic Control Supervisors, each of whom shall have DB Co's authority to respond to traffic control requirements, and each of whom shall personally perform all the duties of the Traffic Control Supervisor, in accordance with this Part 7.
 - (ii) A Traffic Control Supervisor shall be on the Site full-time when construction activities are underway.
 - (iii) The duties of the Traffic Control Supervisor shall include but not be limited to the following:
 - A. Directing all traffic control operations for construction;
 - B. The Traffic Control Supervisor shall have direct line authority over all of DB Co's Traffic Control Personnel and procedures on the Site;
 - C. Liaising with the City, OC Transpo, and MTO, as required;
 - D. Recording the actual duration of lane closures, full closures, detours, Lane Shifts, and unauthorized traffic delays, and forwarding this information, on a daily basis, to the City's Lead Traffic and Mobility for information and appropriate action;
 - E. Monitoring queue lengths in active Work zones and implementing appropriate measures when such queues affect the operation and safety of provincial Roadways, Transitway, Major and Minor Municipal Roads, and other federal and municipal Roadways, and providing the City with documentation outlining the date, location, queue lengths, and measures taken;
 - F. Monitoring, and recording on a daily basis, the transit travel times through Work zones and detour routes, at a frequency and duration sufficient to identify operational performance issues. Coordinate with OC Transpo ahead of time to establish "geofence" points in the system before measurements are to take place in order to facilitate the collection of accurate date, route, time, and location data. Document and evaluate the transit travel times versus the forecast times established in the TTMP submissions. Identify operational performance issues and the DB Co recommended mitigation measures immediately to the City. Provide a copy of the record, issues, and mitigation measures to the City daily.

Prepare and submit to the City on a monthly basis, a monthly summary report of the daily reports. Report the operational performance issues and their resolution at the next Traffic Management Committee meeting and record the same in the notes of the meeting;

- G. Respond to traffic related incidents resulting from construction and traffic management activities. All major incidents shall be documented within 48 hours of the incident and provided to the City per Clause 6.2(c) of this Part 7;
- H. H. Documenting traffic control measures and activities in accordance with this Part 7, and producing a Daily Traffic Monitoring Report and Daily Lane Closure Report as set out in Appendices C and D of this Part 7, respectively;
- I. Documenting site instructions and items noted on daily (site) reports which pertain to or affect traffic control, and updating the Traffic Control Plans immediately to reflect the changes on Site, and then promptly submitting the revised plans to the City in accordance with Schedule 10 - Review Procedure, as updates to the TTMP and applicable TTMP sub-plans;
- J. Overseeing all requirements that contribute to the safety, convenience, and orderly movement of vehicular, cycling and pedestrian traffic;
- K. Attending the Project's regularly scheduled traffic management meetings; and
- L. Traffic control supervision shall be provided by Traffic Control Supervisors on the Site on a 24 hour per day basis when construction activities are underway. During non-Work periods, the Traffic Control Supervisor or accepted alternate shall be on the Site within 30 minutes of being notified. The Traffic Control Supervisors shall have appropriate personnel and equipment available on call, at all times.
- M. Perform daily drive-by inspections as detailed in Appendix G of this Part 7.

(e) Traffic Control Personnel

- (i) All Traffic Control Personnel shall be qualified in accordance with the OHSA/CCOHS and the regulations thereunder.

(f) Traffic Management Committee

- (i) DB Co shall be responsible for forming a Traffic Management Committee that shall be comprised of DB Co, City, OC Transpo, and representatives of Relevant

Authorities that shall meet on a weekly basis. The purpose of this committee shall be to coordinate, plan, and take action with respect to current and future traffic and transit impacts that may be caused by the design and construction Works.

**SCHEDULE 15-2
DESIGN AND CONSTRUCTION REQUIREMENTS**

**PART 8
UNDERGROUND STRUCTURES**

ARTICLE 1 INTRODUCTION

1.1 General

- (a) This Article 1 describes the design and construction requirements related to Underground Structures.
- (b) The scope comprises all underground construction required within the Project limits primarily consisting of Tunnels, Underground Station Boxes, shafts, portals and any Underground Structure work required for the completion of, headwalls, sumps and pumping stations. Refer to Schedule 15-2, Part 1, Article 2 – Physical Layout for a description of the underground sections of the alignment.
- (c) The scope includes temporary decking and support of excavations for Underground Structures, shafts, and retaining walls.
- (d) The scope includes installation of Track, walkways, lighting, fire protection, OCS, Tunnel ventilation and all other systems necessary within Tunnels for operation of the system.
- (e) The requirements of Schedule 15-2, Part 4 – Stations shall apply to Underground Station Boxes.
- (f) DB Co shall determine the specific means and methods for construction of Underground Structures using Cut-and-Cover methods consistent with the design and construction criteria specified herein.
- (g) DB Co shall perform excavations and install temporary excavation support and initial support in a manner consistent with the requirements of Schedule 15-2, Part 2, Article 9 – Protection of Existing Adjacent Structures to minimize ground and Structure movement and deformation. Soil excavation and backfill shall be sequenced such that unbalanced soil loading on EAS will not exceed 1m.

1.2 Scope

- (a) DB Co shall integrate the design and construction requirements of this Part 8 with other contract requirements including the following:
 - (i) Operational performance requirements for determination of the interior Tunnel space to accommodate Track alignment and Tunnel opening size relative to minimum clearance envelopes and required infrastructure - refer to Schedule 15-2 – Design and Construction Requirements:

- A. Part 1 – General Requirements;
 - B. Part 2 –Civil and Guideway;
 - C. Part 3 –Systems; and
 - D. Part 4 –Stations.
- (ii) Permanent retained earth structures other than Underground Structures – Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements;
 - (iii) Protection of EAS during construction – refer to Schedule 15-2, Part 2, Article 9 – Protection of Existing Adjacent Structures;
 - (iv) Structural design requirements for structural elements located underground but not meeting the definition of Underground Structures such as retaining walls, building and bridge foundations– refer to Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements;
 - (v) Corrosion control and stray current protection - refer to Schedule 15-2, Part 3, Article 12 – Corrosion Control;
 - (vi) Geotechnical requirements – refer to Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements; and
 - (vii) Environmental requirements – refer to Schedule 17 – Environmental Obligations.
- (b) DB Co shall sequence construction to mitigate impacts to the surrounding infrastructure, including vehicular and pedestrian circulation, access to and egress from adjacent structures, and disruption to existing Utilities. Such construction sequencing shall consider the order of execution of the work, including the need for multiple shifts, night-time or weekend work and material deliveries and removal of excavated materials. Refer to Schedule 15-2, Part 1 Article 5 – Implementation Constraints, and Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access.
 - (c) DB Co shall perform a detailed geo-referenced 3D survey of the “as-built” Tunnel alignment and all Underground Structures using digital mapping and laser scanning technology. The survey shall provide the actual “as-built” condition of the Underground Structures including but not limited to documentation of the condition of the interior face of the structural concrete. Scanning shall be performed before installation of the Underground Structure systems and finishes. Submit a digital copy of the survey to the City for record in accordance with Schedule 10 – Review Procedure. The scanning system and digital imagery shall be capable of meeting the following minimum technical requirements:
 - (i) Measurement range accuracy: +/- 10mm
 - (ii) Angular accuracy: 0.002 degrees

- (iii) Recording distance: 2m to 300m, with the capability of recording at ranges less than 2m and more than 300m
- (iv) Field of View: Full 360 degrees without gaps.
- (v) Scan precision: 5mm
- (vi) Point cloud spacing: 5mm
- (vii) Colour image resolution: three - 36 megapixel cameras, series of photos taken a minimum of every 3m along the underground structure axis
- (viii) Pixel size: distance dependent (2mm to 5mm depending on profile size)
- (d) Where exterior waterproofing of Existing Adjacent Structures adjacent to Cut-and-Cover excavations is required to be removed to facilitate construction or is otherwise damaged during construction, it shall be repaired or replaced in-kind by DB Co to ensure future leakage into Existing Adjacent Structures is less than or equal to pre-construction conditions.
- (e) Means of Egress
 - (i) DB Co shall provide means of egress for Emergency evacuation of a Train at any point within the Tunnels and open cut sections in conformance with NFPA 130 and the Safety Management System. Emergency evacuation to the surface from Underground Structures shall be through the Underground Stations and the Tunnel Portals. No EEBs shall be located within the Tunnel sections.
 - (ii) Emergency Egress including but not limited to routes, cross passages, walkways and egress components shall conform with the requirements of NFPA 130.
 - (iii) Where continuity of the egress route requires walking down to the Track level to reach the evacuation point at an Underground Station Platform, handrails and guards shall be provided at the stairs leading down from the walkway to the Track.
 - (iv) At locations where trains are expected to reverse direction, a walkway, equal to the length of the train, shall be provided to allow the driver to safely exit the cab at one end of the train, walk to the cab at the other end of the train, and reboard. This walkway shall avoid encroachment into the dynamic envelope of a Revenue Vehicle on an adjacent Track.
 - (v) DB Co shall provide a storage facility room exclusively for the use of ESP with internal dimensions of 2.0m x 3.0m x 2.8m height. The room shall be located along the portal sidewall and accessed from the emergency walkway, located no more than 2m from the Tunnel opening.

1.3 Codes, Standards and Regulations

- (a) The design and construction of the Works shall comply with the criteria contained in this Article 1, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project. The codes, standards, and references indicated in this Clause 1.3 shall be utilized for the design and construction of the Underground Structures indicated in this Article 1, except as explicitly indicated in other Articles. The structural design shall conform to the most current edition of the following codes and standards.
- (i) CAN/CSA-S6 Canadian Highway Bridge Design Code
 - (ii) CAN/CSA A23.3 Design of Concrete Structures
 - (iii) CAN/CSA A23.1/A23.2 - Concrete Materials and Methods of Concrete Construction/Test Methods and Standard Practices for Concrete;
 - (iv) CAN/CSA S16 - Design of Steel Structures
 - (v) CAN/CSA O86 - Engineering Design in Wood
 - (vi) AREMA Manual for Railway Engineering

ARTICLE 2 TEMPORARY SUPPORT OF EXCAVATION

2.1 Scope

- (a) This Article 2 specifies structural design and performance criteria for the temporary SOE for Cut-and-Cover Structures including but not limited to:
 - (i) temporary excavation support and underpinning systems; and
 - (ii) temporary traffic support, including pedestrian, vehicular and rail traffic, as applicable.
- (b) If any SOE components are incorporated into the permanent Works, the SOE components shall also meet all requirements for permanent Works including, but not limited to Design Life, durability and waterproofing.
- (c) Existing temporary SOE
 - (i) Where the SOE systems used for the construction of existing buildings adjacent to the alignment interfere with the construction of the Underground Structures, DB Co shall ensure these SOE systems are not part of the existing building's permanent foundation and can be removed without impact to the building.

2.2 General Structural Design Criteria

- (a) DB Co shall design for temporary excavation support, underpinning, and temporary traffic support, including pedestrian, vehicular and rail traffic systems that, in conjunction with the selected sequencing, means and methods for excavation and construction of the Cut-and-Cover Structures, is in compliance with the requirements of this Project and Relevant Authorities.
- (b) Design and construction of all temporary SOE work including decking and retaining walls shall be in conformance with the requirements of CAN/CSA-S6 and Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements, as applicable and the additional requirements herein.

2.3 Materials

- (a) DB Co shall select materials for strength, geometry, initial set, toughness, and other qualities required for the means and methods selected to perform the Works and in accordance with requirements, standards, specifications and information specified herein.
- (b) Temporary works constructed of reinforced concrete shall meet the minimum design requirements of Table 8-2.1; as defined by CSA A23.1 Concrete materials and methods of concrete construction;

Table 8-2.1: Temporary Works Minimum Design Criteria

| Application | Exposure | Minimum Required Compressive Strength f'_c (MPa) | Acceptance Age of Required Compressive Strength (days) | Nominal Maximum Aggregate Size (mm^2) | Cement Type |
|--|----------|--|--|--|-------------|
| Shotcrete | C-2 | 40 | 28 | 28 | GU or GUb |
| Precast Concrete for Temporary Road Deck | C-1 | 55 | 28 | 20 | GU or GUb |

- (c) Temporary ground anchoring systems used for temporary excavation support or initial support shall consider the location of utilities and comply with right of way restrictions, all requirements of Article 2.5 of Schedule 15-2, Part 1 – General Requirements, and Schedule 20 – Lands.
- (d) Traffic decking surfaces shall provide a static coefficient of friction not less than 0.5 as determined by ASTM D2047, F609. Timber decking, if used, shall be surfaced with asphalt or other uniform covering that will provide a coefficient of friction of at least 0.5. Uncovered timber will not be permitted.

2.4 Loads

- (a) Temporary works shall be designed using the applicable loads and load combinations from Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements, as required per CAN/CSA-S6 for construction loads and loads on temporary structures.
- (b) The potential for unsymmetrical vertical loads or unbalanced horizontal loads due to variations in ground conditions or properties and construction sequencing shall be accounted for as follows:
 - (i) Lateral soil loading on temporary excavation support for Underground Structures shall be based on the soil properties as determined by DB Co, the type of support proposed and the means and methods for construction. This shall also apply to temporary excavation support that is incorporated into the permanent Underground Structure.
 - (ii) Rock loading on temporary excavation support for Underground Structures: Lateral rock loading and the type of support proposed and the means and methods for construction shall be determined by DB Co. This shall also apply to temporary excavation support that is incorporated into the permanent Underground Structure.

- (c) Seismic loads need not be considered for the design of temporary excavation support.

2.5 Monitoring Requirements:

- (a) DB Co shall integrate the following monitoring requirements with the monitoring requirements in Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements.
- (b) Where applicable the City will turn over existing instrumentation installed by other contractors in Existing Third Party Infrastructure prior to any excavation within the ZOI of the EAS as defined in Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements, to DB Co who shall:
 - (i) incorporate the instrumentation into the GIMP;
 - (ii) continue to read the instruments at the frequencies specified in the GIMP; and
 - (iii) decommission instrumentation when not required per the GIMP and restore the Site, surfaces or area disturbed by the instrumentation installation.
- (c) Temporary excavation support and initial support shall be monitored using a management system incorporating Review Levels and Alert Levels, as outlined in Schedule 15-2, Part 2, Article 9 – Protection of Existing Adjacent Structures.
- (d) DB Co shall develop review procedures to ensure that the excavation and support for Underground Structures are proceeding as planned, and shall consider all relevant factors when evaluating the performance of the temporary excavation support and initial support.
- (e) DB Co shall develop contingency plans and mitigation measures to address temporary or initial support that fails to meet the performance requirements developed by DB Co in accordance with the requirements of Schedule 15-2, Part 2, Article 9 – Protection of Existing Adjacent Structures.

2.6 Crossing and Underpinning of Existing Facilities

- (a) This section applies to Temporary SOE for:
 - (i) Underground Structures that cross over and pass within close proximity of the WNC combined sewer.
 - (ii) Locations where the Underground Structures pass within close proximity of Existing Adjacent Structures within the Project ZOI and the analysis requirements of Schedule 15-2 Part 2 Article 9 - Protection of Existing Adjacent Structures indicate mitigation measures are necessary.
- (b) DB Co shall develop and submit in accordance with Schedule 10 – Review Procedure SOE plans for the construction of Underground Structures crossing over and in close

proximity to the existing facilities. The plans shall include methods for installing and maintaining the SOE without damaging and imposing loads on the existing facilities.

- (c) Protection of Existing Utilities within the limits of the Cut-and-Cover construction shall be in accordance with Schedule 15-2, Part 2, Article 8 – Utility Infrastructure Design Criteria.
- (d) DB Co shall install and monitor instruments on temporary SOE and EAS in accordance with the GIMP requirements of Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements, to monitor any settlement or deformations of the EAS resulting from Cut-and-Cover construction activities.

ARTICLE 3 CUT-AND-COVER STRUCTURES

3.1 Scope

- (a) The scope of work includes designing, furnishing, and constructing permanent Cut-and-Cover Structures.

3.2 Durability Criteria

- (a) DB Co shall design Cut-and-Cover Structures that are durable and structurally sound to achieve the Design Life specified in Schedule 15-2, Part 1, Article 4 – Design and Construction, and durability requirements specified herein.
- (b) Durability – DB Co shall prepare and submit a durability report for the Underground Structures that incorporates the design recommendations of CSA S478-95 (R2007) Guidelines on Durability in Buildings with consideration of the corrosive properties of the soil and groundwater in contact with the Underground Structures. The report shall include the results of durability modelling to demonstrate that the design of Underground Structures meets the Project specified Design Life. Develop and submit results from a durability model of the concrete Structure using a widely accepted software package such as Life365 or Stadium. The model shall be used to demonstrate expected life cycle performance consistent with the Project requirements. Refer to ACI 201.2R Guide to Durable Concrete for information regarding causes of concrete deterioration and recommended methods to prevent such deterioration.
- (c) Cut-and-Cover Structures shall be constructed of reinforced concrete meeting the minimum design requirements of Table 8-3.1 as defined by CSA A23.1 Concrete materials and methods of concrete construction;

Table 8-3.1: Permanent Underground Structures Minimum Design Criteria

| Application | Exposure | Minimum Required Compressive Strength f'_c (MPa) | Acceptance Age of Required Compressive Strength (days) | Nominal Maximum Aggregate Size (mm ²) | Cement Type |
|--|----------|--|--|---|-------------|
| Permanent Concrete Structure | C-3 | 40 | 28 | 28 | GU or GUb |
| Permanent Concrete Structure <2m from top of roadway | C-XL | 50 | 56 | 28 | GU or GUb |

| | | | | | |
|-----------|-----|----|----|----|--------------|
| Shotcrete | C-2 | 32 | 28 | 28 | GU or GUb |
|-----------|-----|----|----|----|--------------|

- (d) Cast-in-place concrete and constituent materials shall comply with CSA A23.1
- (e) Concrete reinforcement shall conform to the requirements of the applicable Standards listed in CSA A23.1. The use of steel fibers as the sole and primary source of concrete reinforcement shall not be permitted.
- (f) Permanent ground anchoring systems used in the Tunnel and Underground Station Boxes shall consist of steel bars, wires or strands and be corrosion protected.
- (g) Structural steel shall meet the material requirements specified in Clause 4.11 of Schedule 15-2, Part 4 – Stations. Structural steel in Underground Structures shall not be permanently exposed to earth or in contact with the ground.
- (h) Cast in place and post installed concrete anchoring systems shall meet the design requirements of CSA 23.3 Annex D and be corrosion resistant. The use of adhesive anchoring systems to support overhead components in Underground Structures shall not be permitted.
- (i) DB Co shall develop and implement a quality control program for the construction of Cut-and-Cover reinforced concrete structures and submit the program quality control plan in accordance with Schedule 10 – Review Procedure. At a minimum the quality control plan shall address the procedures for proportioning, producing, mixing and placing concrete per the standards of CSA A23.1. All records and quality documentation included in the quality control plan shall be made available to the City upon their request.

3.3 Structural Design Criteria

- (a) The structural design of Underground Structures shall comply with the requirements of CAN/CSA-S6 for the ultimate limit states and serviceability limit states for structural concrete and the criteria specified herein, whichever is more stringent. Underground Structures with components designed using structural steel shall comply with the requirements of Schedule 15-2, Part 4, Article 4 – Structural Design Criteria.
- (b) DB Co shall determine the appropriate level and scope of analysis for the Underground Structures based on criteria such as ground conditions, loading conditions and Cut-and-Cover construction methods unless otherwise noted herein.
- (c) DB Co shall develop and apply loads and load combinations in accordance with the following requirements:
 - (i) The Underground Structures shall be designed using the applicable design loads defined in Clause 4.5 of Schedule 15-2, Part 2 – Civil and Guideway, except for seismic loads which shall follow the criteria herein.

- (ii) Seismic Loads and Design Criteria
- A. Site Classification shall be determined per the requirements in Clause 7.12 of Schedule 15-2, Part 2 – Civil and Guideway.
 - B. Design levels for MDE and ODE are defined in Clause 7.12 of Schedule 15-2, Part 2 – Civil and Guideway.
 - C. The general procedure for seismic design of Underground Structures shall be based on the ground deformation approach. Underground Structures shall be designed to accommodate the deformations imposed by the ground before, during and after the seismic event. Seismic design of Underground Structures shall consider two loading components: (1) the racking deformations due to the vertically propagating shear waves and (2) inertial forces due to vertical seismic motions. Determine both ODE and MDE level design considering soil-structure interaction effects.
 - D. Estimates of displacement capacity for Underground Structures shall not exceed the material strain limits of Table 8-3.2:

Table 8-3.2: Material Strain Limits for Earthquake Design Levels

| EQ | Material | Strain Limit |
|-----|----------|--------------|
| ODE | Steel | 0.0010 |
| | Concrete | 0.002 |
| MDE | Steel | 0.0020 |
| | Concrete | 0.0033 |

- (iii) The Underground Structures shall be designed using the modified load factors of Table 8-3.3. For loads not included in Table 8-3.3 refer to CAN/CSA S-6 and Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements for load factors.

Table 8-3.3: Load Factors for Underground Structures

| Load | α_{\max} | α_{\min} |
|-----------------------|-----------------|-----------------|
| Dead (self weight) | 1.25 | 0.9 |
| Dead (earth backfill) | 1.25 | 0.9 |

| | | |
|-----------------------------------|------|-----|
| At rest and Active Earth Pressure | 1.5 | 0.9 |
| Hydrostatic (normal elevation) | 1.25 | 0.9 |
| Hydrostatic (flood elevation) | 1.0 | 0 |
| Live | 1.5 | 0 |

- (iv) The Underground Structures shall be designed using the applicable load combinations for ultimate (ULS) and serviceability (SLS) limit states of CAN/CSA-S6. Load combinations for ultimate strength design shall satisfy the minimum requirements of CAN/CSA-S6 for reinforced concrete buried structures. The additional load combinations of Table 8-3.4 shall also be used for the design,

Table 8-3.4: Additional Load Combinations for Underground Structures

| Load Combination | Notes |
|--|---|
| SLS 1 = D | |
| SLS 2 = D + E | Buoyancy, consider with and without backfill, use 100 year flood elevation |
| SLS 3 = D + E + L | Construction, surcharge without backfill cover, use normal hydrostatic elevations |
| SLS 4 = D + E + L + K | Service check for cracking of concrete |
| ULS 1 = 1.4D(self weight)+1.5D(backfill) | |
| ULS 2 = $\alpha D + \alpha E$ | |
| ULS 3 = $\alpha D + \alpha E + \alpha L + 1.25K$ | |
| ULS 4 = $\alpha D + \alpha E + \alpha L$ | Use 100 year flood elevation for Hydrostatic, consider with and without L |
| ULS 5 = $\alpha D + \alpha E + 0.5L + EQ$ | Consider with and without backfill and L |

- (v) Vent shaft damper supports, ancillary walls and doors located within or adjacent to the Tunnel and Underground Stations, any divider walls and any equipment installed within the Underground Structures shall be designed to withstand the air pressures and cyclic loading generated by moving trains and mechanical

ventilation systems. Pressures shall be determined based on Revenue Vehicle and ventilation system design and performance data provided by the manufacturers.

- (vi) Underground Structures shall be designed to resist temporary construction loading developed from the Cut-and-Cover construction means, methods and sequencing selected by DB Co.
- (vii) DB Co shall engage with the City during design to determine if future development plans that will potentially load Underground Structures are available for inclusion in the design. Refer to Clause 9.6 of Schedule 15-2, Part 2 – Civil and Guideway, for future adjacent construction requirements and protection of Project Infrastructure for DB Co design role as it pertains to future development within the Underground Structure ZOI. Refer to Clause 2.10 of Schedule 15-2, Part 1 – General for future works in the design and construction of the Project that shall be protected for and included in the design and construction of Underground Structures.
- (d) Hydrostatic loading shall consider the 100 year flood elevation for the determination of Underground Structure buoyancy. Uplift resistance for Underground Structures due to buoyancy loads shall follow the requirements for Cut-and-Cover Structures in Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements.
- (e) Temporary excavation support and initial support shall not be used as measures to relieve the design loads on a permanent structural lining unless the initial support can achieve the required design life. Underground Structures that incorporate temporary excavation support into the permanent work shall include the unsymmetrical vertical and unbalanced horizontal loads of Clause 2.4(b), of this Part 8 in addition to the long term loads of Clause 3.3(c) of this Part 8.
- (f) Structures shall be designed to prevent collapse and minimize damage from derailment. Where safety guard rails are not provided, or are ineffective in preventing impact, columns and walls situated within 7.5m as measured perpendicular from the centerline of a Track and not protected by reinforced concrete benches, platforms or crash barriers, shall be designed to withstand derailment forces.
- (g) DB Co shall comply with the following design requirements for fire resistance of Underground Structures:
 - (i) The structural integrity and Design Life of the Underground Structures subjected to the design fire outlined in Article 7– Tunnel and Station Ventilation Design Criteria, of this Part 8, shall not be compromised during the fire event.
 - (ii) Explosive spalling of concrete shall be mitigated by methods such as the inclusion of micro polypropylene fibres to the concrete mix for permanent linings or by providing a fire resistant interior lining.

- (iii) The development of gas temperature shall correspond to recognized temperature versus time curves per ITA Fire Guidelines Figure 2.4 unless Project-specific curves are developed by DB Co.
- (iv) DB Co shall design the Underground Structures following exposure to a fire by incorporating degradation in material properties due to temperature to ensure that Underground Structures shall not collapse following exposure to a fire.
- (v) All structural steel members shall be protected from direct fire exposure based on the specified fire intensity outlined in Article 7 – Tunnel and Station Ventilation Design Criteria, of this Part 8.

3.4 Waterproofing

- (a) DB Co shall design and construct Underground Structures located in regions of sensitive clays susceptible to stress increase and potential settlement from groundwater drawdown as undrained structures. Refer to Schedule 15-2, Part 2, Article 7 – Geotechnical Design Criteria and Requirements, identifying regions of the alignment subject to groundwater drawdown restrictions. Undrained structures are defined as structures that do not employ a drainage system that actively lowers the groundwater level to relieve hydrostatic pressure on the structure.
- (b) DB Co shall apply permanent concrete treatments such as sealers and coatings to ensure that any water present on internal surfaces does not affect the safety, durability and function of the Underground Structures.
- (c) DB Co shall meet the following criteria for water-tightness throughout the design life for new Underground Structures and new portions of existing Underground Structures:
 - (i) A maximum overall water infiltration rate 0.2L/m^2 of Underground Structures perimeter per day measured over any 1000m length of Underground Structure not to exceed 0.4L/m^2 of Underground Structures perimeter per day measured over any 10m length of Underground Structure.
 - (ii) Underground Structures shall have:
 - A. no identifiable or visible flow of water into the structure; and
 - B. no drips or seepage of water:
 - i. on walkways or egress passageways; or
 - ii. over the rail surfaces; or
 - iii. over the OCS; or
 - iv. where water has the potential to freeze on surfaces of Underground Structures; or

- v. where the dripping of water has the potential to cause damage to equipment or the malfunctioning of any electrical power, signaling, lighting, control or communication equipment, or to compromise electrical clearances;
 - C. no water penetration into embedded conduits and pull boxes; and
 - D. soil particles shall not enter into the structure through water ingress.
 - (iii) Public areas of stations, corridors and passageways and all electrical rooms including communications and signal rooms, shall be watertight. Where cavities are provided behind finishes, the cavities shall be:
 - A. drained and vented and
 - B. include cleanouts or other access points to allow inspection for compliance with the maximum overall water infiltration rate.
- (d) DB Co shall comply with the following additional provisions for new Underground Structures and new portions of existing Underground Structures:
 - (i) Underground Station Boxes shall be designed and constructed with a permanent waterproofing system around the entire perimeter of the Underground Station Box. If the Underground Station Box incorporates the SOE systems into the permanent structure meeting the requirement of Clause 2.1(b) of this Part 8, the Underground Station Box shall be designed and constructed with a permanent waterproofing system applied to the exterior of the invert and roof slabs with a 100 mm minimum drained and vented wall cavity for drainage behind finishes in exterior station walls and exterior walls of electrical and equipment rooms. The waterproofing systems shall include terminations as required to ensure the Station water tightness criteria is achieved and incorporate the groundwater drawdown restrictions of Clause 3.4(a) of this Part 8, and as determined by evaluation of geotechnical conditions.
 - (ii) Provide waterstops in all slab and wall construction joints of Underground Structures, including joints and transitions between existing and new Underground Structures.
 - (iii) The number of construction joints in Underground Structures shall be the minimum necessary to facilitate construction without inducing shrinkage stresses that result in shrinkage cracks exceeding the crack limits specified herein.
 - (iv) Design concrete to limit the crack width on the exterior face of exterior walls to 0.25 mm and the interior face of exterior walls to 0.35mm.
 - (v) Design shall prevent the freezing of any water in the Tunnels, Underground Station Boxes and portals from groundwater infiltration and surface drainage.

The design shall ensure there is no buildup of ice and snow over the top of rails, walking surfaces and in drainage structures.

- (e) DB Co shall prepare and submit in accordance with Schedule 10 – Review Procedure a report detailing the waterproofing plan that includes at a minimum:
 - (i) proposed methods and details for meeting the specified maximum water infiltration rate;
 - (ii) DB Co's previous experience with similar waterproofing systems, effectiveness of those systems and lessons learned that will be implemented on the Project;
 - (iii) remedial measures to achieve and maintain the water tightness criteria beyond construction and throughout the Design Life; and
 - (iv) measures to facilitate inspection of the Underground Structures at potential leaks and any remedial measures proposed to protect and/or restore the structure to achieve the required Design Life.
- (f) The existing Underground Structure at Baseline Station is required to meet all of the water tightness criteria of Article 3.4.(c) except as modified herein:
 - (i) A maximum overall water infiltration rate of 0.75L/m^2 of Underground Structures perimeter per day measured over any 300m length of Underground Structure not to exceed 1.5L/m^2 of Underground Structures perimeter per day measured over any 10m length of Underground Structure;
 - (ii) Existing leaks documented in the reference documents and any additional water infiltration noted during design and construction that results in the exceedance of the infiltration rate requirements in Clause 3.4(f)(i) of this Part, and does not meet the criteria of Clause 3.4(c)(ii) of this Part, shall require leak remediation. DB Co shall design and construct leak remediation solutions which at a minimum shall consist of but not be limited to the following:
 - A. Concrete repairs of cracks, spalls and other defects where water is infiltrating the structure;
 - B. Remedial grouting using chemical or cement grouting methods based on available Baseline Station structure, subsurface geotechnical, and adjacent structure information;
 - C. Water infiltration management designs that collect and divert water away from the elements and Station Box locations identified in Clause 3.4(c) of this Part and discharge into the existing Station Box drainage system. Modifications to the existing Station Box to accommodate a water infiltration management system shall comply with the clearance

requirements of Article 2.12 of Schedule 15-2, Part 2 – Civil and Guideway; and,

- D. Sealing around the perimeter of concrete penetrations and openings.

3.5 Crossing of West Nepean Collector

- (a) DB Co shall develop and submit plans in accordance with Schedule 10 – Review Procedure for the section of Tunnel crossing over the existing WNC. The submittal shall include at a minimum:
- (i) Structural drawings for the Tunnel crossing including details showing the means of isolating the Tunnel structure from the WNC. A minimum clear separation distance of 150mm shall be maintained between the outside face of the WNC lining and the outside face of the Tunnel structure through construction and the Design Life of the Tunnel.
 - (ii) Detailed analysis presented in a CLAR-2 report per Schedule 15-2, Part 2, Article 9 – Protection of Existing Structures, including all stages of construction using 2D and/or 3D finite element and finite difference simulation methods demonstrating that the Tunnel crossing design does not impose load on the WNC during construction and operation of the Tunnel. The analysis shall include the possibility of future settlement of the Tunnel and the transmission of Vehicle vibrations into the surrounding ground focusing on the impact to the WNC structure at the Tunnel crossing. The Tunnel crossing design shall include mitigative measures for the control of both Tunnel crossing and WNC ground settlements and Vehicle vibrations.
 - (iii) Physical alterations to the existing WNC may be considered if the design and construction of the Tunnel crossing cannot provide the minimum separation distance of 150mm, providing the following design and construction criteria are followed,
 - A. A detailed physical condition assessment presented in a CLAR-2 report shall be performed for the section of WNC requiring physical alterations to verify the integrity of the WNC and establish the WNC structural properties. The results of the physical condition assessment shall be used to determine the extent of WNC that can be removed and replaced without reducing the existing structural load capacity and hydraulic performance of the WNC.
 - B. WNC removals and replacement shall be subject to approval from the City. DB Co shall submit a WNC removal and replacement plan including at a minimum;
 - i. Results of the physical condition survey including as-built dimensions and structural properties,

- ii. A Work plan with drawings showing the extent of removals including the sequencing of removals, means and methods of removals, temporary liner support if necessary and replacement section if necessary.
- iii. Schedule identifying the calendar months and duration of WNC removals and replacement work. The schedule shall be coordinated with the City taking into consideration maximum seasonal volumes of storm and sanitary water conveyed by the WNC.

ARTICLE 4 MECHANICAL DESIGN CRITERIA

4.1 Scope

- (a) This Article 4 contains mechanical criteria developed for the Underground Structures, and where applicable the Stations. These criteria govern the functional requirements for Track drainage and sub drainage facilities, and fire protection systems.

4.2 Codes, Standards and Regulations

- (a) DB Co shall ensure that the design and construction of the Works complies with the criteria contained in this Article 4, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project. Mechanical systems design shall apply, but not be limited to, all Applicable Codes & Standards as referenced in Schedule 15-2, Part 4 – Stations. In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, refer to Schedule 15-2, Part 4, Article 5 – Mechanical Design Criteria for order of precedence.

4.3 General Requirements

- (a) The requirements include mechanical systems located in the Underground Structures. Mechanical systems will consist of Track drainage, sub drainage, Tunnel ventilation and Tunnel fire protection systems.
 - (i) All equipment, pipes, supports, accessories, and their connections to the Structure, shall be designed to resist seismic force and to accommodate seismic deflection in accordance with OBC 4.1.8.18.
 - (ii) Any anchorages into Tunnel concrete shall not compromise the water tightness of the Tunnel.

4.4 Track Drainage System

- (a) DB Co shall design and construct the Track drainage system to collect water from all underground Track sections utilising a gravity flow system into pumping stations, consisting of, but not limited to Tunnel invert slab drainage troughs, catch basins, maintenance holes and drainage pipework.
 - (i) Track drainage troughs shall be designed to contain the design flow and prevent any overflow from occurring,
 - (ii) The system shall be designed such that flow blockages can be located by maintenance personnel, the design shall provide access for maintenance personnel to remove the blockage.
 - (iii) The pumping stations shall discharge the Track drainage water as permitted by the City. DB Co shall be responsible for obtaining any required discharge permits.

Refer to Schedule 15-2 Part 2, Article 5 – Drainage and Stormwater Management Design Criteria, for Track Drainage and SWM design criteria.

- (iv) Drainage system components including drainage troughs subject to near and below freezing temperatures shall be heat traced.
- (b) Water entering the Track areas is expected to be from, but not limited to, the following sources:
 - (i) Rain water entering the Tunnels from the portals
 - (ii) Rain water entering the Tunnels from ventilation shafts
 - (iii) Water discharged during fire-fighting operations within the Tunnels and/or stations
 - (iv) Water discharged during Tunnel wash-down
 - (v) sub-drainage
- (c) DB Co shall design and construct the drainage pump stations as per the following:
 - (i) Pumping stations shall be provided at low points in the Tunnel alignment and portals. Tunnel pumping stations shall be accessed through the tunnel and shall remain completely below grade with no pump station structures at or above grade.
 - (ii) Pumping stations shall be designed to support the same loads used in the Tunnel design as specified in Clause 3.3 of this Part 8.
 - (iii) Pumping stations shall include a concrete sump pit, submersible pumps, water level controllers, and pumps control panel, and discharge to an oil and grit separator
 - (iv) Pump selection and number of pumps shall be designed to accommodate the design flow rates and incorporate redundancy, so that drainage of the Underground Structure and emergency egress routes is maintained at all times. Pumping stations shall include a minimum of two pumps providing duplex pump systems with a back-up power source. The pumps shall be designed with sufficient capacity to meet the underground drainage requirements while one pump is not in operation. Pump sets shall be either the submersible or self-priming type with proven reliability and be capable of handling grit through interception and pumping.
 - (v) Pumping stations shall be configured to allow pumps and accessories to be retrieved for servicing without requiring confined space entry.
 - (vi) Pumping stations shall be equipped with monorail lifts, stainless steel ladders in pits, stainless gas-tight sump covers, and grease sensors

- (d) DB Co shall design and construct the pumping station control panels as per the following:
 - (i) Control panels and all accessories located in the pumping station, including cable connectors, fittings, indicating lights, push buttons, supporting mountings, etc. shall be constructed of materials to suit the environment of an Underground Structure, exposed to dust dirt and moisture.
 - (ii) Control panels shall operate the pumps in stages based on pre-determined water levels monitored by the sump water level monitoring system
 - (iii) Control panels shall facilitate the placement of local indicating lights & warning lights and provide alarm(s) back to the TOCC via. the SCADA system

4.5 Tunnel Dry Standpipe System

- (a) DB Co shall provide a manual, dry, Class I, standpipe system conforming to OBC, NFPA 14 and NFPA 130 throughout each Underground Structures section.
- (b) DB Co shall ensure that the dry standpipe system including fire valves is located over and along the egress walkway side of the Tunnel.
- (c) DB Co shall include the following components in the standpipe system:
 - (i) Fire department connections at station fire-fighter's access points;
 - (ii) Automatic air release valve assemblies to accelerate the charging of the standpipe lines; and
 - (iii) Fire valves located at 60m intervals along each Tunnel walkway of the Underground Structure.
 - (iv) Manual drain valves, heat traced drum drips.
- (d) DB Co shall ensure that fire hydrants are located unobstructed and not more than 45m from the Tunnel cross passages or dry standpipe fire department connections.
- (e) DB Co shall design and construct fire shut-off valves with signage to allow diversion of the system feed points from either end of the looped system at stations and/or cross passages as applicable to serve each full section of the dry fire line.
- (f) DB Co shall design and construct fire valve sites to incorporate a 65mm fire hose valve positioned to discharge perpendicular to the Track.
- (g) DB Co shall ensure that piping shall be steel pipe minimum Schedule 40 and meet NFPA standards.

- (h) DB Co shall ensure that pipe sleeves shall be galvanized steel, minimum two sizes larger than carry pipe. Where pipe penetrates exterior structures, pipe sleeve shall be provided with water-proof seal.

ARTICLE 5 ELECTRICAL DESIGN CRITERIA

5.1 Introduction

- (a) DB Co shall be responsible for the design, construction, testing and Commissioning of electrical distribution and lighting within the Underground Structures. This work shall be coordinated with electrical work within and adjacent to Stations specified in Schedule 15-2, Part 4 – Stations.
- (b) DB Co shall ensure that electrical spaces are properly located and sized to facilitate the operation, installation and maintenance of equipment. Electrical system for the Underground Structures shall be designed to accommodate at least 25% spare capacity to protect for future growth and expansion of the power distribution systems.
- (c) DB Co shall provide accessibility to permit removal and replacement of major equipment. Installation and removal routes of such equipment shall be clearly identified and dimensioned and included on submissions outlined in Schedule 10 – Review Procedure.
- (d) DB Co shall ensure that electrical power distribution equipment is heavy duty construction selected to provide equipment longevity and shall be designed to provide lower arc flash potential during maintenance, high arc flash energy dispersion. Refer to Clause 6.1(i) of Schedule 15-2, Part 4 – Stations, for existing equipment and electrical distribution requirements for the existing Underground Structure at Baseline Station.
- (e) DB Co shall design and construct all electrical equipment to be individually identified by a unique number matching the equipment schedule identification developed for the existing Confederation Line. The label shape, letter size, color coding and background color shall be standardized to match labels used on existing Confederation Line equipment. Identifying labels shall be designated for: cable trays, conduits, pull/junction boxes, cables/wires lighting fixtures including blue lights, maintenance receptacles and all electrical and electronic equipment (mini-substations, control cabinets, switches, etc). In addition to identification labels, approval labels shall be provided as required per either CSA or ULC.
- (f) DB Co shall ensure that anchorages into Tunnel concrete shall not compromise the water tightness and structural integrity of the Tunnel.
- (g) DB Co shall provide fixtures, equipment and raceways that are watertight and will not be damaged under Tunnel pressure washing operations.

5.2 Codes, Standards and Manuals

- (a) DB Co shall design and construct the Works to comply with the criteria contained in this Article 5, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents. In the event of a conflict between criteria, commitments or requirements

contained within one document when compared with another, refer to Schedule 15-2, Part 4, Article 6 – Electrical Design Criteria for order of precedence:

- (i) Refer to Schedule 15-2, Part 4, Article 6 – Electrical Design Criteria, for Design Codes, Standards, Regulations, and Guidelines.

5.3 Basis for Design

- (a) DB Co shall design and construct the Work in accordance with the Electrical Load Classification as follows:
 - (i) Refer to the Clause 6.3(a) of Schedule 15-2, Part 4 – Stations, for Electrical Load Classification.
- (b) DB Co shall perform calculations as per the following:
 - (i) Refer to Clause 6.3(b) of Schedule 15-2, Part 4 – Stations, for descriptions of the calculation requirements for the following:
 - A. short-circuit study;
 - B. protective device coordination study;
 - C. voltage drop including cables and motors;
 - D. grounding system study; and
 - E. lighting illumination calculations.
 - (ii) Arc flash Hazard calculations shall be extended to the high energy low voltage equipment with expected high arc fault current and/or protected by instantaneous only or time delayed protection settings.
- (c) DB Co shall design and construct the Work in accordance with the electrical safety provisions as follows:
 - (i) Equipment ground fault “annunciation only” shall be provided where equipment ground fault protection is required by code or standard engineering practice for equipment or feeders serving Level 2 Emergency Systems.
 - (ii) Personnel ground fault protection shall be provided on branch circuits that have equipment or outlets for which personal protection is required either by code or standard engineering practice.
 - (iii) Arc flash Hazard warning labels shall be provided on the equipment as per required code. Flash boundary and incident energy values shall be displayed

5.4 Functional Requirements

- (a) DB Co shall design and construct the electrical service as per the following:
 - (i) All Underground Structures electrical distribution shall comply with all Applicable Codes and standards including NFPA 130 and all other relevant standards referenced by NFPA 130,
 - (ii) For Underground Station feeder requirements for emergency systems, refer to Clause 6.4 of Schedule 15-2, Part 4 – Stations.
- (b) DB Co shall design and construct system duct banks and pull-boxes as per the following:
 - (i) Duct banks and handholes shall be designed in accordance with the seismic criteria defined for the Project. Duct banks shall be designed to include at least 25% spare capacity to protect for future growth and expansion of each system accommodated in the duct bank. All ducts shall be roped.
 - (ii) Provide segregation between system within the duct-bank and pull-boxes. Provide dedicated pull-boxes for systems. Size pulls boxes accordingly to accommodate the manufacturer recommended cable bending radius. In addition to identification labels, approval labels shall be provided as required per either CSA or ULC.
 - (iii) Provide minimum two hour fire rating for the rooms within Underground Structures accommodating the equipment providing the power distribution inside the Underground Structures. Rate the equipment and distribution (conduits, wires) in accordance with the NFPA-130.
- (c) DB Co shall design and construct Grounding and Bonding as per the following:
 - (i) All non-current-carrying metal enclosures and all alternating current equipment enclosures shall be securely connected/bonded to the grounding system. Provide local grounding for each major distribution system within the Underground Structures.
- (d) DB Co shall design and construct Emergency and standby power sources as per the following:
 - (i) Refer to Schedule 15-2, Part 4, Article 6 – Electrical Design Criteria for emergency and standby power services.
- (e) DB Co shall design and construct maintenance receptacles as per the following:
 - (i) Provide 120V/20A maintenance duplex GFI receptacles complete with water-resistant enclosure and cover spaced every 100m. Refer to Schedule 15-2, Part 4, Article 6 – Electrical Design Criteria for receptacle functional requirements. No more than two outlets shall be connected to a branch circuit.

- (f) DB Co shall design and construct lighting as per the following:
- (i) Lighting design shall be consistent across all Underground Structures. Provide sufficient illumination to provide safety and security for:
 - A. Passenger Emergency egress as per NFPA-130;
 - B. Blue lighting within the Underground Structure and portals as per NFPA-130; and,
 - C. Maintenance accesses as per Schedule 15-2, Part 4 – Stations.
 - (ii) Emergency power for lighting in the Underground Structure shall comply in terms of back-up time with the requirements of NFPA-130.
 - (iii) In the addition to the requirements highlighted in Schedule 15-2, Part 4 – Stations, for design, calculation, and validation of the results, lighting in the Underground Structures shall be selected, located, and/or aimed to accomplish their primary purpose while producing a minimum glare and interference with task accuracy for the Operators.
 - (iv) Lighting system shall be designed so that the failure of any single luminaire or lighting circuit shall not result in less than 2.7 lux.
 - (v) DB Co shall design and construct transitional lighting from underground to surface sections of the Project. The length of threshold/transition lighting shall be based on operating speeds and the corresponding safe stopping distance. DB Co shall review and take into account the given criteria in the American National Standard Practice for Tunnel Lighting – ANSI/IESNA RP-22 and TC – RTD 10 Transport Canada Road/Railway Grade Crossing Technical Manual: Guide for the Design of Roadway Lighting Transportation Association of Canada.
 - A. Lighting control systems shall be monitored and controlled through the facility BAS system. Where facility remote control system is not provided, a central-key/timer control system including override switches for controls in service areas shall be provided.
 - (vi) Lighting for exterior access to Underground Structures areas shall be designed to consider security, CPTED and CCTV requirements as per Guideline for Security Lighting for People, Property, and Public Spaces, IESNA G-1-03;
 - (vii) A TVA has been completed for the Confederation Line, as outlined in Schedule 15-2, Part 1, Article 7 – System Safety and Security Certification. DB Co shall update the TVA as per the requirements of Schedule 15-2, Part 1, Article 7 – System Safety and Security Certification, and shall ensure that the determination of the appropriate type of lighting is included.
 - (viii) Minimum illumination levels are outlined in Table 8-5.1

Table 8-5.1: Underground Structures

| Location | Average Minimum Lux | Emergency |
|--|---------------------|-----------|
| Passenger Emergency Egress (Tunnel Walkway) | 15 | 15 |
| Tracks, Cross-Overs and Catwalks | 20 | 10 |
| Track Switches | 50 | 10 |
| Tunnel Interior Zone | 20 | 10 |
| Tunnel Transition Zone (day) | 50 | N/A |
| Tunnel Threshold Zone (day) | 500 | N/A |
| Tunnel Portals (night) | 20 | 10 |

**Note: 1.) All lighting, including, but not limited to Normal and Emergency lighting illumination levels, shall be designed to meet or exceed OBC, accessibility requirements, and security requirements including but not limited to, AODA, COADS, CPTED, CCTV and CAN/CSA B651 requirements. 2.) Illuminated areas and values not listed in this table shall be per 5.4 (f)(v) above.*

- (g) DB Co shall design and construct power distribution within Underground Structures and portals as per the following:
- (i) Provide power distribution within Underground Structures for each system requiring a power supply (voltage level, type of load (normal, essential or critical) to be coordinated with Schedule 15-2, Part 4 – Stations.
 - (ii) Primary switching rooms for incoming services including any underground TPSS shall be:
 - A. Designed in coordination with [REDACTED] and in accordance to [REDACTED] specification GSC002: Primary Voltage Service Specification.
 - B. Coordinated with [REDACTED] in terms of switchgear location and placement within rooms.
 - C. Designed for a 3 hour fire envelope.
- (h) DB Co shall design and construct metering and monitoring as per the following:
- (i) Remote monitoring shall be provided to:
 - A. Underground Structures main panelboard breaker position; and
 - B. Voltage availability at the main buses.

ARTICLE 6 SYSTEMS INTERFACE

6.1 Scope

- (a) DB Co shall develop all system and infrastructure requirements within the Underground Structures as detailed in Schedule 15-2, Part 3 - Systems.

6.2 Systems to Tunnel Infrastructure Interface

- (a) DB Co shall develop designs to integrate with the Underground Structures including but not limited to the following elements:
 - (i) Tunnel invert design; and
 - (ii) FLS; and
 - (iii) Tunnel and Station Ventilation; and
 - (iv) OCS design; and
 - (v) Communication systems design; and
 - (vi) Tunnel portal intrusion detection system design; and
 - (vii) conduit provisions; and
 - (viii) Emergency egress requirements.

6.3 General Interface Requirements

- (a) DB Co shall be responsible for designing the Tunnel interface to provide the required clearance for the Revenue Vehicle to maintain for safe operation.
 - (i) DB Co shall develop and provide a swept path analysis along the length of the ROW to confirm that all elements including safety walkway and all system elements and equipment are clear of the required envelope of the train as defined in Schedule 15-2, Part 2, Article 2 – Geometric Design Criteria, for Track alignment.
 - (ii) DB Co shall analyze impact to clearance envelopes based on Track form and invert design.
 - (iii) DB Co shall ensure that all Electric Traction installations as defined in Schedule 15-2, Part 3, Article 13 – Traction Power System can be accessed when standing on the safety walkway.
- (b) DB Co shall design the OCS to adhere to the vehicle manufacturer requirements for:

- (i) nominal operating height as per Schedule 15-2, Part 3 – Systems;
 - (ii) maximum rate of change of the pantograph as per Schedule 15-2, Part 3 – Systems;
 - (iii) electrical clearances as per AREMA, OESC and CSA standards; and,
 - (iv) any additional considerations to ensure safe operation of the Vehicle.
- (c) DB Co shall ensure that equipment and raceways are appropriately designed and sealed to prevent water and material infiltration during Tunnel cleaning operations.

6.4 Interface with Tunnel

- (a) Anchorages into Tunnel concrete shall not compromise the water tightness of the Tunnel.
- (b) DB Co shall ensure that all system interfaces with the Tunnel structure conform to the limits set out by the existing Tunnel liner. Limitations include the following:
- (i) drill depth limitations into the liner;
 - (ii) drill point locations;
 - (iii) loading considerations;
- (c) DB Co shall be responsible for determining loads from the OCS in accordance with the requirements of Schedule 15-2, Part 3, Article 14 – Overhead Contact System.

6.5 Invert and Cabling Requirements

- (a) DB Co shall determine all cabling requirements within the Underground Structures;
- (b) DB Co shall maximize the use of embedded conduits, or cable raceways as applicable, within Underground Structures;
- (c) DB Co shall ensure that pull boxes are provided at a maximum spacing of 120m or a total cumulative bend radius of 270 degrees;
- (d) DB Co shall ensure that pull boxes are adequately grounded and bonded in accordance with OESC;
- (e) DB Co shall ensure that there are sufficient cross conduit connections within the invert to support system installation as well as future system requirements. Cross conduit connections shall consist of the following as a minimum:
- (i) location requirements: Within 10m of the start of a Tunnel segment (Cut-and-Cover section boundary) and a maximum spacing of 300m; and

- (ii) minimum cross conduit requirements: 2-50mm I.D. Schedule 40 PVC conduits if embedded, RGS if exposed.
- (f) DB Co shall ensure that cable provisions along the Underground Structures include a minimum spare capacity for future system expansion;
 - (i) a minimum of 25% spare capacity to support future system installation; and
 - (ii) provision along the Tunnel walls to allow for surface mounted cable installation running the length of the Tunnel

ARTICLE 7 TUNNEL AND STATION VENTILATION DESIGN CRITERIA

7.1 Scope

- (a) The scope includes the requirements for the design, installation, testing and Commissioning of the Emergency ventilation systems for the Tunnels and for the Underground Stations.

7.2 Codes, Standards and Manuals

- (a) The design and construction of the Works shall comply with the criteria contained in this Article 7, and all standards, regulations, policies, Applicable Law, guidelines or practices applicable to the Project, including but not limited to each of the following Reference Documents, In the event of a conflict between criteria, commitments or requirements contained within one document when compared with another, refer to Schedule 15-2, Part 1, Article 1 – Reference Documents for order of precedence:
 - (i) OBC;
 - (ii) OFC;
 - (iii) OESC;
 - (iv) CSA;
 - (v) CEC;
 - (vi) OHSA;
 - (vii) ANSI/AMCA Standard 210-07 | ANSI/ASHRAE 51-07, "Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating"
 - (viii) ANSI/AMCA 250-12, "Laboratory Methods of Testing Jet Tunnel Fans for Performance"
 - (ix) AMCA Standard 300, Test Code for Sound Rating Air Moving Devices;
 - (x) AMCA Standard 301, Methods for Calculating Fan Sound Ratings from Laboratory Test Data;
 - (xi) ANSI;
 - (xii) ASHRAE Handbooks; Particular references shall be made to the following sections of ASHRAE:
 - A. ANSI/ASHRAE Standard 62.1-2010;
 - (xiii) MNECB;

- (xiv) ASME;
- (xv) ASTM;
- (xvi) APTA, Rail Transit Committee, Guidelines for Design of Rapid Transit Facilities;
- (xvii) DOT Recommended Emergency Preparedness Guidelines for Rail Transit Systems;
- (xviii) NEMA;
- (xix) SMACNA;
- (xx) ULC; and
- (xxi) NFPA - Particular references shall be made to the following sections of NFPA:
 - A. NFPA Standard 70, National Electrical Code;
 - B. NFPA Standard 90A, Installation of Air-conditioning and Ventilating Systems;
 - C. NFPA Standard 130, Fixed Guideway Transit and Passenger Rail Systems;
 - D. NFPA Standard 204, Smoke and Heat Venting; and
 - E. NFPA Standard 502, Standard for Road Tunnels, Bridges and Other Limited Access Highways.

7.3 Emergency Ventilation

- (a) General Requirements
 - (i) DB Co shall design and construct all Underground Structures including Underground Station Boxes in accordance with the ventilation requirements of NFPA 130.
 - (ii) Ventilation system(s) shall be provided for the control of heat and smoke in an emergency as required by NFPA 130.
 - (iii) DB Co, with City involvement for SCADA integration as stated in Schedule 15-2 Part 3 – Systems and the requirements of this Part 8, shall design and provide an Emergency ventilation system including all Emergency fans, dampers, controls, and accessories of the Emergency ventilation system as required by NFPA 130.
 - (iv) The design shall include provisions for the installation, removal and replacement of the ventilation system equipment.

- (v) Manufacturers recommended clearances shall be provided around ventilation system equipment to facilitate maintenance, repair, installation, removal and replacement.
- (vi) All ventilation system's equipment and controls shall be of similar appearance and functionality at all stations to minimize training requirements, and to provide easier operations and facilitate use.
- (vii) DB Co shall perform SES analyses and CFD analyses of the ventilation system to validate the design.
- (viii) DB Co shall conduct SES and CFD analyses for fire cases at the Station Platform, storage Tracks, running Tunnels and other areas including concourse areas to demonstrate that the design of the Underground Stations and Tunnels can provide the required tenability criteria based on NFPA 130. DB Co shall implement necessary modifications to the design (such as smoke baffles, barriers and additional fan capacity) to meet the tenability criteria based on the SES and CFD study results.
- (ix) DB Co shall develop the SES and CFD modelling criteria. The criteria shall address and include the following sections at a minimum and shall be submitted in accordance with Schedule 10 – Review Procedure before the analyses are performed:
 - A. Applicable Codes and standards;
 - B. Tenability criteria and time of tenability calculations for Stations, and Tunnel;
 - C. Fire scenario development;
 - D. Fire detection time and ventilation system start up time;
 - E. Modelling input data and assumptions.
 - F. Acceptable limits and other constraints; and
 - G. Methodology.
- (x) The ventilation zones shall be coordinated with the signaling system, Traction Power blocks, Train operation plans, and the Emergency response plans. Refer to Article 6 – Systems Interface, of this Part 8.
- (xi) Ventilation zones shall be designed for one Train per ventilation zone in the Tunnel segments. More than one Train per ventilation zone shall be permitted if the following condition is met:

- A. The Train control system shall be capable of removing non-incident Trains in the same time frame as the activation of the ventilation response and prior to the de-energization of the Traction Power. Refer to 7.2.5 and A.7.2.5 of NFPA 130 for additional information.
- (b) System Operational Requirements
 - (i) DB Co shall ensure that the following operational requirements are met or exceeded by the Tunnel ventilation system.
 - A. System Operation
 - i. DB Co shall develop requirements for ventilation scenarios.
 - ii. DB Co shall develop ventilation modes to be implemented through the SCADA system as per Schedule 15-2, Part 3, Article 8 – SCADA System.
 - iii. The ventilation system’s modes of operation shall be initiated from the TOCC or BCC through the SCADA system.
 - iv. The SCADA system shall include a schematic display of the Tunnel ventilation system indicating all the ventilation elements to be activated and their modes of operation.
 - v. All fans, dampers and modes of operation shall be monitored and controlled through SCADA system.
 - vi. All exit doors and cross passage doors shall be monitored and controlled through SCADA system.
 - vii. A ventilation control panel for local control of the Tunnel ventilation system shall be provided at each Underground Station/Facility that has an active controllable Tunnel ventilation system.
 - viii. The local ventilation control panels shall be capable of overriding the TOCC or BCC.
 - ix. Ventilation control panels shall be used in accordance with the operational and safety procedures and controls, to be developed to mitigate the Emergency scenarios developed in the system hazard analysis
 - x. The ventilation control panel shall be secured or located in a secure area of the Station.

- (c) DB Co shall design and construct the Emergency ventilation systems to meet the following performance requirements:
- (i) Emergency ventilation fans for Stations and Tunnels
 - A. Axial-flow fans - Station Emergency ventilation fans
 - i. Fans shall be of the axial-flow type, with internally mounted, directly driven motor and shall be reversible.
 - ii. Fans shall have adjustable-pitch blades, fitted to permit changes in fan-operating characteristics for future system modification.
 - iii. Fan motors shall be operated by variable frequency drives for commonality with existing City ventilation fans.
 - iv. The flow capacity in either direction (exhaust and supply) shall be equal to or greater than the rated capacity.
 - v. Fans shall be selected to have a total efficiency of not less than 60 percent in the forward (exhaust) flow mode.
 - vi. Each fan shall be provided with modular sound attenuators on both the inlet and discharge sides of the fan. Additional sound lining shall be provided as required so that maximum noise levels from ventilation systems do not exceed allowable limits. Any additional sound lining shall be accounted for in determining the pressure of the fan.
 - B. Jet fans – Tunnel Emergency ventilation fans
 - i. Jet fans shall be of the vane-axial type, and shall be equal or greater than the rated static thrust in either direction (forward and reverse mode).
 - ii. Jet fans shall be provided with appropriate sound attenuators.
 - iii. Fan power curve shall not exceed 100 percent of the motor rating at any point. The brake horsepower for reverse (supply) flow shall not exceed the brake horsepower for (exhaust) flow.
 - iv. There shall be no OCS supports installed within the length of the jet fan assembly including the attenuators. The first set of OCS supports shall not be less than 0.3m or more than 0.5m past the inlet or outlet of the jet fan assembly. The next set of supports, in either direction, shall be the maximum allowable distance per criteria in Article 6 – Systems Interface of this Part 8. OCS supports shall not be installed in the high velocity jet of the fans.

- v. The design and layout of the fans shall provide maintenance access with the option to lower and raise the fans at the Track level from overhead supports without requiring removal of the OCS.
 - vi. A local disconnect switch shall be provided at each jet fan location.
 - C. Emergency ventilation dampers
 - i. Dampers shall be parallel-blade, industrial, heavy-duty type, weatherproof design. Two limit switches shall be provided in each damper actuator for remote monitoring of damper position, one for open and the other for closed position. Damper leakage at shutoff shall be less than or equal to UL555 Class1 Extended.
 - ii. By-pass dampers shall be specified to fail-close while fan dampers will be specified to fail in the position determined by the ventilation design.
 - iii. Where supported by an engineering analysis, the use of bypass dampers may be removed from the design.
- (d) Equipment requirements
 - (i) DB Co shall design and construct the Emergency ventilation fans for Stations and Tunnels per the following equipment requirements:
 - A. Axial-flow fans - Station Emergency ventilation fans
 - i. Axial flow fans shall be suitable for operation individually or in parallel with other fans as applicable. Fan components shall meet the following minimum design criteria or otherwise approved equal;
 - 1 Impeller;
 - 1. Hub and blades of aluminum-alloy casting suitable for the specified performance and Underground Structure environment.
 - 2 Fan housing including motor mounts and supports;
 - 1. Hot-rolled steel.
 - 2. Minimum gage 3.
 - 3. Flange thickness shall be not less than fan housing thickness.

- 3 Support bolts, nuts, and washers;
 1. Bolts shall be not less than 1/2 inch minimum in diameter. All bolts shall be Type 316 stainless steel conforming to ASTM A 193, Grade B8M on B8MA.
 2. Nuts compatible for use with the above bolts shall be alloy steel conforming to ASTM A 194, Grade 2H.
 3. Washers and lock washers used on the fans and components shall be of Type 316 stainless steel.
- 4 Motors;
 1. Squirrel cage induction motors
 2. Service Factor: 1.15
 3. Minimum NEMA insulation Class H
 4. Minimum NEMA temperature rise Class F
 5. Motor bearings: Minimum L-10 rating equal to 40,000 hours at maximum capacity and maximum speed based on the bearing load imposed by the driven equipment.
- 5 Monitoring and instrumentation;
 1. Fan/motor bearing vibration monitoring
 2. Motor speed
 3. Flow switches
 4. Bearing temperatures
 5. Minimum two 100 ohm, three wire platinum resistance type temperature RTD sensing detectors for each stator (phase) winding.
- 6 Encasements, enclosures, terminal boxes, junction boxes;
 1. NEMA 4X stainless steel

- ii. Sound attenuators for axial-flow fans shall consist of components that meet the following criteria or otherwise approved equal;
 - 1 Shells;
 - 1. Minimum 10 gage
 - 2. ASTM A240, Type 304 stainless steel
 - 2 Flanges and stiffeners;
 - 1. Minimum gage 3 Type 304 stainless steel bent plate or ASTM A276 stainless steel angles
 - 3 Splitters including the nose and tail and the face sheets;
 - 1. Minimum 18 gage
 - 2. ASTM A293 or ASTM A240, Type 304 stainless steel
 - 4 Filler;
 - 1. Inorganic mineral or glass fiber, inert, vermin-proof and resistant to high humidity conditions.
 - 2. The filler material shall be protected with glass fiber cloth and stainless steel screen.

B. Jet fans – tunnel emergency ventilation fans

- i. Jet fan components shall meet the following minimum criteria or otherwise approved equal;
 - 1 Motor;
 - 1. Service Factor: 1.15
 - 2. Minimum NEMA insulation Class H
 - 3. Minimum NEMA temperature rise Class F
 - 4. Bearings: Minimum L-10 life rating equal to 40,000 hours at maximum capacity and maximum speed based on the bearing load imposed by the driven equipment
 - 2 Impeller;

1. Hub and blades of aluminum-alloy casting suitable for the specified performance and environment
- 3 Fan housing including motor mounts and motor supports;
 1. Hot-rolled steel
 2. Minimum gage 3
 3. Flange thickness shall be not less than fan housing thickness.
- 4 Support bolts, nuts, and washers;
 1. Bolts and studs shall be not less than 5/8 inches in diameter with a nut, 2 plain washers and a lock washer.
 2. All bolts and studs shall be of galvanized steel conforming to ASTM A 193, Grade B8M or B8MA.
 3. Nuts compatible for use with the above bolts shall be alloy steel conforming to ASTM A 194, Grade 2H.
 4. Washers and lock washers used on the fans and components shall be of galvanized steel.
- 5 Monitoring and instrumentation;
 1. Fan/motor bearing vibration monitoring
 2. Motor speed
 3. Flow switches
 4. Bearing temperatures
 5. Minimum two 100 ohm, three wire platinum resistance type temperature RTD sensing detectors for each stator (phase) winding.
- 6 Encasements, enclosures, terminal boxes, junction boxes;
 1. NEMA 4X stainless steel
- 7 Sound attenuators

1. Exterior casing: Minimum gage 18 hot dipped galvanized steel
 2. Perforated sheets: Minimum gage 22 stainless steel
 3. In fill material: Vermin free and moisture resistant inorganic mineral wool or glass fiber acoustic
- 8 Mesh screen: Hot dipped galvanized steel
- C. Emergency ventilation dampers shall meet the following minimum criteria or otherwise approved equal;
- i. Damper type: Parallel or opposed acting, multiple blade tunnel ventilation dampers
 - ii. Minimum net free area: 80%
 - iii. Frames;
 - 1 Minimum gage 7 AISI Type 304 stainless steel
 - 2 Minimum 152mm web
 - iv. Blades;
 - 1 Blade positions: Fully open and fully closed
 - 2 Minimum AISI Type 304 stainless steel
 - 3 Minimum gage 14
 - v. Blade shafts;
 - 1 Minimum 19mm diameter
 - 2 Stainless steel rounds conforming to the requirements of ASTM A276, Type 304 or 303, Condition A, Class C conditioning
 - vi. Linkage
 - 1 Minimum AISI Type 304 stainless steel
 - vii. Mullions
 - 1 Minimum AISI Type 304 stainless steel
 - viii. Actuator;

- 1 Furnish with internal position limit switches
- 2 Motor;
- 3 Minimum NEMA insulation Class F
- 4 Minimum NEMA temperature rise Class B

D. Equipment nameplates shall be fabricated from AISI Type 304 or 316 stainless steel or otherwise approved equal.

(e) Smoke Dispersion/Recirculation Study

(i) DB Co shall undertake smoke dispersion analyses for Emergency ventilation systems to demonstrate the following:

- A. Smoke discharged from Emergency ventilation shafts, Tunnel portals and Station openings to atmosphere is not drawn into the Station entrances or other Station air intakes;
- B. Smoke discharged from Emergency ventilation shafts, Tunnel portals and Station openings to atmosphere is not drawn into Non-Station Entrances or air intake shafts of adjacent buildings including known future buildings;
- C. Smoke re-circulation studies shall confirm that a minimum total smoke dilution ratio of 35:1 is reached at all air intakes to achieve a potential 10m visibility of make-up air; and,
- D. Smoke re-circulation studies shall account for all wind conditions (wind speed, wind direction and frequency of occurrence).

(ii) Based on the study, the location of the Station facilities shall be adjusted to minimize recirculation impacts or other mitigating measures shall be identified and implemented.

(f) FLS Protocols

(i) DB Co shall be responsible for reviewing and if necessary updating the current FLS protocols based on the final design of the Emergency ventilation systems in compliance with Schedule 15-2, Part 1, Article 7 – System Safety Certification, and the following:

- A. The development of the protocols shall involve a collaborative process involving DB Co, the City and the AHJ over FLS issues. This process shall be led and managed by DB Co;

- B. The protocols shall include fan ventilation scenarios for the Emergency evacuation and ventilation of Stations and Tunnels in response to all potential FLS risks including but not limited to risks identified as a result of risk analysis;
- C. Fan ventilation scenarios to outline the responsibilities of, the Operator, the City and ESP;
- D. The role of the fire alarm annunciator panels in Stations is to be defined as part of the overall FLS system;
- E. SOP shall be developed and agreed upon by all parties; and
- F. The development of SOPs and FLS protocols shall be in full compliance with Schedule 15-2, Part 1, Article 7 – System Safety Certification, and this Article 7.

(g) Design Criteria

- (i) DB Co shall apply the Design Criteria outlined in Tables 8-7.1, 8-7.2, and 8-7.3 to the Tunnel and Underground Station Emergency ventilation systems for Emergency ventilation including the associated Tunnel ventilation shaft structures and equipment.

Table 8-7.1: Design Fire Heat Release Rate

| Location | Maximum Fire Size | Minimum Growth Rate |
|---|-------------------|--------------------------|
| Guideway/Stations (Vehicle Fire) | 13.2 MW | 11.72 W/s ² * |
| Station Platform/Concourse (Trash Fire at station) | 1.0 MW | 46.89 W/s ² |

* The growth rate of the Vehicle design fire shall be, at a minimum, the value listed in this table and can be adjusted for characteristics of the Vehicle.

Table 8-7.2: Air Velocity Criteria

| Location | Description | Velocity |
|-----------|--------------------------------|---|
| Guideway | Emergency Operation Maximum | 11.0 m/s in areas where passengers may be present |
| Emergency | Emergency Operation | 9.14 m/s max |

| Location | Description | Velocity |
|------------------------------|-------------|----------|
| ventilation shafts and ducts | | |

(h) Noise Criteria

- (i) Noise criteria shall comply with the Guidelines for Design of Rapid Transit Facilities as listed by the Rail Transit Committee, APTA and as required in Table 8-7.3.

Table 8-7.3: Ventilation Equipment Noise Limits

| Scenario | Target Noise Level (NC) |
|---------------------|-------------------------|
| Emergency Operation | 70 |

- (ii) During Emergency operations, the Tunnel ventilation noise shall not exceed Lmax 85 dB(A) within the Tunnel, and combined with the ventilation noise shall not exceed NC 70 as measured within the Station.
- (iii) Refer to Schedule 17, Part 9 – Noise and Vibration, for information on external noise level restrictions.
- (i) Smoke ventilation shaft locations
- (i) Ventilation shafts shall not be located in the Tunnel sections between the East Portal and Cleary Station, Cleary Station and New Orchard Station, New Orchard Station and the West Portal.
- (ii) The design shall account for air recirculation between exhaust shafts, intake shafts, portals and open Station openings. Openings for Emergency smoke ventilation shafts on the surface shall be separated by a minimum stretched string distance not less than the recommended distance determined by a detailed smoke dispersion/recirculation study in accordance with Clause 7.3 of this Part 8, from the closest Station entrance or exit and air intakes operating in supply mode serving the Station.
- (iii) Openings for Emergency smoke ventilation on the surface shall be separated by a minimum horizontal distance of 12m from unprotected outside air intake or other openings of all other adjacent structures;

- (iv) Where the above distance is not practical, the minimum distance shall be 4.5m if the closest shaft opening is raised a minimum of 2.5m above the Station entrance or exit, unprotected outside air intake or other openings. The final configuration and separation distances shall be supported by a detailed smoke dispersion/recirculation study in accordance with Clause 7.3 of this Part 8;
- (v) The minimum distance at grade between the edges of adjacent openings for outside air intakes, protected by smoke dampers, and openings for Emergency smoke ventilation shall be as follows:
 - A. $d = 0.25 \times (L1 + L2)$
 - i. Where: d = minimum distance between the edges of the adjacent openings, in meters,
 - ii. $L1 + L2$ = lengths of the adjacent parallel sides of the openings, in meters
- (vi) Ventilation shaft openings on the surface shall be located to provide as direct a route to atmosphere as possible, to facilitate ease of airflow to and from the underground sections; Shaft openings shall include design features that mitigate the vulnerabilities identified in the TVA of Schedule 15-2, Part 1, Article 8 – Security and Emergency Management.
- (vii) Ventilation shafts shall not terminate in driveway surfaces at parking garage entrances or other surfaces utilized for daily vehicular access;
- (viii) Where not located in a sidewalk, vent shafts shall terminate a minimum 150 mm higher than any adjacent surface to exclude run-off drainage into the shaft; and
- (ix) Gratings and louvers shall be of high security and tamper proof construction.

7.4 Normal Operation Requirements

- (a) DB Co shall design the Underground Structures such that ventilation during normal operation is provided by the “piston effect” of the Trains moving through the Tunnels.
- (b) DB Co shall design the Emergency ventilation fans to be capable of being used to maintain Tunnel air temperatures.
- (c) Design Criteria
 - (i) DB Co shall apply the Design Criteria outlined in Tables 8-7.4, 8-7.5, 8-7.6 and 8-7.7 to the Tunnel and Station Emergency ventilation systems for normal operation including the associated Tunnel ventilation shaft structures and equipment.

Table 8-7.4: Outside Ambient Design Conditions (Ottawa, ON)

| Description | Data | Source | Comment |
|------------------------------------|---------|---------------------|--------------------|
| Summer dry bulb design temperature | 28.9°C | ASHRAE Fundamentals | 1% occurrence |
| Summer wet bulb design temperature | 20.8°C | ASHRAE Fundamentals | 1% occurrence |
| Winter dry bulb design temperature | -24.2°C | ASHRAE Fundamentals | 99.6% design value |

Table 8-7.5: Air Temperature Design Criteria

| Guideway – Normal Operation | |
|--|---------------|
| Maximum Average Temperature at Peak System Headway | Ambient + 3°C |

Table 8-7.6: Air Velocity Criteria

| Location | Description | Velocity |
|-----------------------------|----------------------------------|---|
| Public Areas of Station | Maximum velocity | 5.10 m/s |
| Exterior inlets and outlets | Normal Operation/at sidewalk | 2.5 m/s based on net free area of terminal gratings Maximum velocity to be determined by site specific requirements. |
| | Normal Operation/not at sidewalk | |

(ii) Noise Criteria

- A. Noise due to fan operation shall not exceed the allowable limits in areas accessible to the public. Noise criteria shall comply with the Guidelines for Design of Rapid Transit Facilities as listed by the Rail Transit Committee, APTA and as required in Table 8-7.7.

Table 8-7.7: Ventilation Equipment Noise Limits

| Area | Target Noise Level (NC) |
|------|-------------------------|
|------|-------------------------|

| | |
|----------------|----|
| Platforms | 45 |
| Mezzanines | 45 |
| Station Booths | 40 |
| Retail | 45 |

- B. Refer to Schedule 17, Part 9 – Noise and Vibration, for information on external noise level restrictions.

(iii) Pressure Wave Criteria

- A. DB Co shall ensure the design accounts for total changes in pressure greater than 0.69 kPa, in areas normally occupied by the public and employees, the maximum rate of pressure change shall be limited to 414 Pa/s.
- B. DB Co shall design doors, support systems, and equipment exposed to changes in air pressure due to Train movement to withstand the expected repetitive pressure transient loading and pressure reversals.

7.5 Congested/Maintenance Operation Requirements

- (a) DB Co shall design and construct the Tunnel ventilation system to be used to maintain temperatures, exhaust the fumes, and provide required fresh air to the Vehicles and patrons during a non-fire Emergency case, maintenance operation and non-Revenue Vehicle operation.
- (b) DB Co shall design and construct the Tunnel ventilation system to be capable of diluting diesel fumes to acceptable concentrations during maintenance operations with the use of diesel stock or equipment.
- (c) DB Co shall design and construct sliding doors located in the walls separating the Revenue Service and maintenance/Vehicle Storage Tracks at the Baseline Station LMSF with spacing coinciding with the length of the rolling stock to be used at the Station.
- (d) Design Criteria
- (i) DB Co shall apply the Design Criteria outlined in Table 8-7.8 to the Tunnel and Station Emergency ventilation systems including the associated Tunnel ventilation shaft structures and equipment.

Table 8-7.8: Air Temperature Design Criteria

| Guideway – Congested Operation | |
|--|------|
| Maximum Temperature for Train A/C and electrical equipment | 45°C |
| Maximum 5 min Local Peak Temperature | 45°C |

- (ii) Refer to normal operation Design Criteria in Clause 7.4(c)(ii) of this Part 8 for ventilation equipment noise limits.

HIGHWAY WORKS

PART A – GENERAL PROVISIONS

ARTICLE 1 REFERENCE DOCUMENTS

1.1 Application of Ontario Provincial Standards for Roads and Public Works and MTO Technical Manuals

- (a) DB Co shall perform the Highway Works in accordance with Ontario Provincial Standards for Roads and Public Works and other applicable Reference Documents, including MTO Technical Manuals, subject to Clause 1.3 of Part A of this Schedule 15-2, Part 9 and with the following amendments to OPS and MTO Technical Manuals:
- (i) In the event OPS and MTO Technical Manual design and submission requirements, with respect to both temporary and permanent works, and quality requirements, are in conflict with this Project Agreement then this Project Agreement shall apply;
 - (ii) OPS and MTO Technical Manual requirements and specifications related to Equipment for performing the Highway Works do not apply; for greater clarity specified Equipment restrictions under the “Construction” Section do apply;
 - (iii) Sections and requirements of OPS and MTO Technical Manuals that are not applicable to this Project Agreement, such as payment terms, do not apply;
 - (iv) Any and all references to “approval by the Contract Administrator”, “submitted to the Contract Administrator”, or other such reference in OPS and MTO Technical Manuals, in terms of acceptance of Materials, permission to proceed, work methodology or end product, shall be construed as being the responsibility of DB Co (IQAF Project Manager as detailed in Schedule 11) to undertake all required reviews, confirm compliance with this Schedule 15-2 and make submissions to the City with the full acceptance and approval by the Engineers on their Design Team, unless otherwise requested by the City Representative in writing or as outlined in the Project Agreement;
 - (v) Any and all references in OPS and MTO Technical Manuals to submission of documentation to the Contract Administrator “for approval”, “for acceptance”, “to be submitted to”, or other qualifying phrase with similar connotation not identified in (iv) above, is to be construed as the City Representative retaining the right to object to the submission as set out in Schedule 10 – Review Procedure, if the submission is required to undergo the Review Procedure upon consultation with the City Representative;
 - (vi) Any and all references to the “Owner” or “Authority”, or other words or phrases with similar connotation in OPS and MTO Technical Manuals shall have the same meaning as the City Representative or its assigned authority, unless otherwise stated by the City Representative in writing;

- (vii) DB Co shall, when required to submit for approval by the City Representative samples of any products proposed by DB Co that are not included in the Designated Sources for Material List, submit such samples with supporting documentation to the City Representative in accordance with Schedule 10 – Review Procedure;
- (viii) DB Co may seek relief from any parts or portions of OPS and MTO Technical Manual, by articulating in writing the aspects that do not apply and demonstrate by clauses or sections in the Project Agreement how such aspects are not appropriate in the context of this Agreement, and submit this written request to the City Representative under the Review Procedure. For clarity, DB Co relief from any parts or portions of OPS and MTO Technical Manual requires the prior written approval of the City Representative; and,
- (ix) OPS and MTO Special Provisions refers to the current version at Commercial Close; only the Common and Provincial versions shall be used.

1.2 Reference Documents

- (a) Without limiting any other provision in the Project Agreement, the Reference Documents shall apply to the Highway Works as described in this Schedule 15-2, Part 9.

1.3 Order of Precedence

- (a) Unless otherwise expressly provided in this Schedule 15-2, Part 9, if there is any conflict between any of the provisions of the Project Agreement and any of the Reference Documents, the following shall apply in descending order of precedence:
 - (i) The provisions of the Project Agreement;
 - (ii) MTO Special Provisions
 - (iii) OPS; and,
 - (iv) Any other applicable Reference Documents.

1.4 Acceptable Products

- (a) DB Co shall use products and proprietary systems on the Highway Works which meet applicable Project Agreement requirements and shall be in accordance with the Designated Sources of Materials List. Without limiting Section 11.20 of the Project Agreement, the use of products that are not on the Designated Sources of Materials List requires the prior written approval of the City, in its sole discretion, and acceptance shall be subject to DB Co demonstrating in its submission sufficient knowledge, understanding and experience with the proposed product and proprietary system and acceptable performance for the proposed product and proprietary systems under conditions and applications similar to those existing for this Project.

1.5 Reference Concept

- (a) Any use by DB Co of any or all aspects of the Reference Concept or Preliminary Design Report in performing the Highway Works shall be entirely at DB Co's own risk. Use of the Preliminary Design Report as a basis for DB Co's design for any part of the Highway Works does not constitute City's acceptance of DB Co's design, unless use of the Preliminary Design Report is specifically required under the Project Agreement.

1.6 Definitions

- (a) Capitalized terms used in this Schedule 15-2, Part 9, including all Appendices hereto, are defined in the following and/or in Schedule 1 - Definitions and Interpretations of the Project Agreement and/or in Schedule 15-1 – Technical Terms and Reference Documents. In the event of conflict between terms defined in this Schedule 15-2, Part 9 and Schedule 15-1 and/or Schedule 1, the definitions in this Part 9 shall govern.

AASHTOWare means the enterprise AASHTOWare Pavement ME Design software suite designed by transportation professionals to help transportation professionals comply with AASHTO standards.

Acceptable Products means the products that meet the Project requirements as described in Clause 1.4 of Part A of Schedule 15-2, Part 9.

Accurate means the information provided is a true representation of an actual situation, accomplishment or occurrence.

Address or Addressed means the initiation of an activity that will reduce or remove a condition or Construction Defect.

Advance Notification refers to an **Advance Notification Sign**. It is a temporary sign (a version of a TC-64, 4'X 8', static sign) which message is temporal or time-oriented in nature. It aims to create awareness of a future work activity before the time (usually 7-14 days in advance) that it occurs in order to forewarn of future work activities liable to impact upon traffic operations and to effectively communicate the location, time, duration, extent and potential impact of the future work activity. It should provide information to motorists for route selection and travel planning.

Advance Warning refers to an **Advance Warning Sign**. It is a temporary sign (a version of a TC-64, 4'X 8', static sign) which message is situational or location-oriented in nature. It aims to create awareness of an ongoing work activity during the time that it occurs in order to warn of ongoing work activities that impact upon traffic operations, and therefore it needs to be located in advance of potential queues and to effectively communicate the location, time, duration, extent and potential impact of the ongoing work activity. It should provide information to motorists for route selection using a formal, signed detour route or an informal, un-signed alternative route.

Advanced Traffic Controller or ATC means an expandable, flexible, microprocessor-based traffic controller designed to run the owner's application software, which has been developed for the Intel x86 family of microprocessors, running QNX 6.3 real-time operating system.

Advanced Traffic Management System or ATMS means a system or series of systems that encompass a broad range of wireless and wire line communications-based information and electronics technologies integrated into the transportation system's infrastructure, and into vehicles themselves, to develop and improve transportation systems.

Arc Flash Study Report has the meaning given in Clause 6.3 of Part B of this Schedule 15-2, Part 9.

Ball Bank Indicator Report has the meaning given in Clause 2.3(b) of Part B of this Schedule 15-2, Part 9.

Barrier means physical barriers set along the road, including cable guide rail, steel beam guide rail, temporary and permanent concrete barriers, safety items such as energy-attenuating systems and crash cushions, box beams and anti-glare screens, which are intended to provide additional protection to motorists when vehicles leave the Roadway, that protect vehicle occupants from a more severe hazard and thereby reduce the degree of injury and damage.

Bearing means the superstructure support elements between the Bridge seats and the Bridge superstructure composed of steel, rubber or other materials and separated into two general categories as follows:

- (a) Fixed, allowing only rotational movements; and,
- (b) Expansion, allowing longitudinal as well as rotational movements, referring to drawings for specific Bridges.

Bikeways Design Manual means the Ontario Bikeways Planning and Design Guideline, as published by MTO.

Bluetooth Reader has the meaning given in Clause 11.3(f)(i) of Part B of this Schedule 15-2, Part 9.

Bluetooth Server has the meaning given in Clause 11.3(f)(ii) of Part B of this Schedule 15-2, Part 9.

Bluetooth Travel Time Monitoring Service has the meaning given in Clause 11.3(g)(i) of Part B of this Schedule 15-2, Part 9.

Borrow means earth or rock material acquired from outside of the right of way to complete the Works.

Bridge Deck means the structural element under the Deck wearing surface system that transfers loads from the Deck surface to the Bridge's superstructure or substructure components.

Bridge Deck Drainage means a system designed to remove water from the Deck as completely and quickly as possible and to discharge the runoff harmlessly.

Bridge Surface means the wearing surface used by vehicles, pedestrians, cyclists and others to travel over a Structure and includes curbs and gutters and approach slabs.

Bullnose means the location where the edge of a highway and the edge of ramp meet each other. Bullnose geometry is defined in the Geometric Design Standards for Ontario Highways (MTO) Figures FA-1 to FA-7.

Catch Basin means a drainage structure that collects stormwater surface runoff and transports it into a Culvert or storm sewer system. They may be located in paved areas or unpaved drainage ditches.

CCTV System/Subsystem means a video surveillance system/subsystem used to monitor Roadway conditions.

Certificate of Authorization has the meaning given in the Ontario *Professional Engineers Act*, R.R.O. 1990, c. P.28, as amended from time to time.

CHBDC means Canadian Highway Bridge Design Code (CHBDC) CAN/CSA-S6.

Checking Team has the meaning given in Clause 4.2(b)(i) of Part B of Schedule 15-2, Part 9.

Chromaticity means the colour of the line by reference to Commission Internationale de l'Eclairage (CIE) chromaticity diagram to define the area within which the colour must fall, as measured in accordance with ASTM E-1347.

Clearance Certificate means a form that demonstrates registration with and the existence of an account in good standing with the Workplace Safety and Insurance Board of Ontario.

Closure means any partial or total closure, obstruction, blockage or other restriction or interference (howsoever arising) impeding the flow of traffic on or affecting the ability of the public to pass and re-pass over a traffic lane of whatever duration including, without limitation, any such partial or total closure, obstruction, blockage, restriction or interference:

- (a) That is effected by DB Co;
- (b) That is required for any works by a Governmental Authority or for any inspection, investigation or survey (whether carried out by DB Co, City, any other Governmental Authority or any other person);
- (c) That results from an Incident or a vehicle breakdown;
- (d) That is effected by an Emergency Service Provider;
- (e) That materially affects the ability of Highway users to use that traffic lane in a safe manner due to the build-up of snow, ice or water resulting from a failure to meet the requirements defined in the Output Specifications; or,
- (f) From any other natural event physically affecting the Roads.

For purposes of this definition, traffic congestion or slowing of the flow of traffic in a traffic lane or traffic lanes within the Roads will not by itself be considered to be a Closure (including where the same results from speed restrictions properly imposed from time to time as a direct result of adverse weather conditions or seasonal restrictions for the time being affecting the Roads, but excluding where the standard of construction and/or condition of the Roads has contributed to the need for such speed restrictions).

Closure Notification Number means a reference number provided by OTOC to identify Road Closures in respect of pre-approved Road Closures.

Communications System/Subsystem means the system or subsystem used to interconnect the various ATMS devices (VMS, CCTV, VDS, etc.) with the OTOC. It can be wireless and/or wire-line, as applicable.

COMPASS means the centralized software and hardware that controls and monitors remote ATMS devices and that is used to reduce travel delay and travel time uncertainty, to enhance safety, to improve incident response and to improve traffic flow.

Complete means that all required services and relevant information has been provided.

Concrete Barrier, Temporary and Permanent means pre-cast and cast-in-place concrete barrier walls in the median and edge of pavement; commonly installed in highway medians to separate traffic.

Context Sensitive Design or CSD means a series of concept design recommendation (Context Sensitive Design (CSD) to promote a consistent treatment of the major elements of the Queensway infrastructure such as Bridges, Retaining Walls, Noise Barriers, landscaping and architectural lighting.

Context Sensitive Design Concept has the meaning given in Appendix F of this Schedule 15-2, Part 9.

Continuous Illumination means a lighting system on an essentially straight and linear section of Roadway designed to provide a specific lighting level and uniformity of light over the traveled portion of the Roadway.

Council Resolution means a resolution passed by a municipal council under the *Municipal Act, 2001* (Ontario).

Counting Stations and Loops means a system consisting of electronic detecting and recording units installed at the side of the Roadway and connected to actuation devices, such as loop detectors, imbedded in the Roadway Pavement to measure traffic volumes, speeds and axle counts.

Crossing Road has the meaning given in Clause 4.1 of Part C of this Schedule 15-2, Part 9.

Culvert means a drainage structure designed to allow the passage of surface water, livestock or pedestrians under a roadway, railway or roadside entrance. For the purposes of these

Performance Requirements, culverts are less than three metre span and may be a concrete Culvert, corrugated steel Culvert (CSP), timber Culvert or plastic Culvert.

Data Room means the secure website established by City for the Project prior to the date of this Project Agreement containing or referring to materials, documents, information and data in respect of the Project.

Debris means objectionable items including damaged City/MTO inventory, sand, gravel, roadside garbage, litter, dead animals, unlawful signs, fallen trees, loose brush and fallen rocks.

Deck means the portion of an Bridge that supports the highway, from the top of the major structural members to the wearing surface, and is designed to distribute loads evenly across the Bridge.

Deck Area means the plan area of a bridge Deck: Total length (centre-line of bearing to centre-line of bearing x width (outside of barrier to outside of barrier).

Demolition, Removals, and Disposal Plan has the meaning given in Clause 12.1 of Part B of Schedule 15-2, Part 9.

Design Bulletins or Highway Design Bulletins or Bridge Office Memo's mean updated interim recommendations, directives and/or policies on select Highway design subjects.

Design Integration means a coordination process undertaken by DB Co to consider and ensure that all necessary disciplines (e.g. roadway, traffic, geotechnical/foundations, drainage, structural, environmental, etc.) that have an impact or may be impacted by a design have reviewed the design and have had their input incorporated and coordinated to ensure completeness of the design.

Design Life means the period of time specified by the Owner during which an asset is intended to remain in service.

Design Manager means the manager of the Design Team.

Design Safety Review means design safety reviews that are to be carried out in accordance with Article 10 of Part B of Schedule 15-2, Part 9.

Designated Construction Zone means one or more highway work zones located on or near the Roadway. A Designated Construction Zone must be designated through a Designation of Construction Zone and signed in order to have enforceable maximum speed limits.

Designated Sources of Materials List or DSM means materials and sources of materials that have been approved by MTO for use on an MTO construction contract.

Designation of Construction Zone means the Designation of Construction Zone Form PH-M-101, to be prepared and submitted by DB Co to MTO and through which an official of MTO may, by signing the Designation of Construction Zone Form, designate part of a King's Highway

as a Designated Construction Zone, thereby authorizing the posting of a lower regulatory rate of speed than is otherwise provided through the existing regulatory speed limit.

Detour Route means a route that takes traffic off of the regular route and, using existing or newly made temporary Roadways within the work zone, guides traffic around the work zone.

Ditch means an open drainage facility constructed to carry water to an outlet.

Diversions means traffic diversions by means of a lane shift or an on-site Detour Route.

Drainage and Stormwater Management Report has the meaning given in Clause 7.2 of Part B of this Schedule 15-2, Part 9.

Drop-off means the drop from the surface of the edge of asphalt pavement or concrete pavement to the gravel Shoulder as measured vertically from the underside of a 1.3 m rigid straight edge, placed on the asphalt pavement or concrete pavement and on the gravel Shoulder, to the deepest portion of the rut.

Durability means the percentage of marking remaining on the Roadway, as assessed in accordance with the MTO Durability Classification Guidelines.

EB means eastbound.

Electrical Safety Authority means the Electrical Safety Authority of Ontario.

Electrical System/Subsystem means the system composed of all infrastructure for electrical work relating to the Highway Works.

Emergency Repairs means any activity required to bring the Subsystem to full functionality in accordance with the specifications other than routine maintenance activities.

Enhanced Grading means the implementation of landscape berms to blend the extension with adjacent landscapes.

Engineer means a professional engineer licensed by the Professional Engineers of Ontario to practice in the Province of Ontario.

Engineer's Report means an Engineer's report containing the information specified in Section 8 of the *Drainage Act* (Ontario)

Environmental Approvals has the meaning given in Schedule 17 – Environmental Obligations.

Equipment means all machinery and equipment used for preparing, fabricating, conveying or erecting the Works and normally referred to as construction and maintenance machinery and equipment.

Explicit Safety Analysis has the meaning given in Clause 1.7 of Part B of this Schedule 15-2, Part 9.

Flasher Beacons means electrically operated warning devices that intermittently flash a red or amber light.

Flexible Pavement means Pavement consisting of asphalt concrete layers on supporting courses such as granular base and granular sub base, placed over the sub grade.

Floodplain Mapping means mapping approved by the Ministry of Natural Resources or local Conservation Authority that illustrates the limits of flooding associated with the Regulatory Storm.

Friction means the force that resists the relative motion between a vehicle tire and a pavement surface and is measured according to the MTO Friction Testing and Reporting Format, October 2009.

Friday Night has the meaning given in Clause 11.3(l)(iii) of Part B of Schedule 15-2, Part 9.

Full Closure means a Closure affecting all of the lanes in one or both travelling directions within the Roads.

Full Depth Paved Shoulder means Shoulder pavement depth that is designed to accommodate detour traffic for a period of one year minimum.

Full Illumination means a consistent lighting system covering a defined area such as an interchange or intersection, designed to provide a specific lighting level and uniformity of light over the traveled portion of the Roadway.

General Arrangement Drawing has the meaning given in Clause 4.4(b)(iii) of Part B of this Schedule 15-2, Part 9.

Geotechnical Report has the meaning given in Clause 5.11 of Part B of this Schedule 15-2, Part 9.

Granular Base means a set of requirements for dense graded aggregates intended for use as granular base within the Pavement structure, granular shouldering and backfill.

Granular Subbase means a set of requirements for well-graded aggregates intended for use as granular subbase within the Pavement structure and granular backfill. Granular B shall be Type II.

Granular Material means coarse-grained soils from which base and subbase aggregates can be produced.

Handrail means the rail mounted on top of the barrier or Parapet Wall, and all associated hardware to secure it to the wall.

Haul Route Plan has the meaning given in Clause 13.1 of Part B of this Schedule 15-2, Part 9.

Hazard(s) or Hazardous means a condition or Defect within the Highway Works causing an unsafe condition to the Highway users.

High Mast Lighting means illumination of a large area by means of a group of luminaires that are designed to be mounted in fixed orientation at the top of a high mast, generally 20 metres (65 feet) or higher.

Highway means a common and public thoroughfare any part of which is intended for or used by the general public for the passage of vehicles and includes the area between the lateral property lines thereof. This includes a street, bridge and any other structure incidental thereto and any part thereof.

Highway Emergency Traffic Plan has the meaning given in Clause 5.2(b) of Part C of Schedule 15-2, Part 9.

Highway Erosion and Sediment Control Plan has the meaning given in Clause 7.4 of Part B of this Schedule 15-2, Part 9.

Highway Lighting System means a system of luminaires, poles, sign luminaires, Underpass illumination, navigation lighting, cables, power supply equipment, control system and all associated materials required to provide illumination on a Highway or associated appurtenances.

Highway Traffic and Transit Management Communications Plan has the meaning given in Clause 5.2(g) of Part C of Schedule 15-2, Part 9.

Highway Traffic and Transit Management Plan or Highway TTMP means the plan to be prepared, submitted and implemented by DB Co in accordance with Clause 5 of Part C of Schedule 15-2, Part 9.

Highway Traffic Control Plan(s) or Highway TCP means the sub-plan or sub-plans of the Highway Traffic and Transit Management Plan prepared by the DB Co in accordance with Clause 5.2(a) of Part C of Schedule 15-2, Part 9.

Highway Traffic Incident Management Plan has the meaning given in Clause 5.2(c) of Part C of Schedule 15-2, Part 9.

Highway Traffic Management Implementation Plan or Highway TMIP means the sub-plan of the Highway Traffic and Transit Management Plan described in Clause 5.2(d) of Part C of Schedule 15-2, Part 9.

Highway Traffic Monitoring Plan has the meaning given in Clause 5.2(h) of Part C of Schedule 15-2, Part 9.

Highway Traffic Risk Assessment Plan means the sub-plan of the Highway Traffic and Transit Management Plan described in Clause 5.2(f) of Part C of Schedule 15-2, Part 9.

Highway Works Manager means the representative of the Lead Design Engineer on the Design Team.

Highway Works Traffic Management Communications Plan has the meaning given in Clause 1.13 of Part C of this Schedule 15-2, Part 9.

Holiday has the meaning given in Clause 1.4 of Part C of Schedule 15-2, Part 9.

Incident means events including traffic accidents, emergency situations, spills (Hazardous and non-Hazardous), flooding, Water Ponding, Highway deficiencies, Debris, and tree removal or other incidents off the ROW, which affect the Highway.

Incident Response Equipment (Freeway) means, at a minimum, a Crash Truck as defined in OTM Book 7 with operator and a vehicle with operator responding together with emergency response equipment including, but not limited to the following: a cutting torch, concrete saw, hand shovels, brooms, camera and film or digital camera, pick axe, chain saw, bolt cutters and other hand tools, emergency flares, cellular phone, sand or absorbent material for minor spills and traffic control equipment including cones, TC-54s and markers.

Incident Site means the location within the Highway Corridor Lands where an Incident has occurred and Response is required.

Independent Checking Team means a separate or independent design team of Professional Engineers engaged to conduct design checks, and are independent from the company of the design team performing the original design without any conflicts of interest.

Information Signage means signs that are used for directing motorists; identifying intersecting routes; identifying geographical locations and distances; and directing motorists to towns, cities, and other important destinations.

Integrated Management Plan has the meaning given in Schedule 11 - Integrated Management System.

Intelligent Transportation Systems or ITS has the same meaning as Advanced Traffic Management System.

Interconnection means a communication link between traffic signal controllers at adjacent intersections to optimize traffic flow by adjusting phasing and timing sequence in response to varying offset.

International Roughness Index or IRI means the measure of the Pavement smoothness based on the longitudinal profile of the Pavement surface as defined in the World Bank Paper 46.

Invasive Species or Invasive Exotics means plant species whose introduction or spread negatively impacts upon native biodiversity, the economy and/or society, including human health. Invasive plant species may out-compete desirable native plant species, destroy wildlife habitat and overtake landscape plantings and natural areas. Examples of invasive plant species include Phragmites, dog strangling vine, and giant hogweed.

Landscape Design Element(s) means an individual component which make up the designed landscape (i.e. stormwater management facility, visual screen, landscape berm).

Landscape Plan means design drawings, presentation graphics, specifications and narrative that cover all aspects of the landscape design to be prepared, submitted and implemented by DB Co in accordance with Article 9 of Part B of Schedule 15-2, Part 9.

Landscape Screening means a combination of one or more screening methods (sound barrier, vegetation, berming, fence), depending on the Site characteristics and safety and engineering requirements.

Lane Closure means any Closure affecting a lane or lanes (including ramps), but excludes a Full Closure.

Lead Design Engineer means the DB Co Party within the Design Team that is responsible for leading the overall design of the Highway Works.

LiDAR means Light Detection and Ranging.

Linear Highway Referencing System or LHRS means a link/node referencing system that is used to locate road sections and points on the Ontario Highway Network. Each Highway is divided into consecutive sections that have unique reference numbers assigned in ascending order. The starting point of any section is defined as the point where two Highways intersect, any other suitable points such as county/regional road intersections, structures and railway grade crossings and interchanges.

Light Trespass means the effects of light that strays from the intended purpose and becomes an annoyance, a nuisance, or a detriment to visual performance. As such, light trespass should always be considered negative, unlike spill light, which can have positive or negative attributes.

Lightweight Fill means a fill material with a unit weight less than conventional soil or rock fill. Examples include EPS (expanded polystyrene), blast furnace slag, cellular concrete, tire chips/shreds, saw dust/wood chips and expanded clay.

LLF means light loss factor.

Luminance means the luminous flux in a light ray emanating from a surface or falling on a surface in a given direction per unit of projected area of the surface viewed from that direction per unit of solid angle (reflective light) as measured in accordance with ASTM E-1347.

Made Aware means when DB Co has been advised by any party or upon detection.

Main Line means the freeway within the Highway Corridor Lands located:

- a. In a north-south direction that consists of the existing Highway 416 from south of Hunt Club Road to Highway 417, including all associated widened and improved infrastructure; and,
- b. In an east-west direction that consists of the existing Highway 417 from east of Maitland Avenue to west of Moodie Drive, including all associated widened and improved infrastructure.

Maintenance Operations means the activities performed to maintain the Highway in a safe and passable condition, to prolong the life of the asset, and other activities prescribed in Appendix G.

Material(s) means material and fixtures forming part of the infrastructure relating to Highway Works.

Ministry Directives means the official method of disseminating policy within the Ministry of Transportation Ontario.

Modular Expansion Joints means prefabricated deck joints consisting of multiple joint openings filled with seals.

MOE Notice of Approval has the meaning given in Schedule 17 – Environmental Obligations.

MOL means the Ministry of Labour (Ontario).

Moving of Utility has the meaning given in the Utility Relocation Guidelines (MTO), January 28, 2010.

MTO General Conditions of Contract means OPSS PROV 100.

MTOD means Ministry of Transportation Ontario Drawing.

MTO RAQS means the MTO Registry, Appraisal and Qualification System.

MTO Technical Manuals means manuals, guides, guidelines or standards published by MTO and listed in the Reference Documents.

Municipal Roadways means those Roads listed in Clause 4.1(a)(ii) of Part C of Schedule 15-2, Part 9.

NB means northbound.

Noise Barrier means a barrier designed to attenuate noise generated by vehicles traveling on a Highway.

Non-Structural Culvert means any Culvert that has a span of less than three metres.

NSSP means the Non Standard Special Provision, as published by MTO.

Office Space has the meaning given in Clause 6.1(a) of Part A of Schedule 15-2, Part 9.

Openness Ratio means the ratio of a Culvert's cross-sectional area divided by its length.

OPS means the Ontario Provincial Standards for Roads and Public Works.

OSIM means the Ontario Structure Inspection Manual, as published by MTO.

Other Affected Municipal Roadways means Roads affected by the Highway Works or Roads within the Highway Corridor Lands that are not Existing Provincial Highways, or Existing Municipal Roadways.

Ottawa Traffic Operations Centre (OTOC) means the MTO's traffic operations centre (TOC) for coordinated highway management systems. It is at this TOC that the data from the highway system is collected and processed, fused with other operational and control data, synthesized to produce "information", and distributed to stakeholders such as the media, other agencies, and the traveling public.

Overhead Sign Support Structure means a permanent structure with a Foundation used to support an over-head sign over a Roadway.

Overpass means a grade separated Structure carrying a Highway over a road, a Highway, a railway or a watercourse.

Parapet Wall means a barrier fastened to the edge of a Bridge Deck to prevent vehicles or other road users from running over the side of the Bridge.

Pavement means all structural elements or layers above the subgrade of a road, including granular driving surfaces and Shoulders.

Pavement Condition means the condition of the Pavement based on roughness and distresses.

Pavement Design Report has the meaning given in Clause 3.2 of Part B of this Schedule 15-2, Part 9.

Pavement Markings means directional dividing lines, lane lines, edge lines, transitional and continuity lines, interchange ramps and channelization lines, barrier lines, intersection markings, reserved facility markings and parking markings, including words, letters and symbols on Pavements, used to delineate vehicle operating limits on Highways conforming to the size and shape as specified in OTM Book 11.

Permanent Pavement Marking Plan has the meaning given in Clause 8.6(a) of Part B of Schedule 15-2, Part 9.

Permanent Signing Plan has the meaning given in Clause 8.4(e) of Part B of Schedule 15-2, Part 9.

Permanent Signing Table has the meaning given in Clause 8.4(e) of Part B of Schedule 15-2, Part 9.

Permitted Periods for Closures means the periods during which DB Co may implement Closures, Full Closures, Detour Routes, Lane Shifts and Diversions in respect of the various Roads, as set forth in Part C of Schedule 15-2, Part 9.

PIT Test Plan has the meaning given in Clause 11.3(m) of Part B of this Schedule 15-2, Part 9.

Poor Weather means any weather situation at any time of year, which requires DB Co to perform Maintenance Operations to Address the weather or the resulting impacts, including high winds and heavy rains.

Pothole means dents or hollow depressions in the Roadway surface.

Preliminary Design Report or PDR means the preliminary design report associated with [REDACTED], and any updates or any additional design to the above as shown on preliminary design drawings from the MTO designer. The PDR forms part of the Reference Concept.

Preliminary Lighting Design has the meaning given in Clause 6.4 of Part B of this Schedule 15-2, Part 9.

Priority Basis means completing the work in order of importance with respect to the public's safety.

Provincial Highways means those Highways listed in Clause 4.1(a)(i) of Part C of Schedule 15-2, Part 9.

Portable Variable Message Sign or PVMS means a Variable Message Sign that may be moved from place to place to provide drivers with information on conditions, usually work zone conditions, at the time and place where needed.

Preventative Maintenance means the proactive care and servicing by DB Co for the purpose of maintaining the New MTO Infrastructure and New Municipal Infrastructure in satisfactory operating condition by providing for systematic inspection, detection and correction of incipient failures either before they occur or before they develop into major Defects.

Professional Engineer means an engineer licensed by Professional Engineers Ontario to practice in the Province of Ontario.

Qualified Person or Qualified Personnel means staff having the licences, training and experience appropriate for the equipment or facilities they are working on.

Rapid Bridge Replacement (RBR) means replacement of the existing structure with an on-site constructed structure using SPMT's in the same location.

Registry, Appraisal and Qualifications System or RAQS means a system used by MTO for the registration, appraisal, and qualification of contractors and consultants for contracts with MTO.

Regulatory Sign means a sign that informs Highway users of traffic laws or regulations and indicates the legal requirements that would otherwise not be apparent, such as "stop" and "speed limit" signs.

Regulatory Storm means a design flow adopted by the Ministry of Natural Resources for floodplain management purposes. Figure 1 in the MTO Drainage Design Standards (January 2008) illustrates the three Flood Hazard Zones in Ontario. Depending on the zone, the

Regulatory Storm is either the 100-year flow or the greater of the 100-year design flow and the peak generated by the regional storm (Timmins Storm or Hurricane Hazel).

Response means the arrival of appropriate qualified staff and an appropriate amount of material and equipment to the Site of an Incident or situation requiring attention.

Restricted Period(s) means those periods of time, as set out in Part C of Schedule 15-2, Part 9, during any Construction Activity for an identified location within the work zone during which there are restrictions on DB Co's available traffic management measures.

Retained Soil System or RSS means a proprietary system that uses mechanical soil stabilization to retain horizontal loads in excess of 2 m in height for applications, such as true and false abutment structures, Retaining Walls and steep slopes, or to retain vertical loads for applications, such as embankments over soft ground.

Retaining Wall means a structure that holds back soils and is not a wingwall connected to a Bridge or Culvert.

Road Safety Audit means an audit carried out in accordance with Article 10 of Part B of Schedule 15-2, Part.

Road Safety Audit Certificate has the meaning given in Clause 10.8(a) of Part B of Schedule 15-2, Part 9.

Road Safety Audit Report has the meaning given in Clause 10.6(b) of Part B of this Schedule 15-2, Part 9.

Road Safety Audit Team means the team engaged by DB Co to undertake the Road Safety Audit.

Roads means, at any time, the Provincial Highways, Municipal Roadways, ramps and all other roads and Highways, including Shoulders, forming part of the Highway Works at that time.

Roadside means the area between the outside edge of the Shoulder rounding and the ROW limits and features within the Roadway that do not form an integral part of the driving surface, such as drainage features and guiderails.

Roadside Landscape(s) means geometrically strong plantings and structural elements that provide a green, aesthetic driving experience for users of Highway 417.

Roadway means that part of the Highway designed or intended for use by vehicular traffic and includes the Shoulders.

SB means southbound.

Select Subgrade Materials (SSM) means a set of requirements in accordance with OPSS 1010 for well-graded non-plastic aggregates used to replace poor subgrade materials and as swamp backfill.

Service Life means the period of time during which the structural component safely performs its design function without significant repairs, rehabilitation or replacement.

Shop Drawings means drawings that are prepared by DB Co and/or DB Co Parties based on the Construction Document Submittals for the detailing or further resolution of the assembly or execution aspects of the Highway Works.

Shoulder means that portion of the Roadway between the edge of the travelled surface and the top inside edge of the ditch or fill slope.

Side Clearance means that portion of the Roadway between the edge of the travelled surface and the edge of the adjacent curb or Barrier on a Structure.

Sign means, for the purposes of the Output Specifications, a lettered board, message or other display that includes all regulatory, warning, guide or informational, advisory, construction and maintenance, route markers and all special or other messages/displays under provincial jurisdiction as defined by MTO but excludes electronically controlled messages/displays, but includes the sign face overlay.

Significant and Complex Structures means Structures, including but not limited to the following:

- (a) Single span bridges of spans greater than 60 m;
- (b) Multi-span bridges of span(s) greater than 60 m or where the overall length of the bridge is more than 250 m;
- (c) Bridges which cannot be analysed by the Simplified Method of Analysis as CAN/CSA-S6-14 Clause 5.7 and that need to be analysed using refined methods of analysis as per CAN/CSA-S6-14 Clause 5.9 and Clause 5.10;
- (d) Curved bridges that exceeds the criteria of CAN/CSA-S6-14 A5.1.3.2 where dead and live loads twisting moments and associated effects of torsional and distortional warping need to be considered;
- (e) Bridges with complex boundary conditions, articulation and idealization;
- (f) Tunnels;
- (g) Bridges built in locations with complex Foundation conditions;

Sign Truss means a truss used as part of overhead static sign support structures.

Simplified Methods of Analysis means the method of analysis referred to as 'Simplified Methods of Analysis' in CAN/CSA-S6-14, Section 5.

SPMT's means Self-Propelled Modular Transporters.

Stage 1 Road Safety Audit means a Pre-Final Design Road Safety Audit as described in Clause 10.6(c)(i) of Part B of Schedule 15-2, Part 9.

Stage 2 Road Safety Audit means a Final Design Road Safety Audit as described in Clause 10.6(c)(ii) of Part B of Schedule 15-2, Part 9.

Stage 3a Road Safety Audit means a Temporary Traffic Control On-Site Road Safety Audit as described in Clause 10.6(c)(iii) of Part B of Schedule 15-2, Part 9.

Stage 3b Road Safety Audit means a Construction Road Safety Audit as described in Clause 10.6(c)(iv) of Part B of Schedule 15-2, Part 9.

Stage 4 Road Safety Audit means a Post Construction Road Safety Audit as described in Clause 10.6(c)(v) of Part B of Schedule 15-2, Part 9.

Structural Culvert means (i) a structure that forms an opening through soil with a span greater than or equal to 3 metres; (ii) Multi-cell culverts separated by a structural wall, with the total of the individual spans greater than or equal to 3 metres; and (iii) Multi-cell culverts separated by fill, the maximum fill spacing must be one times the minimum span of the individual cells, and the minimum individual cell span must be 2 metres. The total span is the total of the spans of the individual cells.

Structural Manual means the Structural Manual, as published by MTO.

Structure means any Bridge, Tunnel, Structural Culvert, Retaining Wall or Overhead Sign Support Structure.

Structure Rehabilitation means a modification, alteration or improvement to the existing condition of a Structure or Bridge subsystem that is designed to correct deficiencies for a particular design life or live load level.

Structure Survey Report has the meaning given in Clause 4.3(c) of Part B of this Schedule 15-2, Part 9.

Substructure means abutments, piers, their Foundations and protective works that form the Bridge substructure supporting the Superstructure above.

Subsystem means a grouping of like components with similar functionality and for the purposes of the Output Specifications, includes the following subsystems: CCTV, VMS, PVMS, VDS and communications. These are also referred to as Systems. These include structures (if applicable), electronic display elements (if applicable), controllers (if applicable), cabinets, electronic equipment and all other mechanisms and equipment.

Superpave means a hot mixed asphalt pavement technology designed and constructed in accordance with OPSS PROV 1151.

Superstructure means an upward extension of an existing Structure above a baseline.

System Integration Plan has the meaning given in Clause 11.3(m) of Part B of this Schedule 15-2, Part 9.

Temporary Pavement Marking Plan means the Pavement Marking plan to be prepared, submitted and implemented by DB Co in accordance with Clause 8.5(a) of Part B of Schedule 15-2, Part 9.

Temporary Signing Plan has the meaning given in Clause 8.3(c) of Part C of Schedule 15-2, Part 9.

Temporary Signing Table has the meaning given in Clause 8.3(c) of Part C of Schedule 15-2, Part 9.

Temporary Highway Works means Works that are performed to serve a specific temporary function in the execution of the Highway Works and in respect of which any resulting infrastructure is removed at such time when its temporary use is no longer required.

Temporary Works means Works that are performed to serve a specific temporary function in the execution of the Works and in respect of which any resulting infrastructure is removed at such time when its temporary use is no longer required.

Timely means that all required information is provided within the prescribed timeframe or, if not prescribed, a commercially reasonable timeframe.

Highway Traffic Advisory Temporary Signage Plan has the meaning given in Clause 5.2(e) of Part C of Schedule 15-2, Part 9.

Traffic Analysis Report has the meaning given in Clause 1.4 of Part B of Schedule 15-2, Part 9.

Traffic Control means the placement or erection of Signs, signals, Pavement Markings or other installations, and the use of flaggers and other personnel, for the purpose of regulating, warning or guiding traffic.

Traffic Control Device(s) or TCD is a term used to describe any person, Sign, signal, marking or device placed upon, over or adjacent to a roadway by or at the direction of a Relevant Authority or their designate, for the purpose of regulating, warning, guiding or informing a vehicle operator or pedestrian of an existing condition or hazard.

Traffic Control Supervisor or TCS means a person appointed by DB Co in accordance with Clause 5.3 (d) of Part C of Schedule 15-2, Part 9.

Traffic Engineer means the person appointed by DB Co in accordance with Clause 5.3 (c) of Part C of Schedule 15-2, Part 9.

Traffic Management Study has the meaning given in Clause 1.2(g) of Part C of this Schedule 15-2, Part 9.

Traffic Manager means the person appointed by DB Co in accordance with Clause 5.3 (b) of Part C of Schedule 15-2, Part 9.

Traffic Paint means a water-borne or organic solvent based paint specifically formulated for use in application of Pavement Markings.

Traffic Management Auditing has the meaning given in Schedule 11 – Integrated Management Systems.

Traffic Signal System means a system of traffic signal equipment, poles, traffic signal controllers, traffic signal actuation and interconnection equipment and all associated materials required to regulate vehicular and pedestrian traffic.

Underpass(es) means a grade separation (Bridge) in which the major road passes under an intersecting road or railway.

Variable Message Sign(s) or VMS means a system that includes sign structure, electronic display elements, sign case, photocell sensor, Variable Message Sign controller and all other mechanisms and equipment.

Vehicle Detector Stations/System/Subsystem or VDS means a system used to detect the presence of vehicles in one or more traffic lanes. Data is provided on speed, volume, occupancy and, frequently, classification of vehicles over timed intervals.

Warning Sign means a sign that indicates conditions on or adjacent to a Highway or street that are actually or potentially hazardous to traffic operations, such as a curve Sign.

Washout means the loss of aggregate, earth fill or any other type of soil from the edge of Pavement to the ROW limits.

Water Ponding means the collection of water on the travelled portion of the Highway.

WB means westbound.

Wildlife means animals such as fox, wolf or larger animals such as deer, elk, bear and moose and excludes smaller animals such as groundhogs, skunks, raccoons and domestic animals.

Winter Period means the period from December 1 in any calendar year, until April 14 the following calendar year, inclusive of these dates.

Winter Season Plan has the meaning given in Clause 1.14 of Part C of this Schedule 15-2, Part 9.

ARTICLE 2 DESIGN AND CONSTRUCTION

2.1 Responsibility for Design and Construction

- (a) DB Co shall be responsible for the design and construction of the Highway Works and all other Construction Activities, Highway DB Co Commissioning, and testing of the Highway Works, which shall be carried out in strict accordance with this Schedule 15-2, Part 9 and in such a manner as to comply with all applicable Project Agreement requirements.
- (b) DB Co shall implement a methodology to verify compliance of the construction with the Works Submittals. Tolerances for all work will be based on the requirements outlined in the Output Specifications. Changes made to the design during construction shall be dated, stamped and signed by the responsible Engineer from the Design Team and where applicable by a member of the Checking Team as per Clause 4.2 of Part B of this Schedule 15-2, Part 9 and submitted for review under Appendix B of Schedule 10 – Review Procedure.
- (c) DB Co shall ensure that the Construction Contractor has arrangements with the Design Team for the checking of the layout and verification of the specification, location, line grade and elevation of all as constructed works that is documented in the mark ups to As Built Drawings.
- (d) DB Co shall ensure that the materials incorporated into the Works meet the specified parameters. Materials that are not rejectable but do not meet the specified parameters may remain in place with a Construction Period Quality Failure applied in accordance with Schedule 21 and at the Construction Period Quality Failure Deduction detailed in Appendix I of this Schedule 15-2, Part 9.
- (e) DB Co shall ensure that at every stage of DB Co's design, and for all design that is submitted to the City in accordance with Appendix B of Schedule 10 – Review Procedure, that all necessary Design Integration has been undertaken prior to submission for City review.
- (f) MTO has developed a series of concept design recommendations (Context Sensitive Design) to promote a consistent treatment of the major elements of the freeway infrastructure such as Bridges, Retaining Walls, Noise Barriers, landscaping and architectural lighting. DB Co shall implement the applicable MTO CSD recommendations as per the Reference Documents indicated in Schedule 15-2, Part 9, Appendix F. DB Co shall employ the services of a professional with demonstrated experience in the implementation of CSD's as defined by FHWA. This individual shall be responsible to coordinate with the coordinating Engineers and the Design Team as necessary to ensure Design Integration requirements pertaining to CSD are met.
- (g) DB Co shall ensure that the Lead Design Engineer is engaged in all aspects of the development of the design and Design Integration through to Highway DB Co

Commissioning of the Project and acceptance and Highway DB Co Commissioning of the infrastructure. The Lead Design Engineer shall:

- (i) Have a Certificate of Authorization from the Professional Engineers Ontario;
- (ii) Be registered in the relevant Registry, Appraisal and Qualification System ("RAQS") certification for Highway Engineering (Multi-lane Arterial & Expressway - Major Reconstruction and/or Widening), Bridge Engineering (Design & Evaluation - Complex Structures (multi-span)) and other specialties as needed, and be directly and contractually responsible for coordinating the companies that are RAQS registered in other categories relevant to the Project including RAQS qualified individuals;
- (iii) Be represented on the Design Team by a lead individual, the Highway Works Manager, who is a Professional Engineer and possesses the qualifications specified in Schedule 9;
- (iv) Have the following minimum responsibilities:
 - A. Prepare and stamp engineering drawings and ensure stamping by the checking engineer for structural drawings;
 - B. Oversee the construction work as required to certify the work in the field is completed in accordance with the design;
 - C. Have adequate resources in the field with delegated responsibilities acting on behalf of the Lead Design Engineer to make certifications under the Professional Engineer's seal and signature, without qualification; and,
 - D. Review all As-built Drawings and Record Drawings, including shop drawings, and if there are material changes made between City's latest reviewed drawings with the As-built Drawings or Record Drawings, DB Co shall identify, justify, and provide supporting document through a revised submittal to City and describe how such material changes are compliant with the Project Agreement.
- (v) Appoint a coordinating Engineer(s). The coordinating Engineer role should be undertaken by different individuals, depending on the nature of work being undertaken, and the expertise required to carry out the responsibilities noted below. The coordinating Engineer shall:
 - A. Be satisfied that the Design Integration requirements have been met;
 - B. Communicate all Design Criteria to all respective disciplines;
 - C. Coordinate the various disciplines involved to ensure that the work as a whole substantially conforms to all applicable design and construction

- codes, guidelines, standards, and this Schedule 15-2 and the design performs as intended;
- D. Ensure that all documents within a particular engineering discipline are signed and sealed by the Professional Engineer taking responsibility for work within that discipline;
 - E. Become knowledgeable in any proprietary system, component or element that is not on the Designated Sources of Materials List or is being utilized for a purpose that differs from its original intended use as contemplated by DSM; ensure that such proprietary system, component or element is appropriately integrated; and ensure that the overall design will function as intended when that proprietary system, component or element is used;
 - F. Review all elements of a design that includes multiple disciplines, identify gaps and omissions in the design, and have those gaps and omissions rectified; and,
 - G. Apply a seal indicating that the work of the various disciplines has been coordinated.
- (h) DB Co shall prepare and submit for approval any necessary addenda to the MTO Design Criteria (as described in MTO Directive PHM-B-021) based on DB Co's design. The timing of these submissions is indicated in Schedule 10 – Review Procedure.
- (i) Where the new Confederation Line alignment and design requirements directly interface with the MTO's future Highway 417 widening as contemplated by the MTO's TESR, DB Co shall consider the interfaces and in particular the spacial constraints when protecting for the future MTO expansion. For certainty, where the Confederation Line infrastructure may preclude the MTO's future widening from both a design and constructability perspective, DB Co shall design and construct the New MTO Infrastructure within the Highway Corridor Lands as to eliminate the design and or construction conflict. DB Co shall provide the analysis of the interface between the LRT and future MTO infrastructure at PFDD, FDD and CDS of the Review Procedure, and where DB Co deems necessary to construct New MTO Infrastructure, DB Co shall submit to the City for MTO approval in accordance with Appendix B of Schedule 10 - Review Procedure.

2.2 Record Drawings and As Built Drawings

- (a) The Design Team shall track and document all changes from the IFC Drawings up to and including the preparation of the Record Drawings.
- (b) Design Team shall keep a record of the as-built condition and the reasons for any changes from the IFC documents including any necessary authorizations. Where the as-built condition deviates from the IFC documents but continues to meet the Output Specifications such that any changes fall within the design and specification tolerances and do not require engineering sign off by the responsible Engineer, the Design Team

shall ensure that drawings are marked up with the relevant information required to represent the as-built condition, highlighting the difference from the IFC documents. Before Highway DB Co Commissioning, the Design Team shall sign and seal the Record Drawings as required in Schedule 14 – Commissioning.

- (c) Where changes in the as-built condition mean that the constructed Highway Works would no longer meet the Output Specifications or would require further Design Data to demonstrate compliance with the Output Specification then the responsible Engineer shall revise the IFC documents and submit the Design Data as a Construction Document Submittal, in accordance to Appendix B of Schedule 10 – Review Procedure and shall be subject to the conditions of Clause 2.2 (a) and (b) in this Part A.

2.3 Post Construction Geospatial Data Collection

- (a) DB Co shall be responsible for the creation of geospatial data and inspection data as well as associated attribute information for each existing and newly installed drainage pipe within the limits of the Highway Works. Photographs shall be taken at every location. Inspections shall follow the MTO Eastern Region Culvert Condition Rating Guide as well as the MTO Drainage Asset Fields document.
- (b) The collection of geospatial data must be completed using a GPS device capable of achieving a horizontal positional accuracy of three metres or less. Coordinates shall record each invert and if necessary any bends or turns in the components alignment.
- (c) All spatial information must be coordinated horizontally to North American Datum 1983, using either the “NAD83 (Original)” or the “NAD83 (CSRS)” adjustment with a specified version, and supplied as 3-degree Modified Transverse Mercator (MTM) grid system co-ordinates.
- (d) All co-ordinate and attribute data shall be populated feature classes within a geodatabase suitable for integration into ESRI ArcGIS 10.4. An empty geodatabase set with all the necessary fields and domains will be provided by the City. There shall be a minimum of two feature classes delivered by DB Co:
 - (i) Culvert and Sewer Feature Class: This will be a line feature class with the asset attributes as defined below.
 - (ii) Culvert and Sewer Inspection Table: This is a table feature class with the specific information related to the inspection. Attributes are defined below.
- (e) Attribute Information:

DB Co shall collect attributes as defined below. Several of these will be supplied from the existing Eastern Region Drainage Inventory.

 - (i) Culvert and Sewer Feature Class:
 - A. Drainage Asset ID (DAID);

- B. Highway;
- C. Township;
- D. Location;
- E. Chainage;
- F. Pipe type;
- G. Pipe status;
- H. Material type;
- I. Pipe code;
- J. Diameter / span;
- K. Rise;
- L. Length;
- M. Cover depth;
- N. Construction year;
- O. Historic contracts (enter current contract);
- P. Inlet Structure ID (DAID of inlet CB/MH/DI, etc.);
- Q. Outlet Structure ID (DAID of outlet CB/MH/DI, etc.);
- R. Extensions (left, right, both, none);
- S. Notes;
- T. Upstream latitude;
- U. Upstream longitude;
- V. Downstream latitude;
- W. Downstream longitude;
- X. Source of spatial data;
- Y. Presence of animal grates;
- Z. Presence of end treatments; and

- AA. Presence of headwall / endwall / retaining wall.
- (ii) Inspection Table (Linked via DAID to Culvert and Sewer Feature Class):
 - A. Drainage Asset ID (DAID) – must match the DAID of pipe in the Culvert and Sewer Feature Class above;
 - B. Inspection date;
 - C. Evaluator (DB Co Party undertaking inspection)
 - D. Fish present at time of inspection;
 - E. Purpose of inspection (post-construction);
 - F. Barrel material rating;
 - G. Joint rating;
 - H. Shape rating;
 - I. Capacity rating;
 - J. Embankment rating;
 - K. Channel rating;
 - L. Roadway settling rating;
 - M. Scour/footings rating;
 - N. Head/endwall rating;
 - O. Recommended actions;
 - P. Beaver activity in area; and,
 - Q. Comments.
- (f) To ensure proper condition evaluation and worthwhile photos, GPS data collection and digital photos shall be completed with no ice / snow cover. A minimum of five digital photos of each location showing:
 - (i) The inlet and its surrounding environments;
 - (ii) The outlet and its surrounding environments;
 - (iii) Interior condition of the pipe from inlet end towards the middle;

- (iv) Interior condition of the pipe from outlet end towards the middle;
 - (v) Pavement condition directly above the pipe; and,
 - (vi) Any other pictures that help to demonstrate any unique aspects of the culvert.
- (g) All documents shall be placed into a digital folder with the following structure (a sample of the desired folder structure will be supplied by the City), and submitted to the City in accordance with Schedule 10 – Review Procedure:
- (i) Asset ID (e.g. CV-0417-001876).
 - A. Date of Inspection (e.g. 2018-09-18).

2.4 Shop Drawings

- (a) The Design Team shall review Shop Drawings and where no further comment is required shall treat Shop Drawings as IFC. Where the designer in the Design Team, who previously signed and sealed the drawings, is required to carry out further checking or design work in relation to the Shop Drawings the designer and a member of the Checking Team where applicable shall sign and seal the drawings and submit as Construction Document Submittal under Appendix B of Schedule 10 – Review Procedure.

2.5 Coordinate System

- (a) All Highway Works shall be designed and surveyed using the horizontal coordinate system MTM grid co-ordinate system, MTM Zone 9, NAD83 (original), metres, and the vertical datum CGVD28 – 1978 adjustment.
- (b) In addition to the project specific geodetic requirements, DB Co shall adhere to MTO survey requirements for New MTO Infrastructure and New Municipal Infrastructure which are as follows:
- (i) MTO Geodetic Reference System (“MTO CSRS GRS”):
 - A. Horizontal Datum: North American Datum of 1983, Canadian Spatial Reference System Version 6 (“**NAD83 CSRSv6**”), also referred to as “**NAD83 epoch 2010.0**”)
 - B. Vertical Datum: Canadian Geodetic Vertical Datum of 1928, 1978 adjustment (“CGVD28:78adj”); and,
 - C. Map projection: MTM, Zone 9.
 - (ii) MTO Geodetic Reference System (“**MTO ORG GRS**”):
 - A. Horizontal Datum: North American Datum of 1983, Original (“**NAD83 Original**”); and,

- B. Vertical Datum: Canadian Geodetic Vertical Datum of 1928, 1978 adjustment (“CGVD28:78adj”).

- (iii) Map projection: MTM, Zone 9.

2.6 Coordination with Ongoing Contracts

- (a) There will be adjacent Additional Works that will have impacts within the construction limits of the Highway Works and will require formal re-designation of the Designated Construction Zone limits. DB Co shall coordinate their Construction Activities with other construction work within and/or adjacent to the Highway Works to avoid performing work in the same Designated Construction Zone, or that may adversely affect operations of either party. DB Co is required to maintain a separate and distinct Designated Construction Zone for this Project at all times and shall ensure that separation by time, space or by physical barrier is maintained between the operations included in this Project and work within and/or adjacent to this Project by others. Any Designated Construction Zone adjustments made for the purpose of facilitating Lane Closures shall consider the requirements of OTM Book 7. No additional compensation shall be made for requirements associated with the adjustments to DB Co’s Designated Construction Zone.
- (b) DB Co is required to adjust all appropriate Project documentation to re-designate the Designated Construction Zone limits during the times when the adjacent projects require the use of DB Co’s Designated Construction Zone or part thereof. Revised Designated Construction Zone limits and Designation of Construction Zone shall be submitted to the City for approval in accordance with Schedule 10 – Review Procedure. DB Co shall not resume Construction Activities in any adjusted work zones until such time that the area has been re-established as the Designated Construction Zone for this Project.
- (c) DB Co shall identify on the Works Schedule and associated written narrative how the adjacent projects will be coordinated and staged with DB Co’s work.
- (d) DB Co shall coordinate with Third Party Contractors and Additional Contractors who may be performing Third Party Works or Additional Works which may connect, complement, interfere, or in any manner impact Highway Works. It is the responsibility of DB Co to work with these Third Party Contractors and Additional Contractors to fully coordinate interfaces and resolve any disputes or coordination problems that may arise, including, but not limited to, design and construction staging considerations. DB Co shall be responsible to be aware of and obtain information related to all Third Party Contractors and Additional Contractors and their projects.
- (e) For the purposes of establishing seniority of contractors with regards to coordination, DB Co shall retain seniority over Third Party Contractors or Additional Contractors whose works are initiated after the start of DB Co’s Construction Activities.
- (f) DB Co shall be aware of the following partial list of projects which may be undertaken within the Highway Corridor Lands prior to, concurrent with, or following Highway Works Construction Activities:

- (i) City of Ottawa Projects: Contact Senior Engineer, Infrastructure Projects, Design and Construction (Municipal) Branch (or the individual responsible for this function at the time). [REDACTED].
- (ii) MTO Contract 2017-4031. Contact MTO Contract Administrator (or the individual responsible for this function at the time). [REDACTED].
- (iii) GWP 4042-12-00 for ATMS work at the Highway 416 Hunt Club Road interchange. Contact MTO Planning and Design Office. [REDACTED].
- (iv) MTO projects: Contact MTO Planning and Design Office. [REDACTED].
- (v) [REDACTED] underground installation crossing Highway 417 at the Pinecrest Road interchange.
- (vi) [REDACTED] tower installation in the NW quadrant of the Woodroffe Avenue interchange.
- (vii) MTO planned electrical work on existing high mast poles in the vicinity of the Holly Acres Road interchange in 2019.
- (viii) GWP 4097-12-00, Crystal Beach Noise Barrier, Highway 417. Contact MTO Planning and Design Office. [REDACTED].

2.7 Graffiti Removal

- (a) Requirements shall be as per Appendix G to this Part 9.

2.8 Temporary Conditions and Access

- (a) Temporary conditions shall be removed/relocated prior to the Winter Period each year of construction. Refer to Clause 1.14 of Schedule 15-2, Part 9, Part C – Traffic Management and Construction Access.
- (b) DB Co shall adhere to the following:
 - (i) Maintain the security of all construction areas/routes with construction fence, including gates, to suit DB Co's operations;
 - (ii) All entrances into construction areas/routes shall be secured at all times outside of working hours;
 - (iii) Existing Utilities within the construction areas/routes are to be protected from any damage resulting from Construction Activities of or use of the construction staging area and/or construction access routes. It is DB Co's responsibility to locate and protect all Utilities within DB Co's construction areas and access routes;

- (iv) Removal of fencing/gates as necessary for deliveries and/or movement of equipment, preparation of access/egress for Closure events, shall be DB Co's responsibility;
- (v) All parking of DB Co vehicles, and storage of equipment and Materials shall be within the construction staging areas. At no time shall parking or storage of equipment and Materials be permitted on privately owned property if not required for on-going operations in the immediate area unless written permission from the property owner and the City has been provided; and,
- (vi) All areas where equipment is operated, Materials are stored and/or construction efforts have occurred shall be scarified as required prior to final site reinstatement.

2.9 Maintenance During Construction

- (a) Maintenance during construction shall be conducted by DB Co in accordance with Appendix G.

2.10 Checking

- (a) DB Co shall at its own cost and expense, engage a consultant to conduct activities as set forth in Clause 4.2 of Part B of this Schedule 15-2, Part 9 and in Appendix B of Schedule 10 – Review Procedure (the “Checking Team”).
- (b) The following expertise shall be included in the expertise of the Checking Team:
 - (i) Recognized expertise in:
 - A. The disciplines of highway, drainage, traffic, geotechnical, foundations, structural, electrical, ATMS engineering;
 - B. The analysis and design of all aspects of Significant and Complex Structures;
 - C. The use of state-of-the-art geotechnical, structural and soil-structure interaction modelling and software used for design and analysis of Foundations; and,
 - D. The review of designs to ensure compliance with all Applicable Law pertaining to the environment, and other environmental requirements.
 - (ii) Individuals who are registered or qualified to be registered as Professional Engineers in Ontario.
 - (iii) Be registered in the relevant Registry, Appraisal and Qualification System ("RAQS") certification for Highway Engineering (Multi-lane Arterial & Expressway - Major Reconstruction and/or Widening), Bridge Engineering

(Design & Evaluation - Complex Structures (multi-span)), and other specialties as needed.

2.11 Designated Construction Zone

- (a) Subject to Clause 2.6 of this Part A, DB Co shall be required to hold a Designated Construction Zone throughout the duration of Highway Works.

ARTICLE 3 NEW MUNICIPAL INFRASTRUCTURE

3.1 Responsibility for New Municipal Infrastructure

- (a) DB Co is responsible for the Highway Works including, the design and construction, Highway DB Co Commissioning and testing, and the New Municipal Infrastructure, as described in Schedule 15-2, Part 1, Article 19 - Description of Confederation Line West, Confederation Line East and Highway Works, which shall be carried out in strict accordance with this Schedule 15-2, Part 9 and all other applicable Project Agreement requirements.
- (b) The Highway Works, in connection with the New Municipal Infrastructure to be constructed by DB Co, shall incorporate the applicable design standards of the City of Ottawa.

3.2 Commissioning New Municipal Infrastructure

- (a) DB Co shall commission the New Municipal Infrastructure in accordance with Schedule 14 – Commissioning.

ARTICLE 4 UTILITIES

4.1 General Provisions for Utility Work on Provincial Highways

- (a) DB Co shall comply with Schedule 15-2, Part 2, Article 8 – Utility Infrastructure Design Criteria, as it pertains to Highway Works Utility Work, and additional requirements of this Schedule 15-2, Part 9, Part A, Article 4. This Article 4 shall take precedence if there are any conflicting requirements between the sections.
- (b) All submittals that pertain to Highway Works indicated in Schedule 15-2, Part 2, Article 8 - Utility Infrastructure Design Criteria, shall be provided under separate cover. DB Co shall submit separate Utility Infrastructure Relocation Plans specific to Highway Works, in accordance with Schedule 10 – Review Procedure.
- (c) DB Co shall comply with applicable MTO Standards.
- (d) DB Co shall apply for and obtain MTO Encroachment Permits in coordination with, and in favour of utility owners, where Utilities are required to be relocated, or newly located within the Highway Corridor Lands.
- (e) Refer to Schedule 15, Part 9, Part B, Clause 12.5 for requirements pertaining to the removal of existing Utilities.

4.2 Utility Design and Construction Requirements

- (a) DB Co shall not construct new maintenance holes, water valve box assemblies or locate valve chamber frame(s) and cover(s) on Highway 416 and 417 paved surfaces, including Shoulders, median or interchange ramps, except:
 - (i) Catchbasin maintenance holes dedicated to highway drainage shall be permitted on the median and outside Shoulders of the Highway.
- (b) For all Utilities, DB Co shall relocate outside of the median, Shoulders and paved surfaces of the Roadway (including Highway 417 and 416 Main Line and ramps), any existing maintenance holes, water valve box assemblies, valve chamber frame(s) and cover(s) where impacted by Construction Activities. Existing maintenance holes, water valve box assemblies, valve chamber frame(s) and cover(s) in the median Shoulder, outside Shoulder or median of the Highway that are not reconstructed shall be permitted to remain in the median Shoulder or outside Shoulder.
- (c) DB Co shall use trenchless methods where constructing new or relocating Utilities beneath the paved surfaces, Shoulders, or interchange ramps of Highway 416 and 417 that are otherwise only to be resurfaced. Open cut may be permitted for longitudinal installations beyond the outside Shoulder subject to adequate available space. Subject to other Utility placement requirements, as identified in this Article 4, open cut methods shall not be permitted within 3.0 m of the travelled portion of the Roadway, unless DB Co implements an engineered roadway protection system, and the excavation is separated by a Barrier.

- (d) New or relocated Utilities shall not be installed longitudinally along Highway 417 beneath paved surfaces, nor in front of the ditch line. Longitudinal utility plant shall be confined within 2.0 m of the ROW limits.
- (e) Utility plant shall not be located at a depth less than 1.2 m below the lowest portion of the Roadway cross-section for longitudinal underground installations.
- (f) New aerial pole crossings shall not be permitted over Highway 417 and Highway 416. New aerial crossings over Highway 416 and Highway 417 shall be permitted on towers. Existing pole crossings may remain if the poles are not impacted by the Highway Works and the Utility Work is limited to same place modifications on the existing poles.
- (g) DB Co shall not construct or relocate Utilities within new or existing MTO Bridge Structures, subject to the following exceptions:
 - (i) Lighting Utilities that provide lighting on or adjacent to the Bridge Structure shall be permitted; and,
- (h) Existing Utilities that are not otherwise impacted or modified by Highway Works need not be relocated for the sole purpose of meeting the design standards contained in this Article 4.
- (i) DB Co shall follow the MTO Eastern Region Utility Locates Protocol for the identification of MTO owned Utilities. Note that MTO owned Utilities are not covered under Ontario One Call.
- (j) DB Co shall invite the MTO Electrical Coordinator and City of Ottawa Street Lighting to be present during the hydro service layouts by [REDACTED] to ensure that the account billing information with regards to Customer and Service Descriptions are set up appropriately. DB Co shall provide a minimum of five Business Days advanced notice to the City Representative prior to arranging the service layout meeting. DB Co shall also make arrangements as early as possible with [REDACTED] for service layouts and connections for the proposed power supply locations. Current contact information is as follows:

[REDACTED]
- (k) DB Co shall design and construct all Utility Infrastructure located on the Highway Corridor Lands to the accommodate the ultimate build of the Highway 417 expansion as per Clause 5.1(b) of this Part A.

4.3 Trenchless Crossings

- (a) Trenchless crossing design shall be in accordance with CSA S250, the MTO Guidelines for Foundation Engineering – Tunnelling Specialty for Corridor Encroachment Permit Application, and Appendix H – Pipe Installation by Trenchless Methods, of this Schedule 15-2, Part 9.

- (b) DB Co shall provide rationale and justification for any new crossing of Highway 417 that is proposed, as an attachment to its Utility Infrastructure Relocation Plan submittals. The attachment shall demonstrate that DB Co has undertaken a review of Utility placement options, and that the option presented is technically preferred.
- (c) DB Co shall provide joint Utility crossings to minimize the number of crossings of Highway 417 and ramps, where possible.
- (d) Utilities crossing the Main Line shall be installed at a minimum depth of 5.0 m from the centreline of the Roadway surface. Utilities crossing ramps shall be installed at a minimum depth of 3.0 m from the centreline of the Roadway surface and 1.5 m below ramp ditch lines. DB Co shall increase these depths as needed to account for other considerations, including, but not limited to, superelevation and/or ditches, frost penetration, Utility work around requirements. This minimum depth does not apply to gravity systems if a shallower installation is required to tie into longitudinal systems. Crossings shall be as level as possible.
- (e) Perpendicular crossings of the Highway shall be offset a minimum of 20 m from any Bridge Structure. Longitudinal Utilities shall be offset a minimum of 10 m from the end of the approach slab of any Bridge Structure.
- (f) DB Co shall perform a minimum of two boreholes and shall include discussion in the Geotechnical Report for all proposed crossings equal to or greater than 300 mm in diameter. The Geotechnical Report shall indicate the preferred trenchless crossing method for each location and a settlement monitoring plan and shall be referenced in the Utility Infrastructure Relocation Plan.
 - (i) DB Co shall evaluate all reasonable alternatives for construction of trenchless crossings, including pipe jacking, pipe ramming, micro-tunneling, tunnel boring, and horizontal directional drilling.
- (g) The use of the pneumatic piercing method, including torpedoes or similar devices, is not permitted.
- (h) Open cuts of paved surfaces are not permitted to recover stuck drill bits.
- (i) Jacking pits or sending/receiving pits shall be located at the bottom of the ditch line or on the back slope, and shall not encroach onto the front slopes, the Shoulder or within 3.0 m of the travelled portion of the Roadway.
- (j) For watermains, casing pipes shall extend to 14 m past the edge of shoulder where feasible, or to the ROW limit at minimum.

4.4 Utility Relocation Process

- (a) DB Co shall engage each Utility Company whose facilities are impacted by Highway Works, and shall develop Utility Infrastructure Relocation Plans, which shall detail designs that meet the applicable standards of the Utility Company and applicable MTO

Standards. The Utility Relocation Plans shall be submitted in accordance with Schedule 10 – Review Procedure.

- (b) Separate Encroachment Permits from MTO are required for each Utility relocation.
- (c) For all Utility Work within DB Co's responsibility for construction, DB Co shall prepare and submit applications for Encroachment Permits from MTO. For Utility Work within a third party Utility Company's responsibility for construction, the Utility Company shall submit applications for Encroachment Permits from MTO. Encroachment Permits applications shall be submitted following return of the draft Final Design Development Submittal or Construction Document Submittal with "no comment" or "minor comments" assigned by the City. The MTO may instruct DB Co or Utility Companies to resubmit applications made prior to the Construction Document Submittal if it determines, at its sole discretion, that insufficient information is available on the Highway Works design to grant an Encroachment Permit prior to review of the Construction Document Submittal.
 - (i) Application for an MTO Encroachment Permit shall be done online through the following link (as may be updated in the future):

<https://www.hcms.mto.gov.on.ca/>
 - (ii) Once a complete application is submitted, DB Co shall allow 35 days for processing of an Encroachment Permit application.
- (d) Encroachment Permit applications shall contain the following minimum requirements, in addition to any other requirements contained in this Article 4:
 - (i) Key plan with scale of 1:100,000 (or as necessary for orientation).
 - (ii) Detail plan drawing including the following:
 - A. Level of detail and accuracy as per CSA S250;
 - B. Scale of 1:500;
 - C. GPS coordination;
 - D. Highway number, municipality, geographical township, lot, concession;
 - E. Scale, dimensions, north arrow, legend, date of plan preparation, name and address of designer or encroaching party;
 - F. Key plan depicting the location of work with GPS coordinates (to six decimal places);
 - G. Property and ROW limits;

- H. Highway infrastructure, including edge of pavement, shoulder, ditch line, centreline;
 - I. Location of poles and anchors (if applicable);
 - J. Existing Utilities, signs, sidewalks, drainage structures, entrances and other features;
 - K. Highway and Municipal Roadway names;
 - L. Proposed Utility plant, including details on type and size, and any associated infrastructure;
 - M. Proposed method of construction; and,
 - N. Dimensions and location of bore pits (if applicable).
- (iii) Relocation profile drawing including the following:
- A. Level of detail and accuracy as per CSA S250;
 - B. Cross-section of Roadway (if applicable), with scale of 1:500 (horizontal) and 1:50 (vertical);
 - C. Roadway width, ROW limits, depth and offset of Utility plant;
 - D. Dimension and location of bore pits;
 - E. Depth of cover at various locations; and,
 - F. Proposed casing, including material type, length, diameter.

ARTICLE 5 COMMITMENTS AND COMPLIANCE REQUIREMENTS

5.1 General Requirements

- (a) DB Co shall ensure that the design and construction of the Highway Works comply with Schedule 17 – Environmental Obligations of the Project Agreement, including all obligations and commitments arising from the Environmental Approvals.
- (b) DB Co's design shall consider and protect for the future implementation of works contemplated within the limits of [REDACTED] by others, with minimal modification to the infrastructure constructed by DB Co

5.2 Additional Compliance Requirements

- (a) DB Co shall not convert Highway 417 lanes and ramps to transit only lanes or ramps, unless otherwise specified in this Schedule 15-2, Part 9.
- (b) DB Co shall accommodate access to the construction site following any request by the City or City Parties to carry out winter maintenance, traffic signal work as detailed in Part B, Clause 6.6, work relating to Encroachment Permits in the Highway Corridor Lands, Bridge inspections, or any similar activities.
- (c) DB Co is not permitted to engage in blasting as part of Highway Works within or immediately adjacent to the Highway Corridor Lands. For greater clarity, this restriction includes blasting of rock. The use of explosives shall not be permitted as part of Highway Works.
- (d) The ATMS power plant shall be protected and reinstated within the Highway Works and if required to ensure that the field equipment can operate continuously, DB Co shall design and construct temporary power facilities.

ARTICLE 6 REGISTRY, APPRAISAL, AND QUALIFICATION SYSTEM

6.1 General Requirements

- (a) In addition to the requirements of Section 11.4 of the Project Agreement, no later than 60 days after Financial Close, all engineering and contract administration pertaining to Highway Engineering (Multi-lane Arterial & Expressway - Major Reconstruction and/or Widening), Bridge Engineering (Design & Evaluation - Complex Structures (multi-span)) and other specialties as necessary shall be performed or reviewed by consultant(s) listed as “accepted” under the MTO electronic Registry, Appraisal and Qualifications System (MTO RAQS) for providing services meeting the applicable “specialties criteria” identified on RAQS.
- (b) Consultants performing engineering or review on Highway Works shall be approved in the relevant “high complexity”, “major”, or “complex” specialties where different levels are identified in the RAQS “specialties listing”.
- (c) Consultants performing quality assurance and oversight on Highway Works shall be approved in the “high complexity” category in the RAQS “specialties listing”.
- (d) The Construction Contractor(s) performing the Highway Works shall be appropriately registered under the MTO’s RAQS, and shall possess a Necessary Available Financial Rating of [REDACTED] and a Necessary Available Maximum Workload Rating of [REDACTED] (as such terms are applied in RAQS).

PART B – DESIGN AND CONSTRUCTION REQUIREMENTS

ARTICLE 1 LANING AND PHYSICAL LAYOUT

1.1 Order of Precedence

- (a) The geometric design for all Provincial Highways and Roads shall be designed in accordance with the criteria contained in this Article 1, and standards and manuals included in Reference Documents, and if there is any conflict between the criteria contained in this Article 1 and standards and manuals included in Reference Documents, the following shall apply in descending order of precedence:
- (i) The criteria contained in this Article 1;
 - (ii) MTO Special Provisions;
 - (iii) The applicable MTO Directives, MTO Policy Memorandums, and MTO Design Bulletins;
 - (iv) OPSS;
 - (v) MTO Contract Design, Estimating and Documentation (CDED) Manual;
 - (vi) Ontario Traffic Manual, MTO;
 - (vii) Highway Standards Bulletin HSB-DCSO-2016-05 Implementation of the Capacity Analysis Manual Memo, MTO;
 - (viii) Highway Capacity Manual, Transportation Research Board;
 - (ix) Accessibility for Ontarians with Disabilities Act (AODA) and Ontario Regulation 413/12;
 - (x) MTO Design Supplement for TAC Geometric Design Guide for Canadian Roads, June 2017;
 - (xi) Geometric Design Guide for Canadian Roads, TAC;
 - (xii) MTO Standard Drawings;
 - (xiii) OPSD;
 - (xiv) Roadside Safety Manual, MTO;
 - (xv) Bikeways Design Manual; and,
 - (xvi) The applicable standards of the City of Ottawa.

1.2 General Requirements

- (a) The Highway Works shall include the following:
 - (i) Modifications to interchanges and ramps at Pinecrest Road, Richmond Road, Holly Acres Road and Moodie Drive, including construction of a new eastbound and westbound Highway 417 on-ramps from Holly Acres Road;
 - (ii) Extension of Graham Creek Culvert and other new Structures to carry Roadways over the Guideway;
 - (iii) Roadside safety, drainage and illumination, utility relocations as required, Overhead Sign Support Structures, , landscaping and Context Sensitive Design;

1.3 Roadway Requirements

- (a) Freeway
 - (i) The area between the LRT and the WB Highway 417 east of Pinecrest Road to Queensway Station shall be treated as a median for the purpose of safety, as such DB Co shall provide an AASHTO Manual for Assessing Safety Hardware (MASH) TL-5 system in this location. The system shall be designed such that relocation is not required upon future widening of Highway 417 (by others). For further clarity, TL-5 system where required shall be entirely within the Lands except where the Confederation Line crosses the Highway Corridor Lands at the Highway 471/Pinecrest Road /Greenbank Road interchange. Refer to Clause 7.2 (m) of Part B – Design and Construction Requirements of this Part 9 for drainage requirements.
- (b) Freeway to Freeway Interchanges
 - (i) Highway 417 and Highway 416
 - A. DB Co shall ensure the fully directional interchange for the Highway 417 connection with Highway 416 is maintained to be operational at all times.
- (c) Crossing Roads and Interchanges
 - (i) Re-configured interchanges shall be designed and constructed at the following Crossing Roads. For site-specific improvements required to enhance pedestrian and cyclist connectivity at each interchange location refer to Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements, in addition to this Clause 1.3. Conceptual intersection minimum lane configuration diagrams are provided in Appendix E. All cross-sectional elements specified on all new grade separated shall be extended beyond the Structure as applicable to tie into existing infrastructure or New MTO Infrastructure, to maintain connectivity for all Roadway users, and to comply with applicable Reference Documents and Good Industry Practices.

- A. Highway 417 and Richmond Road / Holly Acres Road
- i. Note: Due to the orientation of Richmond Road relative to Highway 417 and previously adopted conventions, references to Richmond Road NB and EB may be used interchangeably, and references to Richmond Road SB and WB may be used interchangeably. Similarly, references to Holly Acres NB and WB may be used interchangeably, and references to Holly Acres SB and EB may be used interchangeably.
 - ii. Richmond Road North Side: DB Co shall modify the north ramp terminal and the Road and ramp layout as needed to accommodate the Works, and the design shall adhere to the following:
 1. Maintain the existing general layout of the Road and intersection between the Highway 417 / Richmond Underpass and Bayshore Drive.
 2. Extend the MUP to approx. 25 m west of the the E-N/S ramp terminal. A sidewalk (2.0 m width) shall be provided to connect the MUP to the southeast corner of the intersection. Include a MUP connection from the northwest corner of the Richmond/Bayshore intersection to Elstree Avenue. The MUP shall also connect to the existing road network on both sides of Richmond Road north of Bayshore Drive. DB Co's design shall include a future connection to a MUP (by others) at the northeast corner of the intersection. Connection of the MUP to Bayshore Station shall be in accordance with Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements.
 3. Crosswalks shall be provided at all intersection approaches that currently include a crosswalk. Separated bi-directional cross-rides shall be provided across the approach from the E-N/S ramp to the northeast corner of the intersection and across Richmond Road at the north approach to the northwest corner of the intersection. Existing crosswalks shall be maintained or replaced at all intersection approaches currently featuring a crosswalk. The crosswalks and cross-rides across the right turn channel from WB Richmond Road to WB Bayshore Drive shall be raised.
 4. Richmond Road EB at the approach to the E-N/S ramp terminal shall feature two left turn lanes and two through lanes. The through lanes shall each have a width of 3.5 m. The existing raised concrete median shall be retained. A

sidewalk shall be provided between the travelled lanes and the existing Parapet Wall of SN116110. The Parapet Wall shall be modified as needed to accommodate users of the Road and pedestrian facilities.

- iii. Holly Acres Road: DB Co shall modify the Road and ramp layout as needed to accommodate the Works, and the design shall adhere to the following:
 - 1. Per Schedule 15-2, Part 7 - Traffic and Transit Management and Construction Access, and this Part 9, Part C, DB Co shall provide a new temporary EB bus-only on-ramp from Holly Acres Road to Highway 417. The new temporary OC Transpo bus only access on-ramp shall intersect Holly Acres Road at the intersection with the existing Highway 416 S/Highway 417 W – Holly Acres N/S ramp and shall utilize the existing speed change lane of the Richmond N-E ramp.
 - 2. DB Co shall provide an additional eastbound lane on the existing Highway 416 S/Highway 417 W – Holly Acres N/S ramp that shall terminate at a point 160 m west of Holly Acres Road. DB Co shall conduct a traffic analysis of the intersection with Holly Acres Road to determine the recommended eastbound lane configuration on the off-ramp at this intersection. This analysis shall consider that OC Transpo buses shall be able to make both the eastbound left turn and eastbound through movements at this intersection, in addition to the southbound left turn movement.
 - 3. DB Co shall convert the existing median southbound through lane into a southbound left turn lane, leading to the new Highway 417 N/S-E on-ramp.
 - 4. DB Co shall design and construct all the necessary temporary improvements on Holly Acres Road, associated intersection(s) and interchange ramp(s) as required to accommodate pedestrian and cyclist access, uninterrupted traffic and transit operations during staged construction, and temporary conditions to meet the requirements of Schedule 15-2, Part 7- Traffic and Transit Management and Construction Access and Schedule 15-2, Part 9, Part C.
 - 5. DB Co shall undertake a TIA study including a detailed intersection operations and level of service analysis considering vehicular and non-vehicular road users needs on all new and existing intersections and interchange ramps

on Holly Acres Road that are impacted or required as the result of Works. DB Co shall demonstrate that the traffic and transit operations and associated levels of service are acceptable and feasible using projected traffic volumes and expected transit operations for a 2031 horizon year, including pedestrian and cyclist movements.

- i. DB Co shall submit to the City the results of above-noted traffic analysis report and seek approval from the City in accordance with Schedule 10 – Review Procedure.
6. DB Co shall design and construct all the necessary permanent improvements on Holly Acres Road and associated interchange ramp(s) and intersection(s) impacted as the result of Works according to the requirements of Article 2 of this Part 9, Part B.
7. DB Co shall design and construct all the permanent improvements required at the intersection of the Holly Acres Road and the Transitway bus access at Bayshore Station to meet the requirements of the lane configuration diagram specified in Appendix E of this Part 9 and Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements and Article 9 of this Part 9, Part B.
 - i. DB Co shall design and construct separate crosswalk and bi-directional crossride facilities on the north, east and west legs of the intersection as per OTM Book 15 and Book 18 and the MTO Bikeways Design Manual.
 - ii. DB Co shall be responsible for the design and construction of all such improvements if DB Co's traffic and transit assessment, modelling and analysis determine that additional traffic lanes and improvements are required in addition to the information shown in Appendix E of this Part 9.
 - iii. All temporary and permanent improvements associated with the design and construction of these ramps noted above, within the limits of construction, shall meet the requirements of the City and MTO.

8. DB Co shall design and construct Pavements for any ramps affected by the Works, in accordance to the Pavement requirements of Article 3 of this Part 9, Part B, except where Pavements are prescribed in Article 3 of this Part 9, Part B DB Co shall not be required to design while DB Co shall be required to construct the Pavements as prescribed.
 9. DB Co shall design and construct the proposed improvements for the Holly Acres Drive/Bayshore access intersection, the Guideway Structure over Holly Acres Drive and the adjacent Highway 417 N/S-W ramp geometry, such that all necessary general traffic and bus traffic movements at this intersection can feasibly be accommodated to meet the requirements of the City. DB Co's design shall accommodate all necessary vehicular movements, including all through movements, the NB left and NB right turning movements and the WB movement of a transit vehicle departing from Bayshore Station and entering the above-noted Highway 417 N/S-W ramp.
 - i. DB Co shall design and construct the proposed Highway 417 N/S-W ramp south of the Track alignment, as well as accommodate the northbound left turn movement, per the requirements of this Article 6.
- B. Highway 417 and Pinecrest Road / Greenbank Road.
- i. DB Co shall design and construct interchange ramps and associated intersection modifications per the Design Criteria.
 - ii. SN015180: The lane configuration of the Pinecrest Road Bridge Structure (over the LRT alignment) shall include the following minimum requirements, and shall accommodate the lane configuration specified for the north ramp terminal. Design of this Structure shall be in accordance with Article 4 – Structural Design Criteria and Requirements, of Schedule 15-2, Part 2.
 1. Two NB lanes (3.5 m width) and an outside Side Clearance (1.0 m width);
 2. Two SB through lanes (3.5 m width), one SB right turn lane (3.5 m width) and an outside Side Clearance (1.0 m width);

3. Provide for a future bi-directional cycle track (3.6 m width) west of the SB lanes, separated from the SB lanes by a TL-4 crash Barrier wall (to be constructed by others);
 4. Sidewalks (2.0 m width) along the extreme east and west sides of the Structure; and;
 5. TL-4 Parapet Walls with railings (as applicable to accommodate users of the Road and pedestrian and cyclist facilities) along the outsides of the Structure;
 6. A raised concrete median, connecting between the intersection of Pinecrest Road and the Highway 417 E-N/S ramp and the existing median on the Highway 417 Underpass.
- iii. North Side: DB Co shall modify the north ramp terminal and ramp layout as needed to accommodate the Works, and the design shall adhere to the following:
1. DB Co shall design and construct a realigned N-W ramp such that the new ramp alignment intersects Pinecrest Road south of the Pinecrest Station layout, while maintaining the vertical and horizontal alignment requirements specified in this Schedule 15-2, Part 9. The infrastructure required to support the horizontal and vertical alignment shall be designed by DB Co to accommodate future up to a 500mm grade raise of Pinecrest Road as further detailed in Part B Clause 4.11 (a)(iii) without impacting the LRT Operations. DB Co shall demonstrate in the PFDD submission how this future grade raise and modification of NW ramp can be designed and constructed without impacting the LRT operation during the construction. DB Co shall repurpose the existing SB curb lane as the auxiliary right turn lane, and shall minimize the curb corner radius leading to the realigned N-W ramp to enhance pedestrian safety. The existing N-W on-ramp shall be closed, removed and regraded.
 2. DB Co shall retain the free flow configuration of the existing S-W loop on-ramp off of Greenbank Road.
- iv. A bus loop shall be constructed at the west leg of the north ramp terminal. The bus loop shall include two ingress and two egress lanes (one right turn and one left turn). A bus only left turn lane from NB Pinecrest to the bus loop shall be provided with capacity for one articulated bus. Buses shall also be able to access the bus

loop from SB Pinecrest Road. The bus loop shall be in accordance with the requirements of Schedule 15-2, Part 4 – Stations and Part 7 - Traffic and Transit Management and Construction Access.

1. DB Co shall provide three lanes in each direction on Pinecrest Road between the north ramp terminal and Queensview Drive.
 2. DB Co shall provide crosswalks on the east, west and north legs of the intersection.
 3. DB Co shall design and construct all necessary improvements required on the existing Highway 417 E-N/S ramp in order to accommodate the Confederation Line / E-N/S ramp grade separation. All the associated improvements required for the Highway 417 E-N/S including ramp and shoulder geometry, TL-5 barrier, vertical supports, overhead signs that are subject to relocation, and associated drainage elements as required, shall be designed and constructed at their ultimate location and configuration. DB Co's design of the above-noted improvements shall not preclude the efficient construction of MTO's planned Highway 417 widening so that if / when the Highway widening is implemented by others in the future, the above-noted improvements constructed by DB Co will require no modifications with the exception of ramp and taper transitions at tie-in locations, some relocation of gore points and bull nose treatments to meet MTO standards, as necessary.
- v. South Side: DB Co shall modify the south ramp terminal and ramp layout as needed to accommodate the Works, and the design shall adhere to the following:
1. The existing general purpose N-E ramp shall be retained. Upstream of the tie-in point with the general purpose ramp, the existing N-E bus only ramp shall be closed, removed and regraded.
 2. Maintain the Ashley Street connection with the W-N/S off-ramp. The Ashley Street connection is to be temporarily closed in accordance with Schedule 15-2, Part 7 - Traffic and Transit Management and Construction Access. The existing lane configuration at the intersection with Greenbank Road shall be maintained, except where geometric adjustments are required.

3. In accordance with Schedule 15-2, Part 7 - Traffic and Transit Management and Construction Access, DB Co shall evaluate by undertaking traffic analysis to determine whether the provision of a third left turn lane on the W-N/S off ramp (reserved for buses only) would provide a travel time benefit to eastbound OC Transpo buses when they are on detour. If the traffic study finds this to be feasible and improves the transit service operation, DB Co shall modify the intersection so as to temporarily provide this third left turn lane with appropriate storage. This lane, if provided is to be removed as a Remaining Work, and the intersection restored to its pre-existing condition.

C. Highway 417 and Moodie Drive

- i. DB Co shall design and construct all the necessary temporary improvements on Moodie Drive, associated intersections and interchange ramps as required to accommodate the pedestrians' accesses, uninterrupted traffic, and transit operations during staged construction and temporary conditions and meet the requirements of Schedule 15-2, Part 7 – Traffic and Transit Management and Construction Access and Schedule 15-2, Part 9, Part C.
- ii. DB Co shall also design and construct the necessary permanent improvements on Moodie Drive, associated interchange ramps, and existing and new intersections that are impacted as the result of the Works in accordance with the Reference Documents and according to the applicable clauses of Article 2 of this Part 9, Part B.
- iii. DB Co shall design and construct all the necessary permanent improvements for the S-W and N-W ramp Overhead Structures over the Track alignment to meet the appropriate requirements of Article 4 – Structural Design Criteria and Requirements, of this Part 9, Part B. All temporary and permanent improvements associated with the design and construction of these ramps noted above, within the limits of construction, shall meet the requirements of the City and MTO.
 1. DB Co shall design and construct Pavements for any ramps affected by the Works, in accordance to the Pavement requirements of Article 3 of this Part 9, Part B. As a minimum requirement, DB Co shall resurface all ramps affected by the Works.
- iv. DB Co shall design and construct modifications to the free-flow bus access ramp from the NB lane of Moodie Drive to Moodie Station that accommodates a direct inbound bus traffic movement

to service the Transitway bus operations as required to tie into the proposed Moodie Station bus loop.

1. For any modifications or improvements to the bus access ramp noted above, DB Co shall protect and avoid any impacts to adjacent Structures, including but not limited to foundations, footings, piers or abutments.
- v. DB Co shall design and construct a sidewalk on the west side of Moodie Drive, as described in Schedule 15-2, Part 6 - Urban Design, Landscape Architecture and Connectivity Requirements and Article 9 of this Part 9, Part B.
1. DB Co shall repurpose the existing cross section on the Underpass Structure to provide the sidewalk, such that no widening of the Structure is required.
 2. DB Co shall relocate the existing guiderails, street lights and signage, as necessary north and south of the Structure in order to accommodate the above-noted sidewalk facility.
 3. DB Co shall maintain the existing SB lane widths for the two SB general traffic lanes and the SB on-road bicycle lane.
 4. DB Co shall locate the sidewalk west of the existing edge of roadway, south of the Structure, to maximize the storage length possible for the SB auxiliary traffic lane leading to the N-E ramp. The proposed ramp realignment geometry shall meet the Reference Documents.
 5. For the details of the proposed Bridge Structure requirements refer to Article 4 – Structural Design Criteria and Requirements of this Part 9, Part B.
- vi. For the design and construction of the Moodie MSF facilities associated with the Track Works, DB Co shall protect for and not preclude the necessary provisions for a future widening of the Highway 417 in the WB direction, west of Moodie Drive. The future Highway 417 widening in the WB direction shall account for an additional 3.75 m general traffic lane, a 3.0 m shoulder, roadside barriers and associated grading, drainage and signage requirements beyond the existing edge of outside lane, as minimum.

(d) Crossing Roads

- (i) Where pavement-level bike lanes are constructed adjacent to the curb, side inlet Catch Basins shall be used such that grates for Catch Basins / maintenance holes are not within the cyclist wheel paths.
 - (ii) In all locations where active transportation facilities are specified, DB Co shall provide adequate storage space for pedestrians and cyclists to safely maneuver within the network without obstructing other Roadway users, and shall abide by accessibility requirements at signalized intersections. The design of pedestrian and cycling facilities shall meet the requirements of OTM Book 15, OTM Book 18, and the MTO Bikeways Design Manual.
 - (iii) The Crossing Road Underpass Structures shall include the number of lanes specified in this Clause 1.3 of Part B.
- (e) Design vehicle requirements:
 - (i) DB Co shall use the appropriate design vehicles to design the intersection layout geometry, and to accommodate the applicable sight distances and horizontal and vertical Road clearance requirements. WB-20.5 shall govern the design for all Roads within the scope of Highway Works.
 - (ii) All Roads that are a designated transit bus routes shall accommodate the turning movement requirements of the City's B-12 standard bus, articulated bus, double decker bus, and Para Transpo vehicles.
 - (iii) Clearance requirements for opposing left-turn design: In design of intersections with multiple left-turn lanes, especially where simultaneous opposing left turns exist, DB Co shall ensure that the design vehicle is appropriately selected. In the design of intersection layouts with double turn left lanes, the design shall accommodate the simultaneously turning manoeuvres of the WB 20.5 with a second Light Single Unit truck.
 - (iv) Minimum turning speed of a design vehicle shall not be assumed less than 15 km/hr.
 - (v) The design of OC Transpo bus turning paths shall satisfy the requirements of the OC Transpo - Transitway and Station Design Guidelines. Bus design turning speeds at intersection corners and curb returns shall not be less than 15 km/hr.
- (f) DB Co shall engage the City Representative to coordinate its layout and design of interchanges and Crossing Roads with future projects.
- (g) DB Co shall design and construct the Highway Works such that no maintenance holes are located within the travelled lanes of any Roads.
- (h) DB Co shall be responsible for ensuring proper surface drainage at all times. Surface drainage shall be properly controlled and directed to a suitable outlet without causing any disturbance or damage to existing infrastructure and structures. No flow of water shall be

directed across or over pavements except through approved pipes or properly constructed troughs. Run-off from un-stabilized areas shall be intercepted and diverted to a suitable outlet.

- (i) DB Co shall be responsible to manage water so that it is not injurious to public health or safety, to property or to any part of the Works completed or under construction.
- (j) DB Co shall submit roadway design drawings as part of its Design Development Submittals, in accordance with Schedule 10 – Review Procedure. Drawings shall depict elements of the Highway Works design, including but not limited to those listed below.
 - (i) Plan drawings
 - A. The proposed horizontal alignment including standard dimensioning of all horizontal alignment elements;
 - B. Locations of widening, reconstruction and paving;
 - C. Locations of structural elements, including Bridges, Retaining Walls, Noise Barriers, Culverts, sign structures, guiderail;
 - D. Location of all drainage elements including sewers, culverts and stormwater management ponds;
 - E. Location of Utility corridors;
 - F. Limits of grading; and,
 - G. Property limits.
 - (ii) Profile drawings
 - A. The proposed vertical profile including standard dimensioning for all vertical alignment elements;
 - B. Original ground line, ditching, sewers, top of pavement;
 - C. Location of structural elements, including Bridges, and Culverts;
 - D. Location of drainage elements including sewers, culverts, and stormwater management ponds; and,
 - E. Location of Utility crossings.
 - (iii) Typical cross-section drawings
 - (iv) Typical detail drawings

1.4 Traffic Engineering Requirements

- (a) Traffic engineering requirements for design of the Highway Works:
- (i) DB Co's design shall meet the traffic engineering requirements specified in this Clause 1.4.
 - (ii) MTO's Capacity Analysis Manual 2016 and MTO's Traffic Impact Assessment Guidelines (most current version) shall be applied to MTO's network unless otherwise noted. Synchro and SimTraffic (Version 10 or newer) suites shall be utilized, where appropriate, by DB Co for assessment of other roadway elements.
 - (iii) The Synchro parameters utilized by DB Co in undertaking the traffic analysis shall be as per the requirements laid out in Appendix C of the City of Ottawa's Transportation Impact Assessment Guidelines, and as per the MTO Traffic Impact Assessment Guidelines. The more conservative standard shall govern, except for Provincial Highway and ramp analysis, where the MTO Traffic Impact Assessment Guidelines shall apply.
 - (iv) The SimTraffic parameters utilized by DB Co in undertaking the analysis shall reflect actual local conditions. DB Co shall undertake field analysis in order to accurately identify the SimTraffic parameters. The performance measures from SimTraffic shall be obtained by:
 - A. Averaging 5 different speed values;
 - B. Seeding for 15 minutes followed by four 15 minutes recording intervals; and,
 - C. Applying peaking and anti-peaking (i.e. peaking is to be applied to the second 15 minute recording interval).
 - (v) DB Co shall undertake the necessary traffic engineering analysis to demonstrate that the geometric design and configuration of the ramp terminals shall accommodate the weekday AM and PM peak hour demand consistent with MTO and City of Ottawa performance standards. The analysis shall be undertaken as per the requirements of the City of Ottawa Multi-Modal Level of Service Guidelines, the MTO Capacity Analysis Manual 2016, and as per the MTO Traffic Impact Assessment Guidelines. The more conservative standard for vehicular traffic shall govern.
 - (vi) If the performance criteria in Clause 1.4(v) cannot be achieved through optimal geometric design or other improvements, DB Co shall submit a request to the City Representative to receive exemption on this performance criteria and acceptance of the intersection design, at the City's sole discretion.
 - (vii) DB Co shall undertake the necessary traffic engineering analysis consistent with appropriate MTO and City of Ottawa procedures to demonstrate that the

geometric design and configuration of weave sections shall accommodate the AM and PM peak hour traffic volumes at an acceptable level of performance. All modes of travel shall be considered in the analysis.

- (viii) If performance criteria in Clause 1.4(vii) cannot be achieved through optimal geometric design or other improvements, DB Co shall submit a request to the City to receive exemption on this performance criteria and acceptance of the intersections design, in the City's sole discretion.
 - (ix) DB Co shall submit a Traffic Analysis Report (the "Traffic Analysis Report") summarizing all traffic engineering analysis undertaken as per this Clause 1.4. The report shall demonstrate and identify required operational improvements of all affected Roads based on traffic analysis. The traffic engineering analysis shall identify and utilize projected volumes for 5, 10 and 20 year horizons for both morning and afternoon peak hours when analyzing any roadway configuration intended to be permanent. Traffic growth rates shall be determined from historical and current count data and future volumes shall be applied to the analysis of all Roads within the scope of Highway Works, including ramps, ramp terminal intersections and other intersections, and shall be included in the Traffic Analysis Report. Seasonal variations shall be addressed in the development of future traffic volumes. DB Co shall provide defensible recommendations for identified operational improvements in the report including a review and evaluation of any alternatives developed by DB Co. The Traffic Analysis Report shall be provided to the City Representative for review and acceptance a maximum of 16 weeks after Financial Close, prior to geometric design being further advanced, in accordance with Schedule 10 – Review Procedure.
 - (x) DB Co shall ensure that the Traffic Analysis Report summarizes in tabular form, parameters including but not limited to, overall intersection performance (V/C and LOS), individual movements V/C and LOS, movement delays and 95th percentile queue lengths. All modes of travel shall be considered in the analysis.
 - (xi) DB Co shall ensure that the Traffic Analysis Report shall include an appendix that includes all supporting documentation, modelling information, and calculations both in paper and electronic formats.
 - (xii) Traffic Signal Systems design and construction shall be as per Clause 6.6 of Part B of this Schedule 15-2, Part 9.
 - (xiii) DB Co shall design the intersection configuration, as a minimum, according to the layouts specified in Clause 1.3 of Part B of this Part 9, unless an alternative layout is analyzed by DB Co according to this Clause 1.4 and accepted by the City at its sole discretion.
- (b) Traffic engineering requirements during construction

- (i) DB Co shall meet the traffic engineering requirements specified in this section applicable to the construction period prior to Final Completion.
- (ii) Highway Capacity Manual 2016 methodology, and HSB-DCSO-2016-05 shall be utilized by DB Co, unless otherwise noted. Synchro and SimTraffic (Version 10 or newer) and/or Vissim transportation analysis software suites shall be utilized by DB Co for assessment.
- (iii) The Synchro and/or Vissim parameters utilized by DB Co in undertaking the analysis shall be as per the requirements laid out in Appendix C of the City of Ottawa's Transportation Impact Assessment Guidelines, and as per the MTO General Guidelines for the Preparation of Traffic Impact Studies. The more conservative standard shall govern, except for Provincial Highway and ramp analysis, where the MTO General Guidelines for the Preparation of Traffic Impact Studies shall apply.
- (iv) The default SimTraffic and/or Vissim parameters shall be utilized by DB Co in undertaking the analysis. DB Co shall undertake field analysis and appropriate Highway Capacity Manual analysis in order to alter the SimTraffic parameters to accurately reflect existing conditions. The performance measures from SimTraffic shall be obtained by:
 - A. Averaging five different speed values;
 - B. Seeding for 15 minutes followed by four 15 minutes recording intervals; and,
 - C. Applying peaking and anti-peaking (i.e. peaking is to be applied to the second 15 minute recording interval).
- (v) All traffic data used for analysis for traffic management purposes shall be based on the most current data and no older than two years. DB Co shall be responsible for obtaining or collecting all traffic data necessary for its traffic analysis, if traffic data less than two years old is not relevant to the traffic management analysis due to temporary conditions that existed at the time the data was collected. DB Co shall confirm with the City that the data is appropriate prior to conducting an analysis using said data.
- (vi) DB Co shall undertake an analysis of existing (pre-construction) traffic operations and establish current roadway/freeway performance including travel times/delays, vehicle queues, LOS and V/C and other parameters.
- (vii) DB Co shall undertake the necessary traffic engineering analysis to identify the impacts of all construction staging including closures and detours on all Provincial Highways, Municipal Roadways and Other Affected Municipal Roadways. The LOS analysis shall be undertaken as per the requirements of Chapter 6 of the City of Ottawa Multi-Modal Level of Service Guidelines, the

MTO Capacity Analysis Manual (2016), and as per the Highway Capacity Manual 2016. The more conservative standard shall govern.

- (viii) The performance of all Roads during each stage of construction shall be assessed and compared with existing (pre-construction) conditions. Existing pre-construction performance shall be maintained at all impacted intersections and freeway elements for weekday AM and PM peak hour demands.
- (ix) DB Co shall identify and provide necessary temporary improvements to achieve the pre-construction operational performance.
- (x) If intersection performance criteria cannot be achieved through adjusted signal timings, geometric improvements or other intersection improvements, DB Co shall submit a request to the City Representative to receive exemption on this performance criteria and acceptance intersection performance, in the City's sole discretion. The request for exemption shall include recommended mitigation to minimize the impacts to traffic.
- (xi) DB Co shall complete a detailed traffic engineering analysis and submit a Traffic Analysis Report for all works. DB Co shall review the study area and provide defensible recommendations.
- (xii) DB Co shall ensure that there is sufficient turn lane storage to accommodate temporary traffic conditions. DB Co shall provide additional storage as required.
- (xiii) DB Co shall ensure that within the Traffic Analysis Report, the intersection performance shall be summarized in tables which shall include overall V/C, movement V/C ratio, movement LOS, movement delay and 95th percentile queue lengths by movements, storage lengths (available and required storage lengths).
- (xiv) DB Co shall ensure that the Traffic Analysis Report includes an appendix with all supporting documentation, model data and calculations both in paper and electronic formats.

1.5 Structure Requirements

- (a) At locations where Highway 417 is proposed to cross over the Municipal Roadway, the Overpasses shall accommodate the ultimate cross-section of the Crossing Roads.
- (b) At locations where Highway 417 is proposed to cross under the Municipal Roadway, the Underpass shall accommodate the ultimate cross-section of Highway 417.
- (c) A minimum vertical clearance of 5.0 m shall be provided at all Underpasses. Laning for Crossing Roads shall be designed and constructed as per Clause 1.3 of this Part B. Appropriate horizontal clearance with the inclusion of the sidewalk and MUP, where indicated in the table, shall be provided.

- (d) For water crossings, Bridge Foundations shall be constructed as per Table 1.5b for the number of lanes required on Highway DB Co Commissioning. The Structure and Foundations shall be able to accommodate for future widening to the ultimate condition. DB Co shall provide any additional laning requirements such as acceleration, deceleration, or turning lanes, in its final design.

Table 1.5 b – Water Crossing Requirements ⁽¹⁾

| Creek | Location | Recommended Structure Type in PDR | Ultimate No. of Lanes on Structure (Through + Auxiliary) | No. of Through-Lanes required on Highway Substantial Completion | No. Auxiliary lanes required on Highway Substantial Completion | Notes |
|--------------|------------------------|--|---|--|---|--|
| Graham Creek | Holly Acres N/S-E Ramp | Cast-in-place box Culvert | 1 | 0 | 1 | Extension and rehabilitation of existing Culvert |

Notes:

- (1) Shoulder widths on freeway structures shall be consistent with the road section or as per the MTO Standard, whichever is greater. No reduction to Shoulder widths (Side Clearances) will be permitted for Structures greater than 50 m in length. On ramps, structures shall have Shoulders consistent with the ramp Shoulders. Shoulder widths on structures shall be adjusted to accommodate appropriate sight distances where applicable. Side Clearances on structures shall comply with the MTO Standards.

(e) Retaining Structures

- (i) DB Co shall confirm the location and shall design and construct retaining structures at and any locations where required to accommodate DB Co's design.
- (ii) DB Co shall design and construct the retaining structures at the Pinecrest Road N-W ramp to accommodate a future grade raise by others as described in Part B, Clause 4.11 (a)(iii) of this Part 9.

(f) Noise Barrier Walls

- (i) At any locations identified in this Clause 1.5(f) where existing Noise Barrier is being replaced as part of Highway Works, DB Co shall install the new Noise Barrier walls at the same offset from the Roadway, unless an adjustment is required due to spatial constraints.
- (ii) Existing Noise Barriers that are removed by DB Co shall be replaced within seven days. In instances where Noise Barrier is not being replaced in the same location,

the requirement for replacement within seven days applies to the section of new Noise Barrier that provides equivalent noise mitigation.

- (iii) Noise Barriers shall be opaque except where otherwise noted in this Clause 1.5(f).
 - (iv) DB Co is advised that translucent window panels along the top 1.0 m of the Noise Barriers may be requested by residential property owners through the consultation process along all segments of the Highway where Noise Barrier is specified to be installed. DB Co shall incorporate the translucent panels if a request by the property owners is made and approved by MTO.
 - (v) Transparent Noise Barriers shall include black stripes to reduce the likelihood of bird collisions.
- (g) Other Structures
- (i) Subject to the requirements of this Schedule 15-2, Part 9 as they pertain to the applicable Highway ramps and Crossing Roads, the following Structures shall be designed in accordance with Schedule 15-2, Part 2, Article 4 – Structural Design Criteria and Requirements.
 - A. SN116420; and,
 - B. SN116430.

1.6 Fencing and Ramp Closure Gate Requirements

- (a) Fencing Requirements
- (i) Where New City Infrastructure, and New MTO Infrastructure conflicts with the existing chain link fence, and for further certainty the existing chain link fence located at the limits of the Highway Corridor Lands, a new continuous fencing fully securing Highway 417 shall be provided on the outermost boundaries of the Highway Corridor Lands. When in conflict, the existing chain link fencing shall be removed in order to complete the required widening, New City Infrastructure, and New MTO Infrastructure. New chain link fencing shall be reinstated along the limits removed for construction, with adjustments required in areas where there are changes in ROW limits.
 - (ii) Chain link security fencing shall be provided and shall be in accordance with OPSS 772, OPSD 972.130 and MTO Directive PHY B-209, with the following exceptions:
 - A. The tension top wire design shall be used for all chain link and antiglare screen installations.
 - B. Fencing gates shall be provided for maintenance purposes, such as structural maintenance. For example, for Structures over water crossings, a

minimum of two maintenance access gates shall be required, at least one on either side of the water course.

C. The fencing shall be in accordance with the MTO Context Sensitive Design requirements as detailed in Appendix F of this Part 9.

(iii) Farm or rural fencing shall not be used for security fencing.

(iv) Temporary fencing shall be installed during construction as required to secure the highway and construction areas.

(v) Final fencing plan and design shall be submitted to the City Representative in accordance with Schedule 10 - Review Procedure a minimum of 90 days prior to installation.

(b) Ramp Closure Gate Requirements

(i) DB Co shall install ramp closure gates at all new or reconstructed ramps entering Highway 417.

(ii) Ramp closure gates shall be designed in accordance with applicable MTOD-960 series 1 drawings.

(iii) Ramp gate location plan and design shall be submitted to the City Representative in accordance with Schedule 10 – Review Procedure a minimum of 90 days prior to installation.

1.7 Explicit Safety Analysis

(a) DB Co shall perform an Explicit Safety Analysis (the “Explicit Safety Analysis”) on Hazards within the enhanced clear zone by calculating the potential future collision frequency, severity and societal costs, and also analyzing human factors, to determine if the Hazard should be relocated, shielded with Roadside Barrier, or otherwise safely mitigated in DB Co’s design.

(b) DB Co shall review Highway and intersection safety elements within the Highway Works limits to identify, diagnose, and develop alternative countermeasures to be evaluated within the context of the project. A summary and recommendations of the review shall be provided.

(c) DB Co’s Explicit Safety Analysis shall be conducted with safety as a paramount, and that cost saving shall not take precedence over safety.

(d) DB Co’s analysis and calculation shall be carried out in accordance with the methodology from Appendix A of the 1996 AASHTO Roadside Design Guide, Reference Documents identified in this Schedule 15-2, Part 9, and in consultation with the City.

- (e) The Explicit Safety Analysis shall be carried out by Qualified Personnel who are highway or traffic engineering professionals with safety engineering training, and who have demonstrated experience and familiarity in carrying out such safety analyses (minimum 10 year experience).
- (f) DB Co shall conduct Explicit Safety Analysis early in its design, and shall submit an Explicit Safety Analysis Report in accordance with the Review Procedure as part of the Pre-Final Design Development Submittals. Updated analyses shall be submitted in subsequent submittals if the relevant design changes.
- (g) When the Explicit Safety Analysis is conducted to assess different safety improvement options, options that increase collision costs shall not be carried forward even if they have better benefit-cost ratios.
- (h) Notwithstanding the requirements in Clause 1.7(a) to (f) in this Part B, DB Co's design shall promote open, Barrier free Roadway, to achieve safety goals, and shall submit an Explicit Safety Analysis Report whenever a Hazard warrants Barrier protections.

1.8 MTO Underground Plant Layout

- (a) DB Co shall be responsible for the determination of the exact physical location and protection of all MTO underground plant including, but not limited to, electrical / Permanent Data Counting Stations ducts and cables, ATMS, storm sewers, subdrains, culverts, and all external agency underground utilities (i.e. gas, water etc.).
- (b) Requests for stake-out services by the MTO shall be co-ordinated through the City Representative. Locates shall be the responsibility of DB Co. DB Co shall be responsible for locates at all times, including during the Winter Period, within the Highway Works limits.
- (c) The MTO does not subscribe to the Ontario One Call System.

ARTICLE 2 HIGHWAY GEOMETRICS DESIGN CRITERIA

2.1 Order of Precedence

- (a) The geometric design for all Roads shall be in accordance with the criteria contained in this Article 2, and the standards and manuals included in Reference Documents, and if there is any conflict between the criteria contained in this Article 2 and standards and manuals included in the Reference Documents, the following shall apply in descending order of precedence:
 - (i) The criteria contained in this Article 2;
 - (ii) MTO Special Provisions;
 - (iii) The applicable MTO Directives, MTO Policy Memorandums, and MTO Design Bulletins;
 - (iv) OPSS;
 - (v) MTO Contract Design, Estimating and Documentation (CDED) Manual;
 - (vi) Accessibility for Ontarians with Disabilities Act (AODA) and Ontario Regulation 413/12;
 - (vii) MTO Design Supplement for TAC Geometric Design Guide for Canadian Roads, June 2017;
 - (viii) Geometric Design Guide for Canadian Roads, TAC;
 - (ix) MTO Standard Drawings;
 - (x) OPSD;
 - (xi) Roadside Safety Manual, MTO; and,
 - (xii) The applicable standards of the City of Ottawa.

2.2 General Requirements

- (a) DB Co shall be responsible for all Roads within the Highway Works. In addition to the requirements in Clause 2.1(a) of Part B of this Schedule 15-2, Part 9, DB Co's design for the Roads shall be based on Good Industry Practices generally and in particular, with respect to good engineering practices, which shall consider safety and comfort of all Roadway users as paramount.
- (b) If DB Co is unable to meet any of the geometric Design Criteria contained in this Article 2, it shall propose to the City Design Criteria that comply with the Project Agreement, and applicable Reference Documents to the fullest extent possible. DB Co shall demonstrate that the proposed Design Criteria maximize the level of performance of the

Road, relative to the applicable MTO Standards. The Design Criteria proposed by DB Co are subject to acceptance by the City, at its sole discretion.

- (c) DB Co shall design the geometric elements of Highway Works according to the Design Criteria included in this Part 9. In all cases where a specific Design Criteria is not provided for a Road and/or interchange in this Article 2 of Part 9, DB Co shall undertake a detailed survey and review of the existing conditions, confirm the Road and/or interchange ramps geometric Design Criteria by referencing the existing conditions, appropriate standard and proposed Design Criteria, in order to address the necessary improvements as specified elsewhere in this Part 9. In all cases, DB Co shall consider safety and comfort of all Roadway users as paramount in development of geometric design.
 - (i) Notwithstanding the Design Criteria contained in this Article 2, under the circumstances whereby an existing interchange ramp, impacted by the Highway Works, does not meet current MTO Standards, DB Co shall design and construct the necessary ramp improvements to maximize radii, sight distances and speed change lane lengths used so that the impacted ramp will be upgraded to meet MTO Standards. Under circumstances where upgrading the ramps to standards is not feasible within the Lands available, DB Co shall demonstrate that its design has achieved the maximum level of performance relative to the standard as possible.
 - (ii) In all cases, geometric Design Criteria that correspond with DB Co's design for Highway Works that do not meet MTO Standards shall correspond to a value that is at minimum equivalent to existing conditions.
- (d) Granular foreslopes shall be designed never to be steeper than 4:1 on divided roads and 3:1 on undivided roads.
- (e) Shoulder widths shall be designed and constructed as noted in Clause 2.3 of this Part B.
- (f) In consideration of the Design Criteria contained in this Article 2 and the existing layout of Roads that are not reconstructed under Highway Works, DB Co shall design and construct transitions to tie into the adjacent road network. The design shall be based on Good Industry Practices and shall consider safety and comfort of all Roadway users as paramount.

2.3 Corridor Laning and Geometric Criteria

- (a) Freeway Geometrics
 - (i) General Requirements
 - A. In the case that the interchange ramp needs to be modified or new ramps required, DB Co shall design and construct the ramps to accommodate future highway widening such that in the future the ramps will require

minimal modifications to the extent possible. The following mainline geometric design can be referenced.

1. The geometric Design Criteria for the Highway 417 Main Line are summarized in Table 2.3a.

| Table 2.3a – Highway 417 Main Line Geometric Design Criteria | |
|---|---|
| | Hwy 417 Main Line Widening |
| HIGHWAY CLASSIFICATION | UFD 120 ^(a) |
| MINIMUM STOPPING SIGHT DISTANCE (M) | 120 |
| EQUIVALENT MINIMUM ‘K’ FACTOR (M) (CREST/SAG) | 120 / 60 ^(c) |
| MINIMUM RADIUS (M) | 650 |
| LANE PAVEMENT WIDTH (M) | 4 x 3.50 ^(d) |
| SHOULDER WIDTH (M) (OUTSIDE/MEDIAN) | 3.00 ^(e) / 2.50 ^(b) |
| SHOULDER ROUNDING (M) | 1.0 |
| MEDIAN WIDTH (M) | 5.8 – 11.5 ^(b) |
| POSTED SPEED (KM/H) | 100 |

Notes

- a) Existing alignment shall be retained.
- b) The median shoulder may vary to accommodate asymmetric tall wall barrier. The shoulder may be reduced to 2.25 m at overhead sign locations and to accommodate structure piers as determined by structural requirements. The WB median shoulder width beneath the Maitland Underpass Structure shall be improved by DB Co from the existing condition and shall meet the applicable shoulder width MTO Standards to the fullest extent possible.
- c) Alterations to the Highway 417 Main Line vertical alignment are not required for the sole purpose of correcting existing substandard alignments.
- d) Lane pavement width includes through lanes only. Any required interchange auxiliary lanes are in addition to this requirement.
- e) The Main Line outside Shoulder width also applies to continuous speed change lanes.

(ii) Roadside Safety

- A. Bridge abutments that are located at or outside the normal clear zone (10.0 m in the case of freeways) and have a slope not steeper than 2:1 in front of the abutment shall not require Roadside protection; provided, that the slope is free of obstacles, is traversable, and the approach grading is contoured to steer vehicles away from the abutment as detailed in Figure 2.7.3 of the MTO Structural Manual, where applicable.

(b) Crossing Roads with Interchanges Geometrics

(i) Specific Requirements

A. Geometric Design Criteria

- i. Tables 2.3b, 2.3c, 2.3d and 2.3e provide geometric Design Criteria for the interchange ramps.

| | HOLLY ACRES EB ON-RAMP |

| MINIMUM ENTRANCE TERMINAL SPEED- CHANGE LANE LENGTH (M) | | Continuous | | 345 | | N/A |

Notes

- ii. DB Co shall complete a Ball Bank Indicator Report (the “Ball Bank Indicator Report”) for all ramps impacted by the Highway Works, to determine the posted advisory speed. The reports shall be submitted to the City for review and acceptance in accordance with Schedule 10 – Review Procedure. Advisory speed signs shall be posted prior to ramps being opened to traffic.
- iii. Table 2.3f provides the geometric Design Criteria for the Crossing Roads.

Notes

- Approach grades on intersection roads with ramp terminals shall not exceed 3.0%.
- The cross-sectional geometry of the Crossing Roads shall comply with Article 1 of Part B of this Schedule 15-2, Part 9.
- Full Depth Paved Shoulders shall be provided where Shoulders are required.
- Holly Acres posted speed shall be reduced to 60 km/h to increase safety and consistency between Richmond Road and the current 60 km/h zone just to the north.
- Alterations to the Richmond Road vertical alignment south of Holly Acres Road are not required for the sole purpose of correcting existing substandard alignments.
- Existing ramp alignment shall be retained downstream of the bullnose with modifications only to accommodate the widening of Highway 417, the West Works and specified modification to the ramp terminal.

ARTICLE 3 PAVEMENT DESIGN CRITERIA

3.1 Order of Precedence

- (a) DB Co shall design and construct Pavements in accordance with the criteria contained in this Article 3 and the following Reference Documents, and if there is any conflict between the criteria contained in this Article 3 and any Reference Document(s), the following shall apply in descending order of precedence for design and construction of Pavements:
- (i) The criteria contained in this Article 3;
 - (ii) MTO Special Provisions;
 - (iii) The applicable MTO Directives, MTO Policy Memorandums, and MTO Design Bulletins;
 - (iv) OPSS;
 - (v) MTO Contract Design, Estimating and Documentation (CDED) Manual;
 - (vi) DSM;
 - (vii) Procedures for Estimating Traffic Loads for Pavement Design, 1995, MTO;
 - (viii) MTO Materials Information Report MI-183 “Adaptation and Verification of AASHTO Pavement Design Parameters for Ontario Conditions”;
 - (ix) MTO Ontario’s Default Parameters for AASHTOWare Pavement ME Design Interim Report, 2014;
 - (x) 1993 AASHTO Guide for the Design of Pavement Structures;
 - (xi) Canadian Portland Cement Association – Thickness Design for Streets and Highways;
 - (xii) MTO Pavement Design and Rehabilitation Manual, Second Edition, 2013;
 - (xiii) Embankment Settlement Criteria for Design, July 2, 2010, MTO;
 - (xiv) Ontario Traffic Manual, MTO;
 - (xv) MTO Directive PHM-C-001 The Use of Surface Course Types on Provincial Highways;
 - (xvi) Manual for Condition Assessment of Flexible Pavements – Pavement Performance Monitoring using Automated Pavement Distress Data, November 2015, MTO;

- (xvii) The Formulations to Calculate Pavement Condition Indices, September 2009, MTO;
- (xviii) MTO Standard Drawings;
- (xix) OPSD;
- (xx) American Society for Testing and Materials (ASTM) Standards;
- (xxi) MTO Laboratory Testing Manual; and,
- (xxii) AASHTO Materials Specifications and Standards.

3.2 General Requirements

- (a) DB Co's Pavement structure design requirements for widened, milled or reconstructed components of the Highway Works are provided in this Article 3. The Highway Works paving scope is summarized below:
 - (i) Widened, reconstructed and realigned sections of all Roads within the scope of Highway Works shall be paved by DB Co.
 - (ii) Select ramps shall be reconstructed by DB Co to accommodate the Highway 417 widening.
 - (iii) Any other Roads that are widened, reconstructed or realigned under DB Co's design for Highway Works shall be paved by DB Co.
 - (iv) DB Co shall design all required transitions.
- (b) Acceptable Products
 - (i) All products used on the Highway Works shall meet applicable Project Agreement requirements and, where specified in this Schedule 15-2, Part 9, shall be in accordance with the Designated Sources of Materials List. Without limiting Section 11.20 of the Project Agreement, the use of products that are not on the Designated Sources of Materials List requires the prior written approval of the City, in its sole discretion, and acceptance shall be subject to DB Co demonstrating in its submission sufficient experience with the proposed product and acceptable performance for the proposed product under conditions and applications similar to those existing for this Project.
- (c) DB Co shall be responsible for the construction of all Pavements. A Pavement design has been developed and is detailed below. Without relieving DB Co of its responsibilities to achieve Design Integration, DB Co is required to adopt and incorporate all applicable aspects of the Pavement design specified in this Article 3 into its Highway Works design. DB Co shall design tie-ins (or adapt those detailed herein) to ensure compatibility between the Pavement design and DB Co's geometric design. If deviations to this

Pavement design are required by DB Co, it shall submit an alternative proposed Pavement design to the City in accordance with Schedule 10 – Review Procedure, accompanied by a narrative justifying why a deviation is necessary and how the proposed Pavement will perform relative to the Pavement design detailed herein. These aspects of DB Co’s Pavement design shall be subject to acceptance by the City, at its sole discretion.

- (i) Highway 417 widening, speed change lane widening and shoulder overbuilding:
 - A. Excavate from the existing speed change lane edge of pavement, within the asphalt, towards the shoulder.
 - B. Provide the following courses: 40 mm Superpave 12.5 FC2, 260 mm (50+70+70+70) Superpave 19, 150 mm Granular A, 550 mm Granular B Type II (150 mm on rock subgrades).
 - C. Provide a 50 mm deep by 300 mm wide longitudinal step joint in the upper binder course.
- (ii) Paved Shoulders on ramps and Municipal Roadways:
 - A. Fully paved Shoulders: DB Co shall design and construct fully paved Shoulders by extending the surface course, with the upper binder course extended across the full shoulder width (each side).
- (iii) For location specific Design Criteria for ramp and Municipal Roadway widening, realignment, and new construction, refer to Table 3.2a. Aspects of the paving scope not identified in Table 3.2a shall be in accordance with the general requirements outlined in this Article 3.

| Table 3.2a – Pavement Design Criteria – Ramps and Crossroads | | | | |

| REQUIRED) | | | | |
|-----------|--|--|--|--|

Notes:

- A)
 - B) Paving of ramp shoulders shall be in accordance with Clause 3.2(c)(iii) of this Part B.
 - C) New pavement shall tie into existing pavement (constructed under MTO Contract 2017-4031) at Sta. 640+100 or further upstream.
- (iv) DB Co shall undertake the Pavement design and construction for all ramps (or portions thereof), within the scope of Highway Works, including those not otherwise noted in this Article 3, in accordance with the requirements of this Article 3. The design, performance, durability and life span of any Pavement shall be generally consistent with those of other Road segments with preliminary Pavement designs specified herein.
- (d) DB Co shall ensure that milling will not disturb the binder course or extend within 40 mm of waterproofing including, but not limited to, Overpass and Underpass Structures and approach slabs. DB Co shall clean any asphalt debris such that it is not left in the expansion joints or seals.
- (e) Upon review of DB Co's geometric design, the City may, at its sole discretion, instruct DB Co to undertake its own design for any segment of Pavement. DB Co's Pavement design would be in accordance with the requirements of this Article 3, including but not limited to the requirements of Clause 3.2(c).
- (f) DB Co shall ensure that design of new Pavement structures be in accordance with the "1993 AASHTO Guide for the design of Pavement Structures" and AASHTOWare Pavement ME Design software. The AASHTO 93 method will provide structural Pavement thickness design based on traffic volumes. DB Co shall use the ME Design method to assess the suitability of the chosen AASHTO Design for meeting Pavement performance parameters described elsewhere in this Part 9. DB Co shall select AASHTO Pavement Design parameters as described in the MTO Materials Information Report MI-183 "Adaptation and Verification of AASHTO Pavement Design Parameters for Ontario Conditions". DB Co shall implement calibrated models for the AASHTOWare Pavement ME design software or default parameters for any non-calibrated models as described in MTO Ontario's Default Parameters for AASHTOWare Pavement ME Design Interim Report, 2014. DB Co shall submit the use of alternate design methods and parameters in accordance with Schedule 10 – Review Procedure.
- (g) The soil boreholes advanced by DB Co shall be in accordance with the requirements of Ontario Regulation 903 (wells) and its amendments, made under the Ontario Water Resources Act (R.S.O 1990).
- (h) DB Co shall be responsible for designing all proposed slopes in cut and fill areas, including slope geometry, drainage treatments and erosion control measures for embankments and Ditches.

- (i) DB Co shall be responsible for effective subsurface drainage and frost protection, including the provision of subdrains or any other drainage treatments.
- (j) In areas where standard ditching is not feasible, nonstandard ditching shall be utilized to drain the pavement structure. In such cases, DB Co shall provide for the following:
 - (i) The subdrain shall be 150 mm diameter perforated pipe wrapped with geotextile and backfilled with SP 19 stone.
 - (ii) The geotextile shall be Class 1, non-woven with a minimum thickness of 1 mm.
 - (iii) The subdrain shall be placed under the Roadway Shoulder at the start of rounding and to a reasonable depth below the subgrade line.
- (k) A list of locations containing frost susceptible soils known to the Sponsor is provided below. These soils shall be treated as indicated if impacted by Highway Works. DB Co shall ensure positive drainage at each location. DB Co shall re-evaluate the frost susceptibility of the soils at these locations and the suitability of the treatment indicated. DB Co shall determine and use the most appropriate treatment as required such as excavating deeper, longer, and/or wider sections than indicated. DB Co shall not use less stringent treatment than indicated. DB Co shall be responsible to identify any additional locations containing frost susceptible soils, and shall design appropriate treatment.
 - (i) Station 18+990, 22.0 m Lt (WB): Excavate starting at the existing edge of pavement to a depth of 1.2 m between Station 18+825 and Station 19+075 per OPSD 205.060 Transverse Section With Ditch. Backfill with SSM.
- (l) DB Co shall be responsible for including type of backfill, bedding, and requirements for rock excavation for storm sewer design, if necessary.
- (m) Final travelled surfaces within the boundaries of the Highway Works following completion of the Highway Works shall meet the requirements specified in this Article 3.
- (n) DB Co shall ensure that any roads or sections of roads with unfinished pavement including, but not limited to, milled pavement or pavement without surface course that are opened to traffic, including but not limited to public or construction traffic, are designed to carry the expected traffic and to prevent water penetration. DB Co shall maintain and ensure all unfinished pavement opened to traffic are in compliance with the MTO Standards prior to final paving and that adequate surface friction is provided such as diamond grinding. Traffic shall not be on a Superpave 19.0 surface for more than one Winter Period. If construction staging operations result in pavement surfaces that cannot meet this restriction, Superpave 12.5 FC1 shall be substituted for Superpave 19.0 as the hot mix material for that surface. Steel plates shall not be used on the Provincial Highway or ramps as a travelled surface at any time. For milled pavement surfaces, DB Co shall follow the requirements of Part C – Traffic Management and Construction Access of this Part 9.

- (o) DB Co shall ensure that the Pavement surface course is in accordance with MTO's Directive PHM-C-001. This shall be applicable to all flexible Pavements including existing, rehabilitated and new sections of Pavement.
- (p) Pavement Design Report(s) (the "Pavement Design Report(s)") shall be prepared and submitted according to Schedule 10 – Review Procedure. The Pavement Design Report shall include the following minimum requirements:
 - (i) Results of a comprehensive pavement evaluation, field investigation, soils sampling and laboratory testing program;
 - (ii) Rationale for the design parameters selected in adopting or developing the Pavement design;
 - (iii) The methodology (i.e. AASHTO 93 method or AASHTOWare Pavement ME Design software) used for design of pavements, and how the selected layer thicknesses satisfy the minimum thickness based on the layer elastic analysis; and,
 - (iv) Geotechnical design recommendations for Pavements.
- (q) DB Co shall design and construct the Pavement thickness to be uniform throughout all traffic lanes.
- (r) DB Co shall resurface all locations (of permanent surface course asphalt) where scarring of pavement occurs due to the removal of Pavement Markings.
- (s) Pavement design for Shoulder shall comply with Long Combination Vehicle requirements as set out in Clause 2.2(d) of Part B of this Schedule 15-2, Part 9.
- (t) All Pavements that are outside of the Main Line and ramps shall meet City requirements.
- (u) The Design Life of all new flexible Pavement designed by DB Co shall be 40 years starting at the West Works Substantial Completion Date including intervene rehabilitation with initial Design Life of minimum 20 years.
- (v) Crossfall corrections shall be undertaken with Superpave 19.0 hot mix.
 - (i) Padding thickness less than 25 mm shall be placed with the binder course.
 - (ii) Padding thickness greater than 25 mm shall be placed in a separate lift.
 - (iii) The maximum lift thickness shall not exceed 70 mm.
- (w) The following pavement transitions shall be provided at tie-in locations:
 - (i) Highway Works limits: Partial depth remove 40 mm to key-in the new surface course flush with the existing pavement surface over a 15 m length.

- (ii) Highway 417 Ramps: Partial depth remove 40 mm to key-in new surface course flush with existing pavement surface over a 10 m length.
- (iii) Underpass Structures (Pinecrest/Greenbank Road, and Moodie Drive): Provide for a transverse butt joint in the binder course at the Highway Works limits. Partial depth remove 40 mm to key-in new surface course flush with existing pavement surface over a 5 m length per OPSS 313.07.07.03.
- (x) Widening of existing embankments shall be in accordance with OPSD 208.01.
- (y) All topsoil and other post primary consolidation settlement prone soil types shall be removed prior to constructing any embankments and widenings.
- (z) Transition points, where required, shall be carried out as per OPSD 205 series and in accordance to Clause 3.2(x) of this Part 9, Part B.
- (aa) A frost treatment depth of 1.8 m (from top of pavement) shall be utilized when designing frost tapers in accordance with OPSD 205 and OPSD 803 series.
- (bb) DB Co shall submit a list of all Special Provisions applicable to Highway Works Pavements with filled-in inputs in accordance with Schedule 10 – Review Procedure.

3.3 Pavement Structures

- (a) DB Co shall be solely responsible for selecting all Materials except as otherwise specified in this Article 3.
- (b) Granular Materials shall consist of OPSS 1010 Granular A for base course requirements and OPSS 1010 Granular B, Type II for subbase course requirements. All Granular Materials shall be in accordance with OPSS PROV 1010, April 2013. They shall be placed over the full width of the widened road, in accordance with the OPSD 200 series.
- (c) Performance graded PG 64-34 or 70-34 asphalt cement with an Ontario Traffic Category E shall be used for hot mix asphalt on Main Line and ramps. Performance graded PG 64-34 or 70-34 asphalt cement with an Ontario Traffic Category D shall be used for hot mix asphalt on Municipal Roadways.
 - (i) The Superpave 12.5 FC2 and Superpave 12.5 FC1 asphaltic concrete mix (Fine Grade mix specification under SP111F11 is required for 40 mm lift thickness) shall be designed for Traffic Category E.
 - (ii) The asphalt cement content for the Superpave 12.5 FC2 and Superpave 12.5 FC1 mixes shall be minimum 5.0%. The asphalt cement content for the Superpave 19 mix shall be minimum 4.7%.
- (d) Materials containing contaminants that may discharge into the environment and that could have an adverse effect on the natural environment (including air, land or water, and human plant or animal life) shall not be used. Granular Materials shall conform to the

- requirements of Ontario Provincial Standards Specifications OPSS PROV 1010 except that reclaimed hydraulic cement concrete shall not be used.
- (e) Asphaltic concrete shall conform to the requirements of OPSS PROV 1151 – Material Specification for Superpave and Stone Mastic Asphalt Mixtures.
 - (f) Grading and compaction shall conform to the requirements of OPSS PROV 206 – Construction Specification for Grading, and OPSS PROV 501 – Construction Specification for Compacting. Granular Base and Subbase shall be according to OPSS PROV 314.
 - (g) Drainage of the Pavement structure shall be constructed in accordance with the OPSD 300 series.

ARTICLE 4 STRUCTURAL DESIGN CRITERIA

4.1 Order of Precedence

- (a) The design and construction of Structures shall be in accordance with the criteria contained in this Article 4 and the following Reference Documents, and if there is any conflict between the criteria contained in this Article 4 and any Reference Document(s), the following shall apply in descending order of precedence for design and construction of Structures:
- (i) The criteria contained in this Article 4;
 - (ii) CAN/CSA-S6 Canadian Highway Bridge Design Code; including Exceptions to the Canadian Highway Bridge Design Code CAN/CSA-S6 for Ontario;
 - (iii) The applicable MTO Directives;
 - (iv) MTO Policy Memorandums;
 - (v) MTO Design Bulletins;
 - (vi) MTO Special Provisions;
 - (vii) MTO Standard Drawings;
 - (viii) OPSS;
 - (ix) OPSD;
 - (x) MTO Structural Manual;
 - (xi) MTO Design Supplement for TAC Geometric Design Guide for Canadian Roads;
 - (xii) Geometric Design Guide for Canadian Roads (TAC);
 - (xiii) MTO Contract Design, Estimating and Documentation (CDED) Manual;
 - (xiv) Structure Rehabilitation Manual;
 - (xv) Structural Steel Coating Manual;
 - (xvi) Retrofitting of Existing Bridges with Joints to Semi-Integral Abutments, MTO;
 - (xvii) Ontario Structure Inspection Manual;
 - (xviii) Structural Financial Analysis Manual;
 - (xix) Roadside Safety Manual, MTO;

- (xx) Sign Support Manual;
- (xxi) NFPA502;
- (xxii) DSM; and,
- (xxiii) CSA and ASTM Standards.

4.2 General Requirements

(a) Structure Identification Number

- (i) Structure identification numbers as assigned by the City Representative shall be incorporated into the Structures in accordance with MTO standard practices. DB Co shall supply Bridge numeral forms and imprint identification numbers on Structures.

(b) Checking of Structural Design

- (i) DB Co shall engage a Checking Team, the qualifications of which are described in Clause 2.10 of Part A of this Schedule 15-2, Part 9, to perform design checks of Structures. The design checks shall be performed by a designer in the Checking Team that is independent of the Design Team.
- (ii) DB Co shall engage an Independent Checking Team responsible for certifying the design of Significant and Complex Structures in accordance with Attachment 1 of Schedule 10 – Review Procedure. The following expertise shall be included in the expertise of the Independent Checking Team:
 - A. Recognized expertise in the disciplines of geotechnical, foundation and structural engineering;
 - B. Recognized expertise in the analysis and design of all aspects of Significant and Complex Structures;
 - C. Recognized expertise in the review of designs to ensure compliance with all Applicable Law pertaining to the environment, and other environmental requirements; and,
- (iii) The Checking Team shall be responsible for:
 - A. Conducting design checks to ensure that the design of Structures meets performance expectations outlined in the Project Agreement and that such design is carried out according to accepted industry standards and MTO Standards;
 - B. Verifying that ‘use of engineering judgement’ is validated by appropriate experience. The independent check Engineer shall confirm, in each

- instance, that the use of the Simplified Methods of Analysis is applicable as per CAN/CSA-S6;
- C. Undertaking supplementary analyses to independently verify and confirm the appropriateness of design methodologies and assumptions used; and,
 - D. Identifying deficiencies in the design and analyses, and notifying DB Co and the City Representative of unresolved deficiencies.
- (iv) All structural drawings shall be signed and sealed by a member of the Checking Team and a member of the Design Team, in accordance with the requirements of this Project Agreement.
- (c) Existing and As-Built Structure LiDAR Scans
- (i) Work under this item includes the acquisition and processing of 3D point cloud data for all existing and new Structures constructed as part of Highway Works. Point cloud data shall be collected using a high density stationary terrestrial scanner for the following:
 - A. Existing Structures within the Highway Works limits (in situ prior to removal);
 - B. New fully constructed Bridge Structures on their temporary supports in the staging area (within three weeks prior to move); and,
 - C. New fully constructed Bridge Structures in design location (after move).
 - (ii) LiDAR system equipment shall be used to acquire all existing and as-built data. Scans shall be performed using a stationary terrestrial scanner capable of achieving requested point specifications in accordance with the following:
 - A. Point Spacing < 5.1mm
 - B. Point relative accuracy of < 5.1 mm
 - C. Absolute relative accuracy of < 10.1 mm
 - (iii) Scans should be of sufficient point density to accurately measure and analyze from the point cloud the following features:
 - A. Bridge girders, bearing seats, abutment walls, barrier walls and deck; and,
 - B. Visible cracking or deformation on the Structure components.
 - (iv) Terrestrial scans shall be conducted from a scanner mounted on a tripod or other stationary mount.

- (v) Scans shall be spatially located using established registration points or targets which meet absolute accuracy specification.
- (vi) Scan range shall not exceed 30 m.
- (vii) Scans shall be conducted in locations where shadowing and obstacle interference is eliminated or minimized.
- (viii) Scans shall be conducted during optimal environmental conditions to ensure high quality returns of data.
- (ix) Quality Control surveys shall be conducted to validate scan accuracy.
- (x) DB Co shall provide fully processed registered point cloud in LAS format version 1.4 to requested specifications for each Structure. Point cloud shall include positional, intensity and RGB data.
- (xi) DB Co shall provide Quality Control documents validating scan accuracy requirements are met.
- (xii) DB Co shall submit Structure Survey Reports to the City in accordance with Schedule 10 – Review Procedure. A separate survey report shall be submitted for each Structure scan and shall include:
 - A. Survey and scan details including field and office methodology; and,
 - B. A statement of certification, signed by a Professional Engineer or Land Surveyor registered in the province of Ontario, verifying the submitted deliverables are to requested accuracy tolerances and specifications.

4.3 Structures

- (a) This Article 4 includes the structural design and construction requirements for all new Structures and rehabilitation, widening, lengthening, strengthening and/or replacement of existing Structures, including but not limited to Bridges (which include Underpasses, Overpasses, railway grade separations, and Retaining Walls), Noise Barriers, single cell Culverts with spans equal to or greater than 3.0 m, multi-cell or twin Culverts with combined spans equal to or greater than 3.0 m, Overhead Sign Support Structures and mid-size VMS Signs and high mast pole footings.
- (b) For each Structure to be designed, or rehabilitated as detailed in Clause 4.10 of this Part B, DB Co shall submit to the City Representative individual Structure Survey Reports. The Structure Survey Reports shall be signed and sealed by structural Engineers who are members of the Design Team, and shall include the following minimum requirements.
 - (i) DB Co shall detail the construction, or rehabilitation methodology, identifying activities to be completed at each stage of construction.

- (ii) DB Co shall identify the standards and codes consulted in its design and shall detail how its design adheres to the requirements presented in this Schedule 15-2.
 - (iii) DB Co shall include a General Arrangement Drawing, which shall also be submitted in CAD format. The General Arrangement Drawings shall be prepared according to the MTO Structural Manual, and shall include the following additional minimum requirements (as applicable):
 - A. Embankment cone configuration;
 - B. Rehabilitation details;
 - C. Widening/lengthening requirements;
 - D. Identification of components to be removed or replaced;
 - E. Location and value of the minimum horizontal and vertical clearances;
 - F. Interface with existing Structure(s);
 - G. Interface with utilities;
 - H. Attached or supported utilities; and
 - I. Deep foundation type, size and design criteria.
 - (iv) DB Co shall include a future rehabilitation methodology for new Structures and supporting calculations/analysis that demonstrates that no temporary support would be required.
 - (v) Design drawings and calculations shall be appended to the Structure Survey Reports.
 - (vi) References to applicable section(s) of the Geotechnical Report shall be included.
 - (vii) For proprietary precast Culverts, the responsible Professional Engineer shall certify the design and construction of the precast Culverts.
 - (viii) DB Co shall include an evaluation of the capacity of the piles to satisfy a 75 year Service Life, considering the present condition and future corrosion losses. This section shall provide the methodology and results associated with the Foundation engineering assessments undertaken by DB Co in accordance with Clause 5.2 of this Part B.
- (c) Design Criteria
- (i) Design Loads

- A. Design loads shall be as specified in CAN/CSA-S6 and the MTO Structural Manual. The design of Overheads shall also consider loads due to system-wide elements such as electrification, signalization and communication equipment.
 - B. DB Co shall assume the design lanes as per CAN/CSA-S6 to extend across each Bridge deck between the two most exterior Barrier walls.
- (ii) Design and Service Life
 - A. All new and rehabilitated Structures and components thereof in the Highway Works shall have a minimum Design Life of 75 year starting at the Highway Substantial Completion Date.
 - B. The Service Life of all main structural components of new Structures (including but not limited to Foundations, piers, abutments, Superstructures, Decks, wingwalls, Retaining Walls including wall components such as wall facings and anchorages) shall be 75 year starting at the Highway Substantial Completion Date.
 - C. The Service Life of all existing and rehabilitated substructure components (including but not limited to Foundations, pier and abutments) shall be 40 year starting at the Highway Substantial Completion Date.
 - D. Time dependent design calculations shall use a Service Life of 75 year.
- (iii) Clearances
 - A. Horizontal and vertical clearances for new Overpass/Underpass Structures shall be provided and maintained in accordance the MTO Design Supplement for TAC Geometric Design Guide for Canadian Roads.
 - B. New Overhead Structures and existing Overpass/Underpass Structures being modified to Overhead Structures that span the alignment shall meet the minimum horizontal clearance requirements for the Vehicle, in accordance with Clause 2.12 of Schedule 15-2, Part 2.
 - C. New Overhead Bridge Structures which span the alignment shall be designed to ensure they achieve a minimum vertical clearance of 4.5 m from the TOR to the underside of the Structure.
 - D. Existing Overpass/Underpass Bridge Structures being modified to Overhead structures shall achieve a minimum vertical clearance of 4.5 m from the TOR to the underside of the Structure.
- (iv) Aesthetics

- A. Bridges shall be designed in accordance with the Aesthetic Guidelines for Bridges using a “Level 1” classification, with the following clarifications:
 - i. Aesthetic improvements to the abutments and pier columns shall be per the MTO Context Sensitive Design requirements as detailed in Appendix F of this Part 9.
